5251. Douglas, J. W. (MRC Unit on Environmental Factors in Mental & Physical Illness, London School of Economics, England) **Early hospital admissions and later disturbances of behaviour and learning.** *Developmental Medicine & Child Neurology*, 1975(Aug), Vol 17(4), 456-480.—Presents results of a study which provide strong evidence that one admission to hospital of more than a week's duration or repeated admissions before the age of 5 yrs (in particular, between 6 mo and 4 yrs) are associated with an increased risk of behavior disturbance and poor reading in adolescence. Children who have experienced these early admissions are more troublesome out of class, more likely to be delinquent, and more likely to show unstable job patterns. They include a high proportion of poor readers. The association of troublesome and socially difficult behavior with early admissions is explained neither by the initial selection of children for hospital nor by the physical disabilities they sometimes carry in later life. Children most vulnerable are those highly dependent on their mothers or under stress at home at the time of admission. There is evidence that early admissions are more frequent today than 25 yrs ago and that readmissions are more frequent. Thought should be given to how far home care can be safely substituted for hospital care for small children, especially those already under stress. (French, German, & Spanish summaries) (33 ref)—*Journal summary*.

5252. Flynn, Gertrude E. (Boston U, School of Nursing) **An evaluation of the contribution to nursing management of patients' behavioral problems through the process of consultation in a general hospital by a psychiatrist and a clinical nursing specialist in psychiatry.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1607.

5253. Follin, Sven; Benoist, Pierre & Bogoratz, Pierre. (St Anne's Hosp, Paris, France) **Initial psychiatric care outside the hospital.** *Psychiatric Quarterly*, 1974, Vol 48(4), 483-488.—Presents statistics describing the activities of a Paris mental hospital. Areas covered include case distribution, nosological distribution of 1st referrals, and method of 1st referral. Several clinical examples are presented to illustrate the possibility that earlier psychiatric intervention has greater potential for preventing clinical deterioration. Necessary hospitalization should be voluntary and early enough to keep the patient from loss of adaptability and from developing a clinical defective process.—*R. Tomasko*.

5254. Fontana, Alan F. & Dowds, Barbara N. (VA Hosp, Psychology Service, West Haven, CT) **Assessing treatment outcome: II. The prediction of rehospitalization.** *Journal of Nervous & Mental Disease*, 1975(Oct), Vol 161(4), 231-238.—Reviews studies of rehospitalization in terms of 3 basic methodological issues: the selection of predictor content, the source of predictor information, and the length of the follow-up interval. An empirical examination is made of several questions surrounding each issue, including the relative predictive power of (a) patients' background characteristics vs their behavior; (b) symptomatic behavior vs instrumental role behavior; (c) patients' own reports vs others' reports; (d) hospital behavior vs community behavior; and (e) each domain of predictor content at a 6-mo vs a 1-yr follow-up interval. Data were obtained from 4 male psychiatric patients (mean age, 40 yrs) using the PARS-II scale by R. B. Ellsworth et al. Individual predictors are selected from each domain to produce a composite picture of the person who is at high risk for rehospitalization. (25 ref)—*Journal abstract.*

5255. Freeman, Hugh. (Hope Hosp, Salford, England) **Alternatives to the mental hospital: A British model.** *Psychiatric Quarterly*, 1974, Vol 48(4), 572-577.—Posits that the dispersed alternative system has the possibility of offering a greater variety of care options for more kinds of psychiatric morbidity. Trends are noted which favor the treatment of illnesses which do not require continuous medical and nursing management in a general hospital rather than in a specialized institution. Recent developments in an industrialized English city are described to illustrate these trends. The importance of dismantling administrative barriers is noted.—*R. Tomasko.*

5256. Fryers, Thomas. (Manchester U, England) **New long-stay inpatients.** *Psychiatric Quarterly*, 1974, Vol 48(4), 526-530.—Uses statistics to review the progress of the British movement toward minimizing hospital residence for psychiatric illness. An analysis of newly accumulating long-stay patients is presented; it is suggested that they have priority in the development of alternatives to hospital residence. Areas considered include the numbers of patients accumulating, the length of the accumulation, changes in the accumulation, and the principal characteristics of the new long-stay patients. An increase in female, schizophrenic, and geriatric patients is noted.—*R. Tomasko.*

5257. Garza-Guerrero, A. Cesar. (Menninger Memorial Hosp, Topeka, KS) **Therapeutic use of social subsystems in a hospital setting.** *Journal of the National Association of Private Psychiatric Hospitals*, 1975(Sum), Vol 7(1), 23-30.—Describes a treatment program and an overall organization which grew out of an attempt to integrate psychoanalytic object-relations theory, psychoanalytic understanding of small and large groups, and "community" methods, considering the hospital as an open social system.—*Journal summary.*

5258. Green, James C. & Gillespie, Hal G. (Duke U, Medical Ctr, Highland Hosp, Asheville) **Group rounds.** *Journal of the National Association of Private Psychiatric Hospitals*, 1975(Sum), Vol 7(1), 20-22.—Describes team meetings to discuss psychiatric patients.—*R. M. Cohen.*

5259. Grunebaum, Henry; Abernathy, Virginia; Clough, Louise & Groover, Bonnie. (Harvard U, Medical School, Boston) **Staff attitudes toward a family planning service in the mental hospital.** *Community Mental Health Journal*, 1975(Fal), Vol 11(3), 280-285.—Assessed staff attitudes toward an innovative family planning and gynecological service offered to patients in 3 psychiatric hospitals. Despite structural differences between hospitals, generally similar and favorable reports were obtained at all sites. However, comparison of verbal responses and actual utilization of the family planning service suggests that a theoretical position held by a minority as well as scattered personal biases militated against fullest cooperation with the program.—*Journal abstract.*

5260. Hailey, Anthea M. (MRC, Inst of Psychiatry, Social Psychiatry Unit, London, England) **New long-stay patients.** *Psychiatric Quarterly*, 1974, Vol 48(4), 531-534.—Considers the problem of the few alternatives other than mental hospitals for elderly patients with dementia. The expansion of nonresidential services in a British hospital is reviewed. The importance of a well-organized hostel system, with boarding-out arrangements and supervised lodgings, is noted. Characteristics of the new chronic patient population using day care services include younger male patients and very few patients with dementia.—*R. Tomasko.*

5261. Kedward, H. B. (Clarke Inst, Toronto, Canada) **The hospital census as a sampling frame for studies of long-term psychiatric care.** *Psychiatric Quarterly*, 1974, Vol 48(4), 535-542.—Reviews efforts to discharge patients who have become institutionalized and to limit the period of the newly admitted patient's stay in the hospital. It is no longer possible to define the severely disabled psychiatric patient in terms of length of hospital stay alone, and a decline in the mental hospital bed ratio is an inaccurate measure of decrease in disability. The continuous monitoring of the contacts patients make with mental health services provides the most comprehensive indication of the course of psychiatric disorder. The design of a clinical epidemiological survey of chronic psychiatric morbidity is described.—*R. Tomasko.*

5262. Kosberg, Jordan I. & Gorman, Joanna F. (Case Western Reserve U, School of Applied Social Sciences, Human Services Design Lab) **Perceptions toward the rehabilitation potential of institutionalized aged.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 398-403.—Administered a questionnaire about the perceptions toward the rehabilitation potential of the aged to 157 staff (e.g., social workers, secretaries, and therapists) and nonstaff (e.g., board of directors, residents, and relatives) persons associated with a home for the aged. Differences in perceptions were found between role categories and by years of education, but not by chronological age or years associated with the facility. Attitudinal differences may be related to policy-making, care of the aged, and self-images of the residents.—*Journal abstract.*

5263. Laane, Carl L. & Odegard, Ormolv. (U Oslo, Psychiatric Clinic, Norway) **Hospitalization of former outpatients diagnosed as psychotic.** *Acta Psychiatrica Scandinavica*, 1975(Aug), Vol 52(2), 145-150.—Studied 612 psychotic outpatients, followed by means of a national case register from their 1st referral in 1946-1955

up to and including 1973. 164 cases were not found to be registered as inpatients and were counted as lost to a registration system based upon hospital admissions. The loss of cases was estimated at around 5% of the total 1st admissions. Most of the lost cases were borderline psychotics or manic depressives.—*Journal abstract.*

5264. Leonard, Callista V. (U California, Ctr for Health Sciences, Los Angeles) **Patient attitudes toward nursing interventions.** *Nursing Research*, 1975(Sep-Oct), Vol 24(5), 335-339.—Studied patient attitudes toward nursing interventions over a 28-mo period, in 3 different ward phases. Attitude measures obtained from 37 male and 66 female psychiatric hospital inpatients using the Affect Expression checklist (C. V. Leonard, 1970) were correlated with demographic, psychiatric, and psychologic test variables. Attitudes varied primarily and almost exclusively with the ward administrative phase. Within the differing ward phases the nursing interventions most valued by patients did not focus directly upon the individual patient. (18 ref)—*Journal abstract.*

5265. Liss, Robert & Frances, Allen. (Manhattan VA Hosp, NY) **Court-mandated treatment: Dilemmas for hospital psychiatry.** *American Journal of Psychiatry*, 1975(Sep), Vol 132(9), 924-927.—Presents clinical material and case histories illustrating the special treatment and management problems posed by different types of mentally ill offenders and suggesting that court-mandated hospital treatment is often destructive and unrelated to the needs of the patient, the community, and the mental institution. The failure to create new kinds of institutions, combining modalities derived from the hospital and correctional systems, is traced to poor communication among the disciplines involved. It is concluded that the "mentally ill offender" is caught in the interplay of these systems and is consequently both their victim and victimizer.—*Journal abstract.*

5266. McGlvern, Diane O'Neill. (New York U) **The relationship between aggression in selected male surgical patients, satisfaction with hospitalization, and attitudes of nursing personnel.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 736-737.

5267. McNabola, Marie. (NIMH, Rockville, MD) **Partial hospitalization: A national overview.** *Journal of the National Association of Private Psychiatric Hospitals*, 1975(Sum), Vol 7(1), 10-16.—Discusses topics of concern to partial hospitalization programs: problems of definition, programming and administration, financing, admission criteria, and the lack of literature dealing with such programs.—*R. M. Cohen.*

5268. Mendel, Werner M. (U Southern California, Medical School) **Lepers, madmen: Who's next?** *Schizophrenia Bulletin*, 1974(Win), No 11, 5-8.—Reviews the available evidence on the impact that emptying state mental hospitals has had on discharged schizophrenic patients and the communities to which they were returned. Professional forces in the opposition to phasing out state hospitals, economic forces to be considered in making plans for a phase-out, and social and cultural resistance to discharged mental patients are examined. The need for new treatment alternatives is emphasized.

ce evidence suggests that the effective management of mental illness is best conducted in settings other than
1. A strategy for dismantling state hospitals is

proposed, which includes planning and clinical programming for alternatives to hospitalization, retraining programs for mental health professionals, and a program for educating the public.—*L. Gorsey.*

5269. Nelson, Kottom R. (U Alabama) **The right to treatment: The changed role of state residential facilities for the mentally retarded.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2395-2396.

5270. Olin, Grace B. & Olin, Harry S. (Medfield State Hosp, MA) **Informed consent in voluntary mental hospital admissions.** *American Journal of Psychiatry*, 1975(Sep), Vol 132(9), 938-941.—Studied the amount of understanding that 100 mental hospital patients had of a voluntary admission application they signed upon entering the hospital. Only 8 patients were rated as being completely informed of the terms of the contract at the time of admissions; 15 of 33 patients reinterviewed about 10 days after admission showed increased understanding. Minimal differences were found between 81 state hospital patients and 19 private hospital patients. The findings that few voluntary patients are fully informed to give consent to hospitalization poses a dilemma because of the trend to give personal responsibility to the patient.—*Journal abstract.*

5271. Pierce, Charles A. (Texas Tech U) **Patient treatment preferences and treatment orientation.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 421-422.

5272. Quinsey, V. L.; Warnford, A.; Link, N. & Pruesse, M. (Mental Health Ctr, Penetanguishene, Canada) **Released Oak Ridge patients: A follow-up study of review board discharges.** *British Journal of Criminology*, 1975(Jul), Vol 15(3), 264-279.—Obtained criminal conviction and readmission data on 91 male patients released by the maximum security division of a mental health center and related the data to the patients' prerelease characteristics. During the follow-up period (1-4 yrs), 38% of the sample were convicted of a crime, readmitted, or both. 15% were readmitted, and 16% committed a violent act against persons. Most of the violent patients had committed violent crimes before. Patients diagnosed as personality or character disorders, particularly if they had never married, were more likely to get into trouble after release than those who were not.—*Journal abstract.*

5273. Rieder, Ronald O. (NIMH, Lab of Psychology, Bethesda, MD) **Hospitals, patients, and politics.** *Schizophrenia Bulletin*, 1974(Win), No 11, 9-15.—Describes the current situation in states in which mental hospitals have been closed and patients excluded, the role of various historical developments and causative factors which have led to this situation, and the usefulness of psychiatric hospitals and long-term hospitalization. Studies on the effects of outpatient mental health care and brief hospitalization are challenged, it is argued that the limiting of hospitalization to brief periods has increased the prescription of high dosages of psychotropic drugs, since there is not sufficient time for careful neurological and other clinical evaluations. It is concluded that state mental hospital systems are being phased out without effective alternative sources of care being made available and that this trend is a grave neglect of professional and humanitarian responsibility. (28 ref)—*L. Gorsey.*

5274. Sacks, Michael; Fink, Edward B. & Carpenter, William T. (New York U, Medical Ctr) **Functioning at the clinical-research interface: The clinical-research meeting.** *American Journal of Psychiatry*, 1975(Sep), Vol 132(9), 919-923.—Describes the authors' experience in carrying out clinical and psychobiological research in a therapeutic setting. The clinical-research meeting, composed of clinical-care staff with secondary research responsibilities, researchers, and acutely psychotic patients, proved to be a useful mechanism for identifying and resolving inevitable problems at the clinical-research interface and enhanced the effectiveness of research implementation and patient care. 3 specific areas where covert issues threatened to undermine the work of the unit are discussed: the abrogation of research responsibility, the abrogation of clinical responsibility, and intergroup competition and envy. (16 ref)—*Journal abstract*.

5275. Sandbu, Arne & Steinfeldt-Foss, Otto W. (Oslo Psychiatric Hosp Dikemark, Norway) **Residential settlement, hostels, group homes: Elements of a psychiatric rehabilitation program.** *Psychiatric Quarterly*, 1974, Vol 48(4), 558-567.—Surveys a comprehensive service at a Danish city psychiatric hospital for patients with long-term illnesses. The importance of a continuous reassessment of all residents of mental hospitals to determine the lowest effective level of care is stressed. The importance of the preadmission evaluation and the availability of flexible types of residences are noted. Implications are drawn for the need for structured aftercare when returning patients to the community.—*R. Tomasko*.

5276. Silbermann, R. M.; Schalken, H. F. & de Jong, H. (U Amsterdam, Academic Hosp, Netherlands) **The principle of separate responsibility and the therapeutic community.** *Psychiatra Clinica*, 1974, Vol 7(6), 328-333.

Describes an attempt, within a psychiatric hospital, to realize a maximum number of the elements of the therapeutic community. Problems encountered are the short median stays of patients and the rapid turnover of both patients and staff. A basic problem of the therapeutic community—that the interests of the individual patient and of the patients as a group are considered as identical—has also been encountered. The development of the principle of separate responsibility, whereby a division of responsibility is made between the individual patient and the unit, has been initiated to offset these difficulties. Work is carried out by multidisciplinary and largely democratized teams. *Journal abstract*.

5277. Slovenko, Ralph & Luby, Elliot D. (Wayne State U) **On the emancipation of mental patients.** *Journal of Psychiatry & Law*, 1975(Sum), Vol 3(2), 191-213.—Protests the wholesale emptying of state hospital populations into the community. Psychiatrists are considered to be acting against the best interests of their patients by collaborating in this process. The pressures on hospital administrators to shorten the average duration of stay for the patient population are considered. The aftermath of the *Wyatt* decision is discussed, and the problems of the standard "community" treatment facilities noted. The importance of looking at the adequacy of all facilities for the handicapped is stressed. *R. Tomasko*.

5278. Stone, Morton A. (McLean Hosp, Belmont, MA) **The evolution of activity therapies in transition**

from long-term psychoanalytic to a community mental health approach. *Journal of the National Association of Private Psychiatric Hospitals*, 1975(Sum), Vol 7(1), 30-35.—Discusses the introduction of rehabilitative, community-oriented programs in a traditional, private psychiatric institution. Case material is used to illustrate the transition process.—*Journal summary*.

5279. Szasz, Thomas S. (State U New York, Upstate Medical Ctr, Syracuse) **Medicine and madness.** *Journal of Psychiatry & Law*, 1975(Sum), Vol 3(2), 215-222.—Views psychiatry as acting as an authoritarian tool to control individuals rather than to help them. Psychiatrists are participating in this "political control" by continuing to incarcerate patients through involuntary commitment. Curing an illness is contrasted with controlling insanity. Ways psychiatric interventions may be used as instruments of social control are described, and reforms aimed at abolishing involuntary psychiatric treatment are suggested. The importance of protecting the civil rights of persons "accused" of mental illness is stressed.—*R. Tomasko*.

5280. Volicer, Beverly J. & Bohannon, Mary W. (Boston U, School of Nursing) **A hospital stress rating scale.** *Nursing Research*, 1975(Sep-Oct), Vol 24(5), 352-359.—Describes the development of a scale for measuring general psychosocial stress experienced by short-term medical and social patients. 261 such patients at a community hospital were asked to rank-order 49 events related to the experience of hospitalization from most to least stressful. Results indicate that the Ss were capable and willing to order the events. Moreover, they showed a high degree of consensus as to how the events should be ordered. The rank-order of these events provides a tool that can be used to quantify the measurement of psychosocial stress experienced by hospital patients. (15 ref)—*Journal abstract*.

5281. Weiskott, Gerald N. & Tipton, George B. **Moon phases and state hospital admissions.** *Psychological Reports*, 1975(Oct), Vol 37(2), 486.—An analysis of admissions to all Texas state hospitals showed that this measure of human emotional disturbance was mildly related to lunar cycles. Alternative explanations of these results are discussed.

Rehabilitation & Penology

5282. Aniol, Larry J. (U Missouri, Columbia) **Early identification of students who fail to adjust to a juvenile correctional institution: A prediction study.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1267-1268.

5283. Banks, C.; Maloney, E. & Willcock, H. D. **Public attitudes to crime and the penal system.** *British Journal of Criminology*, 1975(Jul), Vol 15(3), 228-240.—Interviewed 2,846 21-69 yr old British adults representing 5 socioeconomic groups. Respondents' opinions are presented regarding causes of crime, ways of reducing the increase in crime, seriousness and frequency of offences, the courts, sentencing, characteristics of habitual offenders and ways of reducing their numbers, prisons and prisoners, attitudes about potential lawbreakers, and victimization. Lack of parental discipline was considered by the respondents to be a major cause of crime.

Comparisons with other public attitude surveys are made.—*R. Tomasko.*

5284. **Black, Bertram S.** (Albert Einstein Coll of Medicine, Yeshiva U) **Occupational rehabilitation, day centers, and workshops.** *Psychiatric Quarterly*, 1974, Vol 48(4), 549-557.—Discusses the development of vocational rehabilitation in the US following World War II. 4 explanations are offered for the truncated development of services to the mentally ill. Both clinical and administrative findings are presented, based on the author's experiences with workshops for the mentally ill and handicapped. 4 approaches for the improvement of occupational rehabilitation for the mentally ill are recommended.—*R. Tomasko.*

5285. **Bozarth, Jerold D. & Rubin, Stanford E.** (U Florida, Coll of Health Related Professions) **Empirical observations of rehabilitation counselor performance and outcome: Some implications.** *Rehabilitation Counseling Bulletin*, 1975(Sep), Vol 19(1), 294-298.—Reports results of a 5-yr study which suggest the following procedures: allow the counselor work role to be more flexible, institute adequate interpersonal skills training, move toward a differential assignment of clients to counselors, and consider psychological change per se as a possible rehabilitation goal.

5286. **Brooker, Harvey.** (Clarke Inst of Psychiatry, Adults Services, Toronto, Canada) **Rehabilitation and the clinical psychologist.** *Ontario Psychologist*, 1975(Aug), Vol 7(3), 26-28.—Maintains that psychologists need to be more involved in aiding the disabled to live and work as effectively as possible. Their assessment and therapeutic skills make them uniquely equipped to deal with rehabilitation problems.

5287. **Cobb, Charles E.** **Behavior modification in the prison system.** *The Black Scholar*, 1974(May), Vol 5(8), 41-44.—Criticizes the use of behavior modification by penal authorities as reinforcing socially repressive values. The role of the psychiatrist in the prison setting is also discussed.

5288. **Cockerill, R. W.** (U Edinburgh, Scotland) **Probation effectiveness in Alberta.** *Canadian Journal of Criminology & Corrections*, 1975(Oct), Vol 17(4), 284-291.—Studied the records of 2,726 Alberta offenders placed on probation 1967-1971. 61% successfully completed probation, and were still successful when the follow-up investigations ended (December 31, 1972). Several personal and social variables were studied but only a few results were clear-cut. (French abstract)—*B. L. Kintz.*

5289. **Hagmeier, Lee D.** (U Washington) **Locus of control and self-concept: Implications for rehabilitation and an investigation of a method for their change.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2388-2389.

5290. **Hawkins, Michael K.** (Marquette U) **Control orientation: A personality dimension among alcoholics and its implications for alcoholism treatment.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2390.

5291. **Jose, Randall T. & Butler, James H.** (Pennsylvania Coll of Optometry) **Driver's training for partially sighted persons: An interdisciplinary approach.** *New Outlook for the Blind*, 1975(Sep), Vol 69(7), 305-307, 311.

—Explains how, through a program involving optometric and special education professionals, partially sighted persons can be trained to use bioptic telescopes for driving. Special performance tests, given by officers of the Department of Motor Vehicles, insure that a safe and dependable driver will be placed on the highways.—*Journal abstract.*

5292. **McArthur, Arthur V.** (Yale U) **Community reentry from a state reformatory.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 418-419.

5293. **McWilliams, William.** **Sentencing and recidivism: An analysis by personality type.** *British Journal of Social Work*, 1975(Aut), Vol 5(3), 311-324.—Describes some personality and other characteristics of 230 male offenders in London, and relates these variables to recommendations made by probation officers, sentences passed by the courts, and the outcome of penal treatment in terms of further convictions. Probation officers were more likely to recommend probation for introverted neurotics than any other personality type, and once on probation this group was the least likely to be reconvicted. Offenders who were extraverted attracted the largest proportion of recommendations for custodial sentences, and on probation the extraverts who scored low on neuroticism were most likely to be reconvicted. A tentative explanation of the findings is offered in terms of probation "treatment success hierarchy." (20 ref)—*Journal abstract.*

5294. **Roessler, Richard & Mack, Greta.** (U Arkansas, Coll of Education) **Strategies for expanded interagency linkages: Rehabilitation implications.** *Rehabilitation Counseling Bulletin*, 1975(Sep), Vol 19(1), 344-352.—Drawing on a variety of research reports, journal articles, and conference presentations, this article reviews the current status of coordinating service delivery programs. It is stated that improving interagency cooperation requires establishing domain, ideological, and interorganizational consensus at individual's case and program levels, and examples are given. Specific suggestions for improving rehabilitation's linkages with other agencies are listed. (25 ref)—*Journal abstract.*

5295. **Škopková, H.** (Psychiatrická léčebna, Dobřany, Czechoslovakia) **[Possibilities and results of compulsory antialcoholic treatment in psychiatric treatment centers.]** (Czec) *Československá Psychiatrie*, 1974(Aug), Vol 70(4), 227-233.—Discusses the legal aspects of compulsory treatment of young criminally-oriented alcoholics and describes their typical personality features. Treatment is given by a team composed of psychiatrists, psychologists, and social workers, in mental health clinics while patients are in prison or on an ambulatory basis after release. Treatment lasts 6-8 mo and consists of antabuse medication, group counseling, and psychotherapy. A follow-up of 328 convict-alcoholics treated during their terms in prison showed a high rate of recidivism. After 1 yr only 23.6% maintained abstinence and after 3 yrs only 14.8%. Recommendations to improve compulsory treatment of alcoholics committed to prisons are presented. (Russian & English summaries)—*V. Fischmann.*

5296. **Spreitzer, Elmer.** (Bowling Green State U) **Client perceptions and attitudes toward a comprehensive rehabilitation center.** *Rehabilitation Counseling*

Bulletin, 1975(Sep), Vol 19(1), 315-322.—Reports an empirical investigation of client perceptions and attitudes toward a comprehensive rehabilitation center for the physically and mentally handicapped. 222 respondents (average age, 25 yrs) encompassed all clients who had been at the center at least 2 mo and who were participating in the vocational education program. Client attitudes toward the staff, the treatment program, and the institution are analyzed in terms of their relationship to individual background characteristics. Qualitative and quantitative data suggest that the dominant tone of the clients' attitudes was positive. A general implication of the research is that the basic client-centered orientation of the institution prevailed despite the fact that clients found a number of regulations irksome.—*Journal abstract*.

5297. Tichenor, Darwin F.; Thomas, Kenneth R. & Kravetz, Shlomo P. (Wisconsin Div of Vocational Rehabilitation, Madison) **Client-counselor congruence in perceiving handicapping problems.** *Rehabilitation Counseling Bulletin*, 1975(Sep), Vol 19(1), 299-304.—Conducted a study with 51 clients and their 48 respective counselors (a) to investigate client-counselor congruence in the perception of problems in 8 potentially handicapping problem areas and (b) to find factors that might be contributing to any identified variance in problem perception. Results suggest that considerable incongruence exists between rehabilitation counselors and their clients in perceptions of handicapping problems, particularly in problem areas not open to direct scrutiny by the counselor and at times when the counselor has judged the client to have problems of motivation. Implications are discussed, and tentative hypotheses are presented.—*Journal abstract*.

5298. Waligóra, Bogusław. [How men function in conditions of penitentiary isolation.] (Poln) *Uniwersytet im Adama Mickiewicza w Poznaniu, Seria Psychologia i Pedagogika*, 1974, No 34, 125 p.—Identifies 4 types of isolation: experimental, occupational, morbid, and pejorative (prison isolation). It is contended that the latter strengthens a prisoner's negative attitudes and asocial behavior and thus precludes resocialization. It is suggested that an understanding of the role that pathological behavior (e.g., self-injuries, hunger strikes, attempted suicides, etc) plays in the daily life of prisoners could be incorporated in designing meaningful rehabilitative programs.—*H. Kaczkowski*.

Drug & Alcohol Rehabilitation

5299. Alsén, Märta. (Maria Clinic, Stockholm, Sweden) **Outpatient treatment of acute withdrawal states.** *British Journal of Addiction*, 1975(Apr), Vol 70(Supp 1), 53-63.—Discusses the operation of the largest alcohol clinic in Sweden. Commonly treated somatic complications and psychic disturbances are described, along with the clinic's use of drugs in the emergency outpatient clinic. Related somatic problems are noted to be more common and severe than in the past. Commonly reported mental disturbances include anxiety states, insomnia, depression with suicidal tendencies, schizophrenic reactions, memory loss, paranoid reactions, auditory hallucinations, and delirium tremens. Parenter-

al promethazine chloride, barbiturates, and chlormethiazole are used in the emergency clinic.—*R. Tomasko*.

5300. Akerman, Arthur L.; Gotthell, Edward & Crawford, Harold D. (VA Hosp, Alcoholic Research & Treatment Unit, Coatesville, PA) **Mood changes in an alcoholism treatment program based on drinking decisions.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1032-1037.—Compared the amount of discomfort experienced by 18 alcoholic men who chose to drink and 43 alcoholic men who abstained from drinking during a 6-wk treatment and research program. Ss were Veterans Administration hospital patients aged 23-57 yrs. It was found that the discomfort of the drinkers increased but that the discomfort of the abstainers decreased. The increase in the drinkers' discomfort appeared to be more related to their having to make a decision about drinking than to the amount of alcohol actually consumed. This finding emphasizes the importance of the role played by environment in affecting the mood state of drinking alcoholics. (22 ref)—*Journal abstract*.

5301. Atesalp, Albert F. (United States International U) **Effectiveness of short-term psychological/psychiatric treatment of selected residents of California Rehabilitation Center.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 403.

5302. Backeland, Frederick & Lundwall, Lawrence K. **Effects of discontinuity of medication on the results of a double-blind drug study in outpatient alcoholics.** *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1268-1272.—Administered either a combination of oxazepam (15 mg) and protriptyline (5 mg) or placebo to 196 patients (mean age, 38 yrs) in an alcoholism clinic. On each weekly visit, Ss completed a symptom rating scale. When the analysis included Ss who missed clinic visits, no differences in symptoms were found between the drug and placebo groups. When only patients who took adequate levels of medication were included, the drug group fared significantly better than the placebo group. Findings suggest that prescribing medication to outpatient alcoholics should be tempered by the knowledge that its most effective utilization will be by those who keep their appointments and take their medication as prescribed. (29 ref)—*Journal abstract*.

5303. Bourne, Peter G. & Ramsey, Ann S. (Drug Abuse Council, Washington, DC) **The therapeutic community phenomenon.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 203-207.—Therapeutic communities tend to be based on the belief that drug use is the result of a lack of psychic development which results in a socially unacceptable life style. Unswerving faith and commitment to the community's philosophy is seen essential for participant success. Topics include the importance of dynamic leadership, the voluntary and involuntary demand for treatment, problems of withdrawal from the community to the larger society, and the future of therapeutic communities. The use of supportive group techniques to replace severe confrontational attack methods is suggested in working with troubled adolescents.—*R. Tomasko*.

5304. Bowman, Richard S.; Stein, Leonard I. & Newton, Joseph R. (Mendota Mental Health Inst, Madison, WI) **Measurement and interpretation of**

drinking behavior: I. On measuring patterns of alcohol consumption: II. Relationships between drinking behavior and social adjustment in a sample of problem drinkers. *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1154-1172.—Examines issues in the construction of a classification system for drinking behavior, and presents data on the relationships between drinking and other postdischarge behaviors in a sample of 102 problem drinkers treated at a state mental hospital. 3 previously developed classification systems are compared (quantity-frequency, quantity-frequency-variability, and volume-variability). It is argued that although the assumptions behind the first 2 types of indices are substantially different, these differences are masked since both yield 3 identically labeled classifications (light, moderate, and heavy drinkers). A revised classification system, the volume-pattern index, which provides a set of numerical indices to describe drinking behavior in a given period or periods in the S's life (the volume index as a measure of total consumption and the pattern index as a measure of "binginess") is outlined. Data from the 102 patients were analyzed using this system. Results suggest that among severe problem drinkers it matters not in what manner the alcohol is consumed, but only whether alcohol is consumed and if so, how much. It is concluded that volume of intake is a useful predictor of social adjustment, while pattern of intake, either by itself or in combination with volume is not a useful predictor. —L. Gorsey.

5305. Bratter, Thomas E. (Teachers College, Columbia U) **The methadone addict and his disintegrating family: A psychotherapeutic failure.** *Counseling Psychologist*, 1975, Vol 5(3), 110-125.—Suggests that the setting of limits is a difficult but essential task in drug therapy. The psychotherapist must be totally involved. He must be prepared for the expression of hostile feelings by the client, and he should not assume that the client really wishes to change. Confrontation, to help the client see himself as he really is, is considered necessary in order to motivate him. The client's defenses must be penetrated so that he faces and becomes aware of his destructive behavior. A crisis may be deliberately induced in order to force the client to make decisions. A history of a typical drug addiction case is included. (33 ref)—H. Silverman.

5306. de Angelis, G. G.; Lehmann, W. X. & Turner, Robert C. (Vitam Ctr, Norwalk, CT) **Rehabilitation of young drug abusers.** *Drug Forum*, 1975, Vol 4(2), 163-171.—Examines the use of methadone in young heroin addicts and describes inpatient hospital care, day care, and free clinic models. Commitment drug problems, from social, psychiatric, and cultural perspectives, are discussed.

5307. DeAngelis, G. G. (U California, Drug Treatment Program, Los Angeles) **Theoretical and clinical approaches to the treatment of drug addiction: With special considerations for the adolescent drug abuser.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 187-202.—Suggests that the therapist relate the behavior of the drug-dependent client to the class of drugs being abused. Areas considered include drug use as a function of underlying psychopathology, psychoanalytic considerations in drug abuse treatment, functional treatment

modalities, differential use of stress-inducing therapeutic environments, and sociocultural aspects of youthful drug abuse. 3 schemes are presented to illustrate conceptual approaches to fusion, separation, isolation, integration, and autonomy. It is considered that a major difference between healthy and unhealthy adolescents results from supported or nonsupported autonomy. Several clinical approaches are proposed. (25 ref)—R. Tomasko.

5308. Deleppo, James D. (Boston U, School of Education) **Assessment of personality changes of drug addicts under two types of treatment modalities.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1742-1743.

5309. Doherty, James. (National Clearinghouse for Alcohol Information, Rockville, MD) **Controlled drinking: Valid approach or deadly snare?** *Alcohol Health & Research World*, 1974(Fal), Exp Issue, 2-8.—Reviews the controversy over the use of controlled drinking rather than abstinence as the treatment goal for some alcohol-dependent persons. Proponents of this idea contend that there are several types of alcoholics and several possible outcomes of treatment. The few experimental therapies which include controlled drinking as a goal are described. These therapies are based in part on clinical reports, on behaviorist theory, and on various research projects which have indirectly cast doubt on accepted notions regarding the world of alcoholism. A series of experiments at Patton State Hospital in California, which used shock avoidance treatment and in which Ss have been followed for up to 2 yrs, is presented in detail. However, this new approach to alcoholism therapy remains anathema to members of Alcoholics Anonymous, who contend that the only permanent safeguard for the abnormal drinker is abstinence. (28 ref)—I. Davis.

5310. Duncan, David F. (U Texas, Health Science Ctr, Houston) **The acquisition, maintenance and treatment of polydrug dependence: A public health model.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 209-213.—Reviews drug abuse patterns and suggests too much emphasis is being placed on heroin usage and its physical dependence aspects. A general model of the acquisition and maintenance of drug dependent behavior is presented. Peer group pressure, the occurrence of stress, state dependent learning, and negative reinforcement are considered. An epidemiological model involving an agent, a host, and the environment is used to suggest treatment modes. Group and milieu therapy, individual therapy, and vocational rehabilitation services are described. (26 ref)—R. Tomasko.

5311. Gaffney, Joseph M. (American U) **The prediction of length of adjustment of chronic alcoholics based upon selected demographic, treatment, and aftercare variables.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3057.

5312. Heather, Nick; Edwards, Sheila & Hore, Brian D. (Royal Dundee Liff Hosp, Scotland) **Changes in construing and outcome of group therapy for alcoholism.** *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1238-1253.—Compared alcoholics' perceptions of their drinking problems before and after a 10-12 wk inpatient group therapy program using a personal construct theory framework. 40 18-63 yr old patients completed repertory grids at admission and discharge. The instrument

consisted of 10 elements, 5 of which represented aspects of self-construction and 5 of which represented drinking roles. All elements were compared in terms of the distance separating any 2 given elements in multidimensional construct space. Results show that consistent group changes in perceiving alcoholics did occur, with the largest and most consistent changes occurring in views of actual self, the way the patient sees himself, followed by the social self, the way he or she perceives others' constructions of him or her. These changes appeared to consist primarily of a movement by actual and social selves away from socially disapproved drinking roles toward socially approved roles. These changes did not appear to be related to successful treatment outcome, rather evidence suggests that patients who showed the greatest recovery of self-respect and feelings of respectability were more likely to relapse than those who showed only modest changes in this regard. (19 ref)—*L. Gorsey*.

5313. Hirsch, Robert & Imhof, John E. (North Shore University Hosp. Therapy, Drug Treatment & Education Ctr., Manhasset, NY) A family therapy approach to the treatment of drug abuse and addiction. *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 181-185.—Suggests ways of using the family dynamics of the addict as a tool for evaluating and working with addicts and their families. Observations are presented based on an evaluation of 47 families of drug addicts observed during the intake procedure of a hospital drug program. Many of the families studied had a multigenerational history of excessive alcohol use as a coping device and of the utilization of psychotropic drugs to decrease parental anxiety. Characteristic interactional dynamics are described, and the potential of a family therapy approach to drug abuse is emphasized. (24 ref)—*R. Tomasko*.

5314. Huber, Norman A. & Danahy, Susan. (VA Hosp, Knoxville, IA) Use of the MMPI in predicting completion and evaluating changes in a long-term alcoholism treatment program. *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1230-1237.—Administered the MMPI to 104 male 23-75 yr old veterans admitted to a 90-day alcoholism treatment program. Those who completed the program were retested before discharge. Completers differed significantly from noncompleters on the *Pd* scale. Although responses on most MMPI scales indicated improvement after treatment, those on the MacAndrew Alcoholism Scale were not affected. Neither the MacAndrew nor the Unitary Alcoholism Scale differentiated between completers and noncompleters. —*Journal abstract*.

5315. Karp, Elaine G. (George Washington U) Narcotic addicts: Personality, treatment and outcome. *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 414-415.

5317. Lal, Samarthji & de la Vega, Charles E. (Queen Mary Veteran's Hosp, Montreal, Canada) Apomorphine and psychopathology. *Journal of Neurology, Neurosurgery & Psychiatry*, 1975(Jul), Vol 38(7), 722-726. 40 males

(mean age range, 48-53 yrs), mainly alcoholics, were administered either the dopamine receptor agonist, apomorphine HCl (1 mg), or distilled water subcutaneously 3 times a day for 14 days in a double blind study. None of the Ss developed an endogenous depression or schizophrenic symptoms. Scores on the Hamilton Rating Scale for Depression, Zung Self-Rating Scale, and Brief Psychiatric Rating Scale showed improvement with both apomorphine and placebo. There were no significant differences between the 2 treatments on these scales. A significant incidence of spontaneous penile erections occurred after apomorphine treatment. Both treatments eliminated subjective craving for alcohol. Acute administration of apomorphine had no effect on psychomotor retardation or depressed mood in 2 patients with endogenous depression. (30 ref)—*Journal abstract*.

5318. Marcus, Jay B. (International Meditation Society, New York, NY) Transcendental meditation: Consciousness expansion as a rehabilitation technique. *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 169-179.—Discusses underlying discontent characteristics of drug abusers and suggests ways transcendental meditation (TM) may alleviate such discontents. TM is related to consciousness expansion, and physiological changes occurring during TM are described. Research findings on TM and drug use are summarized, and components of a TM treatment program outlined. TM is compared with other treatment methods, and its effect on drug abusers is seen as an indirect result of its focus on the overall development of the individual. (30 ref)—*R. Tomasko*.

5319. McArdle, Judy A. (U Illinois, Urbana-Champaign) Positive and negative communications and subsequent attitude and behavior change in alcoholics. *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 877.

5320. McCabe, O. Lee. (Maryland Dept of Health & Mental Hygiene, Psychiatric Research Ctr, Baltimore) Heroin maintenance: An assessment of its potential role in the rehabilitation of chronic heroin users. *Drug Forum*, 1975, Vol 4(2), 95-106.—Asks the question, might the legal, supervised administration of heroin be an effective approach to rehabilitating the chronic user of opioid drugs? The potential benefits and liabilities of the approach are extrapolated from experiences provided by the prototype British system and the more recent methadone maintenance approach. The function that heroin maintenance might serve relative to other addiction treatment modalities is discussed.—*Journal abstract*.

5321. Mosher, Vaughn; Davis, John; Mulligan, David & Iber, Frank L. (Baltimore VA Hosp, MD) Comparison of outcome in a 9-day and 30-day alcoholism treatment program. *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1277-1281.—At 3 and 6 mo after discharge no differences in abstinence rates were found between 105 patients who completed a 9-day inpatient alcoholism treatment program and 95 who participated in a 30-day treatment program.

5322. Orford, Jim et al. Self-reported coping behavior of wives of alcoholics and its association with drinking outcome. *Journal of Studies on Alcohol*, 1975(Sep), Vol 36(9), 1254-1267.—Administered a coping-with-drinking questionnaire to the 19-60 yr old wives of 100 males

referred to the outpatient department of a psychiatric hospital because of a suspected drinking problem. Other measures included evaluations of husband's treatment outcome, husband's job status, the Neuroticism scale of the Eysenck Personality Inventory, a 10-item symptom scale, and a 10-item hardship scale. Results indicate that high-frequency coping behavior is associated with a relatively poor treatment outcome, whatever the nature of the coping behavior used. The coping components which were most uniformly associated with a poor prognosis were those that suggested a withdrawal or disengagement from the marital bond (e.g., avoidance, feeling frightened, or seeking outside help). Husband's job status was significantly negatively correlated with symptoms, hardship, and wife's neuroticism. (16 ref)—*L. Gorsey.*

5323. Peterson, James F.; Trotter, Ann B. & Uhlig, George E. (Racine-A-Ctr, WI) **A comparison of heroin addicts treated by detoxification and methadone maintenance.** *Drug Forum*, 1975, Vol 4(2), 123-129.—Reports results of a study conducted to examine the efficacy of defining the primary criterion of patient eligibility for methadone maintenance as a 2-yr demonstrated drug addiction. Of 35 variables examined, the 2 treatment groups differed significantly on only 3: marital status, Factor Q3 of the 16 PF, and availability of written documentation of addiction.

5324. Pucel, John C. (U Missouri, Columbia) **Systematic desensitization and the reduction of social anxiety: The efficacy of using such a treatment technique as part of an alcoholic treatment program.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1283.

5325. Raynes, Anthony E.; Patch, Vernon D. & Cohen, Miriam. (Boston Drug Treatment Program, City Hosp, MA) **Comparison of opiate and polydrug abusers in treatment.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 135-141.—Studied the effect of provision of treatment facilities upon the demand for their utilization. 66 consecutive admissions to a polydrug abuser ward were compared to 200 consecutive admissions to the opiate abuser ward. The Zung Self-Rating Depression Scale was administered to subgroups of each category. Results indicate more similarities than differences in the 2 populations. Polydrug users were more depressed than heroin users and appeared to be using drugs more to treat their own emotional disorders than to respond to peer group pressure.—*R. Tomasko.*

5326. Schnoll, Sidney H. & Bruce, William H. (HELP, Philadelphia, PA) **Polydrug abuse as seen and treated in a free clinic.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 229-236.—Discusses a treatment program oriented around emerging community needs rather than around types of drug abuse. Clinical impressions of Philadelphia's HELP Inc. client population are presented, along with patterns of drug use. Treatment approaches include social work counseling; legal, medical, and dental services; and several therapeutic interventions (body therapies, ego-oriented psychotherapy, and psychoanalysis). The clinic's experience suggests it is useful to distinguish between the medical and the psychological treatment of the polydrug abuser.—*R. Tomasko.*

5327. Wolfgang, Donald G. (U Missouri, Columbia) **A videotape microtreatment program for alcoholics.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1288.

(Wynne Assoc, Washington, DC) **Slightly new strokes for different folks: A national overview of non-opiate treatment facilities.** *Journal of Psychedelic Drugs*, 1975(Apr-Jun), Vol 7(2), 237-249.—Presents a classification scheme of US nonopiate treatment programs. Changing use patterns and client populations are also noted.

PROFESSIONAL PERSONNEL AND PROFESSIONAL ISSUES

5329. Ansel, Edward L. (U Florida) **Correlates of volunteer performance in a suicide prevention/crisis intervention service.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 402.

5330. Arkansas Rehabilitation Research & Training Center. **New developments in rehabilitation and counselor education.** *Rehabilitation Counseling Bulletin*, 1975(Sep), Vol 19(1), 330-343.—8 brief articles describe: the Arkansas model for translating research into practice; a comprehensive inservice case management training package; an interpersonal counselor skills training package designed to facilitate client self-exploration; a research training manual consisting of 10 units covering topics in the interpretation of rehabilitation research; a group counseling approach; a description of a physical fitness training package to improve the health of clients; the Arkansas Continuing Education Program, which has focused on upgrading counselor knowledge and skills in dealing with 4 severe disability groups; and a new modeling strategy for training counselors to be more effective helping professionals.—*Journal abstract.*

5331. Bashook, Philip G.; Sandlow, Leslie J. & Hammett, William H. **Teaching problem-oriented recording: A systematic approach.** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 959-964.—Conducted a study with 2nd-yr medical students to determine the relative effectiveness of self-instruction and workshop formats and case materials in teaching students to use problem-oriented medical records (POMR). Results show that the 2 types of format were equally effective in teaching students to convert a case to a POMR design.

5332. Becher, Werner. (Universitätsklinik, Frankfurt, W Germany) **[Clinical pastoral education in the Federal Republic of Germany.]** (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Oct), Vol 5(5), 320-328.—Discusses the intensification of clinical pastoral education and some of the factors that have effected this intensification. Clinical pastoral duties occupy a high rank among the duties of a pastor. Despite the recent development of clinical pastoral education, it is argued that further progress has to be made in theory and practice (e.g., examination of the relationship between clinical pastoral care and psychotherapy).—*M. J. Stanford.*

5333. Beker, Jerome. (Child Care Quarterly, Spring Valley, NY) **Development of a professional identity for the child care worker.** *Child Welfare*, 1975(Jun), Vol

54(6), 421-431.—Discusses problems affecting the professionalization of child care, including professional boundaries, autonomy or affiliation with existing fields, the legitimacy of present practitioners, and role differentiation.

5334. Berman, Alan L. (American U) **Group psychotherapy training: Issues and models.** *Small Group Behavior*, 1975(Aug), Vol 6(3), 325-344.—Reviews the models available in the training of group psychotherapists and discusses problems related to these models. Models discussed include the didactic seminar, the simulation seminar, process and therapy groups, observation, supervised in vivo therapist, and the clinical case conference. Practical and ethical problems of each model are described, and educators are urged to be aware of the ramifications of models employed.—J. Rubin.

5335. Bloch, Sidney; Brown, Stephanie; Davis, Kenneth & Dishotsky, Norman. (Stanford U, Medical Ctr) **The use of a written summary in group psychotherapy supervision.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1055-1057.—Describes the application of a summary written by trainee cotherapists in their supervision. It was found that the summary, which is supplied to the patients as well as to the supervisor, serves several functions that contribute to improved quality of clinical supervision and training of group therapists.

5336. Blumetti, Anthony E. (U Florida) **A test of clinical versus actuarial prediction: A consideration of accuracy and cognitive functioning.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 405-406.

5337. Bradshaw, P. W. (U Otago, Dunedin, New Zealand) **Loosening the marital bonds of clinical psychology: Psychologists in the general hospital.** *New Zealand Psychologist*, 1975(Apr), Vol 4(1), 10-18.—Argues that clinical psychologists should work harder at becoming applied scientists who happen to be employed by the Department of Health as opposed to any other public service agency. An example of relatively virgin territory awaiting the attractions of such a breed of scientists is the general hospital, and an attempt is made to describe various activities in which a general hospital psychologist might become involved. Suggestions are offered regarding tactics for developing applied psychology in the context of the general hospital. (37 ref) *Journal abstract.*

5338. Brook, Peter. (Warley Hosp. Brentwood, England) **Training opportunities for overseas psychiatrists.** *British Journal of Psychiatry*, 1975(Aug), Vol 127, 179-184.—Reviews the literature relating to the training opportunities offered to overseas graduates in Britain and the US. It is concluded that, although overseas trainees in psychiatry do not see themselves at a great disadvantage, the fact that the great majority are working in nonteaching hospitals means, by implication, that overall their training is not so good as that of home graduates. (23 ref)

(Acid Rescue, St Louis, MO) **Can professionals work in the counterculture?** *Social Work*, 1975(Sep), Vol 20(5), 400-401.—Discusses the role of professionals with regard to counter-culture institutions, giving special attention to drug abuse programs.

5340. Burdman, GERAL D. (U Oregon) **An analysis of attitudes of graduate rehabilitation counseling students and gerontology trainees concerning gerontology and older people.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3052.

5341. Chenault, Joann. (Southern Illinois U) **Human services education and practice: An organic model.** *Community Mental Health Journal, Monograph Series*, 1975, No 9, 5-69.—Illustrates a systematic approach which is applicable to the development of human services training programs in education, health, manpower, government, religion, communications, transportation, and social delivery systems of all kinds. A single, unified scheme which covers the educational institution, internships and field work, and in-service training, avoids isolation, and cuts across different systems, is described. All occupational levels, from paraprofessionals to policy makers and administrators are dealt with. Both philosophy and practice are discussed. The model is applicable from local to national levels within and across human service systems and programs. (317 ref) —H. Silverman.

5342. Cook, Peter A. (U Tennessee) **A proposal for a self-awareness experience for future helping professionals.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2381-2382.

5343. Counts, Alfred B. (U Maryland) **Psychiatric nurses' preferences for patient and specified patient behavior in the context of Graves' developmental levels.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 870.

5344. Dahm, Karl-Wilhelm. [Humanistic psychology and group dynamic processes in clinical pastoral education in the US.] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Oct), Vol 5(5), 333-339.—Discusses differences in humanistic psychology and group processes in clinical pastoral education in the US and Germany, where there is less emphasis on the church and its practical problems. Group dynamic processes have received different acceptance and discussion in the US and Germany. American students have displayed great interest in applied psychology. Although pastoral counseling has changed into the concept of human growth, there still exists a struggle between the many methods and application of human psychology and group dynamics in the pastoral sector.—M. J. Stanford.

5345. De Vita, Victor R. **Use of indexes of communication and discrimination as selective criteria in a graduate degree program in counseling for the purpose of more accurately identifying those applicants with the most potential for developing into effective counselors.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3055.

5346. Dentici, Ornella A. (U Pavia, Inst of Psychology, Italy) **Clinical child psychology in Italy.** *Journal of Clinical Child Psychology*, 1975(Sum), Vol 4(2), 39-42.—Reports on the history and present status of clinical child psychology in Italy. The clinical and education roles available, and the current training opportunities, are described.—W. V. Adams.

5347. Dooley, David. (U California, Program in Social Ecology, Irvine) **Effect of automated reflection response training on the group assessment of interpersonal**

traits. *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 535-541.—Assigned applicants for a paraprofessional counselor training program to 1 of 2 training conditions: brief, leaderless reflection training or a simultaneous control experience. 94 women and 17 men with an average age of 44 yrs participated. Ss then participated in Goodman's Group Assessment of Interpersonal Traits (GAIT), which produces a series of brief discloser-understander dyadic interactions. 2 group order conditions were created to test for modeling by drawing the 1st GAIT understander from either the reflection or the control condition. Verbal behavior on the GAIT was not affected by order. Reflection-trained Ss used more reflections but fewer questions and disclosures and received higher participant GAIT ratings than controls. A reflection preference pretest, subsequent reflection usage, and global GAIT ratings were all significantly intercorrelated. Implications for training and selecting nonprofessional counselors are discussed.—*Journal abstract.*

5348. Eigenberg, Charles R. (U Cincinnati) **Empathy training: Programmed vs. individually supervised approaches.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1744-1745.

5349. Engin, Ann W. & Klein, Illane R. (Ohio State U, Coll of Education) **The effectiveness of a simulation technique as an integral part of a school psychology training program.** *Journal of School Psychology*, 1975(Fal), Vol 13(3), 171-184.—Employed a modified Solomon design to study the effects of a school psychology simulation package on the enacted and written response of students. 52 school psychology students from 5 training programs enrolled in the last quarter of school psychology training were divided into 2 groups. The experimental group ($n = 20$) received the simulation experience; the control group ($n = 32$) did not. Results indicate the superiority of the experimental group and suggest that simulation as an integral part of a school psychology training program is an effective method of instruction. Pretesting in combination with the simulation training improved posttest performance more than simulation training alone.—*Journal abstract.*

5350. Evans, Doris A.; Jones, Paul K.; Wortman, Richard A. & Jackson, Edgar B. (Case Western Reserve U, Medical School) **Traditional criteria as predictors of minority student success in medical school.** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 934-939.—Presents data from 43 minority medical students which show that traditional criteria (e.g., undergraduate GPA and the Medical College Admission Test) and the quality of the undergraduate college attended are of some statistical value in predicting success in the preclinical years of medical school among accepted students from underrepresented minority groups. Of these criteria, the selectivity of the undergraduate college attended had the greatest predictive value.

5351. Faber, Herje. [**Pastoral learning processes in Western Europe.**] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Oct), Vol 5(5), 340-344.—Maintains that while in the US clinical pastoral training is an established fact, on the European continent there are few centers, publications, or workers that focus on the topic; yet there are manifestations which can be considered a

trend. This, however, cannot be compared with the clinical pastoral education in the US. On the whole, in Europe there is more need for formation of theories and systematic work.—*M. J. Stanford.*

5352. Geist, Glen O.; Hershenson, David B. & Hafer, Marilyn. (Illinois Inst of Technology, Chicago) **Rehabilitation counselor training: A program evaluation.** *Rehabilitation Counseling Bulletin*, 1975(Sep), Vol 19(1), 305-314.—Notes that with the profession of rehabilitation counseling presently focusing on such major issues as ethics, certification, and accreditation, accountability becomes a key word. A study was conducted to meet the accountability issue for 1 graduate training program. The program was investigated in 3 areas of outcome, using data concerning 37 responding graduates. The 3 areas entailed general background information on the graduates, their satisfaction with their training and current employment, and supervisors' reports on satisfactoriness of the graduates' functioning on the job. Discussion of results concerns attraction and selection of students, processing the students through the program, and the eventual product produced by the program.—*Journal abstract.*

5354. Godejohn, Carol J.; Taylor, Jacqueline; Muhlenkamp, Ann F. & Blaesser, Willard. **Effect of simulation gaming on attitudes toward mental illness.** *Nursing Research*, 1975(Sep-Oct), Vol 24(5), 367-370.—60 nursing students were administered the Opinions about Mental Illness scale. Ss whose scores fell above the median on authoritarianism and social restrictiveness were randomly assigned to experimental and control groups. Experimental Ss' posttest scores on authoritarianism and social restrictiveness after the gaming, decreased significantly ($p < .001$), whereas the control groups' scores on these 2 factors remained essentially the same. Results are interpreted as strong evidence that simulation gaming is an effective means of changing nursing students' attitudes toward mental illness. (18 ref)—*Journal abstract.*

5355. Goff, Joseph H. (North Texas State U) **The image of nursing and job satisfaction of United States Air Force nurses.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1607-1608.

5356. Goldenberg, Irene; Stier, Serena & Preston, Terry A. (U California, Children's Div Neuropsychiatric Inst, Los Angeles) **The use of multiple family marathon as a teaching device.** *Journal of Marriage & Family Counseling*, 1975(Oct), Vol 1(4), 343-349.—Describes procedures used in the family marathon, as well as how the concept stimulates increased focus on issues common to family therapy and broadens the experience of the students. The effects of the marathon on the students' views of their therapy families and of themselves as family therapists are explored.

5357. Gough, Harrison G. & Hall, Wallace B. (U California, Inst of Personality Assessment & Research, Berkeley) **An attempt to predict graduation from medical school.** *Journal of Medical Education*, 1975(Oct),

- Vol 50(10), 940-950.—Examined personality inventory, cognitive, and application data for 1,014 medical school graduates and 57 academic and nonacademic dropouts. The best predictor of a graduation vs dropout hierarchy was given by a 6-variable combination, including scores on the Quantitative Ability subtest of the Medical College Admission Test and premedical grades for the last 2 terms, with positive weightings; personality inventory scales for status potential, socialization, and communality, also with positive weightings; and a personality scale for conformist achievement drive, weighted negatively. (17 ref)
5358. Guttman, David; Eyster, Frances L. & Lewis, Garland. (Catholic U of America) **Improving the care of the aged through interdisciplinary efforts.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 387-392.—Describes the development of a teaching curriculum for social gerontology to enhance mutual understanding between the social work and nursing professions and to improve the care of the aged. Students exposed to the interdisciplinary approach not only learned to work well with each other but exhibited improved perceptions of the aged and interest in careers devoted to services to the aged.
5359. Hall, Robert P. (Northwestern U) **An examination of the effect of video tape playback in a counseling practicum which includes group counseling.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3061.
5360. Hands, Donald R. (State U New York, Buffalo) **Values and counseling: The relationship between counselor moral value judgments and level of facilitation.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3061.
5361. Held, Mark L. & Zimet, Carl N. (U Colorado, Medical School, Denver) **A longitudinal study of medical specialty choice and certainty level.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1044-1051.—Questionnaire results indicate that students were highly uncertain of their choices at the beginning of medical school but became very certain by graduation. Most switched specialties between freshman and senior years, with the least specialty switching occurring with internal medicine and the most with psychiatry. Increasing numbers of students chose internal medicine over the 4 yrs.
5362. Hickey, Tom. (Pennsylvania State U, Coll of Human Development, Gerontology Ctr) **Simulating age-related sensory impairments for practitioner education.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 457-463.—Describes a program which applied research on sensory impairment to the creation of simulation techniques for giving trainees a realistic insight into the difficulties of coping with distorted environmental feedback that can result from sight and hearing losses. Data on the program's design and an evaluation of its effectiveness are presented, and implications for short-term training of gerontological workers are discussed.
5363. Huxeth, David H. (U Oregon) **A descriptive analysis of an in-service counselor training program for ministers.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3062.
5364. Johnson, Davis G. & Sedlacek, William E. (Association of American Medical Colleges, Div of Student Studies, Washington, DC) **Retention by sex and race of 1968-1972 U.S. medical school entrants.** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 925-933.—Reports a national study of new entrants in the 1968 through 1972 1st-yr classes of US medical schools. Recent attrition rates are only about half those of the 9% reported in the last national study of 1949-1958 entrants. Although the retention rate for women and for underrepresented minorities is still slightly less than that for White males, the gap appears to be narrowing. (26 ref)
5365. Kimball, Chase P. **The clinical case method in teaching comprehensive approaches to illness behavior.** *Psychosomatic Medicine*, 1975(Sep-Oct), Vol 37(5), 454-467.—Describes the rationale for a method of teaching consultative skills to psychiatric residents, which uses a case presentation to elicit student associations and questions about various diagnostic, behavioral, and treatment issues. A complete example of such a presentation is provided.
5366. Kristal, Helen F. & Tucker, Ford. (U Rochester, Medical Ctr) **Managing child abuse cases.** *Social Work*, 1975(Sep), Vol 20(5), 392-395.—Describes a procedure coordinated by a social worker who works with a physician and helps train professionals from several disciplines. (29 ref)
5367. Kuna, Daniel J. (Bowling Green State U) **Lecturing, reading, and modeling in counselor restatement training.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 542-546.—In this study with a total of 92 Caucasian female counselor trainees, Ss' verbal behavior change was viewed as being dependent on the training program components, i.e., verbal, written, and model presentations. Specific hypotheses were derived concerning the quantitative production of the target verbal behavior given the training program design. Ss were randomly assigned to 1 of 4 experimental groups: (a) control group; (b) lecture presentation; (c) lecture and reading presentation; and (d) lecture, reading, and model presentation. After exposure to the training program detailing restatement, Ss responded to 10 audiorecorded client statements. One-way analyses of variance demonstrated that the lecture presentation produced a significant increase of target verbal behavior, as did the addition of reading. Model presentation after the 2 symbolic model presentations did not cause a significant increase in production. Implications of symbolic modeling for counselor training and research are discussed. (15 ref)—*Journal abstract*.
5368. LaCrosse, Michael B. (Ohio State U) **Nonverbal behavior and perceived counselor attractiveness and persuasiveness.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 563-566.—Investigated the perception of counselor attractiveness and persuasiveness through the expression of nonverbal behavior. Ss were 20 male and 20 female psychology undergraduates. 2 male and female counselors were trained to portray "affiliative" manner and "unaffiliative" manner. In a repeated measures design, Ss saw 4 different counselors and then rated them on scales measuring perceived attractiveness and persuasiveness. Results indicate that counselors in the affiliative manner condition were perceived as significantly more attractive and persuasive than counselors in the unaffiliative condition. Ss attributed greater

attractiveness and persuasiveness to the same nonverbal cues encoded into the roles. (15 ref)—*Journal abstract.*

5369. Lippert, Frederick G. et al. **A psychomotor skills course for orthopedic residents.** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 982-983.—Describes the development and evaluation of a 1-semester course in motor skills for orthopedic residents which is designed to teach operative techniques, instrument usage, and safety precautions.

5370. Maloney, Dennis M.; Phillips, Elery L.; Flisen, Dean L. & Wolf, Montrose M. **Training techniques for staff in group homes for juvenile offenders: An analysis.** *Criminal Justice & Behavior*, 1975(Sep), Vol 2(3), 195-216.—Investigated the effects of instructions, feedback, and modeling as training methods upon selected interpersonal parenting behaviors of 6 "teaching-parents" in 3 group homes for 12-16 yr old delinquents. The homes were based on the "Teaching-Family" or "Achievement Place" model. The use of a multiple-baseline design indicated that while instructions plus feedback were sufficient to teach some behaviors to some teaching-parents, the addition of model-imitation was generally more successful. The importance of modeling in training correctional staff is discussed. (3 p ref)—*Journal abstract.*

5371. Matulay, K. [The history of the International League Against Epilepsy.] (Slovak) *Československá Psychiatrie*, 1974(Aug), Vol 70(4), 263-265.—Traces the history of the League, founded in 1909 in Budapest, and describes some of its activities.—*V. Fischmann.*

5372. Mayer, John E. & Rosenblatt, Aaron. (Albert Einstein Coll of Medicine, Yeshiva U) **Encounters with danger: Social workers in the ghetto.** *Sociology of Work & Occupations*, 1975(Aug), Vol 2(3), 227-245.—Describes some of the sociopsychological influences which induced and later enabled a group of 20 social workers to expose themselves to physical harm. Topics discussed include the arousal of fear, self-reported motivations, coping effects, and structural influences. The issue of how organizations ensure that undesirable and dangerous positions are filled is also considered. (27 ref)—*Journal abstract.*

5373. McClelland, Charles Q. & Vanek, Eugenia P. (University Hosp of Cleveland, Pediatric Emergency Ward, OH) **The development of an education program in the pediatric emergency department.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1052-1058.—Presents a model educational program for 3rd-yr pediatric clinical clerks and house officers. Learning is defined in 3 areas: patient management, behavioral care needs, and hospital and community health care. Information on educational goals and objectives, learning experiences derived from them, and methods for evaluation of learning is provided. (30 ref)

5374. McDonald, M. Irene. (Catholic U of America) **A retrospective study of the adaptation of professional nurses to hospital practice using Erikson's concept of the confirming adult.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1608-1609.

5375. McIntire, David D. (West Virginia U) **Trainee situational anxiety as a determinant of appropriate supervision style on the learning of empathy.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1729.

5376. Mendell, David. (Doctor's Ctr, Houston, TX) **A paratherapeutic system: Southwest group therapy model.** *International Journal of Group Psychotherapy*, 1975, 291-304.—Discusses the development of the Southwestern Group Psychotherapy Society as a system engaged in the teaching of group psychotherapeutic skills using a group therapy process. A general systems theory view is used to validate this paratherapeutic approach. The use of individually oriented, didactic modes of communications and organization at the national association level is contrasted with the Society's focus on more experiential and cognitive modes. Isomorphies between psychotherapy groups and the paratherapeutic mode are noted.—*R. Tomasko.*

5377. Menne, Joy M. (Central Iowa Assoc, Cambridge) **A comprehensive set of counselor competencies.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 547-553.—75 experienced counselors or therapists from a variety of work settings contributed statements of those competencies they believed necessary for effective face-to-face counseling. The contributed competency statements were edited and compiled into a set of 132 competencies. Each of the 132 competencies was rated for importance by 376 experienced counselors and therapists. 12 dimensions of counselor competency were defined by factor analysis of the ratings. A number of significant differences in importance were found between the ratings of 9 of the 12 dimensions by raters of different work settings, theoretical orientations, majors or degrees, years of experience, and other background categories.—*Journal abstract.*

5378. Miller, J. F. **Unnatural selection.** *AEP (Association of Educational Psychologists) Journal*, 1975(Sum), Vol 3(9), 16-18.—Suggests that the selection, training, and everyday practice of the profession of school psychologist should aim at promoting self-awareness among its members, instead of equipping them only with more statistics and techniques of measurement.—*I. L. Zimmerman.*

5379. Moore, Martha H. (West Virginia U) **The modification of sex-role stereotypes held by counselor trainees.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3066.

5380. Oksanen, Ilkka A. (Wayne State U) **The influence of training in the dimensions of empathy, respect, concreteness, and genuineness on counselor effectiveness.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3067.

5381. Perez, Francisco I. (U Florida) **An experimental analysis of clinical judgment.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 421.

5382. Reubin, Richard H. (U California, Los Angeles) **A study of the factors involved in the decision to treat suicidal clients.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 296-297.

5383. Rockowitz, Ruth J. & Stebbins, Winifred C. (U Rochester, Medical & Dental Schools) **School learning and adjustment: Interdisciplinary training for pediatricians.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1063-1064.—Describes a school health program designed to assist the medical trainee in gaining competence as a private practitioner or consulting school

physician. Most of the training is school- rather than hospital-based, and a team approach is stressed.

5384. Schnaitter, Roger. (Illinois Wesleyan U) **The decline of reason.** *International Journal of Cognitive Psychology*, 1974-1975, Vol 3(1), 79-81.—Disagrees with the notion that the logical and methodological criteria for the evaluation of scientific research should be disregarded in cases where the researcher disagrees with the political or social implications of the research. The use of different criteria to assess the adequacy of scientific and political argumentation is noted. Science is considered to exist in a political and social context, and the importance of being sensitive to the influence of the context on scientific research is stressed. Political considerations can play a valuable role by signaling areas where research outcomes may be biased. The example of IQ research is presented.—*R. Tomasko*.

5385. Schoen, Stephen J. (State U New York, Buffalo) **Characteristics of rehabilitation counselor training program graduates and their relationship to eventual vocational selection.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3070-3071.

5386. Shapiro, Rodney J. (U Rochester, Medical School, Family & Marriage Clinic) **Some implications of training psychiatric nurses in family therapy.** *Journal of Marriage & Family Counseling*, 1975(Oct), Vol 1(4), 323-330.—Because few psychiatric nurses applied family therapy training skills in their work settings, the situation was analyzed as a "family" problem, the nurses being members of the larger social system comprising the psychiatry department. Strategies adopted to modify aspects of the system facilitated positive contributions by the nurses.

5387. Shore, James H. (U Oregon, Medical School) **Community psychiatry in Oregon: State participation.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1067-1068.—Describes a psychiatric residency program stressing the importance of interdisciplinary relationships in community mental health training. 18 categories of training are provided, and community placement experience is required.

5388. Skuja, Andris T.; Schneidmuhl, A. M. & Mandell, Wallace. (California School of Professional Psychology, San Diego) **Alcoholism counselor trainees: Some changes in job related functioning following training.** *Journal of Drug Education*, 1975, Vol 5(2), 151-157.—41 alcoholism counselor trainees were evaluated on changes in 5 parameters of job related functioning by their supervisors after an intense training program. A rating scale, completed by agency supervisors at 7- and 14-wk intervals following training, indicated positive changes in trainees' clinical competence, utilization in alcoholism work, personal involvement in alcoholism work, degree of assigned responsibilities, and overall job performance, relative to pretraining.

5389. Turton, Frederick E. & Marine, William M. (Emory U, Medical School) **A multidisciplinary introduction to community medicine and behavioral science.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1065-1067.—Describes a freshman behavioral science course which studies the professional role of the physician, the US health care system, the social context of health and disease, psychiatry, the gathering of family

and social histories, and epidemiology. Each student is assigned a patient and his family to study for a 6-mo period.

5390. Vogelson, Andrew R. (Temple U) **Empathic understanding and stereotype accuracy of rehabilitation counselors as related to education and experience.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3074-3075.

5391. Wallace, Warren G.; Horan, John J.; Baker, Stanley B. & Hudson, George R. **Incremental effects of modeling and performance feedback in teaching decision-making counseling.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 570-572.—In a replicated study involving 54 randomly assigned counselor trainees, 3 cumulative methods of teaching decision-making counseling were compared (a traditional method, a method incorporating a filmed instructional model, and a method featuring several microcounseling components). In both the original study and in the replication the latter method was found to be significantly more effective than either of the former methods in promoting student acquisition of decision-making counseling skills. Incorporation of a filmed instructional model did not significantly improve the traditional method.—*Journal abstract*.

5392. Wallston, Kenneth A. & Weitz, Lawrence J. (Vanderbilt U) **Measurement of the core dimensions of helping.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 567-569.—Examined the intercorrelations of 4 instruments (3 self-report and 1 behavioral) at 2 points in time (before and after a course in counseling psychology). Ss were 56 college students. The test-retest reliabilities of all instruments were highly significant, but only on the behavioral test of empathic communication was there a change over time. On both administrations, the self-report empathy measure correlated positively with a self-report measure of respect (i.e., acceptance of others) and negatively with a self-report of genuineness (i.e., refusal to play roles other than being oneself), but none of the self-report measures had significant 1st-order correlations with the behavioral measure of ability to communicate empathically. On the posttest, however, the 2 measures of empathy were correlated when the other self-report measures were partialled out.—*Journal abstract*.

5393. Weinberg, Jon R. & Morse, Robert M. **Understanding alcoholism: A test for use in medical education.** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 978-979.—Describes a test entitled "Understanding Alcoholism," which is designed as an educational measurement instrument for use in physician training. Data on the development, administration, and preliminary validity and reliability assessments of the 42-item true-false measure are presented, along with descriptions of sample items.

5394. Wood, Christopher H. (African Medical & Research Foundation, Nairobi, Kenya) **Staffing the health services.** *Teachers College Record*, 1975(May), Vol 76(4), 617-623.—Discusses the improvement and expansion of training programs for paramedical (i.e., nonphysician and non-registered nurse) personnel in developing countries. It is noted that such personnel are needed to lessen the combined interactive effects of

poverty, ignorance, and disease. Persons are needed who have a good understanding of medicine and who also want to work in the community. This opens up the important questions of development of teaching manuals, job satisfaction, and continuing education. For example, financial reward and prestige has to be sufficiently close to that of physicians and nurses so that the paramedic would not eventually opt out of basic community service in order to move up in the medical hierarchy. It is suggested that continuing educationists ought to work on developing self-learning techniques that the worker could use in the field.—*L. Green.*

5395. Yager, Joel. (U California, Medical School, Los Angeles) **The clinical experience worksheet.** *Journal of Medical Education*, 1975(Nov), Vol 50(11), 1061-1062.—Describes a 1-page form that records and monitors clinical experiences in a psychiatric residency program. The form is used monthly to record patient data, 12 possible treatment modes, and 5 types of discontinuation. Diagnostic information is considered separately from "major problems."

EDUCATIONAL PSYCHOLOGY

5396. Adeyinka, A. A. (U Ibadan, Nigeria) **Current problems of educational development in Nigeria.** *Journal of Negro Education*, 1975(Spr), Vol 44(2), 177-183.—Discusses the need for restructuring education in Nigeria so that school achievement would be more attuned to the aspirations and needs of Nigerians. Major problems concern (a) eliminating educational-opportunity differentials between Nigerian regions; (b) gearing curricula to national needs for manpower; (c) financing new curricula; and (d) maintaining, training, and securing an adequate quantity of qualified teachers. It is advocated that the 1 national educational system subsume the 12 state systems for increased efficiency and uniformity. Equipment needs are noted. Criticisms, recommendations, and activities of certain committees or organizations are included in the overview of the history and nature of Nigerian education.—*B. M. Anthony.*

5397. Fredriksson, L. & Gestrelus, K. **Lifelong learning in Swedish curricula.** *Didaktometry*, 1975(Aug), No 48, 128 p.—Describes the results in Sweden of a UNESCO research project which was also carried on in Rumania and Japan. Lifelong learning is defined, and criteria of conditions favorable to its development are described; Swedish curricula in the primary and secondary schools appear to meet most of the criteria. However, it is noted that no empirical research has been done to establish how well the curricula are actually applied. (2 p ref)

5398. Goodrow, Bruce A. (Western Kentucky U) **Limiting factors in reducing participation in older adult learning opportunities.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 418-422.—Based on the finding that personal and social constraints that reduce active participation in older adult learning experiences are related to such factors as sex, age, and previous educational level, a community based study of 268 randomly selected Ss over the age of 65 was conducted to identify limitations that

prevent older adults from taking advantage of existing or future educational programs. The 3 most prevalent were poor vision, home responsibilities, and lack of transportation. It is concluded that knowledge of such limitations should provide educational planners and program administrators with guidelines to develop more effective strategies designed to minimize restrictions and concerns of the older adult such as minimal dependence on printed materials, flexible scheduling, transportation models, and increased use of neighborhood facilities and local community resources.—*Journal abstract.*

5399. Hartley, L.; Bradshaw, P. W. & Graham, P. (U Otago, Dunedin, New Zealand) **The research subject panel at the University of Otago.** *New Zealand Psychologist*, 1975(Apr), Vol 4(1), 19-22.—Describes the purpose and formation of the Research Subject Panel at the University of Otago. The primary reason for the development of the Panel was the need to provide a representative cross-section of the population for applied research problems in the University. Details of the administration and necessary safeguards are discussed, and a brief description of a simple method of storage and retrieval of data is provided.—*Journal abstract.*

5400. Jencks, Christopher S. & Brown, Marsha D. (Harvard U) **Effects of high schools on their students.** *Harvard Educational Review*, 1975(Aug), Vol 45(3), 273-324.—Presents a detailed argument to show that earlier findings from studies of high school effectiveness have been inconclusive because "comprehensive high schools rarely have consistent effects on test scores, eventual educational attainment, or occupational status."—*C. M. Franks.*

5401. Jernryd, Elisabeth & Svensson, Gunilla. [Critical ability: A discussion of the concept and related literature.] (Swed) *Pedagogisk-Psychologiska Problem*, 1974(Dec), No 263, 72 p.—Discusses the concept of "critical ability" in relation to literature in the field as well as to teacher opinions. A survey of research on variables related to critical thinking and of suggestions concerning training and evaluation of this ability is included. (5 p ref)—*English abstract.*

5402. Luecke, Daniel F. & McGinn, Noel F. (Harvard U) **Regression analyses and education production functions: Can they be trusted?** *Harvard Educational Review*, 1975(Aug), Vol 45(3), 325-350.—Many studies purport to demonstrate that schooling has little independent influence on achievement. Questioning these results, variations of a computer simulation model were used to generate and analyze data sets similar to those used by educational researchers. Because of the casual relationships programed into the data, it is concluded that many findings of "no significant effect" may be statistical artifacts.—*C. M. Franks.*

5403. Muchinsky, Paul M. & Fitch, Mary K. (Iowa State U, Industrial Relations Ctr) **Subjective expected utility and academic preferences.** *Organizational Behavior & Human Performance*, 1975(Oct), Vol 14(2), 217-226.—10 graduate students in an interdisciplinary industrial relations program rated the relative preferability of the 6 academic areas from which they took courses, the probabilities that each academic area and the attainment of the MS degree would lead to satisfactory levels of each of 14 kinds of payoffs, and the utilities of the

payoffs. The probabilities and utilities were used to compute subjective expected utilities (SEUs) for each academic area and for the MS degree. The relative magnitudes of the SEUs associated with the 6 academic areas were correlated (mean correlation = .81) with the relative preferability for the academic areas. A systematic relationship emerged between the SEU associated with the MS degree and the SEUs associated with the 6 preferences for the academic areas.—*Journal abstract.*

5404. Peterson, David A. (U Nebraska, Coll of Public Affairs & Community Services, Omaha) **Life-span education and gerontology.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 436-441.—Discusses the distinction between life-span education and lifelong learning. Life-span education denotes a type of educational programing the focuses on the lifelong process of human development and views education as an intervention to maximize functioning. Life-span education also emphasizes a planned series of activities, while lifelong learning, which may also include a planned process of interaction, may be much less structured. The meaning, value, and uses of education throughout life is examined from the perspectives of gerontology and adult education. Content areas of life-span education (e.g., vocational preparation and development, leisure time preparation and use, and attitudes toward aging) are also outlined. (22 ref)—*L. Gorsey.*

5405. Presland, John L. (District Council, Birmingham, England) **Reply to "Behaviourism and Education"** by J. C. Quicke. *AEP (Association of Educational Psychologists) Journal*, 1975(Sum), Vol 3(9), 34-35.—Attempts to show that behavior modification can be compatible with criteria which J. C. Quicke (see PA, Vol 54:8247) himself would regard as important in judging techniques of intervention in human affairs.—*I. L. Zimmerman.*

5406. Rudvall, Göte. [Varying sizes of group and team teaching (VGT): The design of a comparative study of the upper level of the comprehensive school.] (Swed) *Pedagogisk-Psychologiska Problem*, 1975(Jun), No 272, 24 p. Presents the design of a comparative study conducted during 3 school yrs in 8 schools in the Malmö (Sweden) region, organized and built in different ways. The schools were divided in 3 groups along the dimension stability-flexibility.

5407. Smith, Jill B. (Florida State U) **The effects of observational session length, method of recording, and frequency of teacher behaviors on observational accuracy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3160.

5408. Woodruff, Diana S. & Walsh, David A. (U Southern California, Andrus Gerontology Ctr) **Research in adult learning: The individual.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 424-430.—Reviews past research in adult learning, organizing it around cognitive and noncognitive factors in performance. The need for education and learning in the middle and older years is discussed within the context of developmental tasks. Finally, behaviors which apparently improve with age are examined in relation to prerequisites for learning. (22 ref)—*Journal abstract.*

5409. Yeseldyke, James E. & Pickholtz, Herschel. (Pennsylvania State U, Ctr for Educational Diagnosis &

Remediation) **Dissertation research in school psychology: 1967-73.** *Journal of School Psychology*, 1975(Fal), Vol 13(3), 264-271.—Reports results of a categorical analysis designed to ascertain the kinds of dissertation research completed for the doctoral degree in school psychology from 1967 to 1973. Major areas of research emphasis are delineated, although trend analysis reveals no significant trends over the 7 yr period.

Educational Administration & Personnel & Training

5410. Alexander, Charles A. (Northern Illinois U) **The role conceptions of counselors in Illinois public community colleges.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-A), 1071-1072.

5411. Almase, Araceli G. (Michigan State U) **Modification of teacher behavior through an in-service biology methods course.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3173.

5412. Ames, Russell. (Purdue U, Educational Psychology Section) **Teachers' attributions of responsibility: Some unexpected nondefensive effects.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 668-676.—Studied attributional responses of 80 female undergraduates who taught a confederate (4th-grade boy) in a 3-way factorial design with 2 levels, respectively, of outcome (success or failure), importance of success (high or low), and feasibility of success (high or ambiguous). A postteaching questionnaire asking teachers to attribute responsibility and causality for the outcome and to evaluate and grade the student was analyzed using multivariate analysis of variance. Unexpectedly, it was found that Ss attributed significantly more responsibility to themselves for student failure. Student ability was the attributed cause of success. In contrast, Ss evaluated the student and situation more negatively for failure. Results suggest a theoretical distinction between attributions of responsibility and causality and also that the defensive attribution construct may need revision.—*Journal abstract.*

5413. Anderson, LaVeta; Leonard, B. Charles & Gies, Frederick J. (U Missouri, Columbia) **Cognitive growth during a professional education training program.** *Journal of Educational Research*, 1975(Oct), Vol 69(2), 61-63.—Conducted a study with 14 university teaching assistant trainees, and 27 teaching assistants and professorial staff (controls) to examine the effect of the cognitive portion of a 15-wk training program for teaching assistants and other university faculty. Results indicate that the short-term program effected a positive change in knowledge of teaching skills and processes of the teaching assistants and the professorial staff. Instruction about and participation in writing behavioral objectives, evaluation, media, verbal interaction behavior in the classroom, and microteaching sessions increased the teachers' knowledge of those concepts and made them more aware of their own contributions and behavior in the university classroom.—*Journal abstract.*

5414. Bierschenk, Bernhard. **Self-confrontation in teacher training: Student teachers assess their own video-taped micro-lessons: A follow-up study.** *Didaktometrie*, 1975(Oct), No 50, 124 p.—Reports immediate, 6-wk, and 2-yr follow-up data from a study on student teachers' assessments of their own videotaped

classroom behavior. Data on the extent to which teacher training influenced the teachers' assessments, comparisons between educational experts' evaluations and self-assessments of the teachers, and differences in classroom structural relations between teachers are presented. (30 ref)

5415. Boyette, LeGrand W. (George Washington U) **The relative importance of functions of the senior high school guidance department chairmen in Maryland.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3050-3051.

5416. Brandt, Larry J.; Hayden, Mary E. & Brophy, Jere E. (U Houston) **Teachers' attitudes and ascription of causation.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 677-682.—Investigated attitudes toward students and assignment of responsibility for student performance by 48 male and 48 female undergraduates acting as experimental teachers. Specifically, sex and locus of control of the teacher-Ss and ascribed performance and motivation of simulated students were studied for effects on teacher attitudes and assignment of responsibility for learning outcomes. Apparent student performance strongly affected both teacher attitudes and assignment of responsibility, while ascribed student motivation affected only teacher attitudes. Female Ss with internal locus of control assumed more responsibility for student performance than female Ss with external locus of control, but this expected finding was not observed in male Ss.—*Journal abstract*.

5417. Burnickas, Alfred A. (American U) **A study of the relationship between selected personal variables and the vocational need profiles of a sample of school and college counselors.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3053.

5418. Calhoun, Mary L. (Winthrop Coll, School of Education) **Teachers' causal attributions for a child's hyperactivity: Race, socioeconomic status, and typicalness.** *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 195-198.—80 teachers and teachers-in-training responded to paragraphs describing a child as hyperactive. The race, socioeconomic status of the child, and the typicalness of the child's hyperactivity were systematically varied. Responses were affected by the described typicalness but not by the described race or sex.—*Journal abstract*.

5419. Carlson, Waymann C. (U California, Los Angeles) **The relationship of student teacher's religiosity to personality and classroom behavior.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3169-3170.

5420. Carranza, Elihu. (Evergreen Valley Coll, San Jose, CA) **The impact of teacher life changes and performance on student dropouts.** *Educational Research*, 1975(Feb), Vol 17(2), 122-127.—Conducted a study to assess the relation between the number of dropouts and the magnitude of teacher life changes in conjunction with selected teacher performance variables in terms of pair-wise and multiple correlation procedures. Ss were 110 high school teachers. Findings support the thesis that the selected teacher performance variables taken in conjunction with teacher life changes and the number of student dropouts are significantly associated. (18 ref)—*Journal abstract*.

5421. Carroll, H. C. (University Coll, Swansea, Wales) **The four year integrated approach to training educational psychologists.** *AEP (Association of Educational Psychologists) Journal*, 1975(Sum), Vol 3(9), 9-13.—Evaluates the effectiveness of the 1st 4-yr postgraduate integrated course of training for educational psychologists in Great Britain by comparing questionnaire responses received from past course members with responses given by those who pursued only the Diploma in Educational Psychology, a 1-yr course. Results can be useful to those devising similar courses, by revealing weaknesses as well as strengths, thus allowing appropriate improvements to be made.—*I. L. Zimmerman*.

5422. Carter, Lonnie T. (Marquette U) **A structured human relations program for teachers: An experiment in classroom management.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2380.

5423. Cortis, Gerald A. (U Birmingham, School of Education, England) **The structure of teacher's behavioural preferences.** *Educational Studies*, 1975(Mar), Vol 1(1), 55-62.—After 8 yrs of teaching, 162 teachers completed standardized measure by G. G. Stern et al which asked them to express preferences for various aspects of behavior connected with teaching. Responses were factor analyzed and split into groupings of primary and secondary teachers and the distributions on each item compared. The factor analysis grouped behavioral preferences in 4 distinct areas—involvement with children, professional orientation-identification, relationships with senior staff, and attachment to home and outside interests. 63 of the 100 comparisons between primary and secondary teachers reached significance. Implications of the data are discussed and the obtained factor structure is compared with the dimensions posited by the original test constructors.—*Journal summary*.

5430. Fritzell, Christer. [The teacher's occupational functions: Evaluations at different levels of description.] (Swed) *Pedagogisk-Psykologiska Problem*, 1975(Jun), No 273, 47 p.—Used demands and expectations made on class and teachers as variables in 3 sections of a questionnaire. The variables are described at different levels of abstraction. Some 750 school-leaders and teacher-trainers evaluated the variables in relation to the importance for the teacher's occupation and to the adequacy of present day teacher education in covering the contents of the variables. Results vary according to levels of description, and some comments are made on this fact, indicating possible conflicts between relatively abstract formulations and the more practically anchored situation with reference to the teacher's occupation. 5434. Groves, David L.; Smith, David W.; Stumbo, Donald A. & Cauley, Virgil B. (Virginia Polytechnic Inst & State U) **Forest resource inservice education for science teachers.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 144-150.—Tested a lecture-demonstration approach to individualized teacher instruction, using a pre- and posttest evaluation design to assess changes of knowledge, opinion, and teaching methods. The approach produced significant changes in the experimental group of 13 science teachers; the control group of 14 Ss did not show such changes. (17 ref) A. J. Ter Keurst.

5435. Harvey, Dale G. & Slatin, Gerald T. (Comprehensive Care Ctr, Lexington, KY) **The relationship between child's SES and teacher expectations: A test of the middle-class bias hypothesis.** *Social Forces*, 1975(Sep), Vol 54(1), 140-159. A sample of 96 elementary school teachers drawn from 4 schools serving lower- and middle-upper-class neighborhoods was asked to judge the performance potential and related characteristics, including the socioeconomic status (SES), of photographs of both Black and White grade school children. While expectations were positively and significantly related to perceived SES of the children in the

photos, variations by school SES and number of years teaching experience in the mean number of judgments made suggest that teachers' class bias operates in a more complex manner than is usually thought. Ss responded more often when choosing children for "success" than for "failure" categories. Regardless of perceived SES, White children were more often expected to succeed in school than Black children. (28 ref)—*Journal abstract*.

5436. Henry, Pearl L. (Atlanta U, Morris Brown Coll) **Training teachers for one-to-one pupil-teacher encounters.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 179-191.—Attempted to determine whether training in C. Roger's technique of one-to-one encounters can improve the facilitative functioning level of teachers and create positive changes in pupils' self-concept and teacher attitudes. 8 teacher-pupil pairs were experimental Ss and 8 pairs were controls. Study design, procedures, and results are described in detail. Findings imply that focus on facilitative relationships and conditions does achieve growth in teacher and pupil functioning. The implications for research, teacher recruitment, and teacher education are discussed.—A. J. Ter Keurst.

5438. Hranitz, John R. (Indiana U, Pennsylvania, IN) **Perceptual differences of the role of an elementary school classroom teacher.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 162-165.—Investigated the role of the elementary school teacher as seen by administrators, parents, school board directors, teachers, and elementary education professors. Respondents (100 in each group) answered a Likert-type checklist of 36 statements representing viewpoints from traditional to progressive. Significant differences, ($p < .05$) were found between the scores of the respondents with respect to sex, age, type of educator, educational experience, occupation, and educational background. Elementary education professors and administrators, females, those with a CA less than 40, those with less than 20 yrs experience, professional educators, and upper occupational levels of the respondents were significantly more in agreement with the progressive statements than the traditional ones. The chief interest of all respondents was not the intellectual level of children's education but its technical or practical aspects for the individual student.—A. J. Ter Keurst.

5450. Marks, Merle B. (U Southern California) **Performance based programs: Teacher education's added dimension.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 98-104. Believes that the gap which has developed between supporters and opponents of Competency-Based Teacher Education (CBTE) is unnecessary. Teacher education programs should in-

volve 3 important interrelated aspects of teaching profiles. (a) The development of teacher personality traits essential to successful teaching must be part of any system of teacher education, including CBTE. (b) Mastery of teaching behaviors is essential; i.e., knowledge of the principles of learning and their application, to maintain a classroom environment favorable to learning. (c) Use of CBTE programs, whose specific and implied characteristics can be and are integrated with the development of teacher personality and teacher behavior. Unanswered questions about CBTE concern assessment criteria and concepts of humanism. CBTE does not necessarily interfere with present programs but may effectively complement them.—A. J. Ter Keurst.

5460. Presland, John L. (District Council, Birmingham, England) **Advising on school behaviour modification.** *AEP (Association of Educational Psychologists) Journal*, 1975(Sum), Vol 3(9), 5-9.—Discusses the problems which have occurred during efforts to encourage the use of behavior modification techniques in schools, specifically when such activities are a minor part of a psychologist's work load. After communication is established with teachers, the remaining problems can be considered as (a) presenting the principles of behavior modification clearly and fully, (b) convincing teachers that the approaches are worth trying; (c) and showing how they can be made practicable in school.—*I. L. Zimmerman.*
5461. Redwine, Judith M. (U Notre Dame) **Teacher change as a function of intent-action discrepancy and student performance feedback.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2394.
5462. Rice, Marion F. (Board of Education, Div of Research & Evaluation, Chicago, IL) **The influence of irrelevant biographical information in teacher evaluation.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 658-662.—Investigated the importance of out-of-role Research in teacher evaluation. 60 administrators were presented 1 of 2 variations of a teacher's application form from which they assessed the personality traits of the teacher and indicated their interest in seeing the teacher for an interview. A multivariate analysis of variance revealed that altering responses for out-of-role behavior (positive vs negative) resulted in significantly lower trait ratings and less likelihood of an interview for the teacher with negative out-of-role behavior than for the teacher with positive out-of-role behavior ($p < .001$). This finding indicates that irrelevant biographical information is an important determinant in the evaluation of prospective teachers by school administrators.—*Journal abstract.*
5463. Rippey, Robert M. **Student evaluations of professors: Are they of value?** *Journal of Medical Education*, 1975(Oct), Vol 50(10), 951-954.—Discusses the design, validity, and generalizability of 5 studies of student ratings of teaching. It is argued that student evaluations of teaching can provide useful information relevant to the improvement of instruction; however, improved methods of data collection and analysis are needed, particularly in the area of generalizability.
5464. Schneiman, Richard S. (Syracuse U) **An evaluation of structured learning and didactic learning as methods of training behavior modification skills to low and middle socioeconomic level teacher-aides.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1263.
5465. Sikula, John P. & Sikula, Andrew F. (U Toledo) **Do Black and White university interns differ in their basic values?** *Journal of Negro Education*, 1975(Spr), Vol 44(2), 200-207.—Used the Rokeach Value Survey to study differences between 22 Black and 17 White working class teaching interns, aged 20-42, assigned to inner city schools. Chi-square analyses of value rankings revealed that of 18 "instrumental" values, Blacks valued clean, independent, polite, and self-controlled more than Whites ($p < .05$), but Whites valued honest more ($p < .01$). Of 18 "terminal" values, Blacks valued salvation less than Whites ($p < .05$). Sex, age, marital status, public school experience, and income level of the 26 females and 13 males did not influence results. It is concluded that (a) some popular views about Blacks and Whites may be false, and (b) the Black experience may be unique and influential in determining values underlying attitudes and behavior. Research on values to aid educational planning is suggested.—*B. M. Anthony.*
5466. Sloggett, Barbara B. (U Hawaii) **The comparative effects of verbal information, passive observation, and active observation on the acquisition of classroom management skills.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 426-427.
5467. Smith, Stanley A. (Carmel Central School District, NY) **Teachers inservice education for learning problems.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 153-156.—Describes a workshop for teachers of kindergarten and transitional 1st grade, to help them assess children's educational disabilities. Skills taught included (a) recognition of perceptual problems, (b) knowledge of possible remedies for difficulties, (c) use of figure drawings to evaluate IQ and (d) to recognize emotional problems, and (e) correct use of behavior modification. Training in these skills enabled the teachers to know when to call in the help of the school psychologist, and how to deal more effectively and confidently with their students.—*A. J. Ter Keurst.*

5481. **Connelly, J. Richard.** (Oregon State U, Gerontology Program) **A model for organization and evaluation of short-term training.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 442-447.—Describes a theoretical model for short-term training and alternative methodologies for assessing the probable impact of training in achieving change. The model can also be applied to long-term training within a broad spectrum of educational settings. The model, which uses gerontological training as an example, identifies 3 areas of change: (a) change in factual knowledge about aging and the aged, (b) change in a person's skill to transfer normative and descriptive

data into the assessment of group situations as a basis for decision making, and (c) change in a person's self-perception and ability to empathize with others based on their life histories and development. The use of the model in both trainer and trainee contexts, assumptions about the impact of short-term training, and 3 major research issues derived from the model (the selection and assessment of participants, control of training as an independent variable, and generalizability and reduction of variance by the assumption of randomness) are also considered.—*L. Gorsey.*

Programmed material was developed for each special field. No significant differences were found between the experimental and control groups on the creativity and cognitive development variables.—*H. Kaczowski.*

5485. **Denton, Jon J. & Woods, Bob G.** (Texas A&M U) **A computer-managed instructional program in high school physics.** *Southern Journal of Educational Research*, 1975(Fal), Vol 9(4), 188-202.—Determined whether an individualized instructional model which used student-selected objectives and a computer-generated instructional guide would affect student achievement in and attitudes toward physics. No significant differences in attitudes or achievements were found between the individualized group and a traditional format group, but when the number of objectives mastered was used as the criterion variable, significant differences in achievement were observed. (21 ref)

5486. **Fenwick, G.** **Junior school pupils' rejection of school library books.** *Educational Research*, 1975(Feb), Vol 17(2), 143-149.—191 10-11 yr olds kept records for 6 wks of the fiction books they selected from their school libraries. These records indicated whether books were completely or partly read (i.e., rejected) before they were returned to the libraries. When factors related to the children and their environment were examined, results showed social class and the provision of school library books to be linked significantly with this type of book rejection. An examination of a sample of the books selected revealed a significant relationship between rejection and the number of words and proportion of illustrations which a book contained. *Journal abstract.*

5487. **Fredriksson, Lennart & Gestrelus, Kurt.** **[Lifelong learning in Swedish curricula.]** (Swed) *Pedagogisk-Psychologiska Problem*, 1975(Jul), No 274, 120 p.—Presents results of the Swedish section of a United Nations Educational, Scientific, and Cultural Organization research project conducted simultaneously in Japan, Rumania, and Sweden. Criteria favorable for the development of good attitudes toward and abilities in

lifelong learning were produced and used to analyze the general curricula of primary and secondary schools. Research projects concerning the application of the curricula in actual school work are analyzed. (23 ref) —English abstract.

5488. Gaynor, Patricia E. (U Miami) The effect of feedback delay on the retention of material at selected levels of the taxonomy in computerized mathematical instruction. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2386.

5489. Gerner, Francis J. (U Oregon) The analysis of the specificity of feedback available in multiple-choice test items as a teaching instrument. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3135-3136.

tion Abstracts International, 1973(Dec), Vol 34(6-A), 3178.

5498. Harris, Mary B. & Trujillo, Amarilys E. (U New Mexico) Improving study habits of junior high school students through self-management versus group discussion. *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 513-517.—Both a self-management approach, teaching the principles of behavior modification and self-control ($n = 36$), and a group discussion technique, involving discussion of study habits and problems ($n = 41$), led to improvements in GPAs compared with a no-treatment control group ($n = 36$) for low-achieving junior high school students. Ss in both treatment groups reported improvement in their academic abilities relative to those of other junior high school students after the program. More than those in the group discussion condition, those in the self-management group also reported that they were more likely to have a specific time and place to study and that the program had increased their efficiency and time spent studying.

5499. Hesselholdt, Svend. (Danish School of Educational Studies, Copenhagen) [Impulsive misreaders: On getting them to doubt reading material, possibilities, and focus on discrimination-relevant letters.] (Danh) *Skolepsykologi*, 1975, Vol 12(3-4), 255-282.—Discusses impulsivity as a perceptual or cognitive style manifesting itself in reading, and impulsivity in reading as a product of newer trends in the teaching of reading. The concept of reading as an inference or guessing process has influenced methods, materials, and possibilities of testing. If impulsivity is a general and personal style, training should transfer to and from reading, but the problem is as yet uninvestigated. Training should be directed at the text and other materials where it is relevant to doubt and reflect, thereby stimulating preplanning. The teaching of impulsive children to control guessing should not inhibit or make them generally uncertain. Lower class children are not educated to self-direction and linguistic tentativeness, and they may experience difficulties in the school situation. (27 ref)—*Journal abstract*.

5500. Hosle, Thomas W. (Northeast Louisiana U) The effects of reinforcing intermediate elementary students to constructively use free time for vocational exploration. *Journal of Educational Research*, 1975(Oct), Vol 69(2), 77-81.—A total of 154 5th and 6th graders were assigned to 1 of 3 groups: (a) utilizing reinforcement practices, (b) utilizing traditional instruction, or (c) a nontreatment control group. 2 dependent measures, amount of time spent in occupational exploration and the number of occupational materials viewed, were used to evaluate treatment effects. Reinforcement practices and traditional instruction were not found to significantly differ in terms of each dependent measure. The traditional instruction method significantly differed from the control group on both dependent measures; reinforcement practices significantly differed only in number of occupational materials viewed. Number of materials viewed was emphasized as the best description of Ss' behavior. Thus, both reinforcement practices and traditional instruction were found to be effective methods in stimulating Ss to pursue occupational information during free time.—*Journal abstract*.

5501. Hougard, Ruth. (Danish School of Educational Studies, Copenhagen) [The initial teaching of reading in the perspective of central curriculum plans and theories of reading.] (Danish) *Skolepsykologi*, 1975, Vol 12(3-4), 299-312.—Compares the definitions of reading as presented in the 1960 Danish curriculum plan and the published but unofficial plan for 1974. When authorized by the ministry, these subject guides are generally confirmed by the local educational authorities. According to the 1960 plan, reading was defined as an appropriation of contents and students' experience; in 1974 reading was a systematic build-up of technical abilities and thereafter contents reading. The 2 definitions are elucidated by K. S. Goodman's theory of reading as a psycholinguistic guessing game and E. J. Gibson's theory of reading as separately trainable skills which serve as the foundation for higher level skills. The definitions and corresponding theories have fundamentally different implications for the initial teaching of written Danish.—*Journal abstract*.

5502. Howell, J. Emory; Woodruff, H. Frank & Garraway, Hugh P. (U Southern Mississippi) Improving pre-laboratory instruction through student "hands-on" use of videocassettes. *Southern Journal of Educational Research*, 1975(Fal), Vol 9(4), 236-244.—Describes the use of a combination of group and individual "hands-on" use of videocassette prelaboratory instruction in general chemistry which aids the student in conceptualizing the objectives and design of assigned experiments. Student acceptance of the program was very good; and an improvement in mastery of laboratory objectives was observed relative to classes which did not utilize this method.

5503. Hull, Gary L. (Southern Illinois U, Edwardsville) Racial implications for the design of instructional materials. *Journal of Educational Research*, 1975(Oct), Vol 69(2), 47-52.—Investigated the influence that selected ethnic variables of an information source had on 60 Black and 60 White 6th graders. The research was focused on the auditory and visual channels of the information source (tape-slide presentations) and their effects on the intended audience. Results indicate that Black and White voices were accepted by both White and Black pupils. However, White pupils rated visuals representing only Black people lower than visuals representing only White people. (20 ref)—*Journal abstract*.

5504. Kernan, Mary N. (U Pittsburgh) The effects of a human development program on performance in college freshman writing classes. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3237-3238.

5505. Konsumentprojektet (LHM). Consumer education in schools: Construction of nine study materials for grades 4, 5 and 6 in Denmark, Finland, Norway and Sweden. *Pedagogisk-Psykologiska Problem*, 1974(Dec), No 268, 39 p.—Presents an orientation on the development of the work done in consumer matters during the last decades and describes the construction of study materials. Some of the discussions held in the Nordic countries on the shaping of consumer education are also presented.

5506. Kreutzer, Virginia O. (Brigham Young U) A study of the use of underachieving students as tutors

for emotionally disturbed children. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3145.

5507. Lesgold, Alan M.; McCormick, Claire & Golinkoff, Roberta M. (U Pittsburgh, Learning Research & Development Ctr) Imagery training and children's prose learning. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 663-667.—Used a pretest-posttest design to examine the effects of passage-illustration training (relative to a reading-practice control procedure) on reading comprehension in 10 3rd and 22 4th graders. Without this imagery training, imagery instructions did not improve performance on either a standardized reading comprehension test or a paraphrase prose recall procedure. After extended training in drawing adequate "comic strips" to illustrate prose passages, performance in a paraphrase recall task improved, but only when explicit imagery instructions were given with the task. The imagery training did not affect the standardized test performance, explicit imagery instructions notwithstanding.—*Journal abstract*.

5508. Lessner, Johanna W. (United States International U) Melpomene and psyche: The synergy of literature and psychology. *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1259-1260.

5509. LeUnes, Arnold. (Texas A&M U) An individual testing course: A descriptive study. *Psychological Reports*, 1975(Oct), Vol 37(2), 408-410.—Analyzed reports from 20 graduate students in a beginning course in individual testing to determine who was tested and what tests were used when students were given limited structure with regard to these points. Several conclusions may be drawn from an analysis of 243 reports: (a) Persons tested scored substantially above average in intelligence. (b) The average age of tested persons was relatively young. (c) More females than males were tested. (d) The various Wechsler measures were quite popular with students in the class. (e) These graduate students were quite capable of self-direction and self-discipline in a testing course. Additional structure must be provided where more specific course objectives are desired.—*Journal abstract*.

5510. Levine, Daniel U. (U Missouri, School of Education, Kansas City) Educating alienated inner-city youth: Lessons from the street academies. *Journal of Negro Education*, 1975(Spring), Vol 44(2), 139-148. Speculates that traditional inner-city high schools might learn to help improve achievement of alienated pupils through analysis of nontraditional secondary institutions. 5 characteristics considered typical of "street academies," the possible importance of humanistic goals, and staff, streetworker, and student characteristics are discussed.—B. M. Anthony.

5518. Okunrotifa, P. O. (U Ibadan, Nigeria) **Attitudes of Nigerian secondary school children to programmed instruction in geography.** *Educational Research*, 1975(Feb), Vol 17(2), 110-114.—Conducted an investigation into the attitudes of 200 8th graders from rural and urban schools towards programed instruction as a teaching method and towards geography as a subject studied in this way. Ss in each of 4 schools were divided into experimental and control groups matched on the basis of achievement, verbal, and quantitative aptitude tests. Attitudes toward geography and programed instruction were pretested by questionnaire. Ss then underwent 2 different learning sessions for 3 wks. Despite more positive attitudes shown initially by the control group to both geography and programed learning, experimental Ss later performed better and showed more favorable attitudes toward map reading than those taught by conventional texts.—*Journal abstract*.

5525. Rothkopf, E. Z. & Billington, M. J. (Bell Lab, Murray Hill, NJ) **A two-factor model of the effect of goal-descriptive directions on learning from text.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 692-704.—Studied in 138 college students the effect of specific descriptions of instructional goals on learning from a 6,000-word written passage. A limited model of text recall was constructed from completion test data. Performance on a given goal-relevant item was $P_r = E + (1 - E)m_r$ when goal descriptions were available and $P_c = E + (1 - E)m_c$ when only general directions to learn were provided (where E is a preexperiment experience factor which determines item ease and m characterizes effective text processing activities). Results indicate that m_c was variable over goal-relevant elements, but m_r was best characterized as a constant. No evidence was found for statistical dependence between the recall of goal-relevant items and adjacent incidental information.—*Journal abstract*.

5534. Ward, William D. & Barcher, Peter R. (State University Coll New York, Brockport) Reading achievement and creativity as related to open classroom experience. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 683-691.—From 2nd-, 3rd-, and 4th-grade classes selected for their open characteristics, 49 children were matched on IQ, socioeconomic status, sex, age, and grade with 49 Ss from classrooms identified as traditional. Reading achievement and creativity were assessed with a 2×2 factorial analysis of variance, open and traditional \times high and low IQ. All 98 Ss were administered the reading test, and 39 pairs were given the creativity measures. Both reading and figural creativity analyses showed significant main effects for IQ and significant interactions. Among low IQ groups, open and traditional Ss could not be distinguished on reading achievement or creativity. Among high IQ Ss, traditional Ss had significantly higher reading and figural creativity scores. (15 ref)—*Journal abstract*.

5535. Washburne, Carleton W. The individual system in Winnetka. *Elementary School Journal*, 1975, Vol 75, 42-53.—Presents a description of a program to abolish the lockstep system of pupil progress in grade schools. The system permits a pupil to be promoted to the next grade level in a particular subject area when he has mastered the material of the present grade. The system requires that for each step in each subject there must be a specific and well understood goal, that tests of goal achievement be complete and diagnostic, and that practice material to correct specific weaknesses be available. A 4th general principle is that the pupil must spend half of his school time in social activities. A number of practice exercises are given in detail, and the results and advantages of the system are emphasized. —A. J. Ter Keurst.

5536. Watson, Charles E. (Miami U, OH) The case-study method and learning effectiveness. *College Student Journal*, 1975(Apr-May), Vol 9(2), 109-116.—Compared the effectiveness of the case-study and the lecture method in teaching college students the principles of management and their application. 3 groups of Ss, with 35-45 members each, were matched on 12 factors (age, sex, GPA, authoritarianism, etc), and were taught by the same professor, 2 by the case-study method and 1 by lectures. Both methods appeared to be equally effective in teaching the principles of management, but

the case-study method was significantly more effective in teaching and application of concepts and was more apt to produce favorable study reaction to the professor and the learning climate. Surprisingly, no correlations were found between types of individuals studying and types of material learned.—A. J. Ter Keurst.

Academic Learning & Achievement

5538. Albino, Judith E. (U Texas, Austin) The motive to avoid success and problems reported by male and female students withdrawing from the University of Texas at Austin. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2375-2376.

5539. Alexander, Karl L. & Griffin, Larry J. School district effects on academic achievement: A reconsideration. *Center for Social Organization of Schools Report, Johns Hopkins U*, 1975(Sep), No 201, 12 p.—In a recent article, C. E. Bidwell and J. D. Kasarda (see PA, Vol 54:10420) developed a "social-ecological" model of school district-level academic achievement. Their results suggest that various attributes of the district population and the organizational structure and staff composition of the school district do significantly affect aggregate levels of student achievement. This paper demonstrates, however, that the Bidwell-Kasarda achievement model is seriously misspecified because of its omission of aggregate levels of academic ability. Achievement test data from 24 Maryland school districts indicate that estimates of the influence of community resources and organizational characteristics of districts are thus markedly inflated. Only 5-10% of the variance in student achievement is estimated between the Maryland school districts. It is argued that the findings seriously undermine the utility of the Bidwell-Kasarda model of district-level academic achievement. (16 ref)—*Journal abstract*.

5540. Alpert, Judith L. (New York U) Teacher behavior and pupil performance: Reconsideration of the mediation of Pygmalion effects. *Journal of Educational Research*, 1975(Oct), Vol 69(2), 53-57.—"Good" teacher behaviors are defined as those teacher behaviors experts judged likely to increase pupil reading performance. The effect of an increase in the "good" teacher behaviors on the performance of pupils in the bottom reading group was considered by means of a pretest-posttest control group design in which the duration of the intervention was 50 school days. Ss were 17 2nd grade teachers in Catholic schools and their 138 bottom reading group pupils. Results indicate that an increase in "good" behaviors did not alter bottom reading group pupil performance. Also, the results suggest that investigators of the mediation of Pygmalion effect are considering behaviors which may have little effect on pupil performance. (18 ref)—*Journal abstract*.

5547. Dimitrovsky, Lilly & Almy, Millie. (Jewish Board of Guardians, New York, NY) **Early conservation as a predictor of arithmetic achievement.** *Journal of Psychology*, 1975(Sep), Vol 91(1), 65-70.—124 kindergartners were tested on a conservation of number task and subsequently were administered an arithmetic achievement test toward the end of Grade 1. Results indicate that early conservation was predictive of later arithmetic performance. Ss who conserved number in kindergarten were significantly more likely to perform at or above grade level in arithmetic 1½ yrs later. Similarly, the mean Grade 1 arithmetic achievement test score of those who conserved number in kindergarten was significantly higher than that of those who did not. Findings are interpreted as supporting Piaget's assertion that conservation is basic to the understanding of number concepts.—*Journal abstract*.

5548. Dolins, Joseph L. (New York U) **Selected personality and ability variables related to success of disadvantaged youths entering a community college.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 850.

5551. Fournier, Patricia A.; Mazzarella, Madeline M.; Ricciardi, Morena M. & Fingeret, Allan L. (Rhode Island Coll) **Reading level and locus of interference in the Stroop color-word task.** *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 239-242. Studied color-word interference as a function of reading level with 20 3rd and 4th graders. An equal amount of interference with

color naming due to presentation of colors in a verbal form was found for both good ($n = 10$) and poor ($n = 10$) reading levels. Additional interference due to presentation of colors in conflicting color names was found only for good readers. Differences in reading comprehension rather than general reading ability are proposed to account for differences between good and poor readers.—*Journal abstract*.

5552. Frase, Lawrence T. & Schwartz, Barry J. (Bell Lab, Murray Hill, NJ) **Effect of question production and answering on prose recall.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 628-635.—Studied the recall consequences of generating questions about prose in 2 experiments. In Exp I, 48 high school students cooperated in a tutorial situation. At different times, an S asked questions, answered questions, or merely studied. In Exp II, 64 college students worked alone constructing 5 or 10 questions which were free to vary in difficulty or which all were to be difficult. In both studies, questioning activities produced higher overall recall than just studying. Recall effects were confined to content that was directly related to Ss' questions, and recall level was the same whether questioning or answering. Directions about the number and type of questions to be constructed altered characteristics of questions, but recall was not strongly affected.—*Journal abstract*.

5559. Kagan, Spencer & Zahn, G. Lawrence. (U California, Riverside) Field dependence and the school achievement gap between Anglo-American and Mexican-American children. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 643-650.—Research supports the hypothesis that field dependence explains the poorer school achievement of Mexican-American children compared to Anglo-American children. To test that hypothesis, multiple regression and path analyses were used to interpret the relationships between culture, field dependence, and school achievement among 134 2nd-, 4th-, and 6th-grade Anglo-American and Mexican-American children. Results indicate that Mexican-Americans were significantly below Anglo-Americans in reading and math achievement, field independence was significantly correlated with both reading and math achievement, and Mexican-Americans were significantly more field dependent. Field dependence explains the cultural difference in math achievement but does not fully explain the cultural difference in reading achievement. Implications for understanding both field dependence and the nature of the observed cultural differences are discussed. (32 ref)—*Journal abstract*.

5566. Lesgold, Alan M.; Levin, Joel R.; Shimron, Joseph & Guttman, Joseph. (U Pittsburgh, Learning Research & Development Ctr) Pictures and young children's learning from oral prose. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 636-642. Reports 4 experiments examining the effects of overt illustration on 1st graders' learning from oral prose. A total of 132 Ss participated. In all experiments, Ss heard prose selections after (or during) which they illustrated lecture content with plasticized figure cutouts and background scenes. Control Ss copied or colored geometric forms during the illustration period. After hearing 3 or 5 passages, Ss orally recalled passage content and answered simple factual questions about each passage. Illustration facilitated prose learning only when the S was given the correct pieces for his illustration or had the illustration done for him. When Ss selected the pieces for each illustration out of a common pool of 20-30 cutouts, illustration activity had either negative or no effect. (25 ref)—*Journal abstract*.
5567. Marjoribanks, Kevin. (U Adelaide, Australia) Environment as a threshold variable: A further analysis. *Journal of Educational Research*, 1975(Oct), Vol 69(2), 66-69.—Tested the common assumption in educational practice that the environment acts as a threshold variable in relation to the development of children's characteristics. Relations between the learning environment of the family and measures of children's arithmetic achievement, English achievement, intelligence, self-esteem, and educational and occupational aspirations were examined. Ss were 2,400 English school children with approximately 800 in each of 3 age-cohorts. Measures were taken twice 4 yrs apart. At the end of the study, the average ages of the cohorts were 11, 12, and 15. Squared, cubic, exponential, and logarithmic relations, as well as linear relations, were investigated. In general, the environment accounted for as much of the variance in the cognitive and affective scores when the relation was expressed in a linear form as when the relation was in a curvilinear form. Results fail to support a threshold hypothesis and thus replicate the findings of an earlier study by K. Marjoribanks (see PA, Vol 52:03914).—*Journal abstract*.
5568. Mason, Mildred; Katz, Leonard & Wicklund, David A. (U Connecticut) Immediate spatial order memory and item memory in sixth-grade children as a function of reader ability. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 610-616.—16 good and 16 poor 6th-grade readers served as Ss. Exp I tested immediate order memory for strings of 4 and 6 consonants that were either redundant (R) or nonredundant (NR) based on positional frequencies of letters in printed English. Both reader groups were better in retrieving order for R strings; poor readers were inferior to good readers on both R and NR 6-letter strings. Exp II tested for immediate order memory and immediate item memory for strings of 8 digits and strings of 8 consonants. Good readers were better than poor readers on all tasks. However, order memory appeared to be more strongly related to reading ability than was item memory. (15 ref)—*Journal abstract*.

5573. Nachmias, Chava. (Levi Eshkol School of Agriculture, Agriculture Faculty, Rehovet, Israel) Determinants of educational choice: Some alternative models. *Sociological Quarterly*, 1975(Sum), Vol 16(3), 333-345.—Classified the predictors of educational choice into 3 constructs: structural, interpersonal, and intrapersonal. It is argued that these constructs are necessary to the occurrence of educational expectations and that the effect of each is contingent upon the others. The predictive utility of 3 multivariate models (an additive, an interactive, and a mixed model) were compared using data from the 2nd wave of a 3-wave longitudinal panel study of achievement in 2,859 high school sophomores. The 2 models that incorporate interaction terms were most effective in predicting educational plans.—*Journal abstract*.

5574. Orme, Kathleen. (Abbeydale Middle School, Sheffield, England) Personality, ability and achievement in primary school children. *Educational Research*, 1975(Jun), Vol 17(3), 199-201.—Investigated the relationship of personality, ability, and school achievement in 112 11-yr-old elementary school children. Ss were administered the Junior Eysenck Personality Inventory and the Coloured Progressive Matrices, and data were correlated with school performance. Results show that (a) intelligence was the major determinant of school achievement, (b) bright Ss tended to come from smaller families than dull Ss, (c) relatively unstable Ss had a better level of school achievement than stable Ss, and (d) extraversion-introversion had no effect on school achievement.—*Journal abstract*.

5575. Parkhurst, Perrin E. (McDonnell Douglas Corp, Lowry Air Force Base, Denver, CO) Generating meaningful hypotheses with aptitude-treatment interactions. *AV Communication Review*, 1975(Sum), Vol 23(2), 171-183.—Presents description of the aptitude-treatment interaction (ATI) concept and examples of ATI studies. It is suggested that ATI research be used to resolve such questions as whether (or how) the realism and relevant cue theories apply to learning from visual presentation.—*Journal summary*.

5578. Rohwer, William D. & Harris, Wendy J. (U California Inst of Human Learning, Berkeley) Media effects on prose learning in two populations of children. *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 651-657.—Assessed prose learning in 84 high-socioeconomic status (SES) White and 84 low-SES Black 4th

graders as a function of presentation media, test-item structure, and response methods. The 7 presentation conditions included both single media—oral, print, and pictures—and combined media. The learning of intra and intersentence relations was tested by means of assertion-verification, short-answer, and free recall methods. While all of these variations contributed to performance differences, major emphasis was given to discrepancies in the media effects observed in the 2 populations. For low-SES Black Ss, performance in the combined media conditions, especially in oral plus pictures, was superior to that in single-media conditions, whereas among high-SES White Ss combinations of media were of little benefit.—*Journal abstract*.

(TNO, Nederlands Inst voor Praeventieve Geneeskunde, Leiden) [Temporal order and the process of learning to read.] (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Jun), Vol 30(4-5) 337-361.—Discusses the development of temporal order in the ability to learn to read. 411 5-6 yr old kindergartners responded to the Reading Prediction Test by J. H. Groenendaal and J. J. Schroots that included the RPTa and RPTb subtests. In the RPTa, Ss were orally given names of objects that they recalled in order of presentation. In RPTb, Ss were required to point to pictures of objects previously mentioned in order of presentation. Analysis of variance of the scores on the RPTa were calculated in terms of (a) age, (b) sex, and (c) socioeconomic levels of the Ss. No significant differences among Ss were found with respect to a and b. Differences among Ss with respect to c were significant ($p < .005$). With respect to RPTb, the differences were significant for a and c. A 1-yr followup examined the relationships between RPTa and RPTb scores and the reading scores. The rs were positive but not significant. It is suggested that perception of temporal order accounts significantly for certain aspects of the variance in reading performance in the early elementary grades. (38 ref)—A. J. Ter Keurst.

5610. Mabe, Paul A. & Williams, John E. (Duke U, Medical Ctr) Relation of racial attitudes to sociometric choices among second grade children. *Psychological Reports*, 1975(Oct), Vol 37(2), 547-554.—Investigated the relationship of racial attitudes to interpersonal choice behavior among 32 Euro-American and 20 Afro-American 2nd graders who comprised 2 intact classrooms in an integrated public school. Ss were administered the revised Preschool Racial Attitude Measure (PRAM II) and a sociometric procedure which asked them to choose classmates as associates for 3 different activities. For all Ss a correlation of 0.52 was obtained between the degree of pro-Euro-anti-Afro bias displayed on PRAM II and the frequency of choice of Euro-American associates. There was some evidence of less racial bias and less frequent choice of Euro-associates in the racially balanced classroom than in the classroom which was predominantly Euro-American. It is concluded that the validity of the PRAM II procedure as a method for assessing racial attitudes in young children was supported. (23 ref) *Journal abstract*.

5618. Ollila, L. O. & Chamberlain, L. A. (U Victoria, Canada) The effect of noise and object on acquisition of a sight vocabulary in kindergarten children. *Alberta Journal of Educational Research*, 1975(Sep), Vol 21(3), 213-219.—Investigated the influence of classroom noise and 2 methods of presentation upon the rate at which kindergartners learned 4 dissimilar words. 120 Ss were randomly assigned to 4 groups of girls and 4 groups of boys, each containing 15 Ss. An analysis of variance revealed a significant difference ($p < .05$) favoring girls trained by the word-alone method under a no-noise condition over girls trained by the word-object methods under a noise condition. No other significant differences were found. (17 ref)—*Journal abstract*.

5619. Redl, Fritz. (Massachusetts State Coll) Disruptive behavior in the classroom. *School Review*, 1975(Aug), Vol 83(4), 569-594.—Contends that the label "disruptive child" is misleading and has no root in psychological reality. Various causes of disruptive behavior are described and interpreted. Depending on the particular case and situation in which disruptive behavior originates, a number of possible solutions are offered.—C. K. Miller.

5620. Rich, Jordan. (Bar Ilan U, School of Education, Ramat-Gan, Israel) Effects of children's physical attractiveness on teachers' evaluations. *Journal of Educational*

Psychology, 1975(Oct), Vol 67(5), 599-609.—After viewing the photograph of a physically attractive or unattractive child and a vignette depicting a misbehavior possibly committed by the child, 144 female elementary school teachers evaluated the pupil for blame, personality, and punishment before and after reading a report card characterizing the child as a good, satisfactory, or poor student. Though attractive children generally received more desirable personality ratings than unattractive children, a misbehavior was deemed less undesirable if attributed to unattractive rather than attractive children. Furthermore, unattractive girls were blamed less frequently and received more lenient recommendations for punishment than did unattractive boys. Implications for the physical attractiveness stereotyping hypothesis are discussed as well as explanations for the differential evaluations based on the child's sex.—*Journal abstract*.

5621. Richman, Lynn C. (U Iowa) **Behavior and achievement of cleft palate children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3157.

5622. Sachdeva, Darshan. **Social class origin and interracial student attitudes in desegregated schools.** *Southern Journal of Educational Research*, 1975(Fal), Vol 9(4), 209-222.—Administered a demographic and attitude questionnaire to 1,131 Black and White students in a newly integrated junior high school in Berkeley, California. Ss were classified into 12 groups according to grade level, socioeconomic status (determined by census tract data), and race. Social class origin, race, and grade level did not have any effects on student responses to 11 of 19 items dealing with work in school, attitudes toward school, or making new friends. Findings suggest that personal contact explains more changes in student attitudes than social class origin.—*L. Gorsey*.

5623. Schaller, Joseph. **The relation between geographic mobility and school behavior.** *Göteborg Psychological Reports*, 1974, Vol 4(22), 17 p.—Summarizes studies carried out within a project called "Geographic Mobility and Its Relation to Different Aspects of School Adjustment." The project had 2 distinct parts, one a follow-up study of 458 geographically mobile pupils in Grades 4 and 5, the other a number of cross-sectional studies. The present paper summarizes work on the cross-sectional part of the project, reported in full in 6 articles: (a) Residential change and various factors of school adjustment: a review of research, (b) Residential change and emotional maladjustment in childhood and adolescence: a review of research, (c) Children's attitudes to newcomers, (d) Residential change and academic performance, (e) Experienced and expected problems after a family move reported by children, and (f) Geographic mobility and children's perception of their school situation. Results of these empirical studies call attention to the need to help children to adjust to their new schools. (57 ref)—*Journal abstract*.

5627. Sivulich, Stephen. (Allentown Coll of St Francis de Sales) **Who is to blame for deviant college behavior?** *College Student Journal*, 1975(Apr-May), Vol 9(2), 157-161.—Examines the problem of deviant behavior of college students. It is suggested that this behavior is overemphasized by the news media (it has been estimated that only 5-8% of college students are involved in disciplinary problems and only 1-2 are considered to be "activists"). The parents, the schools, and the students all blame each other for campus behavioral problems, but there is no single answer. The complex causes of deviant student behavior include parental indulgence and overprotection, peer group pressure, the student's psychological insufficiency in meeting college problems, and failure by the college administration to provide counseling and advice.—*A. J. Ter Keurst*.

5628. Spinetta, John J. & Hickey, Tom. (San Diego State U) **Aging and higher education: The institutional response.** *Gerontologist*, 1975(Oct), Vol 15(5, Pt 1), 431-435.—Argues that universities are in need of change and that an experienced adult who returns to school can offer a uniquely useful perspective for the future growth of the university. The mature adult is envisioned as playing a vital role in that change by forcing the university to reexamine its goals. With the maturity gained from experience that unites both the traditional and the innovational, the adult learner is in a unique position to humanize the scientific endeavor while preserving the essentials of scientific rigor.—*Journal abstract*.

5629. Stensaasen, Svein. (Norwegian Coll of Physical Education, Inst for Social Sciences, Oslo) **Pupils' liking for physical education as a school subject.** *Scandinavian Journal of Educational Research*, 1975, Vol 19(3), 111-129.—Assessed 1,321 7th, 8th, and 9th graders' attitudes toward physical education as a school subject using a 5-point Likert scale and open-ended questions. Results show that (a) physical education was one of the best liked subjects in school, (b) there were no sex or grade differences, and (c) attitudes showed a very high degree of consistency from fall to spring.

5630. Stephan, Walter G. & Kennedy, James C. (U Texas, Austin) **An experimental study of interethnic competition in segregated schools.** *Journal of School Psychology*, 1975(Fal), Vol 13(3), 234-247.—Used decomposed matrix games to study interethnic competition in the triethnic school system of a southwestern city. Ss were 135 male 6th graders from segregated schools. In addition to the data from the matrix games, brief questionnaire measures of internal vs external locus of control, self-esteem, and authoritarianism were also obtained. Results on the game matrices indicate that the Anglos competed more and were less trusting than Blacks or Chicanos. Questionnaire results indicate that Blacks were highest on feelings of external control and authoritarianism, while Chicanos were lowest in self-esteem. Cooperative interethnic work groups are suggested.

ed as a means of coping with the problems that these differences might be expected to cause in integrated schools. (29 ref)—*Journal abstract*.

Extended positive effects of a comprehensive Head Start-Follow Through program sequence on academic performance of rural disadvantaged students. *Journal of Negro Education*, 1975(Spr), Vol 44(2), 149-160.

5642. Carter, John L. (U Houston) **Intelligence and reading achievement of EMR children in three educational settings.** *Mental Retardation*, 1975(Oct), Vol 13(5), 26-27.—Reports on a study with retarded 3rd graders in regular, segregated self-contained, and Plan A "mainstream" classes. Results indicate that there was no evidence to support differences in reading achievement among the 3 systems, although Plan A provided considerable supportive resources.

5643. Dyssegard, Birgit. [Why can't Johnny learn to read?] (Danh) *Skolepsykologi*, 1975, Vol 12(6), 439-458.—Describes 2 males with learning difficulties to illustrate the need for early identification of such problems. Based on R. Valett's (1969) "basic learning abilities," it is argued that it is possible to evaluate developmental processes and implement relevant educational programs thereby integrating the growing volume of professional knowledge. (19 ref)—P. Mylov.

5644. Eklin, Duane E. (U Minnesota) **The influence of a remedial perceptual-motor activity program on the academic performance of retarded junior high school students.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2366.

5645. Guralnick, Michael J. (National Children's Ctr, Washington, DC) **Early classroom based intervention and the role of organizational structure.** *Exceptional Children*, 1975(Sep), Vol 42(1), 25-31.—Explored the role of organizational structure in classroom-based early childhood intervention programs. 9 characteristics were identified as necessary components for an effective system. The operation of a curriculum evaluation feedback model which incorporates these 9 components is described and discussed in terms of the interrelationships among the elements of the system. (16 ref)—*Journal abstract*.

5646. Harris, Walter J. & Mahar, Carolyn. (U Maine, Exceptional Child Research Inst, Orono) **Problems in implementing resource programs in rural schools.** *Exceptional Children*, 1975(Oct), Vol 42(2), 95-99.—Discusses lack of organizational readiness, system shock, interpersonal roadblocks, and the lack of trained personnel as problems which impede the development and effectiveness of resource programs in rural schools. Suggestions for the resolution of these problems are proposed.

5647. Heilwell, Martin L. (U Michigan) **A comparative study of behavior change and preschool intervention.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1723-1724.

5648. Howie, Patricia A. (U Rochester) **Remediation of psycholinguistic disabilities of severely disturbed children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3189-3190.

5649. Hughes, John M. (Caerleon Coll of Education, Wales) **The educational needs of the mentally handicapped.** *Educational Research*, 1975(Jun), Vol 17(3), 228-233.—Studied the educational needs of mentally handicapped children in the new day special schools from 3 major perspectives as a result of examinations of

(a) questionnaires received from headteachers of 88 schools, (b) the skills of 151 mentally handicapped children in 44 of these schools, and (c) questionnaires completed by 52 parents of mentally handicapped children. Results highlight the effect of these schools being in an "educational wilderness" until 1971 and indicate a low level of achievement in certain social skills and parental problems and attitudes. (16 ref)—*Journal abstract*.

5650. Johnson, Arthur R. (Washington State U) **The treatment of sight word deficiencies in elementary school children: An application of behavior modification principles.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3237.

5651. Kocijan, Dubravka; Faber, Bõidar & Hajnšek, Franjo. (Jankomir Psychiatric Hosp, Epileptic Ward, Zagreb, Yugoslavia) [Education of epileptic children.] (Yugo) *Socijalna Psihijatrija*, 1975, Vol 3(1), 39-42.—Suggests that epileptic children encounter special problems in school because of environmental attitudes toward them. Preventive measures are outlined, including assistance to parents and teachers in avoiding negative attitudes and helping the child develop a more positive personality and outlook.

5652. Kristal, Jerome E. (U Oregon) **Peer utilization as a primary agent for effecting behavioral change in mentally retarded children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3190-3191.

5653. Lamon, William E. & Threadgill, Judy. (U Oregon, Coll of Education, Psychological Research Lab for Mathematics Learning) **The Papy-Lamon Minicomputer for Blind Children: An aid in learning mathematics.** *New Outlook for the Blind*, 1975(Sep), Vol 69(7), 289-294.—Describes the Papy Minicomputer adopted for use by blind and visually handicapped children. The device is intended to develop an understanding of the concept of number and the fundamental operations in the arithmetic of whole numbers. It consists of 3 boards with cut-out shapes for the number values of 1, 2, 4, and 8 and multiples of 10 and 100. Numbers are generated on the boards by placing pawns in the variously shaped regions; arithmetical operations are carried out by moving the pawns from region to region according to 4 simple rules.—*Journal abstract*.

5654. Leviton, Harvey & Kiraly, John. (Edina Public Schools, MN) **Summer compensatory education: Effects on learning disabled children.** *Exceptional Children*, 1975(Sep), Vol 42(1), 48-49.—Results of an arithmetic program with learning disabled 1st, 2nd, and 3rd-graders show that (a) only temporary gains were made in arithmetic skills, (b) gains were made in self-concept, (c) no relationship was found between gains in academic achievement and gains in self-concept, and (d) little empirical justification exists for referring learning disabled children to summer compensatory classes.

5655. Lovitt, Thomas C. (U Washington, Experimental Education Unit, Seattle) **Applied behavior analysis and learning disabilities: II. Specific research recommendations and suggestions for practitioners.** *Journal of Learning Disabilities*, 1975(Oct), Vol 8(8), 504-518.—Describes the applied behavior analysis (ABA) research method and how this method can be used to investigate general curricular topics, emphasizing specific

curricular areas of importance to learning disabled youngsters: reading, spelling, penmanship, writing, and arithmetic. In each area, the specific variables that have been studied by other applied behavior analysts are briefly mentioned. A statement as to which behaviors have been measured and which interventions have been arranged is included. A short description of current ABA research is presented. Some suggestions for teaching, derived from ABA research, that practitioners can implement in their current instructional situations are discussed. (26 ref)—*Journal abstract*.

5656. McCarthy, Francis E. (U Connecticut) **An evaluation of the effects of two intervention techniques on the classification and constraint seeking behavior of educable mentally retarded children.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2395.

5657. Nathanson, David E. (U Minnesota) **Attending behavior of severely retarded teenage pupils as a function of selected stimuli used in television broadcasting.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3191.

5658. Neisworth, John T. & Greer, John G. (Pennsylvania State U, Coll of Human Development) **Functional similarities of learning disability and mild retardation.** *Exceptional Children*, 1975(Sep), Vol 42(1), 17-21.—Discusses descriptions of educable mentally retarded and learning disabled children as they relate to similarities and differences in assumed cause and educationally relevant problems. The terms "genotype" and "phenotype" are presented to conceptualize the distinction between underlying condition and objectively assessed psychoeducational repertoire. The argument is made that real or assumed differences in the underlying conditions of the educable mentally retarded and learning disabled are somewhat irrelevant to the analysis and design of instructional programs. A tentative schema is provided that illustrates appreciable overlap of the educable retardation and learning disability classifications with respect to instructional objectives and instructional intervention. (18 ref)—*Journal abstract*.

5659. Poole, Pearl S. (North Carolina State U, Raleigh) **A study of short-term group counseling with educable mentally retarded students in a junior high school.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3068.

5660. Porter, Geraldine. (Oralingua School for the Hearing Impaired, Whittier, CA) **The missing vital dimension in successful integration.** *Volta Review*, 1975(Oct), Vol 77(7), 416-422.—Emphasizes the importance of continually preparing teachers and administrators to integrate hearing-impaired children into regular education, and suggests how this may be carried out.—*W. A. Hass*.

5661. Povey, Robert M. (Christ Church Coll, Canterbury, England) **Educating the gifted.** *AEP (Association of Educational Psychologists) Journal*, 1975(Sum), Vol 3(9), 1-4.—Examines the views of 30 leading British performers on the question of providing special schooling for gifted young musicians and dancers. Aside from members of the ballet, who opted for special education paralleling their own experience, the other performers, specifically instrumentalists and singers, were largely opposed to segregated education, stressing instead a

broad course of academic study not removed from normal life.—I. L. Zimmerman.

5662. Rabush, Donald R. (U Denver) A comparative study of the Syntax Teaching Program and the Peabody Language Development kit as they affect oral expressive language in children who demonstrate retarded verbal behavior. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3192-3193.

5663. Rayburn, Wendell G. & Hayes, Edward J. (U Louisville) Compensatory education: Effective or ineffective? *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 523-528.—Measured the effectiveness of a college level compensatory program for Black disadvantaged students relative to aspiration, motivation, and academic levels as compared to advantaged students at the University of Detroit. Ss were 169 undergraduates, 98% of whom were Black; controls were 152 predominantly White undergraduates. Ss had lower levels of aspiration, motivation, and academic achievement in each year of college. However, the disadvantaged group reduced the gap between initial disparities on the criterion measures for the independent variables measured when compared to the control group.—*Journal abstract*.

5666. Snyder, Lee K.; Lovitt, Thomas C. & Smith, James O. (George Peabody Coll for Teachers) Language training for the severely retarded: Five years of behavior analysis research. *Exceptional Children*, 1975(Sep), Vol 42(1), 7-15.—Reviews 23 behavior analysis studies which have appeared since 1968 and analyzed them in terms of target behaviors investigated, research methodologies employed, and implications for classroom or clinical practice and for future research. A majority of the studies dealt exclusively with expressive language, and many of these investigated the generative property of the language under study. All of the studies involved the use of tangible reinforcers, and most used institutionalized Ss more than 8 yrs old. Implications are drawn which suggest the need for (a) an increased emphasis on antecedent conditions, (b) consideration of a broad range of reinforcement contingencies, (c) specific attention to variables which effect maintenance and generalization, and (d) investigation of younger Ss in noninstitutional settings. (30 ref)—*Journal abstract*.

5672. Bakan, Paul. (Simon Fraser U, Burnaby, Canada) Lateral eye-movement consistency and academic aptitude: Failure to replicate. *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 85-86.—Compared scores on the Scholastic Aptitude Test for 54 right and 46 left undergraduates directionally consistent and 62 directionally inconsistent for conjugate lateral eye movements elicited by reflection in interpreting a series of 10 proverbs. The finding of lower Scholastic Aptitude Test scores for Ss inconsistent in direction of eye movement (W. Weiten and C. Etaugh; see PA, Vol 53:1959) was not confirmed.—*Journal abstract*.

5673. Beckum, Leonard C. (Stanford U) The effect of counseling and reinforcement on behaviors important to the improvement of academic self-concept. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3129.

5674. Bergan, John R. & Tombari, Martin L. (U Arizona, Coll of Education) The analysis of verbal interactions occurring during consultation. *Journal of School Psychology*, 1975(Fal), Vol 13(3), 209-226.—Describes a consultation analysis technique for coding conversion between a consultant (e.g., psychologist) and a consultee (e.g., teacher) serving a client (e.g., student). Consultation analysis classifies the topics discussed in consultation, the verbal processes exhibited during consultation, and the extent to which one participant in consultation controls the kinds of things which another participant says. Uses of consultation analysis in training and research are discussed. (19 ref)—*Journal abstract*.

5675. Bergland, Bruce W.; Quatrano, Louis A. & Lundquist, Gerald W. (U Colorado, Denver) Group social models and structured interaction in teaching decision making. *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 28-36.—Studied the effectiveness of 3 group counseling procedures in fostering decision-making skills. 80 high school junior males enrolled in vocational experience courses were randomly assigned to 4 possible conditions: structured group interaction (SGI), videotaped models (VTM), SGI plus VTM, and waiting list control. Groups met for 5 wks each. 2 doctoral students acted as counselors, each leading 6 groups of Ss. All groups took pre- and postmeasures designed to identify planning and decision-making attitudes; knowledge of how to process relevant, reliable information; information-seeking behavior; and ability to use decision-making behaviors. Analyses of variance

and covariance showed (a) no main effect for counselor and (b) no significant differences between the experimental groups and the controls. Reasons for the lack of hypothesized effects are offered, the potential of these group counseling models are reaffirmed, and areas for further study are outlined.—C. A. Heikkinen.

5676. Bishop, John B.; Sharf, Richard S. & Adkins, Deborah M. (U Delaware) **Counselor intake judgments, client characteristics, and number of sessions at a university counseling center.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 557-559.—Conducted a study to investigate the variables used by intake counselors at a university counseling center in estimating the number of interviews a client will attend and to assess the accuracy of those estimates. Data collected from 448 cases indicate that counselors relied most heavily on their judgment of the severity of personal problems in estimating the number of interviews clients would attend. The variables investigated accounted for a relatively small amount of the total variance found in the actual number of counseling sessions held. An unexpected finding was that the judged severity of vocational problem was negatively correlated to both the estimated and actual number of interviews.—*Journal abstract*.

5677. Bradley, John M. (U Pennsylvania) **Extent of agreement of reading tests and readability measures.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2379.

5678. Bray, Nanci M. & Estes, Robert E. (U Texas, Dallas) **A comparison of the PIAT, CAT, and WRAT scores and teacher ratings for learning disabled children.** *Journal of Learning Disabilities*, 1975(Oct), Vol 8(8), 519-523.—Administered the Peabody Individual Achievement Test (PIAT), the California Achievement Test (CAT), and the Wide Range Achievement Test (WRAT) to 45 learning disabled 7-12 yr old children. Teacher ratings of academic performance were also obtained. Pearson product-moment correlations were moderate to high, indicating substantial concurrent validity for the PIAT. Mean grade placement scores on subtests with similar content for all 4 measures were generally equivalent, with the exception of PIAT Reading Recognition and WRAT Reading, which produced lower scores. It is concluded that PIAT is suitable for use with learning disabled children.—*Journal abstract*.

5679. Brickell, John L. (U Oregon) **Biased samples in educational research.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3130-3131.

5681. Broussard, Burness. (U Pennsylvania) **Prediction of occupational and educational plan attainment by race among secondary school graduates.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2286.

5682. Cangemi, Joseph P. (Western Kentucky U) **Self-actualizing behavior: A goal for student personnel services.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 141-143. Discusses self-actualization in college students. 30 characteristics of the self-actualized student

are mentioned. Although no one can attain all these characteristics, the objective of student personnel counseling should be that the student progresses toward self-actualization. To attain this objective, all university experiences must be appraised in terms of their contributions to self-actualization; new programs to promote self-actualization must be created; and old and new programs must be continually appraised as to their development of self-actualization among the students.—A. J. Ter Keurst.

5683. Coury, Janine P. (U Tennessee) **Screening for learning disabilities among inner-city first graders.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2382.

5684. Das, J. P.; Manos, J. & Kanungo, R. N. (U Alberta, Ctr for the Study of Mental Retardation, Edmonton, Canada) **Performance of Canadian native, Black and White children on some cognitive and personality tests.** *Alberta Journal of Educational Research*, 1975(Sep), Vol 21(3), 183-195. Examined cognitive abilities and personality characteristics in a total of 190 4th graders from low and high socioeconomic (SES) strata from the White population in Edmonton, low and high SES White and Black populations in Montreal, and a native reservation near Edmonton. Parents of Ss were also given personality tests and were interviewed to obtain an index of educational environment in the S's home, reflecting parents' attitude to the S's education. Canadian native and White groups showed differences in their performance on some of the cognitive tests. Personality differences in their performance on some of the cognitive tests. Personality differences, as measured by S. B. Eysenck's extraversion neuroticism questionnaire and questionnaires for rigidity and locus of control, were negligible between the groups of Ss. However, adults in the 3 ethnic and 2 socioeconomic groups showed some significant personality differences. Performance of Ss on reasoning and school achievement tests were predictable by parental attitude to child's education. This finding is discussed in terms of the role of personological and social variables which may affect the development of a child's cognitive competence. (27 ref)—*Journal abstract*.

5685. Frost, Ronald A. (Arizona State U) **Effects of the Vocational Exploration Group on measures of vocational maturity, employability perceptions, perceptions of social alienation and dogmatism of two-year college students.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 391.

5686. Frymier, Jack R. et al. (Ohio State U) **A longitudinal study of academic motivation.** *Journal of Educational Research*, 1975(Oct), Vol 69(2), 63-66.—The Junior Index of Motivation (JIM) Scale is an instrument designed for use as a measure of academic motivation by teachers and counselors working with secondary school students. Tests indicate that the motivation variable accounts for some of the disparity between ability and performance levels of underachievers and overachievers. To determine the long-range predictive value of the JIM Scale, a longitudinal study was conducted with 591 7th graders to test the hypothesis that the JIM Scale would successfully differentiate among college bound and noncollege bound junior high school students. Findings

confirm this hypothesis. It is concluded that the JIM Scale, administered in the 7th grade, can be used as 1 measure to assist counselors and teachers as they work with students regarding the probability of future college attendance. Motivation seems to be fairly well defined early in the secondary school experience.—*Journal abstract.*

5687. Gardner, William E. (Wayne State U) **The effects of intergrade tutoring with group guidance activities on the reading achievement, self-concept, attitudes toward school and behavior of third and fourth grade tutors and on the reading achievement and behavior of first and second grade tutees.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3058.

5688. Gibbons, Thomas J. (New York U) **The degree of ability-to-relate projected by Black and White junior high school students after exposure to stimuli portraying counseling interviews with counselor-client racial similarity and disparity.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3059-3060.

5689. Gillies, John. (U Glasgow, Scotland) **Personality and adjustment in deaf children.** *British Journal of Projective Psychology & Personality Study*, 1975(Jun), Vol 20(1), 33-34.—Discusses the advantages of using the Lowenfeld World Technique to assess the personalities and adjustment problems of deaf and partially-hearing children.

5690. Ginn, Roger O. (Ohio U, Hudson Health Ctr) **Male and female estimates of personal problems of men and women.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 518-522.—100 male and 100 female undergraduates estimated the types of problems males and females would present at a counseling center. Of 75 problems on a problem checklist, 35 problems were seen as being more typically female whereas only 16 were seen as being more typically male. Sex differences in estimates were found for 13 problems; however, these differences did not affect whether the problems were seen as male or female. Of the 16 male problems, 8 were vocational-educational problems, while none of the female problems was vocational-educational. A 2nd purpose of the study was to look at sex differences in problems presented by actual clients at a university counseling center. Of the 75 problems on the checklist, sex differences were found for only 3 problems.—*Journal abstract.*

5691. Goldstein, Rose S. (New York U) **The relationship of traditionalism, progressivism and authoritarianism of school psychologists to child placement in classes for retarded children.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 873-874.

5692. Gutsch, Kenneth U. (U Southern Mississippi) **Career development: A challenge for counseling.** *Southern Journal of Educational Research*, 1975(Fal), Vol 9(4), 179-187.—Discusses the relationship of personality, academic training, and the roles of the teacher and counselor to career development. The developmental nature of career counseling is examined in terms of 3 methods of operation used by the counselor (self-examination, personal appraisal, and career determination). Varying approaches for counselors of various psychological orientations which can be used to appraise and monitor the client's progress are discussed. The

concept of career development as a service is analyzed and suggestions for helping clients with varying degrees of work experience are presented.—*L. Gorsey.*

5693. Hammill, Donald; Parker, Randall & Newcomer, Phyllis. **Psycholinguistic correlations of academic achievement.** *Journal of School Psychology*, 1975(Fal), Vol 13(3), 248-254.—Investigated the relationship of the Illinois Test of Psycholinguistic Abilities (ITPA) subtests to measures of academic performance (i.e., the California Achievement Test [CAT]). Ss were 137 9-yr-olds similar to those used in the standardization sample of the 1968 revision of the ITPA. 2 kinds of data analyses were undertaken: (a) Correlation coefficients among the variables were derived; and (b) Ss were divided into low, average, and high groups based on their CAT performance, and analyses of covariance were run to determine the significance of ITPA differences. Results failed to support the hypothesis that psycholinguistic abilities, except those which contribute to the Grammatical Closure subtest, are related to academic proficiency.—*Journal abstract.*

5694. Hicks, Wallace K. (U Kentucky) **Variations in the complexity of the three major variables (personological, treatment and dependent) in Aptitude-Treatment-Interaction.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3139-3140.

5695. Horton, Raymond J. (Hofstra U) **The construct validity of cloze procedure: An exploratory factor analysis of cloze, paragraph reading, and Structure-of-Intellect.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3140.

5696. Hullett, John W. (Augustana Coll) **Potential experimenter bias in the effects of training on the Draw-A-Man-Test.** *Journal of Educational Research*, 1975(Oct), Vol 69(2), 83.—Replicated the experiment of Medinnus, Bobitt, and Hullett (1966) to examine the experimental design and findings of that study (i.e., that the performance of 1st graders on the Draw-A-Man Test had been significantly increased by giving them experience in assembling a jigsaw puzzle of a male figure). Results of the present study with 25 kindergartners fail to replicate the findings of Medinnus et al. It is suggested that the results of the Medinnus et al study might be contaminated by E expectation.

5706. Kohlan, Richard G. (Lock Haven State Coll) **Problems appropriate for discussion in counseling centers: 15 years later.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 560-562.—Investigated changes in the perceived counseling role of college and university counseling centers by administering the 66-item Counseling Appropriateness Check List to 97 counselors now working at 19 of the 21 institutions studied by R. F. Warman (see PA, Vol 36:5K131W) in 1961. Analysis of variance results show that significant differences still exist among counseling centers on 2 of the 3 factors identified by Warman, College Routine and Vocational Choice, but not on Adjustment to Self and Others. There is now general agreement by the counseling center sample that student problems in the adjustment area are most appropriately discussed with counselors rather than other campus resources. Future research to update the check list and investigate the source of differences between counseling centers is recommended.—*Journal abstract*.

5710. Lenning, O. T. **Predictive validity of the ACT tests at selective colleges.** *ACT Research Report*, 1975(Aug), No 69, 14 p.—Conducted 3 studies to examine the comparative validity of the American College Testing Program (ACT) and the Scholastic Aptitude Test (SAT) at selective colleges. Study 1 examined the predictive efficiency of the ACT test scores and the ACT test scores plus high school grades at 120 colleges, separated into 3 groups according to average college ACT composite. Study 2 investigated 4 colleges where all students had taken both the ACT and SAT. Study 3, which took place at the US Air Force Academy, was conducted to correct for selection on the SAT. This study was designed so that prior selection of students by the SAT would not be an extraneous factor in the analysis of the comparative predictive validity of ACT and SAT. Results from all studies indicate that both the ACT and SAT are valid predictors at selective as well as at more typical colleges. Where ACT and SAT did not yield similar results, ACT was usually favored with higher correlation coefficients. (15 ref)—*Journal abstract*.

5712. Loeffler, Marcia. (Michigan State U) **Counseling women for their complex life role.** *College Student Journal*, 1975(Apr-May), Vol 9(2), 129-132.—Discusses the changing patterns in counseling women as a result of technological changes in the lives of American women. Before these changes, a woman could either be a housewife or pursue a career in business or the professions, but she could not assume both roles. As a result of labor-saving devices in housekeeping, as well as the use of birth-control devices, the modern woman has a far wider choice of life patterns, and counseling must change accordingly. This new liberation of women has enormously enlarged and complicated the field of vocational guidance services for women. Guidance should begin in the 8th or 9th yr of junior high schools. Counselors should avoid any tendencies to reinforce stereotyped negative images of career women. Resourcefulness and mental flexibility should be encouraged, to help women face unexpected future contingencies.—*A. J. Ter Keurst*.

(U Wisconsin, Graduate School of Business, Madison) *Course and student characteristic correlates of the course evaluation instrument*. *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 742-747.—Describes briefly the Course Evaluation Instrument (CEI), which has 5 dimensions for assessing instructor and course effectiveness. For samples of undergraduate ($n = 3,498$) and graduate students ($n = 1,438$), a field test is reported that examined relationships between dimension scores and (a) 5 student and course characteristics (GPA, expected grade, course difficulty, course required or not, and course in major area or not) and (b) courses taken treated as a set of dummy variables. Student and course characteristics accounted for a small but significant proportion of variance for all dimensions. However, courses taken accounted for a substantial proportion of dimension variance even after the student and course characteristic variables had been controlled. It is suggested that the CEI measures differences in student learning. (19 ref)—*Journal abstract*.

APPLIED PSYCHOLOGY

5742. Feldman, Jack. (U Florida) **Considerations in the use of causal-correlational technique in applied psychology.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 663-670. —Discusses the use of causal-correlational analyses in applied psychology (with reference to recent literature) in terms of weaknesses in the causal interpretation of such designs and the inappropriate use of raw difference scores in "dynamic correlations." Examples of alternative interpretations of published data are presented to illustrate the ambiguities inherent in the strategy of "discovering" causal relationships in correlational data. Guidelines for the interpretation of causal-correlational analyses are discussed. (32 ref)—*Journal abstract*.

5743. Gerhardt, Uta. (U London, Bedford Coll, England) **The emergence of "situated role" in a bureaucratic setting.** *Sociology of Work & Occupations*, 1975(Aug), Vol 2(3), 257-283. —A study of 50 vocational guidance career counselors in a federal German agency showed discrepancies between performance and the formally legislated job description. Participant observations, interviews, and questionnaires were used. It is contended that welfare bureaucrats reduce formally stated role schemes in order to cope. The relational, normative, and functional aspects of reduction are discussed, and mechanisms of cognitive reconciliation of the actual and the formal role are explained. The concept of individuals' role images is used to interpret the clash between bureaucratic and professional forces in welfare agencies as related to the political fate of social reform in capitalistic societies. (2 p ref)—*Journal abstract*.

5744. Parker, Donald F. & Dyer, Lee. (US Naval Air Station, New Brunswick, ME) **A note on the measurement of valence perceptions in expectancy theory research.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 761-764. —Recently, students of expectancy theory have begun to urge that the theory be tested as a within-person behavioral choice model. In these discussions, and in the research thus far conducted, it has been assumed that single measures of valence perceptions are adequate, presumably because these perceptions are not expected to vary much (if at all) across behavioral alternatives. This presumption was tested by examining the valence given by 702 male senior US Naval officers to 25 outcomes in 2 contexts: continuing in the active duty role and leaving the Navy to assume an anticipated retirement role. Results show that for most outcomes the ratings of valence perceptions differed across the 2 roles. —*Journal abstract*.

5745. Pastore, Jose et al. (U Sao Paulo, Brazil) **Occupational wage differentials among university educated technical personnel in a developing economy.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 113-126. —Data taken in 1970-1971 from 3 university-trained occupational groups (2,796 engineers, 1,430 economists-business-administrators, and 162 basic scientists) in Sao Paulo's manufacturing industries were used in a path analysis to draw interoccupational comparisons concerning the antecedents of occupational wage differentials. The worker's total hourly wage was the dependent variable. A new variable, occupational influence

level, was employed as immediately antecedent to wage, as in job experience (years in the present job). Years of advanced education, age, and seniority in the firm were treated as exogenous variables. Similarities and differences among occupations are discussed. As a whole, results of the analysis illustrate a strategy of comparative occupational analysis. (16 ref)—*Journal abstract*.

5746. Petersen, Eggert. (U Aarhus, Psychological Inst, Denmark) [New perspectives in industrial psychology.] (Danish) *Nordisk Psykologi*, 1975, Vol 27(4), 225-237. —Discusses the problems of unlimited, unqualified, and undirected economic growth and argues that this growth is environmentally deleterious for the place of work, the local society, the broader social, and the physical environment. The role of the industrial psychologist within this framework is considered, and it is concluded that he must propose new theories and practices to attempt to specify systems of work which can function with low, qualified, and directed growth.—*Journal abstract*.

5747. Reaser, Joel M. (Southern Illinois U) **The relationship between official and leader behaviors and the performance and job satisfaction of mental health employees.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1784.

5748. Rushall, B. S. (Dalhousie U, Applied Psychology Lab, Halifax, Canada) **Applied behavior analysis for sports and physical education.** *International Journal of Sport Psychology*, 1975, Vol 6(2), 75-88.—Presents an introduction to applied behavior analysis. Several examples of its use in sports and physical education are presented. 2 devices are discussed, one for presenting behavior cues for personality modification and the other for providing contingent feedback for developing stability in sculling. Some of the benefits of applied behavior analysis for sports and physical education are discussed.—*Journal abstract*.

5749. Sargent, George A. (United States International U) **Motivation and meaning: Frankl's logotherapy in the work situation.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1785.

5750. Sjö Dahl, L. [The nurse's job: A limited job-analysis.] (Swed) *Pedagogisk-Psykologiska Problem*, 1974(Dec), No 264, 236 p. —Interviewed 172 nurses from medical and surgical clinics using the critical and incident method. Findings demonstrate the importance of taking into account the expressive, psychological aspect of nursing. For every reported situation appropriate actions or measures are proposed in the form of work demands. (21 ref)—*English abstract*.

Occupational Attitudes & Interests & Guidance

5751. Aldag, Ramon J. & Brief, Arthur P. (U Wisconsin, Graduate School of Business, Madison) **Some correlates of work values.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 757-760.—Replicated findings by M. R. Blood (see PA, Vol 44:5754) concerning relationships of work values to employee affective responses. Ss were 131 hourly employees of a manufacturing firm. Further significant relationships were found between work-value indices and employee perceptions of task characteristics and of leader behaviors. The common suggestion that adherence to Profes-

tant Ethic ideals should be associated with strong higher order needs was supported.—*Journal abstract*.

5752. Barak, Azy; Carney, Clarke G. & Archibald, Robert D. (Ohio State U) **The relationship between vocational information seeking and educational and vocational decidedness.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 149-159.—Explored the relationship between vocational information seeking behavior (VISB) and educational and vocational decidedness. Pre- and postmeasures of VISB and educational and vocational decidedness were given to 2 groups of "undecided" university freshmen. One group of 169 Ss experienced a 3-hr vocationally oriented life planning workshop and a career planning class module of 10 hrs duration; the other group of 222 Ss experienced only the class module. Correlations between VISB and the 2 forms of decidedness were low but significant. Cross-lagged and dynamic correlations completed to determine causal effects only minimally supported the hypotheses that engaging in VISB produces an increase in educational and vocational committedness and vice versa. (31 ref)—*Journal abstract*.

5753. Brosnan, Peter. (La Trobe U, Bundoora, Australia) **The ability to predict workers' preferences: Further evidence.** *Human Relations*, 1975(Aug), Vol 28(6), 519-541.—Conducted a follow-up of J. M. Howells and P. Brosnan's (see PA, Vol 49: 8084) survey of the ability of 71 managers and trade union officers to predict 262 workers' preferences. Results show that even when economic and social conditions change a good deal, and despite changes in individuals' preferences, the average union members' preferences for pay and fringe benefits remain remarkably constant. The managers and union officers were unable to assess workers current preferences, and the majority of persons who had predicted preferences in both surveys performed worse in the second, most overestimating the limited changes in preferences which had occurred. It is concluded that those who work closest to the ordinary worker are less capable of deciphering the confusing array of information which they receive about him. (25 ref)—*Journal abstract*.

5754. Desmond, Richard F. & Weiss, David J. (U Pittsburgh, Rehabilitation Counseling Program) **Worker estimation of ability requirements of their jobs.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 13-28.—A modified version of the Minnesota Job Requirements Questionnaire (MJRQ), representing the General Aptitude Test Battery (GATB) aptitudes, was used by 714 workers in 11 selected jobs to rate the ability requirements of their jobs. Worker MJRQ ratings were compared with 261 supervisors' MJRQ ratings. Modified Occupational Ability Patterns (OAPs) derived from worker ratings were compared with OAPs based on supervisor ratings, OAPs from expert ratings in the Dictionary of Occupational Titles (DOT), and OAPs from the empirical GATB approach. Reliability of worker MJRQ ratings was comparable to that of supervisor ratings. Comparisons of mean ratings and variability of ratings of workers in a job category with workers in other jobs, and with supervisors rating the same job, showed construct validity for worker MJRQ ratings, as did intercorrelations of the worker ratings.

OAPs derived from worker MJRQ ratings compared favorably with OAPs derived from supervisor MJRQ ratings, from the DOT, and from the GATB. Differences among workers on variables such as satisfaction, age, and tenure did not significantly affect their MJRQ ratings. (16 ref)—*Journal abstract*.

5755. Dolliver, Robert H. & Nelson, Richard E. (U Missouri) **Assumptions regarding vocational counseling.** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 12-19.—Describes common hindering and facilitative assumptions related to vocational counseling. False assumptions appear among the general public, clients, vocational test makers, and counselors. Since counseling outcome depends on counselors and clients sharing reasonable assumptions, the following are proposed: (a) Different clients need or want different things in making occupational decisions: (b) Active client involvement enhances counseling outcomes: (c) Occupational decision-making can progress through focus on the areas of occupational information, values clarification, and decision-making skills: (d) Client personality enters into occupational performance and success: (e) Vocational counseling most often leads not to final occupational choices but to possibilities for further exploration. (26 ref)—C. A. Heikkinen.

5756. Gade, Eldon M. & Goodman, Ronald E. (U North Dakota) **Vocational preferences of daughters of alcoholics.** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 41-47.—Studied the vocational preferences of daughters of alcoholics in terms of Roe's theory, which suggests that individuals suffering parental neglect and rejection make career choices which are not person-oriented. 25 undergraduate daughters of alcoholics (DAs) and 30 randomly selected undergraduate women (RSs) took Holland's Vocational Preference Inventory (VPI). National VPI norm comparisons and *t* tests showed that (a) as expected, DAs scored higher on the intellectual and lower on the status scales than RSs; (b) expected DA-RS differences on the realistic, social, enterprising, and control scales failed to appear; (c) as expected, DAs' realistic and intellectual percentile scores were their highest; (d) unexpectedly, DAs' overall scores were not lower or less differentiated than those of the RSs; and (e) as expected, DAs appeared less similar to national norms than RSs. Counseling approaches suitable for DAs are suggested. (16 ref)—C. A. Heikkinen.

5757. Gottfredson, Gary D.; Holland, John L. & Gottfredson, Linda S. (Johns Hopkins U, Educational Research Ctr) **The relation of vocational aspirations and assessments to employment reality.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 135-148.—Used a typology to organize (a) 1970 US Census data about the kinds of employment, (b) survey data about people's aspirations, and (c) the results of vocational assessments made with and without norms for men and women at 2 educational levels—some high school or above and some college or above. Results indicate that kinds of employment differ greatly for different educational levels and between the sexes. The distribution of people's aspirations resembles the distribution of actual employment, with some notable exceptions. Results also indicate that the use of sex-based interest inventory norms is unrealistic because they create distributions that diverge greatly

from the distribution of actual employment. Some implications of the congruence between kinds of people and their employment are discussed for vocational guidance, test development, and career development research and theory. (30 ref)—*Journal abstract*.

5758. Groome, Agnes J. (U Saskatchewan, Regina, Canada) **Interaction effects in life career simulation: Sex and ability of role and participants.** *Simulation & Games*, 1975(Sep), Vol 6(3), 312-319.—Assessed the effects of participation in a simulation activity on high school students' career maturity.—D. E. Anderson.

5759. Kelso, Geoffrey I. (Johns Hopkins U) **The influences of stage of leaving school on vocational maturity and realism of vocational choice.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 29-39.—Obtained cross-sectional data from 1,484 male 7th-12th graders who completed either the Otis Intermediate Test or the Otis Higher Test, Crites' Vocational Development Inventory (VDI), and the author's Student Survey. Major findings show that (a) Ss' anticipated stage of leaving school was significantly related to realism of vocational choice—those SS who expected to leave school prior to Grade 12 showed higher levels of realism than those going on, in spite of the fact that they tended to be lower in both maturity of vocational choice attitudes (VCA) and intelligence; (b) IQ exercised a complicated mediatory effect on both VCA and realism; and (c) in general, both VCA and realism were linearly related to grade. Findings indicate the need to distinguish carefully between VCA and realism as aspects of vocational development. (26 ref)—*Journal abstract*.

5760. Meir, Elchanan I.; Bar, Rivka; Lahav, Gabi & Shalhevet, Reuven. (Tel-Aviv U, Israel) **Interest inventories based on Roe's classification modified for negative respondents.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 127-133.—The Ramak and Courses interest inventories (E. I. Meir et al), based on A. Roe's (1956) occupational classification, were modified for use with Ss who answer negatively to most items in the traditional forms. 136 19-21 yr old male Israeli army personnel responded to the Ramak and Courses inventories with the R ? A (Refuse, Undecided, Agree) scale. The split half reliability of the modified inventories was 0.75, and their occupational structure had the same shape and arrangement as the inventories with the Y ? N (Yes, Undecided, No) scale. Negative respondents gave more positive responses ($p < .05$) on the modified forms than on the traditional ones. *Journal abstract*.

5761. Patrick, Theodora A. (Columbia U) **Personality and family background characteristics of women who enter male-dominated professions.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-A), 2396.

5762. Pearson, Henry G. (Career Concepts, Wayland, MA) **Self-identification of talents: First step to finding career directions.** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 20-26.—Describes a process-oriented workshop to help individuals identify their own skills and interests and relate them to appropriate career fields. In approximately 10 hrs of group and individual sessions, Career Direction Workshop participants learn how to view successes as combinations of skills and traits, to translate them into generic terms, and to apply the resultant patterns to career characteristics with the help

of written occupational descriptions. Once learned, the process is useful for repeated career self-assessment. The workshop has been effective in industry and schools, and requires coaches oriented toward both teaching and counseling.—C. A. Heikkinen.

5763. Pillai, P. Gopala. (U Kerala, Trivandrum, India) **A study of factors related to the disparity between occupational aspirations and value choices of high school students.** *Indian Journal of Social Work*, 1975(Apr), Vol 36(1), 61-73.—Attempted to assess the disparity between occupational preference and value choices of students quantitatively, to determine whether disparity is related to socioeconomic status, and to determine whether such personality variables as extraversion and neuroticism are factors in the disparity. A personality inventory, personal questionnaire, a list of 9 job values, and a list of 26 occupations were administered to 720 pupils. It was found that lower socioeconomic status children and those with parents of lower educational attainment showed greater disparity. There was a greater tendency for disparity among males from families with higher socioeconomic status. In general, neurotic and extraverted Ss showed greater disparity than the others. (26 ref)—I. W. Kidorf.

5764. Sherrid, Samuel D. (New York U) **The effects of cognitive dissonance upon values held by police.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-A), 3545.

5765. Shinar, Eva H. (Midtown Community Mental Health Ctr, Children/Adolescent Service, Indianapolis, IN) **Sexual stereotypes of occupations.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 99-111.—Examined the nature of sex stereotypes of occupations as they exist among college students today, using data from 60 male and 60 female undergraduates. The method of eliciting sexual stereotypes of occupations was distinctive in that 3 types of rating criteria were used, each emphasizing a different aspect of perception, on the basis of which the ratings of occupations as masculine, feminine, or neutral were subsequently made. Results indicate that sexual stereotypes of occupations were clearly defined and held in agreement by both males and females. The study yielded information about the mean rating of each of 129 occupations in terms of its masculinity, femininity, and neutrality.—*Journal abstract*.

5766. Thomas, L. Eugene. (U Connecticut) **Why study mid-life career change?** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 37-40.—Identifies areas in developmental knowledge of midlife career change and stability that need more research. These include (a) motivations for mid-life career change, (b) the relationship between career change and identity change, (c) the balance between work and leisure activities related to psychological well-being in middle age, and (d) correlates of persistence and change at mid-life, especially in the light of current opportunities presented for career change. Besides studying others, developmental psychologists should investigate themselves and colleagues since this concern also touches their lives. The nature of the problem requires an interdisciplinary approach, and the help of guidance workers is needed.—C. A. Heikkinen.

5767. Valentine, Debbie; Ellinger, Nancy & Williams, Martha. (Settlement Club Home, Social Services, Austin, TX) **Sex-role attitudes and the career choices of male and female graduate students.** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 48-53.—Studied differences on the Attitudes Toward Women Scale (ATWS) of 224 University of Texas (Austin) female and male graduate students relative to their enrollment in areas traditionally considered "masculine" or "feminine." Analyses of variance gave the following results: (a) In general, women had more nontraditional attitudes than men. (b) Men and women enrolled in nontraditional areas had more liberal attitudes than those in traditional areas. (c) Students in feminine occupations were more liberal than those in masculine occupations. (d) Marital status was unrelated to ATWS scores. (e) Men and women in nontraditional areas had a higher percentage of working mothers than their peers in traditional areas. (f) Women in masculine occupations had a higher proportion of professional fathers than women in feminine occupations. It is suggested that women in masculine occupations experience more role strain than women in feminine occupations, largely because of the attitudes of male peers. Findings indicate the value of including men in studies of women's occupational choice.—C. A. Heikkinen.

5768. Walsh, W. Bruce & Hanle, Nancy A. (Ohio State U) **Consistent occupational preferences, vocational maturity, and academic achievement.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 89-97.—Explored the differences in vocational maturity, academic aptitude, and achievement variables among 53 female undergraduate sorority students who made congruent, incongruent, and undecided occupational choices. The variables were operationally defined by the Career Maturity Inventory, the American College Test Battery, and a self-report questionnaire. Congruent, incongruent, and undecided current occupational choice groups were defined operationally using the Self-Directed Search. Analysis of variance revealed the main effect of groups to be significant for 2 variables. Findings suggest that Ss in the congruent female group tended to be more vocationally mature than Ss in the incongruent and undecided groups. (27 ref)—*Journal abstract*.

5769. Yonge, George D. & Regan, Mary C. (U California, Davis) **A longitudinal study of personality and choice of major.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 41-65.—Examined aspects of J. L. Holland's theory of vocational choice, using university freshmen and senior Omnibus Personality Inventory (OPI) and freshman Scholastic Aptitude Test (SAT) data for 833 males. It was found that freshmen, senior, and change scores on the OPI and SAT were related to senior major field of study, classified into the 6 Holland types. There were differences in both personality and ability among those who persisted in the same type of major for 4 yrs, and there were differences among those who changed to a different type of major from the freshman to the senior year. There was limited evidence that within certain types of major, particularly the realistic type, persisters, and those who entered this type of major resembled each other more on some personality characteristics than did persisters and those who left this type of

major. Evidence in support of Holland's theory was based on relationships which had been well established and known for a long time. More explicit expectations derived from this theory were only weakly supported or not supported at all. Indeed, Holland's theory is not adequate to the task of shedding much light on the obtained results.—*Journal abstract.*

5770. Yuchtman, Ephraim & Samuel, Yitzhak. (Tel-Aviv U, Israel) **Determinants of career plans: Institutional versus interpersonal effects.** *American Sociological Review*, 1975(Aug), Vol 40(4), 521-531.—Describes the Israeli educational system as activating a series of institutionalized controls to promote centralized public policies with regard to educational and occupational opportunities. Hence, individual goals and plans for future careers are severely constrained by formal mechanisms such as an early separation of more promising students from less able ones, differential training of various classes of students through distinctive types of high schools, and the granting of official credentials in the form of various diplomas and licenses. Such institutional arrangements are considered to be a form of "sponsored" mobility system within which the role of informal, interpersonal influences on levels of career aspiration is rather limited, particularly in later stages of the educational process. Empirical data from questionnaires administered to 500 20-21 yr old males and females, a sample randomly drawn from Israeli military records, support this thesis. (29 ref)—*Journal abstract.*

75-6(11), 60 p.—Reports results of an intensive evaluation focused on the actual training value of a US Air Force crew training device. Findings show that the trainer (a) provides effective individual and crew coordination training and (b) validates the effectiveness of functional part-task trainers and the design philosophy that stresses reliance on behavioral task analysis data.

5775. Heneman, Herbert G.; Schwab, Donald P.; Huett, Dennis L. & Ford, John J. (U Wisconsin, Graduate School of Business, Madison) **Interviewer validity as a function of interview structure, biographical data, and interviewee order.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 748-753.—Investigated effects of degree of interview structure, presence or absence of interviewee biographical information, and interviewee order on interviewer validity. 54 undergraduates in personnel management and 36 social-worker supervisors serving as judges rated 6 currently employed social workers assuming the role of job applicants in videotaped interviews. Low validities, calculated using interview ratings and performance-measure criterion scores based on a job analysis of the social-worker position, were obtained in all treatment conditions. Analysis of variance revealed that only interviewee order had an appreciable effect on interviewer validity. Analysis of the interview ratings revealed the presence of halo error and low interrater reliability. Possible design limitations and future research suggestions are discussed.—*Journal abstract.*

5776. Hungerland, Jacklyn E. & Taylor, John E. **Self-paced instruction in a cognitively oriented skills course: Supplyman, MOS 76Y10.** *HumRRO Technical Report*, 1975(Jun), No 75-20, 35 p.—Conducted a study at a US Army training center to determine the feasibility of using self-paced instruction without programed texts in a clerical and computational skills course. Course organization and management and effective instructional techniques for the conduct of self-paced training were the principal areas of study. Data were collected on approximately 135 baseline (lock-step) and 200 self-paced students during a 7-wk supplyman course. Findings indicate that self-pacing is feasible to implement and operate, can be used effectively in cognitive skill training, and is well received by students and instructors.—*Journal abstract.*

5777. Jeske, J. Oscar & Whitten, Mary R. (Oklahoma Baptist U) **Motivational distortion of the Sixteen Personality Factor Questionnaire by persons in job applicants' roles.** *Psychological Reports*, 1975(Oct), Vol 37(2), 379-383.—Investigated motivational distortion on 5 factors (A, C, E, H, and O) of the 16PF by 50 undergraduates in job applicants' roles. Ss were able to distort significantly in their favor these factors and 5 additional ones (G, L, Q₁, Q₂, and Q₃). Results suggest caution in using the 16 PF in personnel selection.—*Journal abstract.*

Personnel Evaluation & Performance

5784. Andriessen, J. H. (Vrije U, Vakgroep Arbeids-en Organisatiepsychologie, Amsterdam, Netherlands) **[The expectancy theory and work motivation.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Aug), Vol 30(6), 453-491. Reviews several studies on work motivation. H. Peak (1955), one of the earliest researchers on the subject, suggested 2 levels of work outcomes: (a) the valence or attractiveness

of the task indicated by objective performance and (b) the subjective motivational levels. In an evaluation of 17 studies on "b", H. G. Heneman and D. P. Schwab (see PA, Vol 49:01420 found that results varied considerably on the structure and content of the "b" level. V. Vroom's (1964) reference performance model is presented to indicate the relationships between "a" and "b." Valence or attractiveness of the task and the expectancy of performance produce force of action. This force is equated with effort which, combined with ability, develops performance that identifies the level of work outcome. The 17 studies are appraised with respect to their interpretations of the form and composition of the subjective motivational level, the influence of the social situation of the worker's performance in developing that level, the statistical procedures used to analyze the work outcomes, and the system of measurement of performance. 5790. Shriver, Edgar L. (URS/Matrix Research Co, Falls Church, VA) **Fully proceduralized job performance aids: Guidance for performing behavioral analyses of tasks.** *US AFHRL Technical Report*, 1975(Jun), No 75-38, 43 p.—Details a method for identifying all the cues, directions, and responses necessary for task performance by US Air Force novice and apprentice maintenance personnel. This method, the behavioral analyses of tasks (BAT), is intended as a supplement to fully proceduralized job performance aids (FPJPA) and involves a "hands on" tryout of the initially produced task steps. The application of BAT with several novice and apprentice personnel identified important cues in the troubleshooting routine and produced an "unfolding" effect from pictorial to pictorial. After inclusion of BAT in FPJPA, the performance of both novices and apprentices greatly improved. Apprentice performance was equivalent to that of experienced personnel, with 95% of their assigned tasks accomplished. It is suggested that the use of BAT in the FPJPA developmental cycle will be necessary for the consistent production of a quality product at a minimum cost.—B. McLean.

Management & Management Training

5791. Bass, Bernard M.; Valenzi, Enzo R.; Farrow, Dana L. & Solomon, Robert J. (U Rochester, Graduate School of Management) **Management styles associated with organizational, task, personal, and interpersonal contingencies.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 720-729.—Prior studies with subordinates and managers from public and private agencies resulted in the development of a 31-scale profile questionnaire conceptualized in a systems framework of input, transform, and output variables. In the present study, the profile was completed by 78 managers and 407 of their subordinates. Convergent and concurrent validity studies generally supported the validity of the scales. 5 management styles measured were found to be conceptually but not empirically independent. The styles—direction, negotiation, consultation, participation, and delegation—differentially correlated with organizational, task, intrapersonal, and interpersonal variables, as well as with measures of work-unit effectiveness and satisfaction. According to stepwise regressions, direction was most likely to appear with structure and clarity; negotiation with short-term objectives and authoritarian subordinates; consultation, with long-term objectives and intra-group harmony; participation, with clarity and warmth; and delegation, with warmth and lack of routine tasks.—*Journal abstract.*

5792. Bates, Peter A. (U Illinois, Urbana-Champaign) **Managerial behavior: Its assessment and implications.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 904.

5793. Helmich, Donald L. & Erzen, Paul E. (U San Diego) **Leadership style and leader needs.** *Academy of Management Journal*, 1975(Jun), Vol 18(2), 397-402.—Conducted a questionnaire study of 108 corporation presidents. It was hypothesized that there is a positive relationship between a task-oriented leadership style and a lack of fulfillment of the leader's personal needs. Results significantly support the central hypothesis. The corollary hypothesis is supported in that employee-oriented style related to a higher degree of need fulfillment for Ss than did the task-oriented style. Of 6 items making up the total need fulfillment score, the 2 which contributed most to explaining the covariance between leadership style and need fulfillment were prestige and opportunity for growth and development. (16 ref)

5794. Hofstede, Geert. (European Inst for Advanced Studies in Management, Brussels, Belgium) **Perceptions of others after a T group.** *Journal of Applied Behavioral Science*, 1975(Jul-Sep), Vol 11(3), 367-377.—60 managers attending an executive course responded to questionnaires specifying their perceptions of the needs for improvement of themselves and of their bosses. 30 Ss answered before participating in a 3-day T-group program and 30 Ss answered immediately after. A comparison of responses showed that the perception gap between perceived "self" and "boss" improvement needs in the interpersonal area was wider after training than before. Based on this finding and an analysis of the literature, it is argued that T-group programs tend to have a negative influence on perceptions of outsiders and

that this effect may be functional as well as dysfunctional in organization development.—*Journal abstract.*

5795. Hunsaker, Phillip L. **Incongruity adaptation capability and risk preference in turbulent decision-making environments.** *Organizational Behavior & Human Performance*, 1975(Oct), Vol 14(2), 173-185.—Studied the value of using the general incongruity adaptation level (GIAL) theory by M. J. Driver and S. Streufert (1965) to predict variations in risk preference under different degrees of environmental incongruity. In a sample of 203 undergraduates, Ss with high scores on the GIAL Self-Description Test perceived incongruent decision environments as less risky, incorporated more risk in the decisions they made, and responded to changes in environmental turbulence in more rational ways, than did lower scoring Ss. Findings confirm the basic hypotheses of GIAL theory and establish its relationship to risk perception and risk preference in turbulent decision-making environments. Application of the GIAL Self-Description Test as a screening criterion, and training methods for increasing incongruity adaptation capability, creativity, risk preference, and flexibility, are discussed. (23 ref)—*Journal abstract.*

5796. Jirásek, Jaroslav. **Science helps management: On the tasks of the Council of the State Economic Research Programme dealing with enterprise management.** Prague, Czechoslovakia: Inst of Management, 1973. 18 p.—Discusses the problems of an enterprise under socialism, surveys its development and functions, and outlines the principles of a branch organization and social planning. Management methods are examined in the light of Czechoslovak experience.

5797. Korman, Abraham K. & Tanofsky, Robert. (Bernard M. Baruch Coll, City U New York) **Statistical problems of contingency models in organizational behavior.** *Academy of Management Journal*, 1975(Jun), Vol 18(2), 393-397.—Examines some of the methodological and statistical problems of contingency theories of leadership and especially the practical applicability of theoretical findings. It is concluded that (a) neither contingency nor noncontingency models can provide adequate solutions to the leadership problem, both need to be used. (b) The use of contingency models must proceed slowly. A priori models are difficult to utilize because of parameter estimation problems, and empirical models present problems unless attention is paid to psychometric problems. (c) The inability of both approaches to satisfy the demands for adequate theory may have a positive effect. It may encourage the viewing of theory as an aid to problem identification rather than as having a "truth" status which must be protected.

5798. Lessner, Milton. (United States International U) **Self-actualization study of the small business entrepreneur.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1727-1728.

5799. Lischeron, Joe & Wall, Toby D. (MRC Social & Applied Psychology Unit, U Sheffield, England) **Attitudes toward participation among local authority employees.** *Human Relations*, 1975(Aug), Vol 28(6), 499-517.—Administered a questionnaire to 127 blue-collar employees to determine their attitudes toward participation in managerial decisions. Results show that, while the Ss experienced little participation, they expressed strong

desires to be involved in decision making. The form of participation preferred depended on the nature of the decision involved. In middle-management decision making most Ss wanted to participate through personal contact with management; in top-management decisions employee representation was desired; and in pay-related decisions participation through trade union representation was favored. Attitudes toward participation were positively related to job satisfaction. The usefulness of such questionnaire data as a starting point for the implementation of participative practices is discussed. (43 ref)—*Journal abstract*.

5800. **Osborn, Richard N. & Hunt, J. G.** (Southern Illinois U, Carbondale) **Relations between leadership, size, and subordinate satisfaction in a voluntary organization.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 730-735.—Examined relationships between leadership, unit size, and subordinate satisfaction in 60 chapters of a nationwide, undergraduate, business fraternity. Chapter members completed questionnaires assessing satisfaction with work, supervision, and co-workers and described their presidents in terms of consideration and initiating structure. Chapter presidents completed questionnaires assessing their lateral orientation, that is, their willingness to develop relations with external units. Responses of individual members were averaged across each chapter to provide an *N* of 60 for analysis. Simple bivariate relationships indicated that consideration and structure displayed some significant positive correlations with satisfaction, while lateral orientation and size displayed some significant negative correlations. Multiple linear regression analysis indicated that initiating structure and lateral orientation were the predictors contributing significant variance and that the leadership \times size interactions were significant when predicting some aspects of satisfaction. (18 ref)—*Journal abstract*.

5801. **Sloane, David E.** (Temple U) **The influence of differential scheduling of sessions on the effectiveness of a human relations training program as moderated by relevant personal characteristics of the trainees.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 906.

5802. **Varga, Karoly.** (Hungarian Academy of Sciences, Sociological Research Inst, Budapest) **nAchievement, nPower and effectiveness of research and development.** *Human Relations*, 1975(Aug), Vol 28(6), 571-590.—Administered the French Test of Insight to 118 executives, scientists, and engineers working on 17 pharmaceutical and chemical industry research and development (R and D) projects. The R and D projects were classified as successful or unsuccessful by outside experts, both from a technical and an economic point of view. Blind analysis showed that (a) need achievement (nAch) significantly correlated both with technical and economic success; (b) need power (nPow) was a strong factor making for both kinds of success when present in conjunction with nAch, but a factor making for failure in the absence of nAch; (c) nAch proved to be a factor making for success both on projects which allowed for initiative and those that did not; nPow on the other hand furthered success on noninitiative projects only, on initiative ones it promoted failure. Results are discussed

in the light of the nAch construct—the theory of the human need for work—and various nPow constructs. (35 ref)—*Journal abstract*.

Organizational Behavior & Job Satisfaction

5803. **Baum, John F. & Youngblood, Stuart A.** (Purdue U, Krannert Graduate School of Industrial Administration) **Impact of an organizational control policy on absenteeism, performance, and satisfaction.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 688-694.—Examined the impact of an organizational control policy based on the concept of "legal compliance" with established organizational norms on 2 behavioral measures—absenteeism and performance—and 2 attitudinal measures of satisfaction. The control policy was experimentally manipulated in each of 2 experimental groups totaling 297 undergraduates. In one group, a compulsory attendance policy followed by a noncompulsory policy was employed, while in the other the sequence of administering the policies was reversed. Attendance, performance, and satisfaction measures were used as criteria in analyses of variance. Results indicate that a control policy based on legal compliance significantly improved attendance and performance and did not alter satisfaction levels.—*Journal abstract*.

5804. **Berger, Leonard S.** (Temple U) **Use of power, Machiavellianism, and involvement in a simulated industrial setting.** *Dissertation Abstracts International*, 1973(Aug), Vol 34(2-B), 904.

5805. **Burnett, Gerry S.** (Michigan State U) **A study of causal relationships between organizational variables and personal influence variables during the implementation of a Scanlon Plan.** *Dissertation Abstracts International*, 1973(Sep), Vol 34(3-B), 1305-1306.

5806. **Caplan, Robert D. & Jones, Kenneth W.** (U Michigan, Inst for Social Research) **Effects of work load, role ambiguity, and Type A personality on anxiety, depression, and heart rate.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 713-719.—Studied Type A personality (hard driving, persistent, involved in work) as a conditioner of the effects of quantitative work load and role ambiguity (stresses) on anxiety, depression, resentment, and heart rate (strains) among 73 male users (mean age, 23 yrs) of a university computer system that was approaching a 23-day shutdown. Each respondent was his own control. Stress, personality, and psychological strain were assessed by questionnaire, and heart rate was measured. Change scores were then analyzed. Role ambiguity was positively associated with anxiety, depression, and resentment; subjective work load was positively associated only with anxiety. Anxiety was positively related to heart rate. The relationship between work load and anxiety was greatest for Type A persons, and a similar but nonsignificant trend appeared for the effects of anxiety on heart rate. Response and respondent specificity are discussed. (20 ref)—*Journal abstract*.

5807. **Christie, Bruce.** (U London, University Coll, Communications Studies Group, England) **Willingness to telecommunicate and general attitude.** *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 102. Reports results of an experiment in which 96 businessmen and government officials used a telecommunication system to hold a discussion. Their general attitude toward the system, as

measured by semantic differential ratings, significantly predicted their reported willingness to use the system rather than travel to an imaginary meeting. Their attitude toward the discussion itself did not.

5808. Dickinson, Terry L. & Wijting, Jan P. (Colorado State U) **An analysis of workers' attitudes toward the 4-day, 40-hour workweek.** *Psychological Reports*, 1975(Oct), Vol 37(2), 383-390.—430 employees' attitudes toward a proposed 4-day, 40-hr workweek were examined relative to job and worker variables, expectations about the shortened workweek, and satisfaction with facets of the job and company. Ss classified by their sex, work shifts, wage schedules, and sex \times work shifts differed significantly in their attitudes toward the 4-day, 40-hr workweek and in the advantages and disadvantages they expected to result from a revised workweek. Except for a weak relation with pay and promotions, satisfaction with facets of the job and company was not significantly correlated with attitude toward the proposed workweek. The importance of employees' expectations in relation to the 4-day, 40-hr workweek is discussed, and it is suggested that firms contemplating a revised workweek should examine and explore with employees the impact of a 4-day, 40-hr workweek before installation.—*Journal abstract.*

5809. DiMarco, Nicholas & Gustafson, David P. (U Missouri, School of Business Administration, St Louis) **Attitudes of co-workers and management toward hard-core employees.** *Personnel Psychology*, 1975(Spring), Vol 28(1), 65-76.—Studied attitudes of 30 White coworkers and 61 White managers toward Black workers who had previously been hard core unemployed (HCU) but were now employed by a manufacturing firm for a year. Coworkers and those who reported that they knew at least one of the Black workers well generally expressed more positive attitudes toward them than managers and those who reported that they did not know any of them well. Managers who did not know any Black workers well expressed especially negative attitudes. Related social psychology literature is reviewed and it is suggested that training programs aimed at increasing acceptance of HCU as workers be designed differently for coworkers and managers. (24 ref)—*J. McKillip.*

5810. Enderlein, Thomas E. (Pennsylvania State U) **Causal patterns related to post high school employment satisfaction.** *Journal of Vocational Behavior*, 1975(Aug), Vol 7(1), 67-80.—Developed a linear recursive path model and evaluated it using a combined male and female sample of 208 high school students and the 89 male and 119 female Ss of the sample separately. An attempt was made to identify causal relationships of in-school student characteristics to satisfaction in post-high-school employment. The statistical methodology used was path analysis. A total of 10 student characteristic variables were used in the model. Findings indicate that overall job satisfaction was related to variables which are associated with the affective domain: occupational values—interest and satisfaction and salary, and vocational maturity. Overall, employment satisfaction was twice as predictable for the females as it was for the combined sample, and it was not at all predictable for the males.—*Journal abstract.*

5812. Gavin, James F. & Howe, John G. (Colorado State U) **Psychological climate: Some theoretical and empirical considerations.** *Behavioral Science*, 1975(Jul), Vol 20(4), 228-240.—Distinguishes psychological climate from organizational climate and presents a model to depict how psychological climate affects and is affected by other variables in organizational settings. Based on the model, a series of hypotheses was developed and tested by administering a battery of psychometric tests to 794 managers of 4 large organizations. Findings indicate that psychological climate seems to be affected by the organizational setting and by the employees' echelon in the organization. Further, psychological climate had considerable covariation with satisfaction and motivational variables. Directions for future research seem to be clarified by this investigation. 5813. Grubb, Eric A. (U Michigan) **Temporal integration as a measure of job boredom and consequent selection of recreation activities.** *Dissertation Abstracts International*, 1973(Oct), Vol 34(4-B), 1722-1723.

5814. Hand, Herbert H.; Entafen, Bernard D. & Sims, Henry P. (U South Carolina, Coll of Business Administration) **How effective is data survey and feedback as a technique of organizational development? An experiment.** *Journal of Applied Behavioral Science*, 1975(Jul-Sep), Vol 11(3), 333-347.—Evaluated the effectiveness of the data survey and feedback method of organization development. In the study which used 216 business students, a pre-post experimental design was utilized with an experimental group which received the organization development treatment and a control group which did not receive the treatment. Both individual satisfaction (Porter Need Satisfaction Questionnaire) and team performance in a complex management simulation game were measured before and after the treatment. Although no differences were found between the control group's and the experimental group's performance, the experimental group was more satisfied than the control group, subsequent to the treatment. Results suggest that the data survey and feedback technique was effective in changing levels of satisfaction; however, it is questioned whether this is a sufficient outcome or not. The relationship of job satisfaction and performance is discussed from this viewpoint. (31 ref)—*Journal abstract.*

5817. Keller, Robert T. (U Houston, Coll of Business Administration) **Role conflict and ambiguity: Correlates**

- with job satisfaction and values. *Personnel Psychology*, 1975(Spr), Vol 28(1), 57-64.—Surveyed 51 professional government employees to study the relationships among role dynamics, job satisfaction, and personality characteristics. Role conflict was negatively correlated with the Job Description Index (JDI) dimensions of satisfaction with supervision, pay, and promotion. Role ambiguity was negatively correlated with the JDI dimension of satisfaction with work itself. The Study of Values test, measuring personality-related values, was unrelated to role dynamics and generally unrelated to job satisfaction. The importance of making role expectations explicit for effective personnel management is stressed.—J. McKillip.
5818. Kraut, Allen I. & Ronen, Simcha. (IBM Personnel Research, Armonk, NY) **Validity of job facet importance: A multinational multicriteria study.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 671-677.—Compared the importance of various job aspects, or facets, in predicting different criteria. Questionnaire measures were obtained from 2,376 salesmen and 6,331 repairmen of an international firm in 5 countries. Employees' ratings of facet importance were compared to facet importance defined empirically (i.e., by the correlation of facet satisfaction with various criteria). The importance of job facets, while similar among the 5 countries, varied with the criterion used. Higher order job facets were most important for predicting overall satisfaction and intent to stay with the company but were least important for predicting work tension. In multiple correlations with facet satisfactions, adding employees' nationality improved predictions only of performance ratings; adding employees' occupation improved predictions only of intent to stay. (29 ref)—*Journal abstract*.
5819. Kulkarni, A. V. (Directorate of Psychological Research, New Delhi, India) **Motivational factors among middle class employees.** *Indian Journal of Applied Psychology*, 1973(Jul), Vol 10(2), 66-69.—Compared the relative importance of 10 job factors for 80 white-collar employees. It was hypothesized that higher value would be placed on intrinsic rather than extrinsic job factors. Data were obtained by a personal interview in which each individual was asked to rank-order each factor according to its importance. The hypothesis was not confirmed since 2 extrinsic factors, adequate earning and job security, were ranked as most important. It was also found that there was no consistent trend between the findings of this study and similar studies using blue collar workers, except in their rankings of adequate earnings and job security.—R. P. Butler.
5820. London, M. & Klimoski, R. J. (U Illinois) **A study of perceived job complexity.** *Personnel Psychology*, 1975(Spr), Vol 28(1), 45-56.—Studied job complexity as seen by 153 female nurses at 4 hospitals. Hierarchical factor analysis of a 33-item questionnaire concerning job complexity revealed a general complexity factor (I) and 2 specific factors: (a) task demands and situational constraints (II); and (b) control and authority in the job (III). These factors were unrelated to supervision or peer ratings of effectiveness, but Factors I and III were related to a composite measure of satisfaction. The implications of the findings and the similarity of Factors II and III to the constructs of job enlargement and job enrichment are discussed. (16 ref)—J. McKillip.

5822. Marrett, Cora B.; Hage, Jerald & Aiken, Michael. (U Wisconsin) **Communication and satisfaction in organizations.** *Human Relations*, 1975(Sep), Vol 28(7), 611-626.—Used data obtained from 16 health and social welfare agencies to develop measures for examining organizational communication and to relate those measures to worker satisfaction. The communication properties of primary concern were the formality of the communication network and the direction of communication in the organization. Results indicate that these dimensions could be specified empirically and that their relationships to satisfaction could be measured. Those relationships varied, depending on whether satisfaction with the job or with co-workers was the focus. The study discusses several implications of the differentiation made among dimensions of communication and proposes hypotheses to be tested in further research on the social-psychological correlates of organizational communication patterns. (22 ref)—*Journal abstract*.
5823. Morgan, D. H. (U Manchester, England) **Autonomy and negotiation in an industrial setting.** *Sociology of Work & Occupations*, 1975(Aug), Vol 2(3), 203-226.—Examines 2 concepts developed to analyze informal workplace behavior: F. E. Katz's (1968) notion of autonomy and the concept of negotiation developed by A. L. Strauss et al (1963). The potential usefulness of these concepts taken together is discussed in relation to 2 everyday features of life in an electrical components workshop: the continued argument about when radios should be turned on or off and the larger issue of the negotiation of time.—*Journal abstract*.
5824. Nadler, David A. & Pecorella, Patricia A. (U Michigan, Inst for Social Research, Survey Research Ctr) **Differential aspects of multiple interventions in an organization.** *Journal of Applied Behavioral Science*, 1975(Jul-Sep), Vol 11(3), 348-366.—Reexamined an organization development effort spanning several years in 1 organization to assess the differential effects of interventions. Findings illustrate how organizational change efforts can have different effects on different groups within an organization. Significant differences among hierarchical levels of the organization were found in satisfaction with several aspects of the work environment, the most important finding being the relatively low levels of satisfaction among supervisory and technical workers. Supporting clinical data revealed the lack of an integrated change program, the failure to adequately structure supervisors into change activities, and problems in the management of participation as possible sources of the differential effects. Recommendations for the design of intervention are made, and it is concluded that there is a need for the application of more systemic models of change combined with more comprehensive measurement of the effects of interventions. 5825. Notz, William W. (U Manitoba, Faculty of Administrative Studies, Winnipeg, Canada) **Work moti-**

vation and the negative effects of extrinsic rewards: A review with implications for theory and practice.

American Psychologist, 1975(Sep), Vol 30(9), 884-891.—Considers the possibility that intrinsic and extrinsic motivation are not independent, that they do not summate, and that a consequence of arousing extrinsic motivation is to reduce intrinsic motivation. The research relating personal causation to the interaction between the types of motivation is reviewed, and empirical evidence is presented. The interaction effects are noted to be symmetrical in some conditions, and the adequacy of current theories of work motivation is questioned. Innovations such as job enlargement, job enrichment, and participative management appear designed to simultaneously manipulate both types of motivation. (23 ref)—*R. Tomasko.*

5826. O'Keefe, R. D.; Kernaghan, J. A. & Rubenstein, A. H. (Northwestern U) **Group cohesiveness: A factor in the adoption of innovations among scientific work groups.** *Small Group Behavior*, 1975(Aug), Vol 6(3), 282-292.—Explored the relationship between group cohesiveness, influence of supervisor and gatekeeper of an information source, and probability of adoption of a system of communication. Ss were 99 medical researchers and clinicians. After a questionnaire was administered, an information system was introduced. The gatekeeper, identified in the questionnaire as one whom Ss ask for information, was the sole link between Ss and the information source. Group cohesiveness was defined by responses on a sociogram. Supervisors were identified from administrative records. After 6 mo, Ss evaluated the system, and evaluations were compared with Ss' actual use of the system. In general the results suggest that the degree of group cohesiveness, and the influence of the gatekeeper and supervisor were important determinants of Ss' use of the information system.—*J. Rubin.*

5829. Schmidt, B. June. **Prediction of success in clerical occupations from ability test scores.** *Vocational Guidance Quarterly*, 1975(Sep), Vol 24(1), 68-72.—Studied the relationship between ability level and clerical employee job performance and job satisfaction in terms of the theory of work adjustment, which identifies ability and needs as moderator variables affecting job success. The 55 Ss were 1972 graduates of stenographic programs in 3 sections of Virginia. Responding to mailed requests, supervisors rated graduate job performance on 31 basic office competencies, and the graduates rated job satisfaction using the Job Description Index. 11th-grade School and College Ability Test percentiles divided the Ss into high, medium, and low ability groups. Analysis of variance showed (a) no relationship between performance ratings and ability level, and (b) a significant ($p < .05$) inverse relationship between job satisfaction and ability level. The 2nd finding supports ability as a moderator variable in the work situation. It is concluded

that future researchers attempting to find predictive measures for job success should also examine relationships between predictive measures and job requirements.—*C. A. Heikkinen.*

5830. Schuler, Randall S. (Pennsylvania State U) **Role perceptions, satisfaction, and performance: A partial reconciliation.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 683-687.—Role theory hypothesizes that role conflict and role ambiguity are negatively related to job satisfaction and performance. Results of recent research indicate, however, that role conflict and role ambiguity are not always negatively related to job satisfaction and performance: Sometimes no relationships are found. The present study used a rationale suggested by previous research and role theory to reconcile the inconsistent results of previous research. Data were obtained from 331 questionnaires completed by employees of a large manufacturing firm. The rationale for reconciliation was based upon the organization level of the employee. Role ambiguity was hypothesized to have a greater negative relationship than role conflict with job satisfaction and performance for employees at higher levels in an organization. Conversely, role conflict was hypothesized to have a greater negative relationship than role ambiguity with job satisfaction and performance for employees at lower levels in an organization. Results support the hypothesized relationships with job satisfaction but not with performance. The lack of support for the performance hypotheses is discussed in terms of an ability-adaptability phenomenon.—*Journal abstract.*

5831. Sheridan, John E. & Slocum, John W. (Wayne State U) **The direction of the causal relationship between job satisfaction and work performance.** *Organizational Behavior & Human Performance*, 1975(Oct), Vol 14(2), 159-172.—Used a crossed-lagged correlation design to test causal relationships between work performance and 4 different equations of job satisfaction using the Porter Need Satisfaction Questionnaire. Longitudinal data over a 1-yr period was collected for 35 managers and 59 machine operators in a specialty steel firm. Affective job satisfaction was linked to managers' performance in a lagged performance \leftarrow satisfaction relationship. Need-deficiency measures of job satisfaction were linked to the machine operators' performance in a lead dissatisfaction \leftarrow performance relationship. The inclusion of the importance moderator in measures of job satisfaction did not improve the correlation between satisfaction and performance. (25 ref) *Journal abstract.*

5832. Steers, Richard M. (U Oregon, Graduate School of Management & Business) **Effects of need for achievement on the job performance-job attitude relationship.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 678-682.—Studied the effect of employee need for achievement (n Ach) on the job performance-job attitude relationship among 1st-level supervisors. Ss were 133 females with a mean age of 42 yrs employed in a large public utility. Before need strength variations were considered, overall performance was found to be somewhat related to job satisfaction but not to job involvement. However, when Ss were split into high and low n Ach groups, performance was significantly related

to both satisfaction and involvement for high n Ach Ss but not for low n Ach Ss. (28 ref)—*Journal abstract.*

Human Factors Engineering

5836. **Beringer, Dennis B.; Williges, Robert C. & Roscoe, Stanley N.** (U Illinois, Urbana-Champaign) **The transition of experienced pilots to a frequency-separated aircraft attitude display.** *Human Factors*, 1975(Aug), Vol 17(4), 401-414.—3 groups of 8 male professional pilots each were given 1 flight in a Link GAT-2 simulator and 1 flight in a Beechcraft C-45H using, respectively, the moving horizon, moving airplane, and frequency-separated attitude displays. The flight tasks performed by the Ss included recovery from unknown attitudes, disturbed attitude tracking, and completion of an area navigation course. Data collected in the aircraft demonstrated superior performance of both the frequency-separated and moving horizon displays when compared to the moving airplane display during unknown attitude recoveries. The frequency-separated display was superior to all others during disturbed attitude tracking. It is concluded that the flight performance of experienced pilots during their initial transition to a frequency-separated flight attitude presentation is at least comparable, and for some tasks superior, to their flight performance with the conventional moving horizon presentation.—*Journal abstract.*

5837. **Ince, Fuat; Williges, Robert C. & Roscoe, Stanley N.** (Marmara Arastirma Enstitusu, Elektronik Bolumu, Gebze, Turkey) **Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays.** *Human Factors*, 1975(Aug), Vol 17(4), 388-400. Tested 24 male nonpilot university students on 3 flight tasks while flying 4 basic aircraft attitude

presentations in a simulator providing 3 types of motion cues. The flight tasks involved conflicting visual and vestibular cues and included disturbed attitude tracking, command flight path tracking in both pursuit and compensatory modes, and a series of recovery trials from discrete unknown attitudes. The present simulator study replicated the procedures used in S. N. Roscoe and R. C. Williges's (see PA, Vol 55: Issue 3) flight experiment. The frequency-separated display yielded performances at least equivalent and in some cases superior to those obtained with the conventional moving horizon display. Either type of simulator motion resulted in better disturbed attitude tracking performance than no motion. It is concluded that care must be used in generalizing simulator results to flight performance when no physical motion cues or inappropriate ones are present in the simulator. (22 ref)—*Journal abstract.*

5838. **McFarling, Leslie H. & Heimstra, Norman W.** **Pacing, product complexity, and task perception in simulated inspection.** *Human Factors*, 1975(Aug), Vol 17(4), 361-367.—Examined potential performance or motivational differences between self-paced and machine-paced inspection tasks, and measured S perceptions of inspection tasks. 20 18-28 yr old paid females with normal vision served as inspectors. Ss in both self- and machine-paced conditions inspected simulated printed circuits varying in circuit complexity. Performance measures of defect detection rate, false alarm rate, and time required for decision were recorded. Self-paced Ss performed better, but both groups suffered performance decrements on the more complex circuits. Both groups found the task basically dull and uninteresting.—*Journal abstract.*

5839. **Moore, D. J.; Seidl, R. A. & Parker, D. J.** (U Newcastle, Australia) **A configurational theory of visual perception.** *International Journal of Man-Machine Studies*, 1975(Jul), Vol 7(4), 449-509.—Outlines a theory which is proposed as a solution to 2 basic problems: (a) Is there an objective way of determining what are the features of a visual scene, and if so, what is the nature of the processes necessary to detect and extract these features? (b) How should these features be organized to provide a representational model of the visual scene? Computer-simulated examples are included to illustrate the theory. (26 ref)

5840. **Roscoe, Stanley N. & Williges, Robert C.** (U Illinois, Urbana-Champaign) **Motion relationships in aircraft attitude and guidance displays: A flight experiment.** *Human Factors*, 1975(Aug), Vol 17(4), 374-387.—Tested 16 nonpilot US Navy ROTC students on tasks involving conflicting visual and vestibular cues while flying with each of 4 basic aircraft attitude presentations. Flight-director versions of each display presenting either compensatory or pursuit steering guidance were also compared on a command flight path tracking task involving random heading changes. For all attitude presentations, pursuit tracking was superior to compensatory tracking. The order of merit of the 4 attitude presentations in flight casts doubt upon the validity of previous simulator experiments. It is concluded that the principle of display frequency separation provides at least equivalent pilot steering performance to that obtained with the conventional moving horizon format.

while the anticipatory cues it affords tends to reduce the incidence of control reversals under circumstances of subliminal angular acceleration by providing initial direction-of-motion compatibility. (25 ref)—*Journal abstract*.

Environmental Psychology & Environmental Issues

5841. Cassidy, R. Gordon. (Queen's U, Kingston, Canada) **Urban housing selection.** *Behavioral Science*, 1975(Jul), Vol 20(4), 241-250.—Examines the selection process of housing in urban areas as a coalition process between buyers and sellers, and uses a behavioral and analytic model to predict occupancy of different socioeconomic neighborhoods by persons of different income levels. The model expands the definition and understanding of decision making about housing and is illustrated with data from the Canadian housing market.

5842. Freedman, Jonathan L. (Columbia U) **Crowding and behavior.** San Francisco, CA: W. H. Freedman, 1975. viii, 177 p. \$4.50.—Argues that crowding is neither good nor bad but intensifies the effects of pre-existing social conditions, which themselves are either good or bad (i.e., urban problems are not caused by crowding). New ways of dealing with the problems encountered in high-density urban environments are presented, and issues related to crowding and crime; personal space and isolation; crowding, aggression, and sex; and the density-intensity theory of crowding are examined. (9 p ref)

5843. Hass, Jane W.; Bagley, Gerrold S. & Rogers, Ronald W. (U South Carolina, Coll of Business Administration) **Coping with the energy crisis: Effects of fear appeals upon attitudes toward energy consumption.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 754-756.—One neglected strategy for coping with an impending energy crisis has been experimental investigations of methods to persuade consumers to use less energy. A 2×2 factorial experiment examined the persuasive effect of 2 communication variables that are confounded frequently in a fear appeal and are also constructs in valence-instrumentality-expectancy theory: (a) the magnitude of noxiousness of a threatened event and (b) the probability of its occurrence. Ss were 60 undergraduates. Results disclose that, although increases in the perceived likelihood of an energy shortage had no effect, increments in the perceived noxiousness or severity of a energy crisis strengthened intentions to reduce energy consumption.—*Journal abstract*.

5844. Pankratz, Loren. (VA Hosp, Psychology Service, Portland, OR) **Assessing the psychosocial environment of halfway houses for the retarded.** *Community Mental Health Journal*, 1975(Fal), Vol 11(3), 341-345.

Used the Community-Oriented Programs Environment Scale to (a) assess the psychosocial environment of 2 halfway houses for the mentally retarded, (b) determine whether the mentally retarded can meaningfully respond to the questionnaire items, and (c) determine whether the results would be meaningful on existing norms. Residents of the houses were asked each question and the staff completed the same scale. Results show general agreement between staff and residents, suggesting that the retarded were adequately able to describe their treatment program. The results were meaningfully

graphed on existing norms for the mentally retarded.—*Journal abstract*.

Marketing & Advertising

5846. Bennett, Peter D. & Harrell, Gilbert D. (Pennsylvania State U) **The role of confidence in understanding and predicting buyers' attitudes and purchase intentions.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 110-117.—Examined the role of buyers' confidence in the formation of attitudes and purchase intention. Ss were 93 private-practicing physicians. The subject of the study was the Ss' prescribing behavior related to the available brands of a class of ethical drugs used to treat a single disease. Results support current buyer behavior theory which postulates a positive relationship between overall confidence in a brand and intention to purchase the brand. (26 ref)—*Journal abstract*.

5847. Bruno, Albert V. & Wildt, Albert R. (U Santa Clara, Graduate School of Business) **Toward understanding attitude structure: A study of the complementarity of multi-attribute attitude models.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 137-145.—Presents an alternative to the traditional method of selecting 1 model as representative of the entire population. It is contended that this procedure extends the usefulness of predictive results and should contribute managerially useful information to research questions which traditionally have been resolved solely through the application of "goodness of fit" effectiveness measures.—*Journal abstract*.

5848. Green, Paul E. & Devita, Michael T. (U Pennsylvania, Wharton School) **An interaction model of consumer utility.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 146-153.—Extends the main-effects, additive utility model to include 2-factor interaction via a 2-stage data collection procedure. The model is applied illustratively to a set of menu preferences data. The model's implications for consumer behavior theory are discussed. (16 ref)—*Journal abstract*.

5849. Green, Paul E.; Wind, Yoram & Claycamp, Henry J. (U Pennsylvania, Wharton School) **Brand-features congruence mapping.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 306-313.—Proposes and applies a model for portraying individuals' associative judgments regarding brands, ideal products, and product features as sets of points in a common multidimensional space. The model is contrasted with current research activities involving bipolar scale ratings as used in value-expectancy models. (16 ref)—*Journal abstract*.

5850. Green, Robert T. & Cunningham, Isabella C. (U Texas, Austin) **Feminine role perception and family purchasing decisions.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 325-332.—Argues that the changing role of women in US society will be manifested in several aspects of male-female behavior. The present study compared family decision-making patterns under different conditions of female role perception. 257 married females completed a self-administered questionnaire involving 38 separate decisions concerning 10

products and services; Ss indicated whether each decision was made by husband, wife, or both together. A 10-item, Likert-type Autonomy Inventory attitude scale was also completed. Findings suggest differences between contemporary and traditional families, particularly within age and income categories. (24 ref)—*Journal abstract*.

5851. Haddock, Rafael A. (Purdue U) **Attempting to establish a consumer typology based on biographical data.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 449.

5852. Jacoby, Jacob. (Purdue U) **Consumer psychology as a social psychological sphere of action.** *American Psychologist*, 1975(Oct), Vol 30(10), 977-987.—Brings to the attention of social psychologists the fact that contemporary consumer psychology is essentially social psychology utilized in a specific context, and attempts to stimulate a few social psychologists to engage in social-consumer psychological research. Consumer behavior and consumer psychology are defined and distinguished from each other, and 10 bases for justifying greater social psychological involvement in consumer research are elaborated. This involvement is considered to contribute to the development of both social psychology and the social psychologists who become so involved. (70 ref)—*Author abstract*.

5853. Montgomery, David B. (Stanford U) **New product distribution: An analysis of supermarket buyer decisions.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 255-264.—Explored the relationship between 18 variables and a supermarket buyer's decision to accept or reject a new product. 124 new products proposed to 3 supermarket buyers were analyzed by multiple discriminant analysis and a hierarchical threshold model, termed a "gatekeeper" analysis. A new method of discriminant validation in small samples is proposed.—*Journal abstract*.

5854. Moore, Roy L. & Stephens, Lowndes F. (Virginia Polytechnic Inst & State U) **Some communication and demographic determinants of adolescent consumer learning.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 80-92.—Examined differential processes associated with 4 measures of consumer learning—price accuracy, slogan recall, brand specification, and attitudes toward advertising—in a cross-sectional analysis of rural, middle and high school adolescents. Ss were 132 6th-8th graders and 180 9th-12th graders. Neither group scored very high on price accuracy, slogan recall, or intrafamily communication about consumption, although brand specification was fairly high, and the various dependent measures were well integrated among both groups. The relatively low level of consumer skills found, it is concluded, may indicate that the adolescent is not provided with learning opportunities and appropriate modeling experiences from parents, teachers, and other socialization agents. (34 ref)—*Journal abstract*.

5855. Narayana, Chem L. & Markin, Ron J. (Washington State U) **Consumer behavior and product performance: An alternative conceptualization.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 265-274.—Asked 54 students to list brand names of toothpaste, mouthwash, deodorant, and beer, and then to indicate which brands they would and would not consider buying, and why. It is suggested (a) that consumers categorize brands of any product class into *evoked set* (considered positively), *inert set* (neutral), and *inept set* (considered negatively), and (b) that this conceptual framework can help the marketer determine needed information and appropriate strategies.—*D. Twedt*.

5856. Olson, Jerry C. (Purdue U) **Cue utilization in the quality perception process: A cognitive model and an empirical test.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-B), 450.

5857. Raichford, Brian T. (State U New York, School of Management, Buffalo) **The new economic theory of consumer behavior: An interpretive essay.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 65-75.—Attempts to summarize and integrate some recent economic theories of consumer behavior based on demand for underlying characteristics of goods. The implications of these theories for research in consumer behavior are discussed, and an attempt is made to compare and integrate these theories with recent developments in multiattribute scaling and attitude models. (33 ref)—*Journal abstract*.

5858. Ryan, Michael J. & Bonfield, E. H. (U Alabama) **The Fishbein extended model and consumer behavior.** *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 118-136.—Describes and evaluates the theoretical development and empirical research, testing the M. A. Fishbein "extended" or "behavioral intentions" model. Discussion of conceptual and methodological strengths and weaknesses leads to the proposal of a reconceptualized form of the model as a framework for future research. 2½ p ref)—*Journal abstract*.

5859. Westin, Richard B. & Watson, Peter L. (U Toronto, Scarborough Coll, Canada) **Reported and revealed preferences as determinants of mode choice behavior.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 282-289.—Examines the relation of attitudes toward transportation system characteristics and the sensitivity of travelers to perceived differences in these characteristics. Data used are drawn from interviews with passengers en route by train and automobile who were grouped, according to their responses, into 3 classifications: economic ($n = 643$), convenience ($n = 844$), and amenity ($n = 442$). A probabilistic model of choice behavior is used, and effects of attitudes are studied by examining how estimated elasticities differed among the travelers stratified on the basis of attitude. (18 ref)—*Journal abstract*.

BRIEF SUBJECT INDEX

Entries in the Brief Subject Index are derived from a 4,000-term *Thesaurus of Psychological Index Terms*. Only those terms representing subject matter content covered in this monthly issue are listed. A thesaurus term missing from the listing indicates that no material of major relevance to the concept is included in the issue. Records are indexed at the level of specificity contained in each document. Each index entry also refers the reader to more specific concepts related to each term. Thus, a reader interested in articles concerning childhood psychosis may find additional relevant information under "early infantile autism."

BRIEF SUBJECT INDEX

Conceptualization [See Concept Formation]

Conditioned Emotional Responses 3776, 4041, 4136, 5124, 5252

Conditioned Reflex [See Conditioned Responses]

Conditioned Responses [See Also Conditioned Emotional Responses, Conditioned Suppression] 3760, 3889, 4119

Conditioned Stimulus 3584, 3737, 3871, 3890, 5124

Conditioned Suppression 3873, 3879, 4074

Conditioning [See Also Avoidance Conditioning, Classical Conditioning, Conditioned Emotional Responses, Conditioned Responses, Conditioned Stimulus, Conditioned Suppression, Counterconditioning, Escape Conditioning, Eyelid Conditioning, Operant Conditioning, Unconditioned Stimulus] 3741, 4065

Conditioning (Avoidance) [See Avoidance Conditioning]

Conditioning (Classical) [See Classical Conditioning]

Conditioning (Escape) [See Escape Conditioning]

Conditioning (Eyelid) [See Eyelid Conditioning]

Conditioning (Operant) [See Operant Conditioning]

Conditioning (Verbal) [See Verbal Learning]

Cones (Eye) 3944

Conflict [See Also Riots, Violence, War] 4493, 4494, 4497, 4517, 4981

Conflicts (Role) [See Role Conflicts]

Conformity (Personality) 4194, 4194, 4435, 4436, 4482, 4544

Congenital Disorders [See Cleft Palate]

Conjoint Therapy 5014, 5016, 5034, 5043, 5050

Connotations 4904

Conscious (Personality Factors) 5479

Consciousness Disturbances [See Hypnosis, Insomnia, Sleep Disorders, Sleepwalking, Suggestibility]

Consciousness States [See Also Attention, Awareness, Divided Attention, Monitoring, Selective Attention, Wakefulness] 3446, 5479

Conservation (Concept) 4228, 4229, 4289, 4858, 4925, 5511, 5547, 5577

Conservatism 5691

Conservatism (Political) [See Political Conservatism]

Consonants 3666, 4892

Consultation (Professional) [See Professional Consultation]

Consumer Attitudes 3482, 3484, 3489, 3492, 3817, 5846, 5848, 5849, 5855, 5859

Consumer Behavior 3489, 5505, 5843, 5846, 5850, 5851, 5853, 5854, 5855, 5856, 5857, 5858, 5859

Consumer Psychology 5852

Consumer Research 3482, 3817, 5857

Content Analysis (Test) 3518

Contextual Associations 3587, 4168

Contingency Management [See Also Token Economy Programs] 3812, 4173, 5102, 5724

Continuing Education [See Higher Education]

Continuous Reinforcement [See Reinforcement Schedules]

Contour [See Form And Shape Perception]

Contraception [See Birth Control]

Contraceptive Methods [See Birth Control]

Contribution (Professional) [See Professional Contribution]

Control (Locus of) [See Internal External Locus of Control]

Control (Stimulus) [See Stimulus Control]

Convergent Thinking [See Inductive Deductive Reasoning]

Conversation 5083

Conviction (Criminal) [See Criminal Conviction]

Convulsions 4019, 4036, 4045, 4122, 4148

Cooperation 3915, 4305, 4310, 4479, 4494, 4503, 4504, 4513, 4532, 4534, 4544, 4565, 5100, 5113, 5579

Coordination (Perceptual Motor) [See Perceptual Motor Coordination]

Coping Behavior 4002, 4362, 4437, 4857, 5073, 5231, 5322, 5372, 5422

Copper 4764

Copulation [See Sexual Intercourse (Human)]

Copulation (Animal) [See Animal Mating Behavior]

Coronary Disorders [See Cardiovascular Disorders]

Coronary Vessels [See Arteries (Anatomy)]

Corpora Quadrigemina [See Superior Colliculus]

Corporations [See Business Organizations]

Correctional Institutions [See Also Prisons] 4416, 5225, 5282, 5292

Correlation (Statistical) [See Statistical Correlation]

Cortex (Auditory) [See Auditory Cortex]

Cortex (Cerebral) [See Cerebral Cortex]

Cortex (Visual) [See Visual Cortex]

Cortical Evoked Potentials 3844, 3848, 3955, 3960, 4001, 4014, 4840, 4943

Corticoids [See Corticosteroids]

Corticosteroids [See Also Corticosterone, Hydrocortisone] 4135, 5148

Corticosterone 4038, 4149

Corticotropin 4149, 5148

Cortisol [See Hydrocortisone]

Costs And Cost Analysis 3466, 4737, 5176

Counselors [See Clients]

Counseling (Group) [See Group Counseling]

Counseling [See Also Related Terms] 3448, 4975, 5202, 5209, 5216, 5226, 5227, 5340, 5676, 5690, 5725, 5727, 5739

BRIEF SUBJECT INDEX

Games [See Also Prisoners Dilemma Game, Simulation Games] 5630
 Ganglia [See Basal Ganglia]
 Ganglion Blocking Drugs [See Nicotine]
 Gastrointestinal Disorders [See Fecal Incontinence, Gastrointestinal Ulcers, Vomiting]
 Gastrointestinal System [See Also Liver] 4011, 4022, 5159
 Gastrointestinal Ulcers 3986
 Gastropods [See Mollusca]
 Geese 3919
 General Anesthetics 5181
 General Hospital Psychiatric Units [See Psychiatric Hospitals]
 General Practitioners 4848
 Generalization (Response) [See Response Generalization]
 Generalization (Stimulus) [See Stimulus Generalization]
 Generation Gap 4356, 4450
 Genetic Disorders [See Also Albinism, Chromosome Disorders, Downs Syndrome, Klinefelters Syndrome, Turners Syndrome] 4906
 Genetic Dominance 3849
 Genetics [See Also Related Terms] 3486, 3614, 3828, 3832, 3839, 3851, 3876, 3881, 3916, 3926, 3927, 3937, 3940, 3967, 4020, 4074, 4110, 4125, 4237, 4707, 4747, 5158, 5549
 Geniculate Bodies (Thalamus) 3952, 4054, 4915
 Genital Disorders [See Amenorrhea, Klinefelters Syndrome, Menstrual Disorders, Premenstrual Tension, Turners Syndrome]
 Geniuses [See Gifted]
 Genotypes 3895, 4676
 Geographic Regions [See Geography]
 Geography 5518, 5572
 Geometry [See Mathematics Education]
 Gerbils 3843, 3899, 3929
 Geriatric Patients 4083, 4675, 4954, 4964, 5121, 5143, 5176, 5196, 5247, 5248, 5260
 Geriatric Psychotherapy 4954, 4964
 Gerontology 5340, 5358, 5404, 5481
 Gestalt Psychology 3616, 4266
 Gestalt Therapy 4977, 5003, 5006
 Gestation [See Pregnancy]
 Gestures 4164, 4498
 Ghettoes 5372
 Gifted 3721, 4661, 5459, 5661, 5702
 Gilles De La Tourette Disorder 4963, 5160
 Glands [See Adrenal Glands, Parathyroid Glands, Salivary Glands, Thyroid Gland]
 Globulins [See Antibodies]
 Glucose [See Also Blood Sugar] 4011, 4021, 4022, 4097
 Glutamine 4027
 Glycine 4157
 Goats 3461, 3798, 4611, 4638, 4917, 5063, 5564
 God Concepts 4190
 Gonadotropic Hormones [See Prolactin]
 Government 4340
 Government Agencies 4420
 Government Bureaucracy [See Government]
 Government Personnel [See Also Air Force Personnel, Army Personnel, Military Medical Personnel, Military Personnel, Navy Personnel, Police Personnel,

Prison Personnel, Probation Officers, ROTC Students] 5799, 5817
 Government Policy Making [See Also Abortion Laws, Laws] 4333, 4358, 4408, 4420
 Government Programs [See Also Peace Corps, Project Head Start, Welfare Services (Government)] 3465, 4333
 Gradepoint Average [See Academic Achievement]
 Grading (Educational) 5412, 5718, 5740
 Graduate Degrees [See Educational Degrees]
 Graduate Education [See Graduate Psychology Education, Medical Education, Psychiatric Training]
 Graduate Psychology Education 5211, 5349, 5421, 5600
 Graduate Students 4644, 4989, 5340, 5345, 5349, 5352, 5357, 5403, 5453, 5509, 5592, 5600, 5761, 5767
 Grammar [See Also Morphology (Language), Phonology, Sentence Structure, Syntax] 4647
 Graphology [See Handwriting]
 Great Britain 4176, 5255, 5256, 5283, 5338
 Grief 4336, 4406, 4687, 5231
 Ground Transportation 5235, 5859
 Group Behavior [See Collective Behavior]
 Group Cohesion 4492, 5065, 5826
 Group Counseling 5075, 5295, 5359, 5659, 5675, 5687, 5729
 Group Discussion 4432, 4433, 4483, 4504, 4505, 4516, 4519, 4522, 4524, 4527, 5026, 5064, 5227, 5498, 5504
 Group Dynamics [See Also Group Cohesion, Group Discussion, Group Participation, Group Performance, Group Size, Group Structure, Intergroup Dynamics] 4387, 4415, 4504, 4505, 4516, 4521, 4525, 4531, 4573, 4575, 5073, 5125, 5344
 Group Instruction 5549
 Group Participation 4519, 4524, 5065
 Group Performance 4490, 4492, 4507, 4528
 Group Problem Solving 4522
 Group Psychotherapy [See Also Encounter Group Therapy, Marathon Group Therapy, Therapeutic Community] 5006, 5016, 5025, 5027, 5029, 5030, 5031, 5036, 5038, 5041, 5044, 5047, 5048, 5049, 5054, 5055, 5122, 5125, 5312, 5334, 5335, 5376
 Group Size 4503, 4507, 5632
 Group Structure 4322, 4531, 4543, 5063, 5068, 5615, 5730
 Group Therapy [See Group Psychotherapy]
 Groups (Ethnic) [See Ethnic Groups]
 Groups (Organizations) [See Organizations]
 Groups (Social) [See Social Groups]
 Groups (Statistics) [See Population (Statistics)]
 Growth [See Development]
 GSR (Electrophysiology) [See Galvanic Skin Response]
 Guanethidine 4143
 Guidance (Educational) [See Educational Counseling]
 Guidance (Occupational) [See Occupational Guidance]
 Guinea Pigs 3854, 3874, 4033, 4092
 Gustatory Perception [See Taste Perception]

Gynecological Disorders [See Amenorrhea, Menstrual Disorders, Premenstrual Tension]
 Habitat Selection [See Territoriality]
 Habits [See Tobacco Smoking]
 Habituation 3664, 3859, 3893, 3957, 4123, 4195
 Halfway Houses 5193, 5844

BRIEF SUBJECT INDEX

Neonatal Genetic Disorders [See Down Syndrome, Klinefelters Syndrome, Turners Syndrome]

Neonatal Sex Chromosome Disorders [See Klinefelters Syndrome, Turners Syndrome]

Neonates 3834, 3969, 4089, 4141, 4213, 4318, 4957

Neoplasms [See Also Brain Neoplasms, Breast Neoplasms] 4941

Nerve Cells [See Neurons]

Nerve Endings [See Neural Receptors, Proprioceptors, Synapses]

Nerve Tissues 3949

Nerves (Cholinergic) [See Cholinergic Nerves]

Nerves (Spinal) [See Spinal Nerves]

Nervous Breakdown [See Mental Disorders]

Nervous System [See Also Amygdaloid Body, Auditory Cortex, Autonomic Nervous System, Basal Ganglia, Brain, Brain Stem, Caudate Nucleus, Central Nervous System, Cerebral Cortex, Cholinergic Nerves, Cones (Eye), Diencephalon, Geniculate Bodies (Thalamus), Hippocampus, Hypothalamus, Limbic System, Medulla Oblongata, Mesencephalon, Nerve Tissues, Neural Receptors, Neurons, Occipital Lobe, Pons, Proprioceptors, Pyramidal Tracts, Reticular Formation, Sensory Neurons, Spinal Cord, Spinal Nerves, Spinothalamic Tracts, Superior Colliculus, Synapses, Telencephalon, Temporal Lobe, Thalamus, Nuclei, Thalamus, Trigeminal Nerve, Visual Cortex] 4087

Nervous System Disorders [See Also Aphasia, Brain Damage, Brain Disorders, Brain Lesions, Brain Neoplasms, Cerebral Palsy, Convulsions, Dyskinesia, Epilepsy, Epileptic Seizures, Gilles De La Tourette Disorder, Huntingtons Chorea, Hyperkinesia, Hypothalamus Lesions, Minimal Brain Disorders, Muscular Dystrophy, Organic Brain Syndromes, Parkinsons Disease, Sclerosis (Nervous System), Senile Dementia] 4879, 4887, 4906

Nervous System Neoplasms [See Brain Neoplasms]

Nest Building 3908

Neural Lesions 4014, 4017, 4053, 4152

Neural Receptors [See Also Proprioceptors] 3636, 3946, 3954, 3976

Neuroanatomy 3949, 3971, 4915

Neurochemistry 3936, 3939, 3946, 3953, 3956, 3972, 3984, 3989, 3991, 3993, 4000, 4023, 4027, 4037, 4062, 4075, 4076, 4079, 4091, 4097, 4111, 4127, 4143, 4144, 4145, 4146, 4150, 4151, 4154, 4155, 4160, 4699, 5135

Neuroinfections [See Nervous System Disorders]

Neuroleptic Drugs [See Also Chlorpromazine, Fluphenazine, Phenothiazine Derivatives, Reserpine, Sulpiride] 4090, 4092, 5144, 5145, 5164, 5169

Neurological Disorders [See Nervous System Disorders]

Neurology 3671

Neuromuscular Disorders [See Cerebral Palsy, Gilles De La Tourette Disorder, Muscular Dystrophy, Parkinsons Disease]

Neurons [See Also Cones (Eye), Sensory Neurons] 3643, 3964, 3966, 4030, 4035, 4129

Neuropathology 4937

Neuropathy [See Nervous System Disorders]

Neuropsychiatrists [See Psychiatrists]

Neuropsychology 3939, 4058, 4794, 4821, 4869, 4931

Neurosciences [See Neuroanatomy, Neurochemistry, Neurology, Neuropathology, Neuropsychology]

Neurosis [See Also Anxiety Neurosis, Obsessive Compulsive Neurosis] 4680, 4715, 4735, 4740, 4754, 4780, 4781, 4967, 4984, 5009, 5030, 5172

Neurosurgery [See Also Psychosurgery, Sympathectomy] 4900, 4929

Neuroticism 4998, 4991, 4651, 4781

New Zealand 3477

Newborn Infants [See Neonates]

Newsletters (Professional) [See Scientific Communication]

Nialamide 4142

Nicotine 4154

Noise (Sound) [See Auditory Stimulation]

Noise (Visual) [See Figure Ground Discrimination, Visual Stimulation]

Noise Effects 3822, 4009, 4224, 5618

Nomenclature (Psychological) [See Psychological Terminology]

Nonparametric Statistical Tests 3573

Nonprofessional Personnel [See Paraprofessional Personnel]

Nonprojective Personality Measures [See Also California Psychological Inventory, Edwards Personal Preference Schedule, Minn Multiphasic Personality Inventory, Personal Orientation Inventory, Roter Intern Extern Locus Cont Scal, Sixteen Personality Factors Question, Tennessee Self Concept Scale] 3479, 3487, 3501, 3509, 3530, 4598, 5714

Nonrapid Eye Movement Sleep [See NREM Sleep]

NonREM Sleep [See NREM Sleep]

Nonverbal Communication [See Also Body Language, Eye Contact, Facial Expressions, Gestures, Smiles] 3818, 4164, 4498, 4499, 4546, 4882, 5368, 5601

Noradrenaline [See Norepinephrine]

Norepinephrine 4007, 4037, 4053, 4091, 4150, 4151

Normalization (Test) [See Test Standardization]

Norms (Test) [See Test Norms]

Norway 4763, 5505

Novel Stimuli [See Stimulus Novelty]

NREM Sleep 4201, 4936

Nuclear Family 4390, 4403

Nucleic Acids [See Also Ribonucleic Acid] 3972, 4160

Number Comprehension 3705, 4228

Nursery School Students 5603, 5635

Nurses [See Also Psychiatric Nurses] 4203, 4834, 5266, 5355, 5358, 5374, 5750, 5820

Nursing 5252, 5264, 5355, 5750

Nursing Education 5355, 5358, 5386

Nursing Homes 5262

Nursing Students 4433, 4926, 5354, 5489

Nurturance [See Animal Maternal Behavior, Parent Child Relations]

Nutrition 4948

Nutritional Deficiencies [See Also Starvation] 3878, 4027

Nystagmus 3844

Obesity 3803, 3982, 4837, 4934, 4945, 5117, 5224

Objectives (See Aspirations)

Objectives (Organizational) [See Organizational Objectives]

Observation Methods 4216, 4388, 4686, 5407

Observational Learning 3715, 4281, 4295, 5466

Observers 3742, 4524, 4550

Obsessions 4697, 4812

Obsessive Compulsive Neurosis 4697, 4731, 5112

Obsessive Neurosis [See Obsessive Compulsive Neurosis]

Obstetrics Gynecology 5259

Obturator Nerve [See Spinal Nerves]

Occipital Lobe [See Also Visual Cortex] 3948

Occupational Adjustment 5664

Occupational Aspirations 4319, 4356, 4430, 4430, 4432, 4435, 4903, 4910, 5455, 5567, 5600, 5681, 5703, 5707, 5714, 5757, 5762, 5763, 5770

Occupational Attitudes 4331, 4435, 5701, 5827

Occupational Choice 4602, 5385, 5599, 5613, 5675, 5701, 5736, 5752, 5757, 5759, 5761, 5766, 5767, 5768, 5769, 5770

 School Administration [See Educational Administration]
 School Administrators [See Also School Principals] 5415, 5427, 5430, 5438, 5455, 5462
 School Age Children 3485, 3502, 3515, 3530, 3535, 3536, 3583, 3592, 3668, 3712, 3722, 3725, 3738, 3742, 3746, 3774, 3775, 3781, 3789, 3808, 3810, 3814, 4171, 4187, 4189, 4192, 4198, 4199, 4200, 4208, 4212, 4214, 4217, 4219, 4220, 4224, 4228, 4229, 4231, 4233, 4236, 4238, 4239, 4240, 4243, 4244, 4245, 4246, 4247, 4248, 4249, 4251, 4252, 4253, 4254, 4255, 4261, 4263, 4267, 4269, 4273, 4276, 4277, 4281, 4283, 4284, 4285, 4286, 4290, 4291, 4292, 4293, 4294, 4295, 4299, 4300, 4301, 4302, 4303, 4304, 4305, 4307, 4308, 4312, 4313, 4314, 4315, 4316, 4317, 4320, 4321, 4326, 4328, 4329, 4330, 4367, 4397, 4401, 4451, 4476, 4479, 4491, 4530, 4532, 4551, 4595, 4611, 4621, 4630, 4658, 4659, 4723, 4732, 4771, 4849, 4850, 4868, 4875, 4876, 4879, 4882, 4883, 4884, 4885, 4891, 4892, 4902, 4911, 4912, 4919, 4925, 4958, 4991, 4992, 5029, 5053, 5056, 5084, 5085, 5088, 5120, 5122, 5127, 5175, 5243, 5524, 5533, 5555, 5589, 5626, 5655, 5662, 5678, 5684
 School Attendance 4849, 5521, 5537, 5686
 School Counselors 5202, 5353, 5415, 5417, 5440, 5676, 5688, 5706, 5741
 School Dropouts 5420, 5538, 5759
 School Enrollment [See School Attendance]
 School Environment 4826, 5406, 5486, 5546, 5593, 5594, 5604, 5651
 School Facilities [See Dormitories, Learning Centers (Educational), School Libraries]
 School Federal Aid [See Educational Financial Assistance]

BRIEF SUBJECT INDEX

School Financial Assistance [See Educational Financial Assistance]
 School Integration (Racial) 4860, 5545, 5610, 5622, 5634
 School Learning 5477, 5519, 5549, 5552, 5557, 5558, 5566, 5578, 5657
 School Libraries 5486
 School Organization [See Educational Administration]
 School Phobia 4771, 5056, 5128
 School Principals 5415, 5429, 5440
 School Psychologists 5378, 5451, 5674, 5691, 5719
 School Psychology 5349, 5409, 5700
 School Readiness 4207
 Schools [See Also Colleges, High Schools] 5228, 5383
 Sciatic Nerve [See Spinal Nerves]
 Science (Social) [See Social Sciences]
 Science Education 5483, 5485, 5497, 5502, 5519, 5563
 Sciences [See Applied Psychology, Biochemistry, Biology, Child Psychiatry, Child Psychology, Clinical Psychology, Community Psychiatry, Community Psychology, Comparative Psychology, Consumer Psychology, Developmental Psychology, Epidemiology, Geography, Gerontology, Immunology, Industrial Psychology, Mathematical Psychology, Medical Sciences, Neuroanatomy, Neurochemistry, Neurology, Neuropathology, Neuropsychology, Obstetrics Gynecology, Ophthalmology, Psychiatry, Psychology, Psychopathology, School Psychology, Social Psychology, Social Sciences, Sociology, Surgery]
 Scientific Communication [See Also Professional Meetings And Symposia, Psychological Terminology] 3558, 4166, 4175, 4733, 5384, 5409
 Scientific Methods [See Experimental Methods]
 Scientists [See Also Related Terms] 5761, 5802
 Sclerosis (Nervous System) 4894
 Scopolamine 4074, 4136
 Scopolamine Hydrobromide [See Scopolamine]
 Scores (Test) [See Test Scores]
 Scoring (Testing) 3510, 3517, 3524, 3526, 3534, 3535, 3537, 4225, 4472, 5719
 Screening (Job Applicants) [See Job Applicant Screening]
 Screening Tests [See Selection Tests]
 Seasonal Variations 3847, 4741, 4807
 Secondary Education 4352, 5400, 5452, 5594
 Secondary Reinforcement 5096, 5524, 5673
 Secretion (Gland) [See Lactation, Salivation]
 Sectioning (Lesion) [See Lesions]
 Security (Emotional) [See Emotional Security]
 Sedatives [See Also Atropine, Chlorpromazine, Haloperidol, Heroin, Methaqualone, Phenobarbital, Reserpine, Scopolamine] 4821
 Segregation (Racial) [See Racial Integration]
 Seizures [See Convulsions]
 Selected Readings 3588
 Selection (Personnel) [See Personnel Selection]
 Selection Tests 3529, 5345

Selective Attention 4283, 5580, 5591, 5657
 Self Actualization 3426, 3448, 3513, 4365, 4383, 4638, 4660, 5066, 5074, 5079, 5342, 5378, 5446, 5504, 5508, 5612, 5682, 5738, 5798
 Self Assessment [See Self Evaluation]
 Self Concept [See Also Self Esteem] 3479, 3781, 4296, 4302, 4319, 4389, 4409, 4412, 4430, 4500, 4558, 4566, 4607, 4617, 4623, 4628, 4642, 4659, 4756, 4826, 4832, 4837, 4851, 4852, 4860, 4881, 4888, 4898, 4910, 4917, 4969, 5067, 5070, 5074, 5084, 5227, 5289, 5301, 5327, 5374, 5436, 5437, 5521, 5528, 5530, 5537, 5581, 5594, 5598, 5604, 5626, 5636, 5659, 5673, 5687, 5698, 5701, 5778
 Self Confidence [See Self Esteem]
 Self Control 3435, 3445, 3591, 3979, 3997, 4192, 4613, 5080, 5082, 5112, 5498, 5523, 5593
 Self Disclosure 3540, 3541, 4506, 4514, 4520, 4612, 4647, 4893, 4901, 4967, 4990, 5012, 5065, 5347, 5725, 5739
 Self Esteem 4320, 4355, 4435, 4436, 4594, 4599, 4619, 4628, 4630, 4633, 4645, 5008, 5301, 5476, 5567, 5630, 5703, 5761, 5785, 5846
 Self Evaluation 3479, 3523, 3809, 4474, 4548, 4555, 4599, 4617, 4642, 4767, 4850, 4965, 5072, 5414, 5590, 5703, 5762
 Self Image [See Self Concept]
 Self Mutilation 4812, 5099, 5114
 Self Perception 3591, 3781, 4003, 4196, 4544, 4554, 4569, 4588, 4617, 4619, 4651, 4808, 4826, 4999, 5072, 5076, 5312, 5378, 5541, 5596, 5605, 5616, 5685, 5703
 Self Realization [See Self Actualization]
 Self Reinforcement 3810, 3812, 3852
 Self Respect [See Self Esteem]
 Self Stimulation 4024, 4033, 4037, 4073, 4084, 4103, 4118
 Semantic Differential 3508, 3516, 4176, 4467, 4861
 Semantics 3421, 3672, 3780, 4716, 5555
 Seminararians 5714
 Senescence [See Aged]
 Senile Dementia 4961, 5180
 Senior Citizens [See Aged]
 Sensation [See Perception]
 Sense Organ Disorders [See Anosmia, Ear Disorders, Myopia, Nystagmus, Otosclerosis]
 Sense Organs [See Cones (Eye), Middle Ear, Retina]
 Sensitivity (Drugs) [See Drug Sensitivity]
 Sensitivity (Personality) 4581
 Sensitivity Training 4433, 5059, 5061, 5062, 5063, 5065, 5067, 5068, 5069, 5070, 5071, 5072, 5074, 5076, 5078, 5079, 5353, 5422, 5595, 5725, 5772, 5794, 5801
 Sensitization [See Repression]
 Sensitization [See Repression]
 Sensory Adaptation [See Also Dark Adaptation, Orienting Responses] 3605, 3621, 3635, 3666, 3974
 Sensory Deprivation 3612, 3829, 3837, 3842, 4116, 4158
 Sensory Feedback [See Also Auditory Feedback, Delayed Auditory Feedback, Visual Feedback] 3595, 3602, 3607, 3612, 4866, 5362
 Sensory Motor Processes [See Perceptual Motor Processes]
 Sensory Neurons [See Also Cones (Eye)] 3975

Sentence Comprehension 3688, 3713, 3734, 4261, 4716, 5555, 5566, 5578
 Sentence Structure 3688, 3734, 4232, 4236, 4253, 4261, 4899
 Sentences 3787
 Separation (Marital) [See Marital Separation]
 Separation Anxiety 4297, 4771, 5056, 5146
 Sephardim [See Judaism]
 Septum (Brain) Lesions [See Brain Lesions]
 Sequential Learning 3759, 3877
 Serial Anticipation (Learning) 3768
 Serial Learning [See Also Serial Anticipation (Learning)] 3748, 3765, 4221, 4273, 5568
 Serotonin 3984, 4007, 4023, 4026, 4062, 4106, 4111, 4146, 4147
 Serotonin Antagonists [See Also Lysergic Acid Diethylamide] 4024
 Serpasil [See Reserpine]
 Serum (Blood) [See Blood Serum]
 Servicemen [See Military Personnel]
 Set (Response) [See Response Set]
 Severely Mentally Retarded 5113, 5133, 5657, 5666
 Sex Chromosome Disorders [See Klinefelters Syndrome, Turners Syndrome]
 Sex Differences (Animal) [See Animal Sex Differences]
 Sex Differences (Human) [See Human Sex Differences]
 Sex Education 4005, 4441, 5474, 5570
 Sex Hormones [See Also Estradiol, Estrogens, Progesterone, Testosterone] 3990, 4020, 4096
 Sex Identity [See Sex Roles]
 Sex Linked Developmental Differences 4096
 Sex Roles 3480, 4183, 4317, 4330, 4351, 4359, 4389, 4402, 4403, 4425, 4429, 4430, 4431, 4432, 4433, 4434, 4435, 4436, 4438, 4443, 4553, 4558, 4566, 4580, 4603, 4632, 4642, 4646, 4654, 4826, 4832, 5120, 5379, 5456, 5520, 5626, 5690, 5699, 5712, 5761, 5765, 5767, 5850
 Sexual Arousal [See Psychosexual Behavior]
 Sexual Attitudes 4005, 4426, 4429, 4434
 Sexual Behavior [See Psychosexual Behavior]
 Sexual Deviations [See Also Pedophilia, Transsexualism, Transvestism] 4442, 4685, 4817, 4818, 5120
 Sexual Function Disturbances [See Also Frigidity, Impotence] 5093
 Sexual Intercourse (Human) [See Also Extramarital Intercourse, Premarital Intercourse] 4425
 Sexual Receptivity (Animal) [See Animal Sexual Receptivity]
 Sexual Reproduction 4223, 4707
 Sexuality 4422
 Shape Perception [See Form And Shape Perception]
 Sheltered Workshops 5190
 Shock 4046, 4049, 4099, 4158, 5130
 Shock Therapy [See Also Electroconvulsive Shock Therapy] 5087, 5111
 Shoplifting 4576, 4842
 Shopping [See Consumer Behavior]
 Short Term Memory 3588, 3655, 3698, 3719, 3724, 3739, 3740, 3747, 3754, 3758, 3763, 3773, 3783, 3882, 3884, 4088, 4100, 4232, 4243, 4773, 4867, 4872, 4900, 5568

BRIEF SUBJECT INDEX

- Short Term Psychotherapy** [See Brief Psychotherapy]
- Shoshone Indians** [See American Indians]
- Sibling Relations** 3905
- Siblings** [See Also Twins] 4406, 4747, 4783
- Side Effects (Drug)** [See Also Drug Addiction, Drug Adverse Reactions, Drug Dependency, Drug Sensitivity, Heroin Addiction] 4132, 4459, 5137, 5144, 5154, 5163, 5165
- Sight Vocabulary** 5650
- Signal Detection (Perception)** 3458, 3483, 3624, 3646, 3656, 3661, 4734, 4773, 4901, 5838
- Signal Intensity** [See Stimulus Intensity]
- Significance (Statistical)** [See Statistical Significance]
- Similarity (Stimulus)** [See Stimulus Similarity]
- Simulation** [See Also Computer Simulation, Flight Simulation, Heuristic Modeling, Mathematical Modeling, Simulation Games, Stochastic Modeling] 3463, 3578, 4519, 5013, 5349, 5362, 5459, 5532, 5758, 5839
- Simulation Games** 5354, 5433, 5454
- Simulators** [See Simulation]
- Sixteen Personality Factors Question** 4644, 5777
- Size (Apparent)** [See Apparent Size]
- Size (Group)** [See Group Size]
- Size Discrimination** [See Also Apparent Size] 3597, 3608, 3617, 3642, 3650, 3657, 3842, 4242, 4367
- Skills** [See Ability]
- Skin Conduction** [See Skin Resistance]
- Skin Electrical Properties** [See Skin Potential, Skin Resistance]
- Skin Potential** 3981, 4017
- Skin Resistance** 3760, 3942, 3998, 3999, 4017
- Sleep** [See Also NREM Sleep, REM Sleep] 4110, 4128, 4213, 4726
- Sleep Deprivation** 3695, 4962, 4970
- Sleep Disorders** [See Also Insomnia, Sleepwalking] 4689
- Sleep Inducing Drugs** [See Hypnotic Drugs]
- Sleep Onset** 3760, 3826, 4201
- Sleepwalking** 5115
- Slow Learners** 4290
- Slow Wave Sleep** [See NREM Sleep]
- Slums** [See Poverty Areas]
- Smell Perception** [See Olfactory Perception]
- Smiles** 4327
- Smoking (Tobacco)** [See Tobacco Smoking]
- Snake Phobia** [See Ophidiophobia]
- Social Acceptance** 4375, 5652
- Social Adaptation** [See Social Adjustment]
- Social Adjustment** 4353, 4405, 4409, 4457, 4978, 5227, 5282, 5304, 5324, 5506, 5596, 5624, 5633, 5637, 5664
- Social Approval** 3716, 4419, 4483, 4680, 4708
- Social Behavior** [See Also Aggressive Behavior, Altruism, Animal Aggressive Behavior, Animal Communication, Animal Courtship Behavior, Animal Courtship Displays, Animal Dominance, Animal Maternal Behavior, Animal Mating Behavior, Animal Sexual Receptivity, Animal Social Behavior, Assistance (Social Behavior), Attack Behavior, Attribution, Bargaining, Charitable Behavior, Collective Behavior, Competition, Compliance, Conflict, Conformity (Personality), Conversation, Cooperation, Criticism, Double Bind Interaction, Eye Contact, Friendship, Gambling, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Compatibility, Interpersonal Influences, Interpersonal Interaction, Interviews, Involvement, Job Applicant Interviews, Leadership, Leadership Style, Militancy, Negotiation, Participation, Peer Relations, Persecution, Praise, Psychodiagnostic Interview, Reciprocity, Responsibility, Riots, Risk Taking, Social Acceptance, Social Adjustment, Social Approval, Social Drinking, Social Interaction, Social Perception, Social Reinforcement, Threat Postures, Trust (Social Behavior), Verbal Reinforcement, Victimization, Violence, War] 3536, 4323, 4474, 4576, 5064, 5343, 5601, 5647, 5652
- Social Casework** 3472, 5045, 5228, 5231, 5232, 5235, 5236, 5237, 5240, 5241
- Social Caseworkers** [See Social Workers]
- Social Change** 4336, 4351, 4354, 4382, 4454, 5201, 5236, 5712, 5743, 5811
- Social Class** [See Also Lower Class, Middle Class, Upper Class] 4255, 4288, 4349, 4418, 4682, 5486, 5542
- Social Class Attitudes** [See Socioeconomic Class Attitudes]
- Social Deprivation** [See Also Social Isolation] 4344, 4348, 4849
- Social Desirability** 3750, 3817, 4562, 4563, 5554
- Social Drinking** 4078, 4446
- Social Environments** [See Also Animal Environments, Classroom Environment, College Environment, Environmental Adaptation, Ghettos, Home Environment, Kibbutz, Neighborhoods, Poverty Areas, Rural Environments, School Environment, Suburban Environments, Towns, Urban Environments, Working Conditions] 4520, 4709, 5544, 5705
- Social Groups** [See Also Dyads, Minority Groups] 5257
- Social Immobility** [See Social Mobility]
- Social Influences** [See Also Criticism, Power, Prejudice, Religious Prejudices, Social Approval, Social Desirability, Social Values] 4474, 4523, 4545, 4978, 5233, 5627
- Social Interaction** [See Also Assistance (Social Behavior), Bargaining, Charitable Behavior, Collective Behavior, Conflict, Conversation, Cooperation, Double Bind Interaction, Eye Contact, Friendship, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Compatibility, Interpersonal Influences, Interpersonal Interaction, Interviews, Job Applicant Interviews, Negotiation, Participation, Peer Relations, Persecution, Psychodiagnostic Interview, Riots, Victimization, Violence, War] 3683, 4318, 4360, 4379, 4545, 4584, 4609, 4917, 5092, 5121, 5343, 5560, 5573
- Social Isolation** 3909, 3986, 5298
- Social Learning** [See Also Imitation (Learning)] 3880, 4366, 4799
- Social Maladjustment** [See Social Adjustment]
- Social Mobility** 4343, 4352, 4356, 4360, 4763, 5707
- Social Movements** [See Also Womens Liberation Movement] 4396
- Social Perception** [See Also Attribution] 4219, 4299, 4300, 4301, 4305, 4316, 4347, 4391, 4398, 4399, 4412, 4472, 4474, 4476, 4481, 4495, 4509, 4524, 4536, 4538, 4539, 4540, 4542, 4543, 4544, 4545, 4546, 4547, 4548, 4551, 4552, 4553, 4555, 4558, 4562, 4567, 4568, 4571, 4573, 4575, 4580, 4581, 4585, 4588, 4816, 4826, 5108, 5157, 5239, 5355, 5390, 5521, 5620, 5688, 5690, 5751, 5794
- Social Processes** [See Also Coalition Formation, Human Migration, Industrialization, Racial Integration, School Integration (Racial), Social Deprivation, Social Isolation, Social Mobility, Socialization, Urbanization] 4336, 5279
- Social Programs** 5176, 5182
- Social Psychology** 4190, 4475, 4477, 4486, 5852
- Social Reinforcement** [See Also Praise, Verbal Reinforcement] 3750, 4186, 4194, 4298, 5119, 5175, 5598, 5673
- Social Sciences** [See Also Applied Psychology, Child Psychology, Clinical Psychology, Community Psychology, Comparative Psychology, Consumer Psychology, Developmental Psychology, Gerontology, Industrial Psychology, Mathematical Psychology, Neuropsychology, Psychology, School Psychology, Social Psychology, Sociology] 3418, 3456, 5341, 5389, 5564
- Social Structure** [See Also Lower Class, Middle Class, Social Class, Upper Class] 4335, 4338, 4347, 4351, 4382, 4454, 4485, 5201
- Social Values** 4420, 4454, 4489, 4523, 4851, 5061
- Social Work** [See Social Casework]
- Social Work Education** 5358
- Social Workers** [See Also Psychiatric Social Workers] 5034, 5225, 5228, 5230, 5235, 5236, 5237, 5238, 5240, 5358, 5366, 5372
- Socialism** 5796
- Socialization** 4380, 4441, 4680, 4898, 5593, 5600
- Socially Disadvantaged** [See Disadvantaged]
- Society** 4335
- Sociocultural Factors** [See Also Cross Cultural Differences, Culture Change, Ethnic Identity] 3448, 4171, 4338, 4351, 4364, 4366, 4367, 4378, 4380, 4443, 4464, 4470, 4632, 4650, 4720, 4787, 4852, 5233, 5559, 5704, 5707
- Socioeconomic Class Attitudes** 4345, 4418, 4576, 4580, 4614, 5057
- Socioeconomic Status** [See Also Family Socioeconomic Level, Income Level, Lower Class, Lower Income Level, Middle Class, Social Class, Upper Class] 4196, 4198, 4208, 4231, 4237, 4272, 4275, 4343, 4349, 4356, 4367, 4377, 4438, 4456, 4610, 4654, 4655, 4762, 5002, 5283, 5418, 5435, 5464, 5527, 5578, 5602, 5622, 5631, 5684, 5698, 5763, 5841

BRIEF SUBJECT INDEX

- Sociology 3411, 3440
 Sociopath [See Antisocial Personality]
 Sociopathology [See Antisocial Behavior]
 Sodium 4016, 4131
 Somatosensory Evoked Potentials 4943
 Somatotypes 4315, 4316, 4625
 Somesthetic Perception [See Cutaneous Sense, Kinesthetic Perception, Pain Perception, Pain Thresholds, Tactile Perception, Vibrotactile Thresholds]
 Somesthetic Stimulation [See Also Tactile Stimulation] 3869, 5837, 5840
 Sons 5035
 Sorting (Cognition) [See Classification (Cognitive Process)]
 Sound [See Auditory Stimulation]
 Sound Localization [See Auditory Localization]
 Sound Pressure Level [See Loudness]
 Southeast Asia 4787
 Space (Personal) [See Personal Space]
 Spatial Discrimination [See Spatial Perception]
 Spatial Distortion 3627
 Spatial Organization 3636, 3701
 Spatial Orientation (Perception) 3619, 3621, 3645, 3783, 3897, 4263, 4277
 Spatial Perception [See Also Apparent Distance, Apparent Movement, Apparent Size, Depth Perception, Distance Perception, Motion Perception, Size Discrimination, Spatial Distortion, Spatial Organization, Spatial Orientation (Perception), Stereoscopic Vision] 3579, 3597, 3614, 3635, 3637, 3656, 3674, 3691, 4096, 4249, 4286, 4757, 5478
 Special Education 4871, 5173, 5452, 5459, 5638, 5639, 5640, 5642, 5643, 5644, 5646, 5648, 5648, 5649, 5656, 5657, 5658, 5659, 5660, 5661, 5662, 5665, 5666, 5668, 5691
 Special Education (Aurally Handicap) [See Aurally Handicapped, Special Education]
 Special Education (Emot Disturbed) [See Emotionally Disturbed, Special Education]
 Special Education (Gifted) [See Gifted, Special Education]
 Special Education (Learning Disabil) [See Learning Disabilities, Special Education]
 Special Education (Mentally Retard) [See Mentally Retarded, Special Education]
 Special Education (Phys Handicaps) [See Physically Handicapped, Special Education]
 Special Education (Visual Handicap) [See Special Education, Visually Handicapped]
 Special Education Students 5642, 5649, 5656, 5664
 Special Education Teachers 5432, 5433, 5442
 Specialization (Academic) [See Academic Specialization]
 Spectral Sensitivity [See Color Perception]
 Speech [See Verbal Communication]
 Speech Characteristics [See Also Articulation (Speech), Pronunciation, Speech Pitch] 3666, 4172, 4536, 4885, 4892
 Speech Development 3973, 4192, 4256
 Speech Disorders [See Also Articulation Disorders, Elective Mutism, Mutism, Stuttering] 5173, 5175, 5648
 Speech Perception 3588, 3598, 3668, 3669, 3672, 3676, 4218, 4878, 4885, 4889, 4892, 4920, 4958
 Speech Pitch 4172
 Speech Processing (Mechanical) [See Compressed Speech]
 Speech Therapy 5173, 5174, 5175
 Speed [See Velocity]
 Speed (Response) [See Reaction Time]
 Spelling 5512
 Spiders [See Arachnida]
 Spinal Cord [See Also Pyramidal Tracts, Spinothalamic Tracts] 4017, 4908
 Spinal Nerves 4024
 Spinothalamic Tracts 4129
 Spokane Indians [See American Indians]
 Spontaneous Recovery (Learning) 3737
 Spontaneous Remission 4784, 4883
 Sports [See Also Baseball] 3610, 4589, 5748
 Spouses [See Also Housewives, Wives] 4343, 4392, 4396, 4399, 4402, 4404, 4411, 4413, 4687, 4990, 5014, 5042, 5043, 5049, 5051, 5078, 5224
 Spreading Depression 3857, 4044
 Stage Plays [See Theatre]
 Standard Deviation 3546, 3563
 Standardization (Test) [See Test Standardization]
 Standards (Professional) [See Professional Standards]
 Startle Reflex 4106
 Starvation 3985
 State Hospitals [See Psychiatric Hospitals]
 Statistical Analysis [See Also Analysis of Variance, Central Tendency Measures, Cluster Analysis, F Test, Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Mean, Nonparametric Statistical Tests, Parametric Statistical Tests, Predictability (Measurement), Standard Deviation, Statistical Measurement, Statistical Probability, Statistical Significance, Variability Measurement] 3545, 3565, 3566, 3574, 5336
 Statistical Correlation [See Also Phi Coefficient, Rank Order Correlation] 3497, 3539, 3548, 3556, 3558, 3572, 5742, 5831
 Statistical Measurement [See Also Analysis of Variance, Central Tendency Measures, Cluster Analysis, Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Mean, Predictability (Measurement), Standard Deviation, Statistical Probability, Variability Measurement] 3430, 3544
 Statistical Probability 3526, 3546, 3558, 3570, 3576, 4542, 4579
 Statistical Reliability 3552
 Statistical Sample Parameters 3467, 3486, 3526, 3547, 3569, 3570
 Statistical Samples [See Also Statistical Sample Parameters] 3563, 3567
 Statistical Significance 3557, 3558, 3560
 Statistical Tests [See F Test, Nonparametric Statistical Tests, Parametric Statistical Tests]
 Statistical Validity [See Also Factorial Validity, Predictive Validity] 3543, 3561
 Statistical Variables [See Also Dependent Variables, Independent Variables] 3549, 3550, 3558, 3576
 Status 4534, 4607
 Stealing [See Theft]
 Stereopsis [See Stereoscopic Vision]
 Stereoscopic Vision 3620, 3655
 Stereotaxic Techniques [See Also Chemical Brain Stimulation, Electrical Brain Stimulation, Spreading Depression] 4061
 Stereotyped Attitudes 4431, 4433, 4443, 4536, 4548, 4553, 4563, 4576, 4632, 4651, 4654, 5379, 5390, 5456, 5620, 5765, 5767
 Stereotyped Behavior 4090, 4107, 4155, 4436
 Sterilization (Sex) [See Castration, Male Castration, Ovariectomy]
 Steroids [See Also Cholesterol, Corticosteroids, Corticosterone, Hydrocortisone] 4009
 Sticklebacks 3913, 3918
 Stimulation [See Also Auditory Stimulation, Aversive Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Perceptual Stimulation, Prismatic Stimulation, Self Stimulation, Somesthetic Stimulation, Spreading Depression, Tactile Stimulation, Visual Stimulation] 3932, 3972
 Stimulus (Conditioned) [See Conditioned Stimulus]
 Stimulus (Unconditioned) [See Unconditioned Stimulus]
 Stimulus Ambiguity 3891
 Stimulus Change 3762
 Stimulus Complexity 3638, 3641, 3644, 3648, 3658, 3697, 3713, 3735, 3770, 4181, 4244, 4293, 4591
 Stimulus Control 3582, 3722, 3726, 3888, 5120
 Stimulus Deprivation [See Food Deprivation, Sensory Deprivation, Social Deprivation, Social Isolation, Water Deprivation]
 Stimulus Discrimination 3582, 3587, 3738, 3853, 3865, 3866, 3875, 3881, 3891, 3896, 4044, 4063, 4115, 4154
 Stimulus Duration 3596, 3599, 3626, 3649, 3660, 3678, 3680, 3692, 3697, 3727, 3737, 3772, 3826, 3959, 4048, 4473
 Stimulus Exposure Time [See Stimulus Duration]
 Stimulus Frequency 3676, 3736, 3865
 Stimulus Generalization 3594, 3762, 3853, 3854, 3861, 3868, 3893, 5524
 Stimulus Intensity 3584, 3594, 3599, 3667, 3673, 3727, 3826, 3860, 3867, 3873, 3951, 4048
 Stimulus Intervals [See Also Interstimulus Interval, Intertrial Interval] 3974
 Stimulus Novelty 3826, 3961, 4209, 4235, 4323
 Stimulus Parameters [See Also Interstimulus Interval, Intertrial Interval, Stimulus Complexity, Stimulus Duration, Stimulus Frequency, Stimulus Intensity, Stimulus Intervals, Stimulus Novelty, Stimulus Similarity, Stimulus Variability] 3462, 3468, 3587, 3747, 3748, 3770, 3868, 3879, 4251
 Stimulus Pattern [See Stimulus Variability]
 Stimulus Presentation Methods [See Also Tachoscopic Presentation] 3613, 3642, 3714, 3720, 3748, 3759, 3767, 4312, 4766, 5490, 5512, 5618
 Stimulus Similarity 3697, 3700, 3711, 3720, 3740, 3749, 3769, 3791, 4557, 4585
 Stimulus Variability 3601, 3615

BRIEF SUBJECT INDEX

- Stipends** [See Educational Financial Assistance]
Stochastic Modeling 3489
Strain Differences (Animal) [See Animal Breeding, Genetics]
Strategies 3718, 3723, 4244
Strength (Physical) [See Physical Strength]
Stress [See Also Environmental Stress, Physiological Stress, Psychological Stress, Stress Reactions] 3776, 4191, 4591, 4918, 4941, 4959
Stress Reactions 3583, 3797, 3937, 3999, 4002, 4601, 4718, 5372
Stroboscopic Movement [See Apparent Movement]
Strong Vocational Interest Blank 3477
Stroop Color Word Test 3589, 4292, 5551
Structuralism 3423
Student Admission Criteria 5345, 5350, 5357
Student Attitudes 4450, 4455, 4860, 5403, 5440, 5448, 5452, 5463, 5480, 5485, 5488, 5503, 5516, 5518, 5522, 5530, 5590, 5592, 5599, 5605, 5606, 5608, 5609, 5614, 5616, 5617, 5622, 5623, 5629, 5631, 5687, 5717, 5740
Student Teachers 4661, 5413, 5414, 5418, 5419, 5431, 5437, 5439, 5465, 5708
Student Teaching 5437
Students [See Also Business Students, College Students, Community College Students, Elementary School Students, Graduate Students, High School Students, Junior College Students, Junior High School Students, Kindergarten Students, Medical Students, Nursery School Students, Nursing Students, ROTC Students, Seminarians, Special Education Students, Vocational School Students] 5429, 5436, 5521, 5558, 5608, 5611, 5694
Studies (Followup) [See Followup Studies]
Studies (Longitudinal) [See Longitudinal Studies]
Study Habits 4455, 5477, 5498, 5514, 5543, 5552
Stuttering 4879, 4880, 4885, 4886, 4887, 5174
Subcortical Lesions [See Brain Lesions]
Subculture (Anthropological) 4576, 4615, 4680, 5339
Subliminal Perception 4620
Subnormality (Mental) [See Mental Retardation]
Subprofessional Personnel [See Paraprofessional Personnel]
Substantia Nigra [See Mesencephalon]
Subtests 3536, 5693, 5726
Suburban Environments 4468
Subvocalization 3728, 4192
Success [See Achievement]
Successive Contrast [See Brightness Perception]
Sugars [See Also Blood Sugar, Glucose] 3874
Suggestibility 4088
Suicide 4674, 4796, 4807, 4810, 4815, 4831, 4834, 4846, 5382
Suicide (Attempted) [See Attempted Suicide]
Suicide Prevention Centers 5329
Sulpride 5141
Summer Camps (Recreation) 4659
Superior Colliculus 3975, 4054
Supervisors [See Management Personnel]
Support (For Theories) [See Professional Contribution]
Supportive Psychotherapy [See Psychotherapy]
Suppression (Conditioned) [See Conditioned Suppression]
Surgery [See Also Adrenalectomy, Amputation, Castration, Heart Surgery, Induced Abortion, Male Castration, Neurosurgery, Organ Transplantation, Ovariectomy, Pinelectomy, Psychosurgery, Stereotaxic Techniques, Sympathectomy] 4015, 5181, 5188
Surgical Patients 5266
Surveys 3461, 3480
Surveys (Opinion) [See Attitude Measures]
Surveys (Personality) [See Personality Measures]
Surveys (Preference) [See Preference Measures]
Susceptibility (Disorders) 3843, 4804
Susceptibility (Hypnotic) [See Hypnotic Susceptibility]
Sweat 5094
Sweden 5299, 5397, 5406, 5487, 5505
Syllables 3666
Syllogistic Reasoning [See Inductive Deductive Reasoning]
Symbolism 3507, 4190, 5039
Sympathectomy 4029
Sympatholytic Drugs [See Reserpine]
Sympathomimetic Amines [See Amphetamine, Catecholamines, Dextroamphetamine, Dopamine, Epinephrine, Methamphetamine, Norepinephrine]
Sympathomimetic Drugs [See Also Amphetamine, Catecholamines, Dextroamphetamine, Dopamine, Epinephrine, Fenfluramine, Methamphetamine, Norepinephrine] 4104
Symposia [See Professional Meetings And Symposia]
Symptoms [See Also Acting Out, Anorexia Nervosa, Apraxia, Body Rocking, Coma, Convulsions, Distractibility, Dyskinesia, Fatigue, Headache, Hyperkinesia, Hyperphagia, Hypochondriasis, Hypoglycemia, Hypothermia, Insomnia, Obesity, Shock, Tremor, Underweight, Vomiting] 4334, 4668, 4679, 4697, 4701, 4711, 4727, 4729, 4732, 4771, 4778, 4793, 4825, 4893, 4896, 4908, 4946, 5004, 5302, 5317
Synapses 4042, 4127
Syndromes [See Also Downs Syndrome, Klinefelters Syndrome, Organic Brain Syndromes, Senile Dementia, Turners Syndrome] 4132, 4924
Synergism (Drugs) [See Drug Synergism]
Syntax [See Also Sentence Structure] 3688, 3786, 4232, 4236, 4256, 4261, 4276, 4716, 5555
Systematic Desensitization Therapy 5089, 5091, 5107, 5110, 5112, 5115, 5117, 5118, 5123, 5128, 5131, 5132, 5134, 5324
Systems Analysis 4485, 4972
T Groups [See Sensitivity Training]
Tachistoscopic Presentation 3698
Tactual Discrimination [See Tactual Perception]
Tactual Perception [See Also Vibrotactile Thresholds] 3581, 3613, 4293, 4294, 4982
Tactual Stimulation 3581, 3595, 3759, 3837, 4091, 4203, 5601
Taiwan 5596
Talent [See Ability]
Talented [See Gifted]
Tantrums 4206
Task Analysis 5790
Task Complexity 3710, 3763, 3774, 3785, 3799, 3810, 3813, 4282, 5789, 5820, 5838
Task Difficulty [See Task Complexity]
Taste Discrimination [See Taste Perception]
Taste Perception 3609, 3863, 3867, 3869, 3874, 4016, 4022, 4043, 4139
Taxonomies 3453, 3968, 4162, 5210, 5328, 5760, 5851
Tea (Drug) [See Caffeine]
Teacher (Evaluation of) [See Personnel Evaluation, Teachers]
Teacher Aides 5464, 5473
Teacher Attitudes 4450, 5416, 5418, 5423, 5431, 5433, 5435, 5436, 5438, 5440, 5444, 5447, 5448, 5449, 5459, 5468, 5542, 5605, 5611, 5620, 5625, 5634, 5651, 5678, 5698, 5717, 5776
Teacher Characteristics [See Also Teacher Attitudes, Teacher Personality] 5407, 5411, 5412, 5416, 5420, 5425, 5426, 5442, 5454, 5461, 5462, 5468, 5480, 5540, 5542, 5597, 5605, 5615, 5625, 5636, 5708
Teacher Education [See Also Inservice Teacher Education, Student Teaching] 5413, 5414, 5424, 5428, 5430, 5439, 5444, 5450, 5453, 5464, 5466, 5592
Teacher Effectiveness [See Teacher Characteristics]
Teacher Personality 5416, 5419, 5420, 5425, 5450, 5462, 5468, 5611
Teacher Student Interaction 5420, 5426, 5432, 5436, 5449, 5454, 5461, 5466, 5589, 5590, 5595, 5597, 5602, 5605, 5608, 5609, 5612, 5624, 5632, 5634, 5698
Teacher Training [See Teacher Education]
Teachers [See Also College Teachers, Elementary School Teachers, High School Teachers, Junior High School Teachers, Special Education Teachers, Student Teachers] 3528, 5418, 5422, 5423, 5430, 5431, 5433, 5434, 5444, 5454, 5455, 5459, 5461, 5467, 5611, 5674
Teaching [See Also Computer Assisted Instruction, Group Instruction, Individualized Instruction, Instructional Media, Lecture Method, Montessori Method, Open Classroom Method, Programed Instruction, Programed Textbooks, Reading Materials, Teaching Methods, Team Teaching Method, Televised Instruction, Tutoring, Videotape Instruction] 5413, 5429, 5448, 5450, 5461, 5463, 5507, 5560, 5602, 5609
Teaching (Programed) [See Programed Instruction]
Teaching Internship [See Student Teaching]
Teaching Methods [See Also Computer Assisted Instruction, Group Instruction, Individualized Instruction, Lecture Method, Montessori Method, Open Classroom Method, Programed Instruction, Team Teaching Method, Televised Instruction, Tutoring, Videotape In-

BRIEF SUBJECT INDEX

- struction] 3764, 3767, 4162, 4163, 5331, 5349, 5356, 5365, 5367, 5370, 5375, 5436, 5466, 5472, 5473, 5477, 5478, 5481, 5482, 5489, 5490, 5495, 5496, 5499, 5500, 5501, 5502, 5504, 5510, 5515, 5522, 5523, 5525, 5529, 5531, 5532, 5533, 5535, 5536, 5570, 5575, 5632, 5642, 5656, 5776

- Toilet Training** 4206
- Token Economy Programs** 5096, 5514
- Token Reinforcement** [See Secondary Reinforcement]
- Tolerance** 4561, 5230
- Tolerance (Drug)** [See Drug Tolerance]
- Tolerance For Ambiguity** 4598
- Tone (Frequency)** [See Pitch (Frequency)]
- Tongue** 3599
- Top Level Managers** 5793, 5802
- Tortoises** [See Turtles]
- Touch** [See Tactile Perception]
- Towns** 4709, 4710
- Toxic Disorders** [See Also Alcohol Intoxication, Chronic Alcoholic Intoxication, Toxic Encephalopathies] 4834
- Toxic Encephalopathies** [See Also Alcohol Intoxication, Chronic Alcoholic Intoxication] 4909
- Toxicity** 4825, 4843
- Toy Selection** 4330, 4859, 5527
- Toys** 4211, 4323, 4859, 5527
- Trace (Memory)** [See Memory Trace]
- Tracking** [See Also Rotary Pursuit] 4866, 5836, 5837, 5840
- Traditionalism** [See Political Conservatism]
- Traffic Accidents (Motor)** [See Motor Traffic Accidents]
- Trainable Mentally Retarded** 4857, 4859
- Training** [See Education]
- Training (Clinical Methods)** [See Clinical Methods Training]
- Training (Community Mental Health)** [See Community Mental Health Training]
- Training (Graduate Psychology)** [See Graduate Psychology Education]
- Training (Mental Health Inservice)** [See Mental Health Inservice Training]
- Training (Personnel)** [See Personnel Training]

BRIEF SUBJECT INDEX

- Training (Psychiatric) [See Psychiatric Training]
 Training (Psychotherapy) [See Psychotherapy Training]
 Tranquilizing Drugs [See Also Amitriptyline, Chlorpromazine, Fluphenazine, Haloperidol, Neuroleptic Drugs, Phenothiazine Derivatives, Pimozide, Reserpine, Thioridazine] 5150, 5155
 Transactional Analysis 4989
 Transfer (Learning) 3731, 3743, 3748, 3765, 4248, 4273, 5134
 Transference (Psychotherapeutic) [See Psychotherapeutic Transference]
 Transplants (Organ) [See Organ Transplantation]
 Transportation [See Air Transportation, Ground Transportation]
 Transportation Accidents [See Motor Traffic Accidents]
 Transposition (Cognition) 4291
 Transsexualism 4817, 4823
 Transvestism 5170
 Tranlycypromine 4103
 Trauma (Emotional) [See Emotional Trauma]
 Trauma (Physical) [See Injuries]
 Treatment Effectiveness Evaluation 4950, 5013, 5019, 5044, 5125, 5135, 5254, 5314, 5321, 5322
 Treatment Facilities [See Also Child Guidance Clinics, Clinics, Community Mental Health Centers, Halfway Houses, Hospitals, Nursing Homes, Psychiatric Clinics, Psychiatric Hospitals] 5325
 Treatment [See Also Related Terms] 4805, 4955, 4959, 5189, 5271, 5274
 Tremor 4061
 Trigeminal Nerve 3958
 Trilodithyrouline 5151
 Trust (Social Behavior) 4506, 5020, 5739
 Tryptophan 3953
 Tuberculosis 5177
 Tumors [See Neoplasms]
 Turners Syndrome 4693, 4923, 4927
 Turnover [See Employee Turnover]
 Turtles 3941, 3971
 Tutoring 5506, 5669, 5687
 Tutors [See Teachers]
 Twins 3905, 3967
 Tympanic Membrane [See Middle Ear]
 Typists [See Clerical Personnel]
 Typologies (Psychodiagnostic) [See Psychodiagnostic Typologies]
 Tyrosine 4075, 4103, 4143
- Ulcers (Gastrointestinal) [See Gastrointestinal Ulcers]
 Ulnar Nerve [See Spinal Nerves]
 Unconditioned Stimulus 3737, 3867, 3871, 3942
 Unconscious (Personality Factor) 5003
 Underachievement (Academic) [See Academic Underachievement]
 Undergraduate Degrees [See Educational Degrees]
 Undergraduates [See College Students]
 Underprivileged [See Disadvantaged]
 Understanding [See Comprehension]
 Underweight [See Also Anorexia Nervosa] 3982
 Unemployment 5809
 Union of Soviet Socialist Republics 4755
- United States 3477, 3501, 4343, 4372, 4625, 4703, 4788, 5019, 5232, 5284, 5338, 5344, 5351, 5596, 5712
 Universities [See Colleges]
 Unwed Mothers 3500, 4800
 Upper Class 4351
 Urban Environments [See Also Ghettos] 3617, 4247, 4352, 4390, 4468, 4604, 4650, 5201, 5217, 5510, 5562, 5841
 Urban Ghettos [See Ghettos]
 Urbanization 4390
 Uric Acid 4087, 4725
 Urinary Function Disorders [See Urinary Incontinence]
 Urinary Incontinence 5084, 5085
 Urination 3903, 5128
 Urogenital Disorders [See Amenorrhea, Klinefelters Syndrome, Menstrual Disorders, Premenstrual Tension, Turners Syndrome, Urinary Incontinence]
 Urogenital System [See Penis, Vagina]
- Vagina 4050
 Validity (Statistical) [See Statistical Validity]
 Validity (Test) [See Test Validity]
 Values [See Also Personal Values, Social Values] 3461, 3487, 3490, 3699, 4376, 4411, 4551, 4561, 4917, 5446, 5521, 5585, 5751, 5763, 5764
 Variability (Response) [See Response Variability]
 Variability (Stimulus) [See Stimulus Variability]
 Variability Measurement [See Also Analysis of Variance, Standard Deviation] 3593
 Variable Interval Reinforcement 3881, 4048
 Variables (Statistical) [See Statistical Variables]
 Variance [See Variability Measurement]
 Variations (Seasonal) [See Seasonal Variations]
 Vascular Disorders [See Cardiovascular Disorders]
 Vasoconstrictor Drugs [See Amphetamine, Methamphetamine, Norepinephrine, Serotonin]
 Veins (Anatomy) 4012
 Velocity 3610, 3662
 Venereal Diseases 5740
 Verbal Ability 3579, 4218, 4272, 4639, 5662
 Verbal Communication [See Also Articulation (Speech), Bilingualism, Compressed Speech, Consonants, Conversation, Cursive Writing, Ethnolinguistics, Etymology, Foreign Languages, Grammar, Handwriting, Homonyms, Language, Language Development, Letters (Alphabet), Linguistics, Literacy, Morphology (Language), Neologisms, Paragraphs, Phonemes, Phonetics, Phonology, Printing (Handwriting), Pronunciation, Psycholinguistics, Public Speaking, Semantics, Sentence Structure, Sentences, Sight Vocabulary, Speech Characteristics, Speech Pitch, Syllables, Syntax, Verbal Fluency, Vocabulary, Vowels, Words (Phonetic Units), Written Language] 3821, 4165, 4169, 4192, 4238, 4323, 4516, 4519, 4527, 4530, 4532, 4546, 4559, 4575, 4647, 4677, 4716, 4758, 4770, 4902, 4997, 4998, 4999, 5005, 5028, 5032, 5096, 5107, 5127, 5367, 5432, 5607, 5609, 5634, 5662, 5674
 Verbal Conditioning [See Verbal Learning]
 Verbal Fluency 4880, 5662
 Verbal Learning [See Also Paired Associate Learning, Serial Anticipation (Learning), Serial Learning] 3589, 3715, 3717, 3752, 3756, 3765, 3793, 3804, 4083, 4253, 4643, 4900, 5475, 5566, 5578, 5618
 Verbal Reinforcement [See Also Praise] 3716, 3774
 Verbalization [See Verbal Communication]
 Vertebrates [See Baboons, Birds, Budgerigars, Cats, Chickens, Chimpanzees, Chinchillas, Deer, Dogs, Fishes, Frogs, Geese, Gerbils, Guinea Pigs, Lizards, Mammals, Marsupials, Mice, Monkeys, Opossums, Pigeons, Pigs, Primates (Nonhuman), Quails, Rabbits, Rats, Reptiles, Rodents, Sticklebacks, Turtles]
 Vestibular Stimulation [See Somesthetic Stimulation]
 Veterans (Military) [See Military Veterans]
 Vibrators (Apparatus) 5086
 Vibrotactile Thresholds 3599
 Victimization 4549, 4802, 5283
 Videotape Instruction 5502
 Videotapes 5013, 5032, 5077, 5241, 5327, 5359
 Violence 4819, 4832, 5272
 Vision [See Also Binocular Vision, Brightness Perception, Color Perception, Dark Adaptation, Monocular Vision, Stereoscopic Vision, Visual Discrimination, Visual Field, Visual Perception, Visual Thresholds] 4014
 Visual Cortex 3954, 3976, 4014, 4064, 4069
 Visual Discrimination 3577, 3642, 3652, 3658, 3659, 3726, 3746, 3842, 3845, 3885, 3897, 3898, 4060, 4195, 4242
 Visual Displays 3646, 3656, 3698, 5836, 5837, 5840
 Visual Evoked Potentials 3637, 3844, 3945, 3950, 3957, 3959, 3963, 3971, 3976, 4054, 4715, 4840, 5135
 Visual Feedback 3988, 5475, 5523
 Visual Field 3631, 3650
 Visual Masking 3643
 Visual Perception [See Also Binocular Vision, Brightness Perception, Color Perception, Dark Adaptation, Monocular Vision, Stereoscopic Vision, Visual Discrimination, Visual Field, Visual Thresholds] 3580, 3586, 3618, 3619, 3621, 3622, 3623, 3624, 3626, 3627, 3628, 3630, 3632, 3636, 3637, 3638, 3641, 3643, 3644, 3646, 3649, 3651, 3657, 3662, 3663, 3688, 3711, 3735, 3829, 3830, 3835, 3845, 3882, 3954, 4006, 4054, 4064, 4195, 4215, 4264, 4272, 4321, 4606, 4621, 4773, 4830, 4858, 4865, 5179, 5838, 5839
 Visual Stimulation [See Also Illumination, Photopic Stimulation, Prismatic Stimulation, Tachistoscopic Presentation, Visual Feedback] 3579, 3594, 3606, 3612, 3630, 3640, 3648, 3655, 3663, 3698, 3759, 3842, 3883, 3944, 3947, 3950, 3959, 3975, 4557, 4621, 4922, 5657, 5840
 Visual Thresholds [See Also Dark Adaptation] 3615, 3625, 3636, 3639, 3660, 3661, 3662, 3844

BRIEF SUBJECT INDEX

Visually Handicapped [See Also Blind, Partially Sighted] 3632, 3639, 3652, 4863, 4903, 5362, 5653
Vocabulary [See Also Homonyms, Neologisms, Sight Vocabulary] 4225, 4876, 4919, 5584
Vocalization [See Also Animal Vocalizations, Infant Vocalization, Subvocalization, Voice] 4536
Vocalization (Infant) [See Infant Vocalization]
Vocalizations (Animal) [See Animal Vocalizations]
Vocational Adjustment [See Occupational Adjustment]
Vocational Aspirations [See Occupational Aspirations]
Vocational Choice [See Occupational Choice]
Vocational Counseling [See Occupational Guidance]
Vocational Counselors 5202
Vocational Education 4350, 4860, 5537, 5709
Vocational Guidance [See Occupational Guidance]
Vocational Interests [See Occupational Interests]
Vocational Mobility [See Occupational Mobility]
Vocational Preference [See Occupational Preference]
Vocational Rehabilitation 5190, 5284, 5297, 5330
Vocational School Students 5613
Vocations [See Occupations]
Voice [See Also, Infant Vocalization] 4536
Volunteer Military Personnel [See ROTC Students]
Volunteer Personnel [See Also ROTC Students] 4533, 4616, 5208, 5329
Volunteers (Experiment) [See Experiment Volunteers]
Vomit Inducing Drugs [See Emetic Drugs]

Vomiting 5082
Voting Behavior 4418
Vowels 3666

Wages [See Salaries]
Wakefulness 3824
Wales 4796
Walking 5121
War 4428, 4602, 5231
Warning Signal [See Signal Detection (Perception)]
Water Deprivation 3833, 3899
Water Intake 3864, 3899, 4119
Wechsler Adult Intelligence Scale 4413
Wechsler Intelligence Scale Children 3515, 3536, 3712, 4413, 4839, 5719, 5726
Weight (Body) [See Body Weight]
Weight Perception 4267
Welfare [See Welfare Services (Government)]
Welfare Services (Government), 5236, 5743
West German Federal Republic 4415, 5332, 5344
West Indies 4614
White Blood Cells [See Leucocytes]
White Collar Workers [See Also Clerical Personnel, Management Personnel, Sales Personnel, Top Level Managers] 4345, 4608, 5819
White Noise 3667, 3820, 3859, 4221
White Rats [See Rats]
Whites [See Caucasians]
Wide Range Achievement Test 5678, 5726
Widows 4687, 5231
Withdrawal (Drug) [See Drug Withdrawal]
Withdrawal Effects (Drug) [See Drug Withdrawal Effects]
Wives [See Also Housewives] 4346, 5322
Womens Liberation Movement 4636
Word Associations 3693, 3745, 3752, 3778, 4175, 4288, 4378, 4770, 5483
Word Blindness (Aphasia) [See Aphasia]

Word Deafness [See Aphasia]
Word Frequency 3777
Word Meaning 3508, 3701, 3777, 4165, 4168, 4174, 4257, 4262, 4288, 4904, 4919
Words (Origin) [See Etymology]
Words (Phonetic Units) 3580, 3589, 3649, 3672, 3676, 3720, 4174, 4912, 5475, 5584
Words (Vocabulary) [See Vocabulary]
Work (Attitudes Toward) 5749, 5751, 5754, 5778, 5786, 5818, 5820, 5832
Work Environments [See Working Conditions]
Work Study Programs [See Educational Programs]
Work Week Length 5808
Workers [See Personnel]
Working Conditions [See Also Work Week Length] 5806, 5812, 5813, 5823
Workshops (Sheltered) [See Sheltered Workshops]
Worship [See Religious Practices]
Wrist 4847
Writing (Creative) [See Literature]
Writing (Cursive) [See Cursive Writing]
Writing (Handwriting) [See Handwriting]
Written Language [See Also Cursive Writing, Handwriting, Letters (Alphabet), Literacy, Paragraphs, Printing (Handwriting)] 4476, 4886

Xylocaine [See Lidocaine]

Yoga 3446, 5074
Young Adults 3632, 3760, 3943, 4098, 4188, 4189, 4225, 4245, 4259, 4277, 4282, 4292, 4479, 4639, 4840, 5110, 5424, 5664, 5681, 5707
Youth (Adolescents) [See Adolescents]
Youth (Adults) [See Young Adults]
Youth (Children) [See Children]

AUTHOR INDEX

The Author Index is intended to be a name index only and not a person index. "Adams, P" will be listed separately from "Adams, Paul" even though the names may refer to the same person, however, two listings for "Adams, P." may refer to two different authors. All authors are listed, not just primary authors.

P P P P P PASAR

is an innovative service designed to benefit the individual users of psychology-related information. It provides a comprehensive literature search capability at a level of complexity achievable only through automated retrieval techniques. The intellectual burden for conducting an effective search is shared by the requester and APA information specialists who formulate specific retrieval strategies, augmenting vocabulary and other search parameters supplied by the requester. Experience has provided APA information specialists with the skills to efficiently interact with the automated data base which contains records published in *PSYCHOLOGICAL ABSTRACTS* from 1967 through the present.

Charges for processing PASAR requests are based on the amount of computer time required to perform a search. Typically these charges range from \$40 to \$60 and will not exceed \$100 unless the requester is contacted first. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and may result in fewer references retrieved than a broad search with few limiting factors.

PASAR Search Request Guidelines

The PASAR Request Form has been designed to assist you in constructing a comprehensive statement of your requirements. However, it should not restrict your input. Provide whatever other information you feel will augment the information specialist's understanding of your requirements. These guidelines should help to clarify items on the Request Form.

ITEM 1. Narrative statement of search topic. Provide a detailed description of the subject matter you wish to be retrieved. Please avoid submitting multiple, discrete requests on a single PASAR Request Form, since such cannot be processed for a single fee. However, multiple aspects of a primary subject may be requested. The distinction is illustrated in the following examples:

Acceptable: "the effects of socioeconomic status, education level, or birth order on career motivation in women."

"Career motivation" is the primary element of this request, while the other elements serve merely to qualify or narrow the scope of this rather broad subject area.

Unacceptable: "the measurement of employee attitudes concerning wages and benefits. Also desire references dealing with the factors that influence management decision-making with respect to personnel policies and procedures."

Although these two topics are closely related to the design and administration of personnel policies and procedures, two separate search strategies would have to be executed to retrieve the specific information requested, and a separate charge for each would have to be made.

ITEM 2. Descriptor(s) relevant to dependent variable(s). Provide a list of words or phrases that indicate the subject matter of prime interest. Descriptors for the "acceptable" example (see Item #1) might include: career motivation, career preference, and career aspirations.

ITEM 3. Descriptor(s) relevant to independent variable(s). Provide a list of words or phrases that will qualify or narrow the scope of the dependent variable. Descriptors for the "acceptable" example (see Item #1) might include: socioeconomic status, social class, educational level, birth order, and women.

ITEM 4. Search qualifications. Once the subject matter of the search has been defined, you may wish to refine it with specific requirements such as population or time frame. These qualifications are often essential to the actual information need; however, they can unnecessarily limit the search, causing retrieval of few of the relevant records. Therefore, consider your requirements carefully.

ITEM 5. Sorting requirements. Please indicate whether you would prefer to have references sorted alphabetically by author or chronologically by year.

ITEM 6. Intended use of search results. Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.).

Ordering information: When ordering a PASAR search, please read the above guidelines carefully before completing the request form. A purchase order must accompany all institutional requests for a PASAR search. For individuals requesting a PASAR search, the signature of the person responsible for payment must appear on the PASAR request form.

PASAR REQUEST FORM

Psychological Abstracts Information Service

American Psychological Association
1200 Seventeenth Street, N.W.
Washington, D.C. 20036

FOR OFFICE USE ONLY

Search Request No. _____
Search Time _____
Date Received _____
Date Sent _____

PSYCHOLOGICAL ABSTRACTS 1976 CHANGES

Content Classification. As the result of an extensive study of the psychological literature, a new classification system for 1976 has been developed which groups the literature in a manner more useful to the reader. This classification outline, showing major and minor subject areas, has become the new Table of Contents. The January 1976 issue of *PA* describes these new classifications and their contents in the *Guide to PsycINFO*.

Dissertation Abstracts International. In 1976, *PA* will resume coverage of *Dissertation Abstracts International (DAI)*. Since coverage was suspended in mid 1973, there will be a period of catching up to insure that all material will be included in the 1975-1977 Cumulative Index and that no gaps will appear in the retrospective data base. The relevant dissertations for the last half of 1973, all of 1974 and 75 will be cited in the 1976 issues of *PA*. In 1977, all relevant dissertations from 1976 and 77 will be covered. The 1978 issues will include *DAI* as one of the regularly scanned journals on a current basis.

GUIDE TO PsycINFO

The *Guide* describes innovations in *Psychological Abstracts (PA)* as well as derivative products and services designed to facilitate selective access to the world's scientific literature in psychology and related disciplines. Copies of the *Guide* are available upon request from:

PsycINFO
American Psychological Association
1200 17th Street, N.W.
Washington, D.C. 20036

Psychological Abstracts (PA) provides nonevaluative summaries of the world's literature in psychology and related disciplines. Over 850 journals, technical reports, monographs and other scientific documents provide material for coverage in *PA*. About 20% of the records published in *PA* are bibliographic citations or annotations which are used to cover books, articles peripherally relevant to psychology, or articles that can be represented adequately in approximately 30-50 words.

Issue. The monthly issues contain abstracts listed under 16 major classification categories, with some categories having subsections, as shown in the Table of Contents. Under each classification heading, the abstracts are arranged alphabetically by first author. Abstracts are numbered consecutively in the two volumes produced each year.

Indexes. An author and brief subject index appear in the issues. An expanded and integrated Volume Index is published every six months. Three-year cumulative indexes are also available.

PsycINFO. *PA* records published since 1967 are now on machine readable tapes which provide the basis for automated search and retrieval services known as Psychological Abstracts Information Services (*PsycINFO*). For more information on these products, uses, and costs write to *PsycINFO*, American Psychological Association, 1200 Seventeenth St., N.W., Washington, D.C. 20036.

Correspondence on copyright matters should be directed to the permissions office, on back issue sales to the order department, and on subscriptions and address changes to Anne Redman, Subscription Manager. All correspondence should be addressed to the American Psychological Association, 1200 Seventeenth St., N.W., Washington, D.C. 20036.

Address changes must reach the Subscription Office, APA, 30 days prior to the actual change of address. Copies undelivered because of address change will not be replaced; subscribers should notify the post office that they will guarantee second-class forwarding postage. Other claims for undelivered copies must be made within 4 months of publication. Address your claims to Subscription Manager, APA.

Subscriptions are available on a calendar-year basis only (January through December). Published monthly in two volumes (January through June, and July through December), each volume contains approximately 15,000 abstract records. Volume Indexes are published twice a year under separate cover. Subscription price including indexes per year is \$220 domestic, \$230 foreign. To subscribe, write to Subscription Manager, APA.

KEY TO THE TEXT

The examples of different types of *Psychological Abstracts* records presented here are number coded to provide definition of their elements.

JOURNAL ARTICLE ABSTRACT

¹1271. ²Conger, Anthony L. & Coie, John D. (Duke U) ⁴'Who's crazy in Manhattan: A reexamination of "Treatment of psychological disorders among urban children." ⁵*Journal of Consulting & Clinical Psychology*, 1975(Apr), Vol 43(2), 179-182. - ⁶Reanalyzed data reported by T. S. Langner et al (see PA, Vol. 52:8150) on the prevalence of psychological disturbances in children from welfare and cross-section homes. Results indicate that the data show no meaningful differences in means or skew and a paradoxical greater heterogeneity among welfare children. Some of the difference in variance is clearly attributable to the differential reliability of final scores, and perhaps the remaining difference is due to between-rater differences. Unless other factors were operating, 2 possible conclusions are tenable: Either welfare children manifest both more health and more disturbance than cross-section children or there are no differences in disorder between the populations. A 3rd conclusion is also offered: The populations do actually differ, but the manner in which the disturbance was viewed, rated, and compared necessarily obscured any differences.⁸ (15 ref.) ¹⁰*Journal Abstract*.

1—Record number.

2—Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.

3—Affiliation of first-named author/editor only.

4—Article title, including subtitles: If the original article is in a foreign language, the translated title is given in brackets and the language of the original article is indicated in parentheses.

5—Primary publication title and bibliographic data.

6—Text of abstract.

7—Reference to a previous entry in *Psychological Abstracts*. If an abstract number is unavailable at time of publication, the issue number is given. Consult the Author Index of the PA issue noted in order to determine the record number for the article.

8—Summaries included in the primary publication are listed when in language(s) other than that of the article.

9—Number of references is included when there are 15 or more listed.

10—Abstract source.

BOOK CITATION

¹1703. ²Sugar, Max (Ed). (Louisiana State U, Medical School, New Orleans) ⁴'The adolescent in group and family therapy. ⁵New York, NY: Brunner Mazel, 1975. ⁹xvii, ¹⁰286 p. ¹¹\$13.50. ¹²

1—Record number.

2—Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.

3—Designation of editor.

4—Affiliation of first-named author/editor only.

5—Book title: If the book is in a foreign language, the original title is given followed by a translated title and the language of the book is indicated in parentheses.

6—Place of publication

7—Publisher

8—Year of publication

9—Prepagination

10—Total pagination

11—Price.

12—Annotation occasionally follows.

BOOK CHAPTER CITATION

¹1641. ²Berkovitz, Irving H. & Sugar, Max. (U California, Los Angeles) ⁴'Indications and contraindications for adolescent group psychotherapy. ⁵In M. Sugar (Ed), *The adolescent in group and family therapy*. New York, NY: Brunner Mazel, 1975. ⁹xvii, 286 p. ¹¹\$13.50

1—Record number

2—Author(s) of cited chapter. As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given

3—Affiliation of first-named author only

4—Chapter title

5—Referral to the whole book and its bibliographic data

CONTENT CLASSIFICATION: PA has subsections for some of the 17 major classification categories. These are displayed in the Table of Contents and are designed to group all abstracts relevant to a narrower topic than the major categories under a single heading. Abstracts that are relevant to a major category but not to any of the subsections are listed first and followed by abstracts that are relevant both to a major category and also to the subsections. It is expected that this will help readers locate material related to their interests more quickly.

ABBREVIATIONS: In addition to commonly understood abbreviations* (including all units of measurement, educational degrees, standard statistical abbreviations, and standard Latin and reference terms), standard abbreviations used in *Psychological Abstracts* records are

CA	= chronological age
CNS	= central nervous system
CR	= conditioned response
CS	= conditioned stimulus
DRL	= differential reinforcement of low rates (of responding)
E	= experimenter
ECS	= electroconvulsive shock
EKG	= electrocardiogram (graph)
EMG	= electromyogram (graph)
EPPS	= Edwards Personal Preference Schedule
Exp	= experiment
FI	= fixed interval (reinforcement)
FR	= fixed ratio (reinforcement)
GPA	= grade point average
GSR	= galvanic skin response
ip	= intraperitoneal (ly) (injections)
iv	= intravenous (ly) (injections)
MA	= mental age
MAO	= monoamine oxidase
MMPI	= Minnesota Multiphasic Personality Inventory
NREM	= nonrapid eye movement
REM	= rapid eye movement
ROTC	= Reserve Officer's Training Corps
RT	= reaction time
S	= subject
SVIB	= Strong Vocational Interest Blank
TAT	= Thematic Apperception Test
UCR	= unconditioned response
UCS	= unconditioned stimulus
US	= United States of America
USSR	= Union of Soviet Socialist Republics
VI	= variable interval (reinforcement)
VR	= variable ratio (reinforcement)
WAIS	= Wechsler Adult Intelligence Scale
WISC	= Wechsler Intelligence Scale for Children
16 PF	= Sixteen Personality Factor Questionnaire

Computer languages and computer names will also be used without definition, e.g., ALGOL, COBOL, FORTRAN, IBM 360.

Language abbreviations used after translated titles are

Afri	= Afrikaans	Iran	= Iranian
Alba	= Albanian	Ital	= Italian
Arab	= Arabic	Japn	= Japanese
Bulg	= Bulgarian	Lith	= Lithuanian
Chin	= Chinese	Norg	= Norwegian
Czec	= Czech	Polh	= Polish
Danh	= Danish	Port	= Portuguese
Duth	= Dutch	Romn	= Romanian
Finn	= Finnish	Russ	= Russian
Flem	= Flemish	Slov	= Slovene
Fren	= French	Slok	= Slovak
Geor	= Georgian	Span	= Spanish
Germ	= German	Sscr	= Serbo-Croatian
Grek	= Greek	Swed	= Swedish
Hebr	= Hebrew	Turk	= Turkish
Hung	= Hungarian	Ukrn	= Ukrainian
		Yugo	= Yugoslavian

PSYCHOLOGICAL ABSTRACTS

Volume 55

April 1976

Number 4

GENERAL PSYCHOLOGY

Parapsychology

5860. Broughton, Richard S. **Psi and the two halves of the brain.** *Journal of the Society for Psychical Research*, 1975(Sep), Vol 48(765), 133-147.—Presents research exploring whether ESP may be partially or totally subject to lateral effects, as are other cognitive functions. The subjective cognitive style of the right hemisphere may be more conducive to ESP than the more rational approach of the left hemisphere. (38 ref)—G. J. Frankel.

5861. Ehrenwald, Jan. (Roosevelt Hosp, New York, NY) **Cerebral localization and the psi syndrome.** *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 393-398.—Distinguishes between spontaneous, macro-psychological incidents and experimental, micro-psychological incidents of the card-calling type. On comparing telepathic drawings with drawings made by brain-injured patients suffering from optical agnosia, the identical tendency to distortion and disorganization of the target materials is discerned. This suggests that the telepathic subject is agnostic in relation to psi impressions, and that his central processing takes place in the right rather than the left hemisphere. The capricious nature of ESP responses of the card-calling type suggests fluctuations in the reticular and limbic midbrain system in warding off the intrusion into awareness of subliminal or irrelevant perceptions from the outside world. (19 ref)—*Journal abstract*.

5862. Eysenck, Hans J. (U London, Inst of Psychiatry, England) **Precognition in rats.** *Journal of Parapsychology*, 1975(Sep), Vol 39(3), 222-227.—2 experiments were carried out to test the presence of precognitive ability in 42 Roman High Avoidance strain rats. Ss were tested individually in a cage having 2 compartments separated by a central barrier over which the S could jump. At the beginning of each trial, one side or the other was randomly chosen to receive an electrical stimulus if the S was on that side. Results show that with the very weak, nonaversive stimulus in Exp I, the Ss sought out the electrified area to a significant extent, while with the slightly stronger, weakly aversive shock in Exp II, no psi effects were noted.—*Journal abstract*.

5863. Gatlin, Lila L. (U California, Davis) **The Pratt-Woodruff experiment and viable explanatory hypotheses.** *Journal of Parapsychology*, 1975(Sep), Vol 39(3), 228-235. The Pratt-Woodruff experiment (1939) was simulated on a computer and a wide variety of models of card misplacement proposed by critics of the experiment

were tested. Results neither confirm nor deny the criticisms. A number of explanatory hypotheses are analyzed, with the conclusion that all are equally viable. (15 ref)—*Journal abstract*

5864. Kanthamani, H. & Kelly, E. F. (Inst for Parapsychology, Durham, NC) **Card experiments with a special subject: II. The shuffle method.** *Journal of Parapsychology*, 1975(Sep), Vol 39(3), 206-221.—Continued the authors' (see PA, Vol 52:8893) experiments, requiring the S to shuffle a deck of playing cards to match a target deck shuffled earlier by the E. There were a total of 55 runs. The data gave significant results in all the series individually, as well as in the pooled data. The main effect was a massive excess of exact hits, about 4 times mean chance expectations. The presence of such excess exact hits, together with essentially chance performance on number and suit hits, suggests that the S produced many more exact hits than could be anticipated through chance association of his hits on the component attributes. The pattern of visual-like errors associated with the previous single-card clairvoyance experiment was not present.—*Journal abstract*.

5865. Nisbet, Brian C. **Grace Roads: An account of a "drop-in" communicator.** *Journal of the Society for Psychical Research*, 1975(Sep), Vol 48(765), 148-158.—Presents the 1st part of the case of a "drop-in" communicator unknown to any of the 6 sitters at a table-tilting session. The 1st 3 sittings are described in detail, and the attempts to check out the information received. Several facts were verified, some unexpectedly; others could not be traced. The remainder of the case will appear in a later issue.—G. J. Frankel.

5866. Rebert, Charles S. & Turner, Ann. (Stanford Research Inst, Menlo Park, CA) **EEG spectrum analysis techniques applied to the problem of PSI phenomena.** *Behavioral Neuropsychiatry*, 1974-1975(Jan-Mar), Vol 6(1-12), 18-24.—Used EEG techniques to study unusual sensory capabilities; Ss were 6 adults. One S, the "sender," of a pair of Ss was stimulated with 10-sec duration trains of flicker at 6 or 16 fps, randomly interspersed with periods of no flicker. EEGs were recorded from another S, the "receiver," to determine whether EEG driving or alpha block would be evident on trials when the sender was stimulated, compared to when the sender was not stimulated. Differential alpha block on control and stimulus trials was observed reliably in 1 receiver, indicating some information transfer. The S's overt indications of which stimulus occurred were not different from what would be expected by chance. The physical parameters by which the EEG effect was mediated were not determined.—*Journal abstract*.

History & Philosophies & Theories

5867. Baumgarten, Franziska. II: Autobiographical notes: Prof. Dr. Franziska Baumgarten. *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 487-490.—Presents excerpts from Dr. Baumgarten's personal files which give insights into the thinking and feelings of this first-rate professional psychologist.

5868. Canziani, Willy. Contributions to the history of psychology: XXIII. I: Franziska Baumgarten-Tramer (11/26/68-3/1/70). *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 479-486.—Surveys the scientific work of the psychologist, Prof. Dr. Franziska Baumgarten, taking into consideration her research and methods in the fields of occupational psychology, developmental psychology, professional ethics, and political and social psychology.—*Journal abstract*.

5869. Chertok, Léon. (Inst la Rochefoucauld, Ctr de Medecine, Paris, France) **Hysteria, hypnosis, psychopathology: History and perspectives.** *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 367-378.—Presents an historical outline of the search for an explanation of the nature of hysteria and hypnosis, their mutual relationship, and their connection to psychopathology. It is postulated that hypnosis is a fourth organismic state, a kind of inborn mechanism which acts as one of the regulators of man's relationships with the environment. Other topics discussed include the aims and methodology of future interdisciplinary research on hypnosis and the study of the transition from one state of consciousness to another. (48 ref)—*Journal abstract*.

5870. Hayes, William M. (Duke U) **The Freudian vision in three contemporary psychiatric writers.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4392.

5871. Macioci, Ralph N. (Ohio State U) **Rationale and organum for the completion of humanity through the acquisition of consciousness.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4879-4880.

5872. Martin, Francis A. (Southern Baptist Theological Seminary, Louisville, KY) **A study of Carl Rogers' philosophy of persons and its implications for church education.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3995-3996.

5873. Nash, Roger J. (Northwestern U) **Within these walls: The ideology of the movement to institutionalize the insane in America.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4163-4164.

5874. Piechowski, Michael M. (U Wisconsin, Madison) **A theoretical and empirical approach to the study of development.** *Genetic Psychology Monographs*, 1975(Nov), Vol 92(2), 231-297.—Argues that in order to claim generality, a theory of development must (a) include emotional development and (b) offer means of explaining developmental transformations. The conceptual structure of such a theory, the theory of positive disintegration, is discussed and results of 3 empirical tests of the theory are presented. Tests 1, 2, and 3 compared, respectively (a) developmental cross sections obtained from different Ss with the overall pattern of development, (b) computed and clinically-derived values for developmental potential (DP) for Ss in the study, and (c) DP values from early and late parts of an autobiography. (58 ref)—*Journal abstract*

5875. Quadagno, Jill S. & Antonio, Robert J. (U Kansas) **Labeling theory as an oversocialized conception of man: The case of mental illness.** *Sociology & Social Research*, 1975(Oct), Vol 60(1), 33-45.—Although labeling theory is supposedly derived from a symbolic interactionist perspective, it conveys a process which is unilateral, ignoring individual interpretations and reactions. This is due largely to its focus upon the social audience, successful labeling, and the permanence of deviant roles. T. J. Scheff's (1966) direct application of labeling theory to mental illness exemplifies these inadequacies. Through analysis of data obtained by interviews with female mental patients at a hospital emphasizing short-term care, labeling theory is qualified to include the notion of individual reactions to labels. (34 ref)—*Journal abstract*.

5876. Ries, Clayton B. (U North Dakota) **Freedom and self-becoming in Karl Jaspers' existential philosophy.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4759.

Research Methods & Apparatus & Computer Applications

5877. Abrahams, Joel P.; Hoyer, William J.; Elias, Merrill F. & Bradigan, Bruce. (Syracuse U) **Gerontological research in psychology published in the Journal of Gerontology 1963-1974: Perspectives and progress.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 668-673.—Psychological research on human Ss published in the *Journal of Gerontology* from 1963 through 1974 is summarized in terms of various dimensions, including S selection procedures, sample characteristics, data analysis techniques, and research design. (20 ref)

5878. Brenenstuhl, Daniel C. (Northern Illinois U) **Cognitive versus affective gains in computer simulations.** *Simulation & Games*, 1975(Sep), Vol 6(3), 303-311.

5879. Chistoni, G. C.; Hermann, P. & Schneider, P. B. (U Lausanne, Polyclinique Psychiatrique, Switzerland) **[Concerning the computerized storage of clinical psychiatric data: An attempt to codify clinical data by the key word method.]** (Fren) *Social Psychiatry*, 1975(Oct), Vol 10(4), 173-188.—Describes a method of storing information from medical files using a system of key words. The method should enable coding of clinical psychiatric data with a minimum of distortion and subsequent retention in an automated, computerized system, capable of yielding cumulative data and alternative groupings. Data can be retrieved under headings different from those originally used at the input stage. Implications of the procedure for psychiatric terminology in general and psychiatric classification systems are noted, and the limitations of the system, which currently appears suitable only for research purposes, are discussed.—*English abstract*.

5880. Dolly, John P. (U Georgia) **The subject bias effect in classroom research.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4862.

5881. File, Sandra E. & Wardill, Ann G. (U London, School of Pharmacy, England) **The reliability of the hole-board apparatus.** *Psychopharmacologia*, 1975, Vol 44(1), 47-51.—Investigated 2 aspects of the reliability of the hole-board apparatus: the similarity between scores of different samples of the same population on their 1st

exposure to the apparatus, and the test-retest reliability. 36 male hooded Lister rats and 50 male and 70 female CFW mice were given a 5-min exposure to the hole-board and then retested for 5 min after 1, 2, or 8 days. Male rats and mice showed good initial exposure reliability, whereas the female mouse groups differed significantly. All Ss showed a positive test-retest correlation (range 0.31-0.78), but a homogeneous group (e.g., all Ss habituating) produced higher correlations (range 0.60-0.99). Comparison of scores on the 2 5-min exposures showed that not all groups showed significant habituation, but the Ss exposed to the hole-board for 2 10-min periods showed both significant habituation and test-retest reliability.—*Journal abstract.*

5882. Fitter, Mike & Daly, Clive. (MRC Social & Applied Psychology Unit, U Sheffield, England) **An extensible touchboard for on-line experiments.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 673-676.—Describes an input system that is designed to be flexible enough to enter data for various purposes.

5883. Goldstein, Melvin L. (Indiana U, Kokomo) **A simple method for recording hippocampal theta in the freely moving rat.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 616.—Describes a method for recording hippocampal theta electrical activity in the freely moving rat. Bipolar recording electrodes are constructed by soldering 2 insulated stainless steel wires to male connectors and then twisting the wires together. The electrodes are implanted into the rat's brain and are fastened to the skull with machine screws and plastic modeling material. A small cup is built up around the electrodes with plastic cement so that only the male connectors protrude from the electrode assembly. Female leads are connected to an EEG machine by means of microdot cable. A typical hippocampal theta recording obtained with this method is presented.—*Journal abstract.*

5884. Goldstein, S. R. et al. (NIH, Biomedical Engineering & Instrumentation Branch, Bethesda, MD) **An instrument for stable single cell recording from pulsating human cerebral cortex.** *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 667-670.

5885. Gregory, Richard L. (U Bristol, Brain & Perception Lab, England) **Drawing and tracing in three dimensions: Stereoscribe.** *Perception*, 1975, Vol 4(2), 221-228.—Designed and built a device for drawing in 3 dimensions. Drawing may be free-hand, or 3-dimensional structures or stereograms (such as stereo x-ray pictures) may be traced in 3 dimensions. The device produces coordinate data, which may be fed to a plotter to produce permanent stereo pairs, and may be fed to a computer for storage and analysis. Stereoscribe can also be used to plot the "subjective space" of observers, to record perceptual knowledge.—*Journal abstract.*

5886. Gur, Ruben. (Michigan State U) **An experimental investigation of a new procedure for enhancing hypnotic susceptibility.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2931.

5887. Madsen, K. B. (Royal Danish School of Educational Studies, Inst of General Psychology, Copenhagen) **Patterns of preferences.** *Communication &*

Cognition, 1974, Vol 7(1), 13-31.—Suggests that scientific paradigms, as metatheoretical positions, imply patterns of preferences for different approaches to theorizing and research for individual scientists. An examination of various psychological theories of motivation provides support for this view. Empiricists, rationalist, and intuitionist paradigms are considered, and the scientific implications of each are discussed.—*R. L. Cook.*

5888. Maxwell, J. H. & Granda, A. M. (U Delaware, Inst for Neuroscience & Behavior) **An automated apparatus for the determination of visual thresholds in turtles.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 131-132.—Describes an apparatus which permits precise and reliable measurements of visual thresholds using a conditioned avoidance technique combined with a motorized head-positioning device. The entire sequence of stimulus management and the collection of response data are under programed control.

5889. Mayo, Robert J. (Purdue U) **Some comments on practical significance in the experimental study.** *Psychology*, 1975(Aug), Vol 12(3), 39-43.—Suggests several ways the practical significance of a statistical finding may be examined, including (a) the presentation and inspection of the treatment effects themselves, (b) the presentation of the full range of scale values of the dependent variable, and (c) an indication of the variability of each set of within-cell scores. These methods demonstrate an awareness that the evaluation of the meaning attached to a rejection of the null hypothesis is ultimately a cognitive process. Researchers are encouraged to examine the meaningfulness question before they collect data.—*R. Tomasko.*

5890. Mitroff, I. (U Pittsburgh) **On the norms of science: A report of a study of the Apollo moon scientists.** *Communication & Cognition*, 1974, Vol 7(1), 125-151.—Reviews a study of 40 scientists working with the Apollo moon mission which suggests a model of science that emphasizes the positive role of such motivational influences as bias and commitment. A tentative alternative normative structure is presented. (47 ref)—*R. L. Cook.*

5891. Pope, Alan T. & Gersten, Charles D. (FDR VA Hosp, Montrose, NY) **A semi-automated system for biofeedback-assisted relaxation therapy.** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 459-463.—Describes a semi-automated system for research in biofeedback-assisted muscular relaxation therapy which includes a cassette tape recorder for presentation of instructions and program control signals, programming modules for timing and gating EMG feedback and recording intervals, a Kodak Carousel programmer to interface the cassette recorder with the programming system, and an EMG processor wired for external timing of feedback and counting of averaged EMG activity. (17 ref)

5892. Roberts, Thomas W. (U Wisconsin, Madison) **A versatile biological amplifier.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 371-374.—Describes an inexpensive, easily assembled amplifier using N-channel and complementary metal-oxide-semiconductor devices. Its high input impedance and excellent common mode rejection ratio suit it well to surface and wire EMG research and make it a desirable choice for student use.

5893. Smith, Stanley G.; Werner, Tureen E. & Davis, W. Marvin. (U Mississippi) **Technique for intragastric delivery of solutions: Application for self-administration of morphine and alcohol by rats.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 220-224.—Presents an esophageal method for intragastric self-administration of drugs by rats. Included are descriptions of the surgical procedures for gastric cannulation by an esophageal approach and data from rats given opportunity to acquire intragastric self-administration behavior for .3 mg/kg/injection of morphine sulfate solution or 50 or 10 mg/kg/injection of ethyl alcohol solutions. Ss were 8 Wistar rats. Results indicate that for each drug, 3 out of 4 Ss had acquired the behavior within 7 days. In other observations, it was found that cannulas remained functional yet at 4 mo after surgery. (25 ref)—*Journal abstract*.

5894. Spain, David H. & Hollenbeck, Albert R. (U Washington, Seattle) **Coding non-western behavior stream data: A problem of reliability.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 137-138.—Summarizes several attempts to contend with the problem of reliably coding naturally occurring non-Western stream data. It is suggested that collection-coding process be combined into 1 stage; observers could then learn the code and achieve an appropriate level of reliability prior to data collection.

5895. Wilkinson, Robert T. & Houghton, David. (MRC, Applied Psychology Unit, Cambridge, England) **Portable four-choice reaction time test with magnetic tape memory.** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 441-446.—Describes a small, battery-powered, fully portable device for administering a 4-choice serial reaction time test and recording the results on a standard magnetic tape cassette. In preliminary performance trials, the 4-choice test appeared to reflect fatigue due to continuous repetitive responding in a way similar to classical, nonportable, multiple-choice serial reaction tests, but over a shorter time scale and with greater internal consistency.

5896. Wilson, Glenn; Harshfield, Gregory & Laux, Louis. (Wittenberg U) **Use of a single gibbon in laboratory research.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 505-506.—Suggests that the high cost of behavioral research with primates may be partially reduced by borrowing animals from a zoo. Operant conditioning data from work with a female gibbon are presented to show that an isolated animal may be used for research.

5897. Young, Laurence R. & Sheena, David. (Massachusetts Inst of Technology) **Survey of eye movement recording methods.** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 397-429.—Reviews most of the known techniques for measuring eye movements. Topics include types of eye movement, characteristics of the eye which lend themselves to measurement and the principal approaches to the measurement of eye movement, practical methods of measurement with attention to the new techniques, and general considerations guiding selection of method. (2 p ref)

PSYCHOMETRICS

5898. Baron, Jonathan. (U Pennsylvania) **Stimuli and subjects in one-tailed tests.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 608-610.—It is argued that in many experiments in which 2 kinds of stimuli are compared, the best statistical test is a 1-tailed test across stimuli. It is stressed that this is not an argument against running several Ss, only against testing across them once an effect has been shown across stimuli. This view implies that H. H. Clark's (see PA, Vol 51:5129) argument for testing across stimuli and subjects may not apply for some common types of experiments, including his own examples.—*Journal abstract*.

5899. Berk, Ronald A. (U Southern California, Washington Public Affairs Ctr) **Utility of analysis of variance with repeated measures programs for estimating reliability.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 441-442.—Describes the generalizability theory of measurement error and its relation to analysis of variance with repeated measures. The interclass correlation is defined in terms of analysis of variance computer program output. The usefulness of several programs is discussed.

5900. Burton, Michael L. (U California, Irvine) **Dissimilarity measures for unconstrained sorting data.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 409-423.—Investigates 3 dissimilarity measures for the unconstrained sorting task. All 3 measures are metrics, but they differ in the kind of compensation which they make for differences in the sizes of cells within sortings. Empirical tests of the 3 measures are done with sorting data (obtained from 104 university students and staff) for occupations names and the names of behaviors, using the multidimensional scaling method.—*Journal abstract*.

5901. Colaiuta, Victoria B. (U South Dakota) **Effects of eye contact on WAIS performance.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2331.

5902. Cronen, Vernon E. & Conville, Richard L. (U Massachusetts, Amherst) **Summation theory and the predictive power of subjects' own salient beliefs.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 47-52.—Argues that the low correlations of summation predictions with semantic differential attitude scores have been due to 2 problems—the cuming effects of the semantic differential scales themselves and the elicitation of nonsalient, as well as salient, S beliefs. An experiment was conducted that eliminated these limiting methodological characteristics. Ss were 55 undergraduates. Summation theory predictions were significantly correlated with attitude (.77), a significantly higher correlation than those usually obtained. In addition, a formula for the proportion of positive to negative salient beliefs is presented which was significantly correlated with attitude (.60). Implications for attitude measurement are discussed. (17 ref)—*Journal abstract*.

5903. Estes, W. K. (Rockefeller U, New York, NY) **Some targets for mathematical psychology.** *Journal of Mathematical Psychology*, 1975(Aug), Vol 12(3), 263-282.—Notes that the concern among mathematical psychologists regarding the present status of the discipline arises from 2 sources. 1 is the growing disparity between the rapid development of mathematical psychology as an

adjunct to research and the slower and more uncertain progress toward a cumulative body of theory. The other is the problem of adjusting to the encroachment of computers and computer simulation models into the traditional province of mathematical methods. It appears that these problems might be alleviated by recognition of the complementary aspects mathematical and computer simulation approaches to psychological theory and by a shift of emphasis from tactics to strategy in the construction and evaluation of models of both types. (54 ref)—*Journal abstract*.

5904. Hutchinson, Grant L. (U Kansas) **Sopalsis, a sequentially ordered probability and list-structured interactive system: Demonstration of a teachable, computerized attitude assessment technique.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2934-2935.

5905. Krantz, David H. (U Michigan) **Color measurement and color theory: I. Representation theorem for Grassmann structures.** *Journal of Mathematical Psychology*, 1975(Aug), Vol 12(3), 283-303.—For trichromatic color measurement, the empirically based structure consists of the set of colored lights, with its operations of additive mixture and scalar multiplication, and the binary relation of metameric matching. The representing numerical structure is a vector space. The vector representation is constructed in a canonical or coordinate-free manner, mainly using Grassmann's additivity law. Color theories attempt to get a more unique homomorphism by enriching the basic empirical structure with new empirical relations, subject to new axioms. Examples of such enriching relations include discriminability or dissimilarity ordering of color pairs, dichromatic matching relations, and unidimensional matching relations, or codes. Representation theorems for the latter 2 examples also are based on Grassmann-type laws. The relationship between a Grassmann structure and its unidimensional Grassmann codes is modeled by, the relationship between a vector space and its dual space of linear functionals. Dual spaces are used to clarify theorems relating to the 3-pigment hypothesis and to reduction dichromacy. (18 ref)—*Journal abstract*.

5906. Krantz, David H. (U Michigan) **Color measurement and color theory: II. Opponent-colors theory.** *Journal of Mathematical Psychology*, 1975(Aug), Vol 12(3), 304-327. Quantitative opponent-colors theory is based on cancellation of redness by a mixture of a standard green, of greenness by admixture of a standard red, of yellowness by blue, and of blueness by yellow. The fundamental data are therefore the equilibrium colors: the set A_1 of lights that are in red-green equilibrium and the set A_2 of lights that are in yellow-blue equilibrium. The result that a cancellation function is linearly related to the color-matching function can be proved from more basic axioms, particularly the closure of the set of equilibrium colors under linear operations. Measurement analysis treats this as a representation theorem, in which the colorimetric homomorphism are axioms and in which the closure properties has the cancellation functions as two of its coordinates. Consideration of equivalence relations based on opponent cancellation leads to a further step analysis of equivalence relations based on direct matching of hue

attributes. For other attributes, precise representation theorems must await a better qualitative characterization of various nonlinear phenomena. (19 ref)—*Journal abstract*.

5907. Madden, Joseph M. (Rensselaer Polytechnic Inst) **An application of the policy-capturing method to the analysis of value systems.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 619-621.—Notes that measurement of value systems has been largely limited to the method of rank ordering. Some weaknesses of this method are suggested, and a more powerful approach, policy capturing, was used to analyze value judgments. Data from 104 male undergraduates were utilized. Ss in 4 religious categories (including no religion) were found to possess value systems to the same average degree, with ranges from low to high. There was a high degree of similarity of value system structure revealed by the method. At the same time, there were differences in value systems that also were depicted.—*Journal abstract*.

5908. McLaughlin, Margaret L. (Texas Tech U) **Recovering the structure of credibility judgments: An alternative to factor analysis.** *Speech Monographs*, 1975(Aug), Vol 42(3), 221-228.—Proposes and illustrates the application of a nonmetric multidimensional scaling approach to recovering the structure of judgments of communicator credibility. Pairwise credibility comparisons of aspirants to the Presidency, collected in February 1972, serves as an example of the sort of content domain amenable to the technique. Solutions are proposed to certain recurrent problems in the application of factor analysis to such research.—*Journal abstract*.

5909. Moore, Clifford L. (U Iowa) **The effect of the examiner's race on Wechsler Preschool and Primary Scale of Intelligence I.Q.'s and Black children's racial preference.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2904.

5910. Mounts, Allan D. (U Minnesota) **An MMPI codebook for a university mental health clinic.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2313.

5911. Noach, Horst R. (Iowa State U) **Application of latent trait models to the ACT Mathematics Usage test.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2288.

5912. Osborne, D. J. & Clarke, M. J. (University Coll, Swansea, England) **The effect of rating scale parameters on rating behaviour: A field validation.** *Ergonomics*, 1975(Sep), Vol 18(5), 503-509.—During a field investigation of passenger comfort 695 passengers on a cross-channel hovercraft were asked (a) to rate the temperature of the craft on a 10-cm rating line bearing 1 of 4 pairs of scale ends (pleasant-unpleasant, comfortable-uncomfortable, agreeable-disagreeable, or hot-cold) and (b) to rate the noise level in the craft on a 10-cm line which was either sectioned or unsectioned, and which bore the scale ends very quiet-very loud. The resultant rating distributions indicated no significant difference between ratings made on the sectioned and unsectioned lines. Furthermore, the rating distributions produced from the 3 aesthetic scales were of the same shape whereas the distribution of ratings made on the hot-cold scale were significantly different both in shape and

median position along the rating line. (French & German summaries)—*Journal abstract*.

5913. Silverman, Franklin H. & Johnston, Robert G. (Marquette U) **Direct interval-estimation: A ratio scaling method.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 464-466.—Describes a variation of S. S. Stevens's (see PA, Vol 31:2311) direct magnitude-estimation scaling procedure in which the standard stimulus consists of an "interval" rather than a "point." Empirical data from a study by the present authors (1969) are used which suggest this variation requires considerably fewer judges than direct magnitude-estimation to produce scale values possessing a given level of reliability.—*Journal abstract*.

5914. Stang, David J.; Campus, Nancy & Wallach, Carey. (Queens Coll, City U New York) **Exposure duration as a confounding methodological factor in projective testing.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 583-586.—Studied 34 undergraduates to examine the impact of exposure on the affective value Ss attribute to the TAT cards. A linear decrease in pleasantness was found as a function of exposure duration. Factors leading to variation in exposure duration might, therefore, be confounded with the interpretations made of an S's protocol. It is suggested that the time an S views a projective test stimulus should be controlled in the administration.—*Journal abstract*.

5915. Walizer, Donald G. (Research Triangle Inst, Ctr for the Study of Social Behavior, Chapel Hill, NC) **The need for standardized, scientific criteria for describing drug-using behavior.** *International Journal of Addictions*, 1975, Vol 10(6), 927-936.—Describes 3 criteria needed to develop standardized measures of drug use: (a) utility, (b) objectivity, and (c) quantifiability. Utility is judged in terms of the development and testing of theory, the formulation and evaluation of social policy, and the diagnosis and treatment of problem drug use. Objectivity requires that different observers be in agreement about the details of an empirical event. Quantification (i.e., the use of numerical indices) is essential for reporting research results in fine detail, and permits the use of more powerful mathematical analyses in assessing results. (15 ref)—*Journal abstract*.

Test Construction & Validation

5916. Anderson, Elizabeth A. (Counseling Ctr for Sexual Minorities, Portland, OR) **The elusive homosexual: A reply to Stone and Schneider.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 580-582.—In a rebuttal of N. M. Stone and R. E. Schneider's (see PA, Vol 55:Issue 4) validation study of the Wheeler signs of homosexuality in the Rorschach, it is argued that (a) homosexuality is not a proper clinical diagnosis, (b) homosexuals do not differ in psychological functioning from heterosexuals, and (c) the Wheeler signs represent an atomistic approach of use only to those defensive clinicians unwilling to encounter the unique character of their clients.

5917. Baston, Lilla D. (U Southern California) **An evaluation of the Torrance Tests of Creative Thinking.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3976-3977

5918. Blaney, Paul H. & Cox, Charles L. (U Texas, Austin) **The Activity Preference Questionnaire: Is the forced choice format necessary?** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 630-633.—Studied 178 undergraduates to determine whether (a) the reliabilities of rating-based scales are as great as those derived from the forced choice methodology used in the Activity Preference Questionnaire (APQ) and (b) the forced choice and rating-based scales correlate highly with each other. All Ss received all of the 120 items from the 60 item pairs on the APQ and additional items under 1 of 3 conditions. Data indicate a high degree of comparability in the reliabilities of forced choice and rating formats of the measure, and that correlations between forced choice and rating formats were 0.51 for physical anxiety and 0.39 for social anxiety.—*M. E. Pounsel*.

5919. Boulger, Joanne W. (Colorado State U) **Locus of control: A quasi-projective measure.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2921.

5920. Boysen, Charles G. (Northern Illinois U) **A comparison of the transparency and fakeability of the hand-scorable and machine-scorable forms of the Allport, Vernon, & Lindzey Study of Values.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3980.

5922. Chasen, Barbara G. & Weinberg, Sharon L. (New York City Board of Education, Bureau of Child Guidance, NY) **Diagnostic sex-role bias: How can we measure it?** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 620-629.—Designed the Chasen Diagnostic Sex-Role Bias Scale to measure sex-role bias towards children. The instrument is composed of case histories focusing on the "somewhat unhealthy" aspects of 2 main factors of behavior: activity (composed of independence and aggression); and passivity (composed of dependence and nonaggression). Validity and reliability coefficients are reported as well as a formula by which to use the scale to diagnose individual bias, in addition to group bias. In using the scale on 120 school psychologists, it was determined that differences in Diagnostic Sex-Role Bias scores exist, as do wide variations about what is considered healthy and unhealthy behavior among females and males. (34 ref)—*Journal abstract*.

5926. Cress, Joseph N. & O'Donnell, James P. (The Community Mental Health Ctr, Rock Island, IL) **The self-esteem inventory and the Oglala Sioux: A validation study.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1),

135-136.—Noting that the validity of the Coopersmith Self-Esteem Inventory rests upon its intercorrelations with such measures of success as sociometric status and GPA, data are presented from 104 Oglala Sioux high school students which suggest that the inventory is not a valid measure of self-esteem for Oglala adolescents, probably because of differing values placed on components of success such as power and competence.

5927. Fagot, Robert F. (U Oregon) **A note on the form of the psychophysical function near threshold.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 665-667.—Notes that in many psychophysical scaling studies, a threshold parameter has been introduced into the power function of account for discrepancies from the simple power function at low intensities. Two such modifications are the ϕ form, which involves translation on the intensity continuum and the ψ form, which involves translation on the psychological continuum. L. E. Marks and J. C. Stevens (see PA, Vol 43:3388) reviewed proposed modifications of the power function. This brief paper replies to some of the methodological points made by Marks and Stevens and concludes that the evidence favoring a choice of the ψ form over the ϕ form is more convincing than admitted by Marks and Stevens. (19 ref)—*Journal abstract*.

5928. Gakhar, Sudesh & Luthra, Sushma. (Guru Nanak U, Amritsar, India) **The test-retest reliability of Torrance Tests of Verbal Creative Thinking in a sample of ninth and tenth grade Indian children.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 48-52.—Examined the test-retest reliability of the Torrance Verbal Tests of Creative Thinking. The complete battery consisting of 7 test-tasks was administered to a random sample of 72 female 9th and 10th graders. The tests were readministered after an interval of 15 days. Responses were scored for fluency, flexibility, and originality for the respective tests. Complete analysis of the results revealed almost consistent high reliability coefficients of correlation for all the 7 subtests and for the complete test battery.—*Journal abstract*.

5929. Greenberg, William H. (U Washington, Seattle) **Reliability and validity as a function of four scoring procedures: Classical, conventional confidence, latent-image, and confidence weighting.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4867.

5930. Hoffman, Seymour; Preiser, Moses & David, Gerald. (Kings County Hosp Ctr, Brooklyn, NY) **Preschool intellectual assessment with the Ammons Quick Test.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 430-431.—Reports results of an investigation into use of the Quick Test, Form 1, and the Stanford-Binet Intelligence Scale, Form L-M, with preschoolers. Findings raise serious doubts about the validity of the Quick Test for the intellectual estimation of preschoolers with above-average functioning.

5931. Knerr, Claramae S. (U Maryland) **An empirical comparison of two predictor battery construction methods.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2989.

5932. Kokenes, Barbara M. (Northern Illinois U) **A factor analytic study of the Coopersmith Self-Esteem Inventory.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4877.

5933. Kurtines, William M. (Johns Hopkins U) **A measure of autonomy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2903.

5934. Leonard, Wilbert M. (Illinois State U) **Constructing a dissonance index.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 145-146.—Describes the construction of a cognitive dissonance index, focusing upon the selection, scoring, and validation of the items used in the index. It is noted that the administration of this instrument and subsequent data analysis produced some significant differences between social-demographic variables and dissonance responses.

5935. Levin, H. S.; Hamsher, K. de S. & Benton, A. L. (University Hosp, Iowa City, IA) **A short form of the Test of Facial Recognition for clinical use.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 223-228.—To explore the possibility of developing a valid abbreviated form of the Test of Facial Recognition, the test performances of 185 adult patients with established diagnoses of brain disease and 151 without history or evidence of brain disease were studied. Stepwise multiple discriminant analysis on subsamples of the brain-diseased and control Ss identified discriminating items which were then subjected to cross-validation on independent subsamples. The resulting short form of the test consisted of 16 items requiring 27 responses, representing a 50% reduction in length. Part-whole correlation coefficients between the short and long forms of the test ranged from .884 to .940 in 5 different samples of Ss. With the use of the smoothed equipercenile method, a table for predicting long form scores from obtained short form scores was constructed. Guidelines for the employment of the short form in clinical evaluation are presented.—*Journal abstract*.

5936. Libet, Julian M. (U Oregon) **The construct of social skill: An empirical study of several behavioral measures on temporal stability, internal structure, validity and situational generalizability.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2940-2941.

5937. Lunneborg, Patricia W. (U Washington, Seattle) **Interpreting other-sex scores on the Strong-Campbell Interest Inventory.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 494-499.—To promote understanding of other-sex scores on the new Strong-Campbell Interest Inventory, correlations between occupational scales common to both forms of the old Strong Vocational Interest Blank (SVIB) with "masculinity" of interests were studied in a sample of 116 female counseling clients. Differences in mean scores for scales appearing on both SVIB forms were highly related to the masculinity of interests of the people in those occupations, compared to others of the same sex. Recommendations are included for using Masculinity-Femininity scores to guide clients with high scores on occupational scales normed on the other sex.—*Journal abstract*.

5938. Merrens, Matthew R. (State University Coll, Plattsburgh) **The relationship between personality inventory scores and self-ratings.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 139-140.—Reports on a study with 60 college students which compared personality data obtained by self-ratings to data obtained from the Personality Research Form. All traits

indicated a significant degree of correspondence. A comparison of the 2 strategies to behavioral indices is recommended.

5939. Mitchellmore, June A. (Ohio State U) **Development of the Instructor Behavior Description Questionnaire to measure graduate student satisfaction from perceptions of ideal and actual instructor behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4881-4882.

5940. Neil, Allan F. (Texas Christian U) **Alternative methods for the factor analytic treatment of ipsative scores, with particular reference to the Edwards Personal Preference Schedule.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2975.

5941. Norton, Robert W. (U Michigan) **Measurement of ambiguity tolerance.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 607-619.—Presents definitions for the construct of ambiguity tolerance and reports findings from 7 studies on the reliability and validity of MAT-50, a measure of ambiguity tolerance. The measure had high internal reliability and high test-retest reliability over a 10-12 wk period. A content analysis of the measure and a subjective analysis by 20 graduate students indicated adequate content validity. A multivariate comparison with 2 other ambiguity measures, 2 rigidity measures, and a short dogmatism measure provided strong evidence for criteria-related validity. Finally, 4 independent empirical studies showed good construct validity. (32 ref)—*Journal abstract*.

5943. Page, Nell W. (Texas A&M U) **Relationships of the Wechsler Intelligence Scale for Children and the Illinois Test of Psycholinguistic Abilities when administered to learning disabled children.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4043.

5944. Rudolph, Charles E. (Mississippi State U) **A comparison of the dimensions of the Cooperative Preschool Inventory with selected measures of intelligence and readiness.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4888.

5945. Smith, Petronilla M. (U Pittsburgh) **Construction for an identity measurement.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4762.

5946. Stone, Norman M. & Schneider, Robert E. (U Iowa) **Concurrent validity of the Wheeler signs of homosexuality in the Rorschach: P (Ci/Rj).** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 573-579.—The Rorschach protocols of 43 males consecutively admitted to a university outpatient clinic were scored for frequency of the 20 signs of homosexuality reported by W. M. Wheeler (1949). Based on case history data, patients were assigned to homosexual, sex-role disturbed, or normal control groups. In addition to the traditional group comparison results were analyzed to yield P (Ci/Rj); i.e., the probability of criterion group membership given test indicator. Both the homosexual and sex-role disturbed groups displayed significantly more Wheeler signs than normals. Furthermore, given a Wheeler sign score of 15%, 0.75 of the predicted-homosexual group could be correctly classified com-

pared to a 0.21 base rate prediction. It is suggested that expressing results as P (Ci/Rj) provides information more relevant to the clinician than is provided by the traditional practice of reporting significant differences between groups.—*Journal abstract*.

5949. Walker, James A. (U Southern Mississippi) **An investigation into the meaning and measurement of four stressor factors and their implications for counseling.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3895-3896.

5950. Warwick, Paul. (U Washington, Seattle) **A re-evaluation of alternate methodologies in legislative voting analysis.** *Social Science Research*, 1975(Sep), Vol 4(3), 241-267.—Compares the Guttman scale analysis with factor analysis as applied to legislative roll-call votes. After defining each technique, their respective shortcomings are discussed. By reconsidering the basis for each technique, they are interrelated by means of a principal components analysis of artificial roll-calls forming a perfect Guttman scale. The results are then used to establish probable interpretations of the principal components of a scalable set of roll-calls, implying that the precision of factor analysis need not be sacrificed even if the scaling criterion is preferred by the analyst.—*Journal abstract*.

5951. White, William C. (Cornell U, Gannett Clinic) **Validity of the Overcontrolled-Hostility (O-H) scale: A brief report.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 587-590.—In order to further assess the validity of the MMPI O-H (Overcontrolled Hostility) scale, 30 high and 30 low O-H youthful offenders were administered the Rosenzweig Picture-Frustration Study and their responses were classified as extrapunitive, impunitive, or intropunitive. Results indicate that high O-H Ss were significantly more impunitive than low O-H Ss and conversely, that low O-H Ss were more extrapunitive than high O-H Ss. Such findings are consistent with the O-H personality typology and lend further support to the construct validity of the scale.—*Journal abstract*.

5954. Adams, R. C. (California State U, Fresno) **On the use of a marker variable in lieu of its factor-analytic construct.** *Perceptual & Motor Skills*, 1975(Oct), Vol

41(2), 665-666.—The notion that a single marker is not appropriately representative of a factor in subsequent research based on the factor definition is supported by concepts of factor analysis and an explanatory figure.

5955. Ager, Joel W. & Williams, David L. (Wayne State U) **On the analysis of Vaught's semiexperimental design.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 869-871.—Critiques the evaluation of assignment effects in the analysis given by R. S. Vaught (see PA, Vol 54:2172) for his semiexperimental design and suggests an alternative analysis. In addition, a 2nd alternative analysis, which is appropriate when treatments can be randomly assigned to groups, is proposed. The difficulties in using a multiple regression approach in any analysis appropriate for this design are discussed. (28 ref) —*Journal abstract.*

5956. Biderman, Michael; Dorfman, Donald D. & Simpson, John C. (U Tennessee, Chattanooga) **A learning model for signal detection theory—temporal invariance of learning parameters.** *Bulletin of the Psychonomic Society*, 1975 (Sep), Vol 6(3), 329-330.—Studied temporal invariance of learning parameters of an additive-operator model, using signal-detection data collected by D. D. Dorfman and M. Biderman (see PA, Vol 46:10110). Results show quite respectable temporal invariance of the learning parameters and of sensitivity.

5957. Bovet, P. (CNRS, Lab de Psychologie Expérimentale, U Provence, Aix-en-Provence, France) **[Automatic production of chain codes.]** (Fren) *Mathématiques et Sciences Humaines*, 1975, No 49, 29-41.—Proposes that successive arrangements of experimental treatments which satisfy the condition of both a balanced design and random sequencing can be constructed by using circular chains. Given an n -set, there exist circuits in this set in which each r -tuple of elements of the set appears only once. A MACRO-PL1 program is presented which generates chains at random for arbitrary values of n and r . —*English abstract.*

5958. Brieger, Ronald L.; Boorman, Scott A. & Arabee, Phipps. (Harvard U) **An algorithm for clustering relational data with applications to social network analysis and comparison with multidimensional scaling.** *Journal of Mathematical Psychology*, 1975(Aug), Vol 12(3), 328-383.—Presents a method of hierarchical clustering for relational data which begins by forming a new square matrix of product-moment correlations between the columns (or rows) of the original data (represented as an $n \times m$ matrix). Iterative application of this simple procedure will in general converge to a matrix that may be permuted into blocked form. This convergence property may be used as the basis of an algorithm (CONCOR) for hierarchical clustering. The CONCOR procedure is applied to several illustrative sets of social network data and is found to give results that are highly compatible with analyses and interpretations of the same data using the block model approach of H. C. White et al (1976). Results using CONCOR are then compared with results obtained using alternative methods of clustering and scaling (MDSCAL, INDSICAL, HICLUS, ADCLUS) on the same data sets. 5959. Edvardsson, Bo & Vegelius, Jan. (U Uppsala, Sweden) **Measures of attitudinal polarization.** *Scandinavian*

Journal of Psychology, 1975, Vol 16(3), 247-254.

Proposes criteria for measures of attitudinal polarization (i.e., degree of opposition among people on a specific issue), and formulas, including the standard deviation, are evaluated in relation to the criteria. The formulas were also tested with respect to level, dispersion, and agreement of received values; 229 Swedish individuals served as Ss. The measures on the whole showed a high degree of agreement. There clearly exist instances where the standard deviation is not an adequate measure of attitudinal polarization. Some guidelines are given for the choice of constant values in one of the formulas. —*Journal abstract.*

5960. Ertel, Sultbert. (U Gottingen, W Germany) **[The dogmatism scale must not be reliable: A reply to Keiler's replication.]** (Germ) *Psychologische Rundschau*, 1975(Jan), Vol 26(1), 30-59.—Examines and criticizes P. Keiler's replication (see PA, Vol 55:Issue 4) of S. Ertel's (1972) content analysis of texts from the dispute between the "critical rationalists" and the "critical psychologists." Ertel's analysis had revealed a higher dogmatism score for the latter group. It is stated that in Keiler's replication only some of the original subcategories were considered and counted on a different set of texts, additional subcategories were added, coding rules were partially ignored, and raw data were incorrectly analyzed. A replication by Ertel with 2 new and independent scorers yielded split-half reliabilities of .95, an interscorer reliability of .989, and high agreement with Ertel's original scores. (21 ref)—*H. A. Euler.*

(Inst National de Science Appliquée, Rennes, France) **[A study of questionnaires by analysis of correspondences: Modification in question coding or number and the stability of the analysis.]** (Fren) *Mathématiques et Sciences Humaines*, 1975, No 49, 5-27.—Outlines the general properties of analysis of correspondences. The stability of the various factors identified in the item matrix was studied when questions were added or deleted. Better factor separation results only if the questions thus manipulated are not orthogonal to the factor space. Recoding of items leads to different frequency distributions and unpredictable structures. —*M. G. Strobel.*

5962. Gnepp, Eric H. **Stimulus and response: A mathematical formulation.** *Psychology*, 1975(Aug), Vol 12(3), 3-10.—Considers stimulus as an epistemological concept and discusses its relationship to response. A stimulus constitutes information about the environment, and through the phylogenetic evolution of species also constitutes the capacity to motivate physiological systems. Some stimuli have a weighting factor, eliciting or tending to elicit a particular response from a physiological system. A mathematical formulation of the relationship of response to stimulus is presented, considering response a function of stimuli from both the external and internal environments, and stimuli from these environments differentially weighted in terms of effecting behavior. Differentiation is made between stimuli which constitute information and stimuli which are both informational and motivational. —*Journal abstract.*

5966. Keiler, Peter. (Free U Berlin, W Germany) **[Ertel's dogmatism scale: A documentation.]** (Germ) *Psychologische Rundschau*, 1975(Jan), Vol 26(1), 1-25.—Criticizes S. Ertel's content analysis (1972) of texts from the dispute between "critical rationalists," who defend a nomothetic psychology, and "critical psychologists," who apply historical and dialectical materialism to psychology. Criticism is focused on Ertel's methodology and on the fact that a replication of the content analysis on slightly different texts gave different results. (26 ref) —H. A. Euler.

5967. Kenny, David A. (Harvard U) **Cross-lagged panel correlation: A test for spuriousness.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 887-903.—Cross-lagged panel correlation is a method for testing spuriousness by comparing cross-lagged correlations. True experiments control for spuriousness by random assignment, but random assignment limits true experimental studies to independent variables that can be manipulated. Like any statistical method cross-lagged analysis is based on a set of assumptions: synchronicity and stationarity. Different forms of stationarity have different consequences for both the changes in the synchronous correlations over time and the difference between cross-lags. Homogeneous stability is a necessary assumption in the identification of both the source and direction of a causal effect. Cross-lagged analysis is a low-power test, better adapted than either multiple regression or factor analysis for many questions in panel studies. Multiple regression must assume no errors of measurement in the independent variables and no correlated errors, while factor analysis must specify a particular factor structure. Two extended examples of cross-lagged analysis are discussed with special emphasis placed on the issue of stationarity and the estimation of reliability ratios. (50 ref)—*Journal abstract.*

5968. Kietlinski, Ryszard. (U Łódź, Socio-Economic Faculty, Poland) **An empirical model of risky decisions.** *Polish Psychological Bulletin*, 1975, Vol 6(3), 123-129.—A model is proposed without reference to expected value. The model assumes decision to be a function of risk and gain; risk is defined as a function of probability of losing

and amount to lose. An experiment using 28 paid male undergraduates yielded an empirical solution for a model of high consistency between predicted and actual decisions. The solution, expressed in terms of a mathematical function, is constrained in many ways, and is to be regarded as an exemplification of the model and research method.—*Journal abstract.*

5977. Wilson, Ronald S. (Health Sciences Ctr, Louisville Twin Study, KY) **Analysis of developmental data: Comparison among alternative methods.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 676-680.—Examined statistical issues in the analysis of repeated measures data in developmental research. The danger of bias in conventional analysis of variance has been emphasized by R. B. McCall and M. I. Appelbaum (see PA, Vol 53:106), but their simulated example was markedly deviant from actual developmental data. Further, a Monte Carlo study by R. O. Collier et al (see PA, Vol 41:16063) has shown that the potential bias in the *F* tests may be accurately compensated by use of the correction factor *epsilon*. For illustration, a conventional analysis of variance (adjusted by *epsilon*) and a multivariate analysis of variance were performed on a set of actual developmental scores recorded over 6 ages. Results are comparable from both analyses, leading to the same decision about the null hypothesis at essentially the same confidence level. It is concluded that the univariate analysis qualifies as a powerful and fully protected design when used with *epsilon*, and the choice of procedures can be guided by the E's preference plus certain properties of the data to be analyzed.—*Journal abstract.*

EXPERIMENTAL PSYCHOLOGY (HUMAN)

5978. Besner, Derek & Jackson, Anita. (U Reading, England) **Same-different judgments with words and nonwords: A word superiority/inferiority effect.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 578-580.—20 undergraduates made same-different judgments on the basis of visual criteria to pairs of letter strings that were either words or nonwords. "Same" response times (RT) were faster for words than nonwords, while "different" RTs were faster for nonwords. Results rule out a race model of parallel self-terminating component processes.—*Journal abstract.*

5979. Craft, John L. & Hinrichs, James V. (Wartburg Coll) **Effects of stimulus-response correspondence and verbal expectancy on choice reaction time.** *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 323-326. Examined the effects of stimulus response (S-R) correspondence, verbal prediction, and stimulus discriminability in a discrete, 2-choice reaction-time task. Ss were 58 right-handed undergraduates. Correctness of prediction and S-R correspondence were significant main effects. In addition, responses were significantly faster for correct predictions on noncorresponding trials than for incorrect predictions on corresponding trials. This latter finding

indicates that an expectancy mechanism can partially offset the negative effect of spatial S-R noncorrespondence on absolute magnitude of choice reaction time.—*Journal abstract.*

5980. Cruise, Donna & Clifton, Charles. (Oregon State U) **Constructing visual images from verbal descriptions.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 585-588.—Five adults who were given written descriptions of simple open geometric forms made decisions about the location of the point at which each constructed form terminated. Their reaction time (RT) increased approximately 1 sec for each segment in the constructed figure. RT for a comparable decision did not vary as a function of the number of segments in actually presented figures. It appeared that Ss took approximately 1 sec to encode a symbol as a line segment and add it to a mental image. In another part of the experiment, intended to measure the time taken to name a line segment, Ss made decisions about the presence of a target item in a list of visual symbols or in a geometric form. Visual search through a list of symbols seemed to be self-terminating, while search through the segments of a geometric form seemed to be largely exhaustive. However, no clear conclusions were possible about the visual-to-verbal transformations which had been expected to occur in this part of the experiment.—*Journal abstract.*

5981. Diewert, Gordon L. (U Wisconsin, Madison) **Retention and coding in motor short-term memory: A comparison of storage codes for distance and location information.** *Journal of Motor Behavior*, 1975(Sep), Vol 7(3), 183-190.—Conducted 2 experiments using 8 male right-handed undergraduates in each. A modified short-term memory design was employed in an attempt to interfere structurally with the codes subserving distance and location information. Location information was codable in that no forgetting occurred over an unfilled retention interval, and there was some evidence that distance information was also codable. The interference effects supported a mechanism whereby locations are stored in a visual-kinesthetic code, with distance information being stored in a kinesthetic code having no visual consequences. Variable error was found to be the measure sensitive to both decay and interference in keeping with the model of G. J. Laabs (see PA, Vol 51:10455). It is proposed that the integrated code for location information storage is the mechanism accounting for the greater relative precision and codability of location cues with respect to distance cues.—*Journal abstract.*

5983. Francès, Robert. (U Paris X, Lab de Psychologie Experimentale & Differentielle, Nanterre, France) **Comparative effects of six collative variables on interest and preference in adults of different educational levels.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol 33(1), 62-79.—Conducted 2 experiments with a total of 72 18-25 yr old undergraduates and 72 18-25 yr old manual workers with only a primary education. In Exp 1, Ss were presented with pairs of designs in which 1 of 6 collative variables was manipulated between the stimuli.

In Exp II, they were presented with pairs of photographs. In both experiments, preference and interest judgments were obtained from the Ss. Results of the 2 experiments show no difference between the groups in terms of interest. In terms of preference, the students as a whole showed a highly significant preference for the complex stimuli over the simple ones; the manual workers showed the opposite preference. When each of the collative variables was examined separately, however, it was found that 2 (number and heterogeneity of elements) had no discriminant effect, whereas 4 others did (regularity of presentation, regularity of position, incongruity, and incongruous juxtaposition). Results are discussed in terms of 2 kinds of visual information.—*Journal abstract.*

5984. **Freides, David.** (Emory U) **Reply to Rudel and Teuber.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 948.—The present author rejects R. Rudel and H. Teuber's (see PA, Vol 55:Issue 4) criticism of his (see PA, Vol 52:9128) paper on human information processing and sensory modality because the issues raised only concern the review's expository strategy and not its substance. In addition, the criticism appears to reflect the persistence of views at variance with available evidence.—*Journal abstract.*

5985. **Fulgosi, Ante & Zaja, Bozo.** (U Zagreb, Philosophy Faculty, Yugoslavia) **Information transmission of 3.1 bits in absolute identification of auditory pitch.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 379-380.—Presented 11 tones (from 50 to 11,000 Hz), differing only in pitch, to 5 undergraduates 108 times each. Ss were told that in the "training" phase of the experiment they should reach a definite, but unspecified, "level" of performance before they could advance to the final or "test" phase of the experiment. In the final quarter of the experiment, the median value of the identification performance was 3.11 bits.—*Journal abstract.*

5988. **Holland, Morris K. & Tarlow, Gerald.** (U California, Los Angeles) **Blinking and thinking.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 403-406.—Measured blinking in 8 undergraduates while the activity of operational memory was manipulated with mental load kept constant. The rate of blinking was significantly reduced when the cognitive operation of internal counting was being performed. It is inferred that the blink rate is low when information in memory is being operated on. To suspend blinking during certain cognitive activities would be adaptive if blinking disrupts them. Since the blackout period of the blink produces a rapid change in visual level, blinking disrupts those cognitive processes utilizing display areas accessible to visual input. Operational memory and the visual imagination may share components with the visual perceptual system. To protect these vulnerable processes from

interference, blinking may be inhibited when they are active.—*Journal abstract.*

5989. **Krueger, Lester E.** (Ohio State U, Human Performance Ctr) **Familiarity effects in visual information processing.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 949-974.—Reviews the literature and deals, predominantly, with the issue of whether familiarity aids in the extraction of visual features or in the interpretation, either verbal or visual, of the features extracted. Familiar visual objects, such as normal letters and real words, are processed faster and more accurately than are unfamiliar objects. This fact is massively documented by a wide variety of studies, involving tachistoscopic recognition, visual comparison, and letter detection. Less clear is how and where familiarity has its effect. There actually appear to be several familiarity effects, some aiding the extraction and/or interpretation of visual information, others aiding nonperceptual processes (e.g., storing and reporting or comparing the information). (3/4 p ref)—*Journal abstract.*

5990. **Ortendahl, Monica.** **Expected time of the outcome of offers to gamble.** *Göteborg Psychological Reports*, 1974, Vol 4(23), 7 p.—Rated offers varying in probability and value as to perceived favorableness. One additive model in raw form and 1 multiplicative model in log form were tested. The multiplicative model showed good fit to data for 6 out of 9 19-37 yr old students. The additive model showed significantly bad fit to data in all cases. The exponents of probability and value exhibited large interindividual variation. Ss also stated expected time of the outcomes. The expected delay periods of the outcomes were short with positive correlations between perceived favorableness of the offers and the expected length of the delay period. Positive correlations were also found between the prizes and the expected delay periods and also, but to a relatively lesser extent, between probability and expected length of the delay periods. (15 ref)—*Journal abstract.*

5991. **Rakover, Sam S. & Kaminer, H.** (U Haifa, Israel) **Inhibitory effect of a second stimulus on reaction time to a primary stimulus: A partial successful replication.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 635-641.—In an experiment with undergraduates (20 experimental Ss and 5 controls), a second visual stimulus, to which no response was required, following a primary one lengthened the reaction time to the 1st stimulus. Reaction time rose as a function of the increase in the interstimulus interval. Duration time of the 2nd stimulus did not affect this response. Results are found under a condition of stimulus-response certainty.—*Journal abstract.*

5992. **Rudel, Rita G. & Teuber, Hans-Lukas.** (Columbia U, Coll of Physicians & Surgeons) **Comment on "Human Information Processing and Sensory Modality: Cross-Modal Functions, Information Complexity, Memory, and Deficit."** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 947.—Seeks to correct 2 points made in the article by D. Freides (see PA, Vol 52:9128) on cross-modal functions. The present authors state that none of the data in their study (see PA, Vol 48:5445) are in "support of the sensory integration hypothesis;" and brain-damaged children did not do better than controls on haptic-haptic matching. The study yielded no selective impairment of

cross-modal functions in brain-damaged children; relative to controls, their greatest deficit was in visual visual matching.—*Journal abstract.*

5993. Sanders, A. F. (Inst for Perception TNO, Soesterberg, Netherlands) **The foreperiod effect revisited.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 591-598. 4 refs. which could be important in accounting for the discrepant results which have previously been obtained with respect to the effect of foreperiod duration on reaction time (RT). In some studies a clear effect of foreperiod duration on auditory RT has been found, in contrast to a recent finding by A. F. Wertheim (see PA, Vol 51: 2270) that foreperiod duration affected visual RT but not auditory RT. By means of 2 experiments with a total of 24 Ss, the effects of practice, time-on-task, reaction task (a-reaction vs selective reaction) and signal intensity were studied. The latter variable appeared to be the principal determinant of the discrepant results in that there was an interaction between signal intensity, foreperiod duration, and modality. Results support the hypothesis that signals beyond a given intensity exert an immediate arousing effect which counteracts the foreperiod effect.—*Journal abstract.*

5994. Wagenaar, W. A. & Stakenburg, H. (Inst for Perception TNO, Soesterberg, Netherlands) **Paced and self-paced continuous reaction time.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 559-563.—Proposes that studies of the effect of pacing in continuous reaction time (RT) tasks are inconclusive, and have failed to (a) compare paced and self-paced RT at matched error rates and (b) examine RT distributions as well as mean or median RT. In the present experiment with 8 Ss, RTs were corrected for error rate by relating them to the speed-accuracy tradeoff function, which was measured in each experimental session. In this way deciles of the RT distributions of paced and self-paced conditions were compared for Ss on 4 successive sessions. The task was a 4-choice continuous RT task employing visual stimuli. Results show that RT distributions were wider in the paced conditions. RTs of the first deciles were faster for pacing whereas medians in paced and self-paced conditions were about equal. Results can be explained when it is assumed that the variable response stimulus intervals in paced conditions lead to a larger variability of RT. (15 ref)—*Journal abstract.*

Perception & Motor Processes

5995. Baird, Richard M. (U Louisville) **The haptic and visual capacities for perceiving shapes that vary in three dimensions.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2327.

5996. Brooks, Barbara A. & Fuchs, Albert F. (U Texas, Health Science Ctr, San Antonio) **Influence of stimulus parameters on visual sensitivity during saccadic eye movement.** *Vision Research*, 1975(Dec), Vol 15(12), 1389-1398.—Measured visual threshold for stroboscope test flashes during saccadic eye movements over various backgrounds and compared it with measures obtained during eye fixation when the same backgrounds were saccadically displaced. Amount and time course of threshold change in the 2 situations compared well, suggesting no necessity for corollary discharge or other

oculomotor interference with primary visual processes during eye movement. No significant threshold rise took place during saccades in the dark. Diffuse test flashes and small well-focused flashes were affected differently by specific background conditions. Diffuse flashes were perceived with more difficulty during a saccade over a contour-free background than well-focused, punctate stimuli. On the other hand, contours in the background raised saccadic thresholds for small stimuli much more than for diffuse test flashes. All threshold changes occurring during saccades were accentuated by increasing the background luminance. (35 ref)—*Journal abstract.*

5999. Desor, J. A.; Greene, Lawrence S. & Muller, Owen. (Warner-Lambert Co, Research & Development, Milford, CT) **Preferences for sweet and salty in 9- to 15-year-olds and adult humans.** *Science*, 1975(Nov), Vol 190(4215), 686-687.—Measured preferences for the tastes of sucrose, lactose, and sodium chloride in 618 9-15 yr old 140 18-64 yr old Ss. The younger Ss preferred greater sweetness and saltiness than did the adults. In the younger group, there were race and sex differences in preferences, none of which appeared among the adults.

6000. Fitch, James L.; Deavours, George M. & Kinard, Debra. (U Southern Mississippi) **Correlation of lingual motor performance and oral form identification by young adults.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 672.—Correlations between overall lingual motor performance scores and oral form identification scores for normal undergraduates ranged from .24 to .35. Further studies are planned to investigate the measures in populations of other ages and speech impairments.

6001. Gill, Diane L. & Martens, Rainer. (U Waterloo, Canada) **The informational and motivational influence of social reinforcement on motor performance.** *Journal of Motor Behavior*, 1975(Sep), Vol 7(3), 171-182.—Conducted 2 experiments, using a total of 80 female 7th and 8th graders in each, to determine the effects of social reinforcement on the performance of a motor task. Exp I examined the influence of knowledge of results (KR) and social reinforcement on 25 initial acquisition trials of a novel motor task in a KR \times social reinforcement \times experimenter blocks factorial design. Exp II examined the influence of KR and social reinforcement on 40 later performance trials in a KR \times social reinforcement \times blocks factorial design. Scores were analyzed with multiple analysis of variance, discriminant function analyses, and step-down *F* tests. Exp I suggested a combination of informational and motivational effects, with both KR and social reinforcement facilitating performance. Social reinforcement did not significantly affect performance in Exp II. (24 ref)—*Journal abstract.*

6002. Gill, Diane L. (U Waterloo, Canada) **Knowledge of results precision and motor skill acquisition.** *Journal of Motor Behavior*, 1975(Sep), Vol 7(3), 191-198.—Investigated the effect of varying knowledge of results (KR) precision levels on the initial acquisition and later performance of a linear positioning task with 40 female undergraduates. Subjective evaluations of performance and estimates of accuracy were recorded along with actual scores. KR precision level (centimeters or millimeters) did not affect actual performance, but extremely precise KR (millimeters) had detrimental effects on performance evaluations and the labeling process of estimate performance.—*Journal abstract.*

6005. Kuroda, Teruhiko & Toshima, Yasuzo. (Kagoshima U, Japan) **Psycho-cybernetic consideration of perceptual system containing double motor systems.** *Psychologia: An International Journal of Psychology in the Orient*, 1975(Jun), Vol 18(2), 110-122.—Considers the information processing in the double motor system from the viewpoint of psychocybernetics. A percept is determined by both a proximal stimulus and by 2 kinds of moves: moves in the motor system to gather visual information and moves in the operation to process that information. In order for the percept to reflect suitably the physical environment, it is necessary to increase the variety of moves. While a suitable percept is obtained by the selection of moves according to a task or goal and through the 1st feedback, the percept becomes increasingly suitable through the 2nd feedback which contains a step mechanism and a corrector. Therefore the total perceptual system functions as both an ultrastable system and a self-organizing dynamic system. (28 ref)—*Journal abstract.*

6006. Long, John. (MRC Applied Psychology Unit, U Cambridge, England) **Reduced efficiency and capacity limitations in multidimension signal recognition.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 599-614.—Performed 2 experiments with a total of 24 Ss to determine whether recognition performance on a dimension presented alone was superior to performance on the same dimension when presented with others also requiring a response. The 1st part of Exp I showed that Ss recognized difficult frequency and intensity signals significantly less well when these were presented together than when they were presented alone. Efficiency on the 2 dimensions presented together was found to be related, and 2 data subsets were identified for which no efficiency reduction occurred. In the 2nd part of Exp I Ss recognized correlated frequency and intensity signals and showed a significant improvement in performance over either dimension performed alone. Efficiency was the same in Exp II whether the signals were presented together or alone. The result indicated that the reduction in efficiency with difficult signals was not due to

response interference or to failures of post-recognition retention. Implications of the results for models of attentional capacity are discussed. (23 ref)—*Journal abstract.*

6008. Muhar, I. S. (U Saugar, India) **Effect of stress on perception.** *Indian Journal of Psychology*, 1974, Vol 49(4), 291-297.—Tested the hypothesis that there is a positive relationship between stress and the resistance to perceptual change. An experimental study was conducted using a before-after design with a sample of 60 university students. Stress was induced by using pursuit meter, threat of shock, and white noise simultaneously. Resistance to perceptual change was measured with the help of Ames Aniseikonic lenses using 3 measures—the initial time lag in the appearance of the 1st change, time required for achieving stabilization, and the extent of distortion. Results of the 1st and 3rd measures statistically reject the hypothesis, while the result of the 2nd measure is inconclusive.—*Journal abstract.*

6009. Prablanc, C.; Tzavaras, A. & Jeannerod, M. (INSERM, Lab de Neuropsychologie Expérimentale, Bron, France) **Adaptation of the two arms to opposite prism displacements.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 667-671.—In a study with 6 right-handed students, Ss' arms were exposed separately to prismatic displacements of opposite sign, using the eye ipsilateral to the exposed arm. Opposite adaptive shifts were induced on each arm whether the eye ipsilateral to the arm (i.e., exposed to a displacement of the same sign as the arm) or the eye contralateral to the arm (i.e., exposed to a displacement of opposite sign) was used during testing. This result precludes the possible role of oculomotor signals in this type of prism adaptation.—*Journal abstract.*

6010. Price, Dennis L. & Hennigan, James K. (Virginia Polytechnic Inst & State U) **The proximity of temperature estimates in hot, humid environments to three common indices.** *Ergonomics*, 1975(Sep), Vol 18(5), 523-528.—Each of 24 male undergraduates was exposed to 3 levels of heat and humidity and given a paper and pencil test during each exposure. Before the experimental trials, each S predicted how well he would perform on each test. After each test was completed the S estimated how well he thought he had actually performed, and he then estimated the immediate temperature in the environmental chamber in which he sat. 2 hypotheses were tested: (a) that the dominant factor in temperature is the conditioning of the S to the dry bulb air temperature measure, so that estimates would be closer to that index than to wet bulb globe temperature or to the temperature humidity index; and (b) that the dominant factor is discomfort or stress and that there is a relationship between a S's performance or his estimate of his performance and his temperature estimate. Results support the 1st but not the 2nd hypothesis. (French & German summaries)—*Journal abstract.*

6012. Salvatore, Santo. (Brown U, Hunter Lab of Psychology) **Response speed as a function of sensory pattern and alcohol in a velocity judgement task.** *Ergonomics*, 1975(Sep), Vol 18(5), 491-502.—Studied the accuracy and rapidity with which judgments of the speed of the vehicle in which the S travels are formed. 15 Ss made velocity judgments in a laboratory setting simulating the visual and auditory cues generated by an automobile moving at various speeds. Visual and auditory cues were presented for 1, .5, and .25 sec for vehicular speeds of 0-129 km/hr. Results indicate that (a) the acquisition of velocity information is most rapid with visual information; (b) within the visual modality peripheral stimulation requires more processing time than frontal information; (c) reaction time increases as observation time increases from .5 to 1 sec, but decreasing observation time to less than .5 sec does not further reduce processing time; (d) interactive effects across Ss mask the effects of moderate blood alcohol levels (.05, .075, and .03 g/100 ml) on response speed; and (e) interpretation is modified by field conditions and driving skill. (French & German summaries) (17 ref) —*Journal abstract.*

6013. Sharma, V. M.; Malhotra, M. S. & Baskaran, A. S. (Defence Inst of Physiology & Allied Sciences, Delhi Cantt, India) **Variations in psychomotor efficiency during prolonged stay at high altitude.** *Ergonomics*, 1975(Sep), Vol 18(5), 511-516.—Studied alterations in psychomotor efficiency of 25 young adults (age range 21-30 yrs) during stays of up to 2 yrs at an altitude of 4,000 m. Psychomotor speed and accuracy were measured by administering an eye-hand coordination test at sea level and altitude after periods of 1, 10, 13, 18, and 24 mo. Overall psychomotor efficiency declined during early stages of altitude exposure. A progressive improvement in accuracy after 13 mo was found, presumably due to acclimatization. Speed in performance showed no such gradual return to sea-level standard. (French & German summaries) (15 ref) —*Journal abstract.*

6014. Smyth, Mary M. (U Leicester, England) **The role of mental practice in skill acquisition.** *Journal of Motor Behavior*, 1975(Sep), Vol 7(3), 199-206.—Exp I, with 70 college students, used mirror drawing to investigate the effects of mental practice on performance of a previously known, symbolic task. Exp II, also with 70 college students, used the pursuit rotor to study mental practice in relation to varying amounts of active practice and rest in a less symbolic task. For mirror drawing, only 1 mental practice group was significantly better than the no practice group, and that by a small amount on 1 variable only. With the pursuit rotor, Ss who trained only with mental practice did not differ significantly from those with no training, and mental practice was no more effective than rest. Mental practice was not clearly effective at any stage of learning. —*Journal abstract.*

6015. Spanos, Nicholas P.; Horton, Carol & Chaves, John F. (Carleton U, Ottawa, Canada) **The effects of two cognitive strategies on pain threshold.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 677-681.

While 1 arm was immersed in ice water, each of 48 female student nurses were asked either to imagine a situation that, if real, would be inconsistent with pain (relevant strategy) or imagine a situation unrelated to pain (irrelevant strategy), or they were not given special instructions (control group). Ss were further divided into those with high and low pain thresholds based on a pretest. The use of strategies (relevant or irrelevant) did not alter the pain thresholds for Ss with low thresholds. Among those Ss with high thresholds, use of a relevant strategy led to a greater increase in threshold than an irrelevant strategy, which, in turn, led to a greater increase than the control condition. Ss who were highly involved in their imaginings showed greater increases in pain threshold than those who were not. (25 ref) —*Journal abstract.*

6021. Winterson, Barbara J. & Robinson, David A. (U Maryland) **Fixation by the alert but solitary cat.** *Vision Research*, 1975(Dec), Vol 15(12), 1349-1352.—2-dimensional eye movements of 3 alert cats, whose heads were restrained, were recorded with a magnetic field search coil technique. Ss fixated stationary objects of their own choosing in a lighted room and also while in darkness. With visible targets, Ss used slow control (drift correction) to maintain fixation. Microsaccades were not observed. The stability of eye position was as good as man's, but 0.2-sec drift velocities were almost twice as fast. Slow control was lost in the dark. Results do not

agree with prior reports based on horizontal eye movement records. (16 ref)—*Journal abstract*.

6022. Wong, T. S. (U Stirling, Scotland) **The respective role of limb and eye movements in the haptic and visual Müller-Lyer illusion.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 659-666. —2 groups of 24 Ss each were tested in 2 experiments with either haptic or visual Mueller-Lyer figures. The size of the obtained haptic and visual illusion was found to be unaffected by the degree of excursive movement of the limb and the eye, respectively. It is concluded that the Mueller-Lyer illusion is the cause rather than the result of peripheral scanning behavior of the limb and eye, and that the similar illusion across modalities is probably determined by common central mechanisms. (20 ref)—*Journal abstract*.

Visual Perception

6023. Bell, Herbert H. & Handel, Stephen. (U Tennessee, Nashville) **The role of pattern goodness in the reproduction of backward masked patterns.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 139-150. —4 experiments with a total of 41 undergraduate and graduate students investigated the role of pattern goodness in backward masking using 5- and 4-dot patterns constructed by placing dots in the cells of a 3 × 3 matrix. In Exp I, Ss rated the goodness of these patterns; and results replicate previous work showing that good patterns had few alternatives. In Exp II, the dot patterns were the target stimuli in a backward masking task using a variety of masking stimuli. For all masks, good patterns were reproduced more accurately than poor patterns. In Exp III, the goodness of the masking stimulus was varied. Results indicate that good patterns were reproduced more accurately and that good patterns were less effective as masking stimuli than were poor patterns. In Exp IV, a long interstimulus interval which precluded masking was used to determine whether goodness affected encoding or memory. There was no differences among patterns, suggesting that the effect of pattern goodness was on rate of encoding. Results demonstrate the importance of configural properties in pattern perception. (17 ref)—*Journal abstract*.

6025. Breitmeyer, Bruno G. (U Houston) **Simple reaction time as a measure of the temporal response properties of transient and sustained channels.** *Vision Research*, 1975(Dec), Vol 15(12), 1411-1412. —Experimental results suggest that, in humans as well as in lower animals, low-spatial-frequency transient channels respond with a shorter latency than do high-spatial-frequency sustained channels. It is suggested that this reflects either a shorter and more direct channel conduction route from the retina to the superior colliculus, a faster transient conduction speed to the visual cortex and/or the superior colliculus, or both of these factors.

6026. Briggs, George W. & Vitz, Paul C. (New York U) **The McCollough effect obtained simultaneously on four orientations with four different colors.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 533-535. —The McCollough, an orientation-specific color aftereffect, has typically been demonstrated with 2 adaptation orientations (horizontal and vertical) and 2 colors. In the present experiment with 8 undergraduates, the McCollough effect was obtained simultaneously on 4 orientations (horizontal, vertical, right diagonal, and left diagonal) and with 4 different colors (violet, orange, green, and green-blue). It is suggested that orientation-contingent color aftereffects may occur at a number of orientations as long as the orientations are coded by separate populations of orientation detectors.—*Journal abstract*.

6027. Clark, Donald W. (U South Dakota) **A test of the rigidity of visual perception as measured by color referents chosen for selected stick-figure stimulus repetitions.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4859.

6028. Clark, Herbert H. & Brownell, Hiram H. (U Stanford) **Judging up and down.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 339-352. —Conducted 4 experiments using approximately 64 undergraduates as Ss. In Exp I Ss were asked to judge whether an arrow was pointing up or pointing down at various heights inside a surrounding rectangle. They were faster on an arrow pointing up the higher it was in the rectangle, and they were faster on an arrow pointing down the lower it was in the rectangle. Exps II, III, and IV were designed to test 3 sources for this "congruity effect." The intrusive height information for each arrow was assumed to facilitate or interfere with (a) the activation of the correct motor response; (b) the maintenance of the implicit instruction "Is it pointing up, or is it pointing down?"; or (c) the selection of the criterial perceptual information as a basis for the response. All 3 experiments were consistent with c, but not with a or b. Indeed, the results contrasted with previous demonstrations of the Stroop effect in certain critical features. (20 ref)—*Journal abstract*.

6029. Cohen, Gillian. (U Oxford, England) **Hemispheric differences in the effects of cuing in visual recognition tasks.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 366-373. —Describes 3 experiments with a total of 34 students as Ss. In Exp I uncued recognition of single letters presented in left or right visual fields showed no hemispheric asymmetry, but cuing by alternatives produced a left-hemisphere advantage. Uncued recognition of words was better in the right visual field (left hemisphere), and this advantage was unchanged by cuing by alternatives or cuing by class. In Exp II, a mixed series of words, digits, and dots was presented. Uncued trials showed no asymmetry, but when a precue indicated which type of stimulus would appear next, a left-hemisphere advantage for words was evident. Cuing also produced a nonsignificant shift toward a left-hemisphere advantage for digits and a right-hemisphere advantage for dots. The asymmetrical effects of cuing can be explained by M. Kinsbourne's

(1970) attentional model of lateralization, which suggests that cuing may selectively activate 1 hemisphere and so bias attention toward the contralateral visual field. Repetition effects within and between visual fields were analyzed but no asymmetries were found.—*Journal abstract*.

6030. Cooper, William E.; Ebert, Robert R. & Cole, Ronald A. (Massachusetts Inst of Technology, Research Lab of Electronics) **Speech perception and production of the consonant cluster [st].** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 105-114.—Conducted 3 experiments with a total of 15 undergraduates to determine aspects of both perceptual and motor processing for the consonant cluster [st]. In Exp I, 7 synthetic speech sounds were generated by varying the silent interval between [s] and [t] in 5-msec steps from 10 to 40 msec. Ss were able to reliably identify these stimuli as either [si] or [sti] on basis of the difference in silent interval. A selective adaptation experiment showed that repetitive listening to end-point members of the [si]-[sti] series produced systematic alterations in the perception of the [si]-[sti] stimuli, such that Ss assigned fewer identification responses to the phonetic category of the adapting stimulus following adaptation. An experiment in perceptuomotor adaptation was also conducted to determine whether repetitive listening to various exemplars of [sti] would also exert a systematic influence on the acoustic properties of [sti] utterances. In contrast, no effects of perceptuomotor adaptation were obtained for either the silent interval preceding the consonant release burst or the interval between the release burst and the onset of laryngeal pulsing. A neural model of speech-processing for voiced-voiceless plosives is proposed. (22 ref)—*Journal abstract*.

6031. Cooper, William E.; Ebert, Robert R. & Cole, Ronald A. (Massachusetts Inst of Technology, Research Lab of Electronics) **Perceptual analysis of stop consonants and glides.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 92-104.—In speech perception, the distinction between stop consonants and glides such as [b] vs [w] and [g] vs [j] can be signaled by variations in the rate and duration of the formant transitions. 3 experiments were conducted to determine whether this rate and duration information is processed by a unitary analyzer for both labial ([b]-[w]) and velar ([g]-[j]) places of articulation. 2 series of synthetic speech syllables were constructed, spanning the distinctions between [ba] and [wa] and between [ga] and [ja], by varying the rate and duration of the 1st 3 formant transitions. A total of 61 undergraduates served as Ss. Selective adaptation experiments showed that repetitive listening to labial labial and velar stimuli produced alterations in the perception of the labial test series. The direction of effect produced by a [ga] adapting stimulus indicated that adaptation did not operate on an analyzer that simply computed the absolute physical duration of the formant transitions. Finally, a signal detectability analysis revealed sizable changes in listener's sensitivity after repetitive listening and provided a means of assessing changes in the perception of individual stimuli of the labial test series. (21 ref)—*Journal abstract*.

6032. Day, R. H. & Dickinson, R. G. (Monash U, Clayton, Australia) **The Poggendorff illusion: Apparent misalignment which is not attributable to apparent orientation of the transversals.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 551-557.—Conducted 2 experiments with a total of 24 Ss to determine whether the noticeable apparent misalignment between transversals occurs either without any change in orientation towards a right angle or, in one condition, with a slight change in the opposite direction. While looking down Ss were required to adjust a horizontal field of parallel lines (Exp I) or a single line (Exp II) to the apparent sagittal direction with and without a superimposed rectangle in the center of a circular field. The rectangle was tilted at 20, 30, or 40° to the parallels and at 20° to the line. For the 20° condition, the parallel lines were apparently oriented at about half a degree compared with the field without a rectangle but in the direction opposite to that necessary to account for the Poggendorff misalignment effect. For the 30 and 40° conditions, the lines did not change in apparent orientation. The orientation of the single line did not change. Almost all Ss readily reported an apparent misalignment between the collinear parallels and line separated by the oblique rectangle. It is concluded that the Poggendorff misalignment illusion occurs without apparent regression of the lines to right angles with the figure.—*Journal abstract*.

6035. Forde, James & Mackinnon, G. E. (U Waterloo, Canada) **Binocular stimulation and the fragmentation of after-images.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 565-577.—Conducted 3 experiments with a total of 21 Ss to investigate the effects of binocular stimulation on the fragmentation of after-images. Binocular after-images were produced by stimulating simultaneously, with intense flashes of light, homologous areas of the 2 retinas. The after-images from such stimulation were found to be more stable than those produced by monocular stimulation. Exp III examined the fragmentation of after-images observed by individuals who either lacked binocular vision and stereoscopic depth perception or who had a history of difficulty with these aspects of vision. Such individuals reported far less fragmentation than normal observers. Results are discussed in the light of research on the responses to binocular inputs of single cells in monkey occipital cortex. (20 ref)—*Journal abstract*.

6036. Frisby, John P. & Clatworthy, Jeremy L. (U Sheffield, England) **Learning to see complex random-dot stereograms.** *Perception*, 1975, Vol 4(2), 173-178.—Many observers of complex random-dot stereograms find that the depth effect takes several seconds, or even

minutes, to develop. B. Julesz (1971) noted that giving a priori information to such Os about the nature of the hidden cyclopean object appears to facilitate their stereopsis. The present experiment investigated this possible facilitation. 103 naive undergraduates were shown a complex stereogram following various kinds of preliminary assistance, ranging from simply telling them about the amount of depth they could expect to see to showing them a full-scale model of the cyclopean object. Surprisingly, no benefit from such assistance could be demonstrated. All observers improved their stereopsis perception times with repeated presentations of the stereogram, showing that they could, in principle, benefit from assistance. A follow-up study 3 wks later revealed that a substantial part of this improvement was maintained, indicating that the perceptual learning involved can last for a considerable period of time.—*Journal abstract.*

6037. Frisby, John P. & Julesz, Bela. (U Sheffield, England) **The effect of orientation differences on stereopsis as a function of line length.** *Perception*, 1975, Vol 4(2), 179-186.—Experimental results with 2 highly practiced Ss show that the amount of depth seen in a multiline stereogram composed of horizontal lines steadily decreased as the lines in 1 field of view were rotated about their midpoints. This effect of orientation difference on stereopsis was more acute the longer the lines in the stereogram. It is suggested that the critical factor underlying the depth reduction is not orientation difference per se, but rather the vertical disparity which an orientation difference introduces into the display between the tips of corresponding lines. This interpretation is supported by the fact that similar vertical disparities caused similar depth reductions regardless of the length of the lines in the stereogram.—*Journal abstract.*

6038. Frisby, John P. & Julesz, Bela. (U Sheffield, England) **Depth reduction effects in random-line stereograms.** *Perception*, 1975, Vol 4(2), 151-158.—Experiments with 2 highly practiced Ss demonstrated that the amount of depth seen in a random-line stereogram steadily diminished as corresponding lines in the 2 fields of view were made increasingly dissimilar in shape. This depth reduction effect was more acute in high- than in low-density stereograms. Both of these results can be explained in terms of the magnetic dipole model of stereopsis.—*Journal abstract.*

6039. Gardner, Gerald T. & Joseph, Douglas J. (U Michigan) **Parallel perceptual channels at "deep" processing levels.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 658-660.—Conducted 2 experiments, using the same 4 female college-age Ss in each. This work extended the tachistoscopic paradigm developed by R. Shiffrin and G. Gardner (see PA, Vol 48:6142) to experimental tasks necessitating "deep" levels of perceptual processing. Results paralleled the Shiffrin and Gardner findings and supported the view that all perceptual analysis prior to decisional and memorial processing involves independent parallel channels.—*Journal abstract.*

6040. Gregory, Richard L. & Harris, John P. (U Bristol Medical School, England) **Illusion destruction by appropriate scaling.** *Perception*, 1975, Vol 4(2),

203-220.—Tested the inappropriate constancy scaling theory of visual distortion illusions by optically projecting, to experienced observers, typical models giving these figures by perspective. Appropriate or inappropriate stereoscopic disparities were then added, with the prediction that when perspective and stereo were geometrically correct the distortion should vanish. This was confirmed with measurements for the Mueller-Lyer illusion and by observation of several other classical examples. It is suggested that much previous work has investigated "end stop" conditions, given by angles too extreme to be generated as perspective. Conditions for appropriate scaling, giving zero or small distortions, were found to be critical but readily attainable. (20 ref) —*Journal abstract.*

6041. Harte, David B. (Tufts U) **Underestimation of length by subjects in motion.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 519-522.—To check a prior observation, in the present experiment 20 18-62 yr old licensed drivers made estimates of the lengths of both the guidelines and the spaces between guidelines on automotive highways so the magnitude of the illusion could be more accurately determined. Ss were individually tested at 0 and 60 mph. At 60 mph, spaces were estimated with an error of 85%; lines were estimated with an error of 72%. Combining data for both stimuli, an error of 78% results, which corresponds to underestimation by a factor of 4.67. This illusory effect is considerably greater than that of the moon illusion, considered by many the most powerful of the classical illusions.—*Journal abstract.*

6042. Holt-Hansen, Kristian. (U Copenhagen, Psychological Lab, Denmark) **Duration of experienced expansion and contraction of a circle.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 507-518.—In an experiment with 26 normally seeing university students and an engineer, the stimulus was a white outline circle which for 60 msec was projected onto a screen 2 m from S. The diameter of the circle was 10 cm and the circle line was approximately 1.5 mm wide. Fixating the center of the circle Ss reported experiencing the circle as expanding from the point of fixation to full size and then contracting to the point of fixation. Ss' experiences fell into 2 classes. Ss also participated in experiments in which they fixated the nethermost point of a 17-cm vertical straight line which was 2 mm wide. Ss experienced the line as lengthening from the point of fixation. For a given S the durations of the experienced expansion-contraction of the circle and the experienced lengthening-shortening of the straight line were the same.—*Journal abstract.*

6043. Jahoda, Gustav. (U Strathclyde, Glasgow, Scotland) **Retinal pigmentation and space perception: A failure to replicate.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 133-134.—Compared the performance of Ghanian Ss and Scottish 14-16 yr olds on a spatial task involving blue in an attempt to replicate an earlier study by the author (1971) which found that Malawi African Ss performed less well on a task involving blue as compared with red hue contrast. Present results show that all Ss did less well with the blue stimuli, providing scant support for earlier findings.

6044. Jones, Paul D. & Holding, Dennis H. (U Louisville, Performance Research Lab) **Extremely long-term persistence of the McCollough effect.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104[1](4), 323-327.—The question has been raised whether an associative mechanism is responsible for the persistence of the McCollough effect. Since current estimates of its rate of decay are derived from procedures in which subjects are repeatedly tested, it was hypothesized that the measured effects might be attenuated by the testing process. Accordingly, a comparison was made between repeated testing and time-elapse testing, using college students. A conventional group of 16 Ss had repeated testing at 0, 8, 24, 56, and 120 hr after induction. 5 other groups of 16 were run, each at 1 of the time delays, with no intervening tests; an additional measure was taken where appropriate at 120 hr. A magenta-green nulling procedure was used to assess the aftereffect. The repeated-test group showed a linear decrease of effect against the stated delays, reaching zero at 120 hr. In contrast, the time-elapse groups showed little decline up to 120 hr. Those groups retested at 120 hr showed declines due to prior testing. When 4 more groups totaling 40 college Ss were subsequently tested at intervals up to 2,040 hr, the effect remained at better than half strength.—*Journal abstract*.

6045. Julesz, Bela & Frisby, John P. (Bell Lab, Murray Hill, NJ) **Some new subjective contours in random-line stereograms.** *Perception*, 1975, Vol 4(2), 145-150.—Describes new subjective contours and suggests that both these and previously observed disparity-based illusory contours can be explained simply in terms of the magnetic dipole model of stereopsis without any reference to gestalt or cognitive factors.—*Journal abstract*.

6046. Julesz, Bela & Miller, Joan E. (Bell Lab, Murray Hill, NJ) **Independent spatial-frequency-tuned channels in binocular fusion and rivalry.** *Perception*, 1975, Vol 4(2), 125-143.—Random-dot stereograms were bandpass filtered in the 2-dimensional Fourier domain, and masking noise of various spatial frequency bands was added to the filtered stereograms. Masking noise bands containing equally effective noise energy were selected such that their bands were either overlapping with the stereoscopic image spectrum or were 2 octaves distant. The 1st case resulted in binocular rivalry; however, in the 2nd case stereoscopic fusion could be maintained in the presence of strong binocular rivalry owing to the masking noise. This finding indicates that spatial-frequency-tuned channels are not restricted to 1-dimensional gratings but operate on 2-dimensional patterns as well. Furthermore, these frequency channels are utilized in stereopsis and work independently from each other, since some of these channels can be in binocular rivalry while at the same time other channels yield fusion. The main binocular experiments are demonstrated (23 ref)—*Journal abstract*.

6047. Kaushall, Philip. (Cornell U) **Functional asymmetries of the human visual system as revealed by binocular rivalry and binocular brightness matching.** *American Journal of Optometry & Physiological Optics*, 1975(Aug), Vol 52(8), 509-520. Used 2 techniques, a binocular rivalry task and a binocular brightness

matching task, to obtain indices of asymmetry (relative dominance weights) for the 2 eyes, the crossed and uncrossed visual pathways, and the 2 cerebral hemispheres. 20 college students with normal vision were run on all conditions. Intercorrelations of the dominance weights obtained by the 2 methods showed no relationship between the 2 methods but produced 3 hypotheses about visual functioning: (a) The left hemisphere appears more dominant for rivalry. (b) The right hemisphere appears more dominant for brightness matching. (c) The uncrossed visual pathways are dominant over the crossed pathways in a binocular rivalry task. (29 ref)—*Journal abstract*.

6048. Krueger, Lester E. (Ohio State U, Human Performance Ctr) **The word-superiority effect: Is its locus visual-spatial or verbal?** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 465-468.—Conducted 2 experiments with a total of 50 undergraduates to determine whether verbal or visual-spatial processes underlie the word superiority effect by presenting stimulus words to either the left or the right visual hemifield in a letter detection task. A 4-letter string was presented horizontally in Exp I and vertically in Exp II and was a word on half the trials and a nonword on the other half. Results show that right hemifield words were responded to significantly faster and more accurately than left hemifield words, and the word-nonword difference on error rate was significant for the right hemifield condition but not for the left. Findings demonstrate a word superiority effect only for the right hemifield which projects directly to the language-dominant left hemisphere. It is concluded that the word superiority effect in letter detection has a primarily verbal locus. (24 ref)—*L. Gorsey*.

6049. Lappin, Joseph S.; Bell, Herbert H.; Harm, O. Joseph & Kottas, Brian. (Vanderbilt U) **On the relation between time and space in the visual discrimination of velocity.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104[1](4), 383-394.—Is the perception of velocity determined by the prior discrimination of spatial and temporal distances? 2 experiments sought to answer this question by comparing the discriminabilities of moving stimuli varied in spatial extent, temporal duration, or in redundant combinations of both variables. Ss were 12 undergraduates. The S's task was to identify which of 2 alternative stimuli was presented on each trial. A set of 4 stimuli was constructed from 2 values of spatial extent and 2 values of temporal duration. Separate conditions required discrimination of each of the 6 possible pairs of these stimuli. Exp I examined continuous motion and Exp II examined apparent motion for stimuli with short (50 vs 65 msec) and with long (500 vs 650 msec) interstimulus intervals. With continuous motion and with good apparent motion (short intervals), the discrimination between the different-velocity bivariate pairs was too accurate to be attributed only to discriminations of the spatial and temporal extents of the motion. This did not occur with poor apparent motion. Evidently, time and space are perceptually related. (22 ref)—*Journal abstract*.

fovea. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2342.

6051. Lorinstein, Barry & Haber, Ralph N. (U Rochester, Ctr for Visual Science) **Perceived numerosity: An information processing analysis.** *Canadian Journal of Psychology*, 1975(Sep), Vol 29(3), 224-236. —Presented 3 university students with matrices of from 1 to 16 dots and asked them to count the dots they could see. In Condition 1 a visual noise pattern followed the display of dots by one of several intervals in order to control the time available to process them. In Condition 2 no mask was used, but the exposure duration was varied. In the processing time condition, dots were counted at a rate of 4 msec/dot when less than 6 dots were presented, and at a rate of 60 msec/dot for all dots in excess of 6. If enough time was given to process all the dots presented, virtually all were reported, whereas, if enough time was given to count only some of the dots, virtually none of the excess were counted. In the duration condition, in which processing time was not restricted, counting appeared to be a function of the visibility of the dots, as shown by a family of more linear functions between number of dots presented and number counted, with the slope determined by the duration of exposure. Data are consistent with a serial processing interpretation of dot counting occurring at a very early stage of information extraction, in which there is a serial scanning mechanism which extracts information from an initial brief store and transfers it to a 2nd store for actual counting. (French summary) (18 ref)—*Journal abstract*.

6052. Magnussen, Svein & Glad, Alf. (U Oslo, Inst of Psychology, Norway) **Effects of steady surround illumination on the brightness and darkness enhancement of flickering lights.** *Vision Research*, 1975(Dec), Vol 15(12), 1413-1416.—Reports results of experiments with the authors as observers which show a stronger darkness enhancement effect. A model is described for a proposed hypothesis which posits that the differences in the magnitude of the psychophysical enhancement effects reflect differences in the overall summed response of the neuronal B- and D-systems during flicker. (22 ref)

6053. McClelland, James L. (U California, San Diego) **Preliminary letter identification in the perception of words and nonwords.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 80-91.—Data from 2 experiments with a total of 98 undergraduates show that words with mixed uppercase and lowercase letters (e.g., fa de) were perceived more accurately than mixed-case pseudowords (e.g., ga de), and mixed-case pseudowords were perceived more accurately than mixed-case unrelated letter strings (e.g., ef dt). In addition, same-case words were perceived more accurately than their mixed-case counterparts. The same held true for pseudowords but not for unrelated letter strings. Results support the view that both letter and visual information are used in word perception. (24 ref)—*Journal abstract*.

6054. McNulty, P. J.; Pease, V. P. & Bond, V. P. (Clarkson Coll of Technology) **Muon-induced visual sensations.** *Journal of the Optical Society of America*, 1976(Jan), Vol 66(1), 49-55.—Studied visual phenomena induced by the passage of a pulse of extremely relativistic muons through the vitreous humor of 3 Ss.

The phenomena included flashes that ranged from small crescents of light in the peripheral field of view to large clouds of light that filled the entire field of view as well as bright flashes with dark centers. Arguments are given to show that the physical mechanism behind these flashes is Cerenkov radiation. Standard psychophysical techniques were used to determine the threshold for muon-induced visual sensations for 1 S. Comparison was made with his pion threshold measured under the same condition. 6056. Miles, Paul W. (Private practice, St Louis, MI) **Errors in space perception due to accommodative retinal advance.** *American Journal of Optometry & Physiological Optics*, 1975(Sep), Vol 52(9), 600-603. —Discusses perceptual errors due to accommodative retinal advance, which may be defined as the forward shift of the entire retina from contraction of the ciliary muscle in accommodation. The anterior border moves forward 0.5 mm at maximum accommodation, with an asymmetrical distortion of the image of space. It is noted that accommodative retinal advance can explain some errors of space perception described in various papers and monographs, usually attributed to unequal crowding of retinal receptors, or to mystical upper cerebral activity. The horopter error, the alley error, and the Aubert-Foerster phenomenon are discussed. Experimenters whose theories have been confirmed are noted. (15 ref)—*Journal abstract*.

6057. Navon, David. (U Haifa, Israel) **Irrelevance of figural identity for resolving ambiguities in apparent motion.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 130-138.—To examine the degree to which form perception affects the formation of apparent-motion experience, 26 undergraduates were presented with 9 ambiguous apparent-motion situations, where the elements of each single flash were various figures. One of the interpretations of each situation preserved the figural identity of the figure across flashes. It was found that figural identity did not have any effect on determining the type of motion experienced, except when the figural analysis involved was relatively simple.—*Journal abstract*.

6058. Neisser, Ulric & Becklen, Robert. (Cornell U) **Selective looking: Attending to visually specified events.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 480-494.—Conducted an experiment, using 24 undergraduates. Ss looked at 2 optically superimposed video screens on which 2 kinds of things were happening. In the principal condition, Ss were required to follow the action in 1 episode (by pressing keys when significant events occurred) and ignore the other. They could do this without difficulty, although both were present in the same fully overlapped visual field. Odd events in the unattended episode were rarely noticed. It was very difficult to monitor both episodes at once. Performance was no better when the 2 episodes were presented to different eyes (dichoptic condition) than when both were given binocularly. It is argued that selective attention

does not involve special mechanisms to reject unwanted information but is a direct consequence of skilled perceiving.—*Journal abstract.*

6059. Packwood, James & Gordon, Barbara. (U Oregon) **Stereopsis in normal domestic cat, Siamese cat, and cat raised with alternating monocular occlusion.** *Journal of Neurophysiology*, 1975(Nov), Vol 38(6), 1485-1499.—3 normal domestic cats, 4 domestic cats raised with alternating monocular occluders (AO), and 2 Siamese cats were tested for stereoscopic vision using a shadow-casting technique that produced line stereograms. Human Ss were tested with the same apparatus. Results indicate that normal, AO, and Siamese cats had equal visual acuity and all could make accurate judgments about the depth of real objects. Normal cats could fuse crossed disparities as great as 50' of arc and uncrossed disparities as great as 30' of arc. They could also make stereoscopic discriminations with stimulus disparities greater than 1°, even though they could not fuse disparities of this magnitude. Human Ss viewing identical stimuli could not fuse stimuli having disparities greater than 10', although they could make depth judgments for crossed disparities as great as 2.5° and for uncrossed disparities as great as 5°. Results imply that animals without binocular cells in area 17 do not have stereoscopic vision. (40 ref)—*Journal summary.*

6061. Pollatsek, Alexander; Well, Arnold D. & Schindler, Robert M. (U Massachusetts, Amherst) **Familiarity affects visual processing of words.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 328-338.—While previous research has demonstrated that words can be processed more rapidly and/or more accurately than random strings of letters, it has not been convincingly demonstrated that the superior processing of words is a visual effect. 2 experiments are described, with a total of 31 undergraduates as Ss, in which the cases of letters were manipulated in letter strings that were to be compared on the basis of physical identity. Mean response time was shorter for words than for nonwords even for pairs of letter strings that differed only in case (e.g., site-site). This finding implies that the advantage of words over nonwords (the familiarity effect) typically observed in the simultaneous matching task is not due solely to comparison of either the word names or the letter names and, thus, at least part of the familiarity effect must be due to more rapid formation and/or comparison of visual representations of the 2 letter strings when they are words. Further analysis failed to reveal a significant involvement of phonemic or lexical codes in the comparison judgments. (18 ref)—*Journal abstract.*

6062. Porac, Clare & Coren, Stanley. (U Victoria, Canada) **Suppressive processes in binocular vision: Ocular dominance and amblyopia.** *American Journal of Optometry & Physiological Optics*, 1975(Oct), Vol 52(10), 651-657.—Recent suggestions linking suppression observed in amblyopia ex anopsia with that manifested in normal ocular dominance coordinations were experi-

mentally tested in a study with 48 visually normal Ss (mean age = 21 yrs). Ss were administered 3 tests for sighting dominance and 1 measure of rivalry dominance. Training procedures which normally alleviate functional amblyopic suppression were shown to have similar results in alleviating the suppression of the nondominant eye in Ss. Methodological and theoretical implications of these results are discussed. (34 ref)—*Journal abstract.*

6063. Purcell, Dean G. & Stewart, Alan L. (Oakland U) **Visual masking by a patterned stimulus and recovery of observer performance.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 457-460.—Used a forced-choice visual acuity task to assess visual backward masking and recovery in 2 experiments. In the masking conditions, the target was closely followed in time by a patterned stimulus. In the recovery condition, the patterned masking stimulus was followed by a homogeneous flash of light. The homogeneous flash enhanced observer performance. This enhancement held under both dark and light adaptation as well as when observers were given immediate feedback about their performance.—*Journal abstract.*

6064. Remole, Arnulf. (U Waterloo, School of Optometry, Canada) **Border enhancement during flicker stimulation: Effect of retinal location.** *Vision Research*, 1975(Dec), Vol 15(12), 1385-1388.—A luminous field on a dark ground exhibits a region of perceptually enhanced brightness along its borders. During flicker stimulation, the region affected by the border increases markedly. Typically, the increase is maximal for frequencies in the order of 10 counts/sec. Some observers show a secondary maximum between 25 and 30 counts/sec. This visual function was tested in 3 normally seeing Ss for various distances of the border from the fixation point. It was found that the spread of the region affected by the border increased with border eccentricity. This increase was particularly prominent for the primary maximum. While the secondary maximum increased in a similar manner, it was absent for central stimulation with the border. Data clarify some subjective differences found in previous studies of the phenomenon. (20 ref)—*Journal abstract.*

6065. Rogers, Brian J. & Anstis, Stuart M. (U St Andrews, Psychological Lab, Fife, Scotland) **Reversed depth from positive and negative stereograms.** *Perception*, 1975, Vol 4(2), 193-201.—A stereogram was presented with patterns of opposite contrast—one positive the other negative. One eye received only the positive pattern; the other received both positive and negative patterns superimposed. Ss reported apparent reversals of perceived depth: crossed (convergent) disparity made the fused stereogram appear further away, while uncrossed (divergent) disparity made it appear nearer. It is believed that spatial summation in the visual system blurred the superimposed positive-and-negative contours and shifted their effective positions, leading to reversals in perceived disparity.—*Journal abstract.*

6066. Rosenbaum, David A. (Stanford U) **Perception and extrapolation of velocity and acceleration.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 395-403.—Conducted 2 experiments using a total of 13 college students and

1 faculty member as Ss. A moving target disappeared behind a screen and Ss predicted when the target passed behind a marker on the screen. When the target moved with constant velocity, predictions were extremely accurate, regardless of the spatial and temporal exposure and concealment of the target and regardless of its rate of velocity. When the target accelerated, accuracy of prediction decreased with increasing acceleration and with increasing target concealment. Analyses of results suggest that the perception of velocity and acceleration is direct and accurate and that extrapolation of velocity and acceleration incorporates concrete and abstract characteristics of the motion that was seen. It is proposed that the motion perception system is tuned to accelerated rather than to constant velocity movement.—*Journal abstract.*

6067. Saye, Ann & Frisby, John P. (U Sheffield, England) **The role of monocularly conspicuous features in facilitating stereopsis from random-dot stereograms.** *Perception*, 1975, Vol 4(2), 159-171.—2 experiments with a total of 42 normally seeing undergraduates investigated the effects on stereopsis perception times of including monocularly conspicuous features in random-dot stereograms. It was found that such features facilitated stereopsis in large-disparity but not in small-disparity stereograms, perception times for the latter being relatively short with or without monocular features. Facilitation in the large-disparity stimuli came about both from features which delineated the shape of the whole disparate area and from features which merely happened to lie in the same depth plane as the disparate area, but which did not give any shape cues. It is argued that these various results can be well accounted for by a "vergence hypothesis," which supposes that the long perception times often found with random-dot stereograms are due in part to the absence of stimulus features which can guide the vergence movements necessary for fusing the display.—*Journal abstract.*

6068. Schaller, M. Joseph & Dziadosz, Gregory M. (U Wisconsin, Madison) **Individual differences in adult foveal visual asymmetries.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 353-365.—The existence and nature of asymmetries in the recognition of elements of a visually presented array have been topics of dispute. In the present study, 32 undergraduates responded to a single vertical or horizontal bar embedded in 1 circle of a 5×7 array of circles by touching a plate corresponding to the orientation of the bar. Two-thirds of the Ss were left superior, while $\frac{1}{3}$ were right superior. Performance was in general top superior and decreased with increasing distance from the center. Possible explanations for these asymmetries are examined in terms of sequential processing, acuity dominance, hemispheric specialization, and selective attention. (2% p ref)—*Journal abstract.*

6069. Sharpe, L. T. & Wysocki, Gunter. (U British Columbia, Vancouver, Canada) **Proximity factor in color-difference evaluations.** *Journal of the Optical Society of America*, 1976(Jan), Vol 66(1), 40-49.—Explored the effect of dividing-strip width (sample proximity) on sensitivity to suprathreshold and threshold color differences in 5 23-49 yr old males with normal color vision. Three methods were used, involving ratio com-

parisons, liminal determinations, and repeated color matchings. Results suggest, in general, that sample separation impaired lightness discrimination more than chromaticness discrimination and that it may be necessary to introduce a proximity factor into color-difference formulas when evaluating threshold or small-size color differences. (19 ref)—*Journal abstract.*

6070. Simmonds, D. C.; Poulton, E. C. & Tickner, A. H. (MRC Applied Psychology Unit, Cambridge, England) **Identifying people in a videotape recording made at night.** *Ergonomics*, 1975(Nov), Vol 18(6), 607-618.—Two groups of 12 21-65 yr old observers watched a 55-min videotape recording of a street scene at night. They had to identify 5 people whose photographs were mounted below the screen. For one group the photographs showed the people wearing the same outdoor clothes as on the night of the recording. For the other group the photographs showed the people wearing indoor clothes. People were not identified by more than about half the Ss unless they were within 12 or 15 m of the camera. Photographs of the people correctly dressed aided identification. The fur hood worn by one person, and the spectacles with thick black rims worn by another person, aided identification and reduced false identifications. Three older male Ss did not take advantage of the cues which the correctly dressed photographs provided. (French & German summaries)—*Journal abstract.*

6071. Slater, Alan M. & Findlay, John M. (U Exeter, England) **The corneal reflection technique and the visual preference method: Sources of error.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 240-247.—Corneal reflection techniques for eye fixation position measurement have been used to assess such variables of visual behavior as duration of looking and the area(s) of the stimulus fixated. These techniques are especially useful when measuring visual regard in infants and young children as head restraints are not required. In an earlier article (see PA, Vol 50:4627) the present authors demonstrated, empirically, that the common assumption that the center of the pupil represents the line of sight is untenable. The present article considers the causes of the errors present in these techniques: it can be shown that theoretical calculations of these sources of error, calculations based both on the anatomy of the eye and on the optics involved, produce good agreement with their empirically derived magnitudes. 6073. Thomas, James P. & Shimamura, Keiko K. (U California, Los Angeles) **Inhibitory interaction between visual pathways tuned to different orientations.** *Vision Research*, 1975(Dec), Vol 15(12), 1373-1380.—Conducted 2 experiments with 3 experienced observers in which, when Ss judged the orientation of a single line presented at threshold luminance, their performance conformed to predictions derived from psychophysical estimates of receptive field properties. When Ss detected stimuli which simultaneously activated channels tuned to 2 different orientations, performance fell below that expected from receptive field properties. The discrepancy

is attributed to inhibition between channels tuned to different orientations. Such inhibition appeared to be strongest when the orientations differed by 15-25°. (18 ref)—*Journal abstract.*

6074. Tolhurst, D. J. & Dealy, R. S. (U Cambridge, Physiological Lab, England) **The detection and identification of lines and edges.** *Vision Research*, 1975(Dec), Vol 15(12), 1367-1372.—The threshold of 2 observers (the authors) for detecting the presence of a bright or dark line was compared with the threshold for being able to identify the polarity of line. The threshold for detection was only about 0.05 log units lower than the threshold for identification. A similar relation was found for the thresholds for detecting and identifying edges. It is argued that these results are evidence for the hypothesis that the human visual system contains 2 classes of channel: "bar-detectors" and "edge-detectors." (20 ref)—*Journal abstract.*

6075. Tyler, Christopher W. (U Bristol, England) **Stereoscopic tilt and size aftereffects.** *Perception*, 1975, Vol 4(2), 187-192.—Adaptation of 2 observers to a random-dot stereograting with no monocularly visible contours produced a tilt aftereffect in a briefly viewed test stereograting. The effect was maximal for adapting orientation at $\pm 30^\circ$ from the test orientation. Similarly, the perceived spatial frequency of a stereograting was altered by adaptation to a stereograting of adjacent spatial frequencies.—*Journal abstract.*

6076. White, Keith D. & Baker, Howard D. (Brown U, Hunter Lab of Psychology) **Foveal CFF during the course of dark adaptation.** *Journal of the Optical Society of America*, 1976(Jan), Vol 66(1), 70-72.—Developed and tested a technique to measure changes in foveal critical flicker frequency (CFF) as a function of time in the dark—both flicker frequency and luminance were varied near the absolute threshold. Results indicate that, for particular values of luminance threshold and CFF test luminance, the CFF showed no substantial dependence on previous dark adaptation. (15 ref)

6077. Zahn, Joseph R. & Hicks, Robert A. (Indiana U) **Perception of less irregular and more irregular stimuli.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 643-650.—Presents D. E. Berlyne's (1960) stimuli in a stereoscope to test his hypothesis that Ss prefer the more irregular member of a pair of stimuli. 32 adult volunteers, screened for normal acuity and phorias, were tested. Contrary to Berlyne's hypothesis and consistent with earlier stereoscopic studies, Ss tended to report more frequently the less irregular member of a pair of stimuli. These data can be explained by an information-conflict model; however, the clearest implication of this study is that experiments concerned with familiarity of stimuli should be qualified by the method. (27 ref)—*Journal abstract.*

6078. Zusne, Leonard. (U Tulsa) **Perception of curves.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 495-504. Studied the perception of 6 types of curved contours in 2-dimensional shapes, conducting 4 experiments with a total of 66 undergraduates. Random polygons and their curvilinear transformations were presented for detection under low-luminance contrast conditions, oddity-type discrimination problem solving, tachistoscopic identification, and identification involving

visual acuity in distance vision. In all experiments curvature affected perception at statistically significant levels, but the extent of this effect was a function of (a) the locus and direction of curvature, (b) the level of compactness-jaggedness of the figure, and (c) the nature of the perceptual task. Shapes with acute corners were more easily perceived than shapes with curved corners. Within these 2 classes of shapes, those with convex sides were perceived as having greater curvedness than those with concave contours. However, the degree to which curvature affected response was determined primarily by the nature of the perceptual task.—*Journal abstract.*

6080. Blakar, Rolv M. & Rommetveit, Ragnar. (U Oslo, Inst of Psychology, Norway) **Utterances in vacuo and in contexts: An experimental and theoretical exploration of some interrelationships between what is heard and what is seen or imagined.** *International Journal of Psycholinguistics*, 1975, No 4, 5-32.—Describes a study with Norwegian undergraduates in which a series of unrelated utterances was presented, and retrieval of what was heard was tested under systematically varied conditions. Results show that presenting a meaningful pictorial context for the utterance improved retrieval more than 10 successive repetitions of it. Ss who received the utterances in meaningful pictorial contexts also very often recalled *what* had been made known without remembering *how*. This was also the case when Ss were listening to each utterance *in vacuo*, but at an interval of 8 sec. Massed repetitions with no intervals for cognitive afterwork served mainly to enhance memory of which particular words had been heard. Findings are discussed in terms of subtle aspects of language use and in terms of particular strategies adopted by the S under different experimental conditions. The pictorial context, it is argued, provides a "here" for what is heard, and similar contextual frames are apparently constructed during cognitive afterwork by the S himself when listening to the utterance *in vacuo*; he tries to remember what he hears by pretending that something is made known to him. Message structure can then be assessed in terms of a progressive nesting of what is made known into whatever is already assumed (or imagined) to be the case. 6081. Chermak, Gail D. (Southern Illinois U) **Intelligibility of monosyllabic words masked by linguistic strings.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 587-593.—Examined the role of grammatical and semantical constraints in linguistic strings functioning as maskers. 12 college age, normal hearing native speakers of English served as Ss. 3 conditions of 25 words with grammatical strings as competing speech, 25 words with semantically anomalous strings as competing speech, and 25 words with ungrammatical strings as maskers were assessed in a treatment \times Ss analysis of variance. A critical difference test indicated that the difference lay

between the mean articulation scores for the semantically anomalous strings and the grammatical and ungrammatical strings. Thus, Ss' performance when the semantically anomalous strings functioned as the masker was depressed relative to performance under the other 2 conditions of competing speech. Results appear to be centered around the concepts of attention (familiarity of masker), probability and information content of the masker, and constituent analysis. (15 ref)—*Journal abstract*.

6085. Fulgosi, Ante; Baćun, Djurdjica & Žaja, Božo. (Odsjek za psihologiju, Filozofskifakultet, Zagreb, Yugoslavia) **Absolute identification of two-dimensional tones.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 484-486.—By combining 7 frequencies (between 250 Hz and 3,000 Hz) with 4 adequately selected intensity levels, 28 stimuli differing simultaneously in pitch and loudness (4 loudness levels) were obtained. Stimuli were presented to 5 undergraduates 75 times each in an absolute judgment paradigm. In the last part of the experiment, median transmission value was 3.85 bits (between 14 and 15 categories). The amount of transmitted information in each dimension was smaller than the corresponding values in unidimensional transmission experiments. The difference in the identification ability of pitch and loudness in 1- and 2-dimensional situations is attributed to interference which is present in one and absent in the other situation and which may indicate differences in the encoding processes of 1- and 2-dimensional tones.—*Journal abstract*.

6086. Goldman-Eisler, Frieda & Cohen, Michèle. (U Coll London, Psycholinguistics Research Unit, England) **An experimental study of interference between receptive and productive processes involving speech.** *International Journal of Psycholinguistics*, 1975, No 3, 5-16.—The question of the interference between the reception and production of speech is basic to an understanding of the processes involved in simultaneous translation. This paper reports an experiment designed to throw light on this problem by controlling the level of interference between decoding and encoding speech using hesitancy as an indicator of interference. 16 postgraduates and young lecturers listened through earphones to a talk while, at the same time, performing arithmetical tasks. This proved effective in spotting the levels at which interference takes place. Encoding without processing did not interfere with the monitoring of even highly complex intellectual material, but encoding involving complex processing did so in proportion to the hesitancy of the input. Such encoding was facilitated at the end of

monitored sentences and inhibited while they were being monitored. (French & Russian summaries)—*Journal summary*.

6089. Layton, Barry. (St Louis U) **Differential effects of two nonspeech sounds on phonemic restoration.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 487-490.—69 undergraduates participated in a phonemic restoration (PHR) experiment. PHR is the illusory perception of a phoneme deleted from a spoken sentence when that phoneme is replaced by an extraneous sound. Contrary to previous results, PHRs were significantly more prevalent when a cough was substituted than when a tone replaced the deleted speech sound. Data also revealed a decreasing tendency across trials to mislocalize the extraneous cough or tone prior to its veridical location when expectancy of stimulus position was minimized. Theoretical and methodological problems of PHR research are discussed.—*Journal abstract*.

6090. Loeb, Michel & Holding, Dennis H. (U Louisville) **Backward interference by tones or noise in pitch perception as a function of practice.** *Perception & Psychophysics*, 1975(Sep), Vol 18(3), 205-208.—In Exp I with 5 volunteers the identification of brief tonal stimuli was unaffected by subsequent presentation of white noise. However, subsequent pure tones, whether central to the stimulus frequencies or remote from them, caused substantial declines in correct identification. Apparent backward masking seems therefore to follow rather than to precede some degree of categorization of the masking stimulus. Exp II with 6 volunteers indicates that even these effects are temporary. Early masking effects are heavily modified by practice and are not therefore permanent features of sensory processing. Neither experiment provides support for preperceptual theory.—*Journal abstract*.

6093. Armstrong, J. Scott; Denniston, William B. & Gordon, Matt M. (U Pennsylvania, Wharton School) **The use of the decomposition principle in making judgments.** *Organizational Behavior & Human Performance*, 1975(Oct), Vol 14(2), 257-263.—151 undergraduate and graduate students were divided into 2 groups, one of which responded to a decomposed version of a problem, while the other group received the direct form of the problem. Results support the hypotheses that people can

make better judgments when they use the principle of decomposition, and that decomposition is especially valuable for those problems where the S knows little. Results also suggest that accuracy may be improved if the S provides the data and the computer analyzes it, than if both steps are done implicitly by the Ss.—*Journal abstract.*

6095. Blackman, A. R. (Simon Fraser U, Burnaby, Canada) **Test of the additive-factor method of choice reaction time analysis.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 607-613.—Tested S. S. Sternberg's (1969) additive-factor method of reaction time (RT) analysis, stimulus quality (intact, degraded), relative stimulus frequency (70:15:15), and stimulus-response (S-R) compatibility (naming, naming-plus-one). Each had significant effects on RT in a number-naming task performed by 6 undergraduates. Additivity of the means, variances, and 3rd cumulants of RT for the quality and compatibility factors showed the RT components attributable to the 2 stages influenced by these 2 variables to be stochastically independent. Relative stimulus frequency interacted with both quality and compatibility in determining RT. It is concluded that the effect of stimulus quality arose at the stimulus encoding stage, and the effect of compatibility at the S-R translation stage, while the duration of both stages was influenced by relative stimulus frequency.—*Journal abstract.*

6097. Coles, Michael G. & Duncan-Johnson, Connie C. (U Illinois, Champaign) **Cardiac activity and information processing: The effects of stimulus significance, and detection and response requirements.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 418-428.—In 2 experiments, measures of heart rate and EMG activity were obtained from 40 male undergraduates while they performed 2 series of trials involving a sequential information processing task. Each trial consisted of a warning light, 3 successive tones, and a respond light, separated by 6-sec intervals. In Exp I, Ss responded only if the 3 tones were of different frequencies. Accelerative heart-rate responses to the last tone increased as a function of the significance of that tone. Subsequent cardiac decelerations were only observed if the S was preparing to make a response. Results were replicated in Exp II in which Ss responded only if 2 of the preceding tones were of the same frequency. EMG activity was not significantly affected by stimulus significance or response anticipation. The data indicate that cardiac acceleration and deceleration reflect 2 independent psychological processes, associated with information-processing and decision-making activity on the one hand, and preparatory activity on the other. 6099. Hersk, Harry M. & Caramazza, Alfonso. (Johns Hopkins U) **Integrating verbal quantitative information.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 589-591.—Explored the question of whether people can effectively integrate quantitatively vague information, using 60 undergraduates. Ss were 1st asked to assign numerical values to the terms *much*, *slightly*, *larger*, and *smaller*. In a separate session 1 wk later, they were asked to solve linear syllogism problems such as *A is slightly larger than B, C is much smaller than B, therefore A is . . . units distant from C*. Results indicate that the mean numerical values assigned to the terms in the syllogisms can be used to predict solutions to the syllogism problems, suggesting the Ss can integrate verbal quantitative information.—*Journal abstract.*

6100. Hoosain, Rumjahn; Atai, Parvin & Salili, Farideh. (U Tehran, Iran) **Mirror tracing by monolingual and bilingual Iranian children.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 531-537.—Bilingual Iranian children learn to write English left-to-right in addition to writing the native Persian right-to-left. 36 bilingual 11-yr-olds were compared with 34 monolingual Ss in tracing a square pattern. Results show (a) no difference in the simple task of direct tracing, (b) superior performance by bilinguals in mirror tracing which required reversed eye-hand coordination, and (c) less interference shown by bilinguals in direct tracing after a series of mirror-tracing trials. Performance was not significantly correlated with any of several socioeconomic-school-achievement variables. The difference between monolinguals and bilinguals is attributed to the latter's acquired flexibility in writing coordination, comparable to flexibility in cognitive behaviors found in other studies.—*Journal abstract.*

6101. Jensen, Arthur R. & Figueroa, Richard A. (U California, Inst of Human Learning, Berkeley) **Forward and backward digit span interaction with race and IQ: Predictions from Jensen's theory.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 882-893.—From A. Jensen's 1969 2-level theory of mental disabilities (Level I: rote learning and memory; Level II: complex cognitive processing) it was predicted that forward digit span (FDS) should correlate less with IQ than backward digit span (BDS), and age and race should interact with FDS-BDS, with the FDS-BDS difference decreasing as a junction of age and a greater White-Black difference in BDS than in FDS. The predictions were substantiated at a high level of significance in large representative samples of 669 White and 622 Black 5-12 yr olds who were given the revised WISC. Socioeconomic differences accounted for less of the predicted effects than race. (25 ref)—*Journal abstract.*

6102. Kearsley, Greg P. (U Alberta, Ctr for Advance Study in Theoretical Psychology, Edmonton, Canada) **Problem-solving set and functional fixedness: A contextual dependency hypothesis.** *Canadian Psychological Review*, 1975(Oct), Vol 16(4), 261-268.—Problem-solving set and functional fixedness (FF) are usually considered to be manifestations of the same basic phenomenon (i.e.,

the effects of immediate or past experience on subsequent performance in a problem-solving task). However, it has been shown that certain variables have different effects on set and FF, suggesting that the 2 involve dissimilar underlying mechanisms. The experimental situations in which set and FF have been studied are reviewed and the findings compared. A contextual dependency hypothesis is proposed which explains set and FF in terms of processes which are common to a wide range of cognitive phenomena. This hypothesis also offers a possible hint for relating the different theoretical perspectives which presently exist in the study of human cognition. (French abstract) (32 ref)—*English abstract*.

6103. Kirasic, Kathleen C. & Siegel, Alexander W. (Coll of William & Mary) **Recognition memory for pictures: Evidence for a feature-analytic basis of cognitive style.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 453-456.—Tested 22 reflective and 22 impulsive (determined by Matching Familiar Figures Test scores) college subjects in a forced-choice visual recognition memory task. 11 reflective and 11 impulsive Ss were shown the presentation stimuli for 4 sec each; the other Ss were shown the stimuli for 8 sec each. In 3 experimental conditions (1FD, 2FD, 4FD), the number of visual feature differences between the correct and incorrect test stimuli was 1, 2, or 4 and correct response could not be based on the name of the stimulus. In the 4th condition (DO), the correct and incorrect test stimuli had different names. Performance on DO and 4FD was equivalent and was superior to that on 1FD and 2FD. Although reflective Ss made more correct responses than did impulsive Ss in all 4 conditions, only the performance differences in Conditions 1FD and 2FD were significant. Neither the main effect of initial exposure time nor the R-I by Exposure Time interaction was significant. Data support the view that the underlying basis for the dimension of reflection-impulsivity is detailed visual feature analysis of stimulus arrays. —*Journal abstract*.

6104. Koriat, Asher & Lieblich, Israel. (Hebrew U, Jerusalem, Israel) **Examination of the letter serial position effect in the "TOT" and the "don't know" states.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 539-541.—R. Brown and D. McNeill (see PA, Vol 40:12901) found that Ss in the "tip of the tongue" (TOT) state were better able to guess letters in earlier and later positions of an inaccessible word than letters in the middle positions. This finding was re-examined in terms of A. Koriat and I. Lieblich's (see PA, Vol 53:4432) analysis of sources of information detection. The relatively high detection of letters in later positions was also found for a "don't know" state and appears to result from (a) a better ability to approximate the distribution of letters in these positions and (b) a stronger correlation in these positions than in others between the semantic and structural features of words. Only the relatively high correct detection of initial letters in the TOT state appears to be particularly indicative of the manner in which specific words are stored in memory and retrieved from it.—*Journal abstract*.

6105. Kozielecki, Józef. (U Warsaw, Inst of Psychology, Poland) **The internal representation of risky tasks.** *Polish Psychological Bulletin*, 1975, Vol 6(3), 115-121.

—Discusses the internal representation of risky tasks relating to the understanding and explanation of human decisions. 3 theoretical representations are distinguished: the probabilistic, heuristic, and deterministic. There is much empirical evidence to show that decision makers tend to form heuristic representations by conceiving of the risky task in terms of a hierarchical list of dimensions. This conceptualization reduces cognitive strain, although it detracts from the effectivity of the final decision. The notion of internal representation makes it possible to view the rationality of choice from a novel angle.—*Journal abstract*.

6106. Lazerson, Barbara H. (Illinois State U) **The influence of highly variable spelling upon the reading performance of skilled readers of Modern English.** *Reading Research Quarterly*, 1974-1975, Vol 10(4), 583-615.—Conducted 3 experiments using 50 students each, randomly selected from a population of 400 skilled readers who were elementary education majors in their junior year. Exp I investigated silent reading performance, Exp II measured oral reading performance, and Exp III investigated eye movements, utilizing a Reading Eye Camera. 10 Ss were assigned randomly to one of the 5 levels in each experiment. Dependent variables in Exp I were reading time and comprehension; in Exp II were oral reading time, comprehension, and errors; and in Exp III were reading time, comprehension, number of fixations, durations of fixations, average span of recognition, number of regressions, and reading rate. Results suggest that efficiency of the skilled reader is reduced more by highly variable spelling than by visibility of the line of print, and that this effect is more pronounced when the familiar syntactic-semantic system is not provided. It is concluded that reading is a highly cognitive process. (French & Spanish abstracts)—*E. J. Mason*.

6107. Linde, Lena. (U Stockholm, Psykologiska Inst, Sweden) **Similarity of poetic rhythms with different amounts of semantic content: Stress ratings and pairwise similarity ratings.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 240-246.—Performed 2 experiments with a total of 28 undergraduates to investigate how syntactic and prosodic information in "nonsense" lines is interpreted and, given this information, to investigate the mental organization of the lines. In Exp I 12 lines, taken from Swedish poems, were presented in written form. Exp II concerned 12 "nonsense" lines metrically equivalent to the ones in Exp I and presented in the same way. Ss made pairwise similarity ratings and also rated stress of the syllables in each verse line. The intra- as well as the interrater reliability was low in the similarity data, and analysis did not suggest any interpretable multidimensional solutions. The ratings of syllabic stress, however, showed a very good correspondence to prosodic norms and meter. The correlations between rated stress in the poetic lines and that in the nonsense lines were generally around 0.90. (17 ref)—*Journal abstract*.

6108. Liu, An-Yen. (Jackson State U) **Specific information effect in probability estimation.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 475-478.—All the necessary prior probabilities for making a Bayesian estimation of the posterior probability were provided to

240 undergraduates along with a cover story. The prior probabilities, but not the cover story, were nonsystematically varied to provide 12 situations. Bayesian solutions of these probability problems indicated p values ranging from 0.4 to 0.9, but Ss estimated a p value around 0.7 across all conditions. For all conditions except one, the mode estimate was identical to one of the prior probabilities. High degree of similarity found among the dominating prior probability, the median and modal estimates of posterior probability within a condition, seems to indicate the existence of specific information effect in probability estimation.—*Journal abstract*.

6111. McKinney, James D. (U North Carolina, Frank Porter Graham Child Development Ctr, Chapel Hill) **Problem-solving strategies in reflective and impulsive children.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 807-820.—87 reflective and 86 impulsive 7-, 9-, and 11-yr-old children (determined by Matching Familiar Figures Test scores) were given a series of 5 problem-solving tasks in which they were required to determine the correct solution from a number of equiprobable solutions by gathering information that eliminated incorrect alternatives. Results indicate that the relative impact of cognitive style on problem solving varied with developmental level and the type of problem that was solved. Cognitive style had the greatest impact on the performance and strategy behavior of 7- and 11-yr-olds. No significant differences were found between reflective and impulsive 9-yr-olds on any measure. Nevertheless, when cognitive style was a significant contributor to performance, reflective children processed task information more efficiently than impulsive children and used more systematic and/or developmentally mature strategies. (23 ref)—*Journal abstract*.

6112. Nahinsky, Irwin D.; Hollyfield, Rebecca L. & Oeschger, David E. (U Louisville) **Resampling of hypotheses after negative instances.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 520-522.—Assigned 90 undergraduates to 3 conditions in a conjunctive concept identification experiment. For one problem, S was presented a repetition of the initial positive instance on the trial on which resampling would occur if the S had not started with the correct hypothesis. For another problem, the S was presented a new positive instance on that trial; and for a 3rd problem, he was presented a negative instance on that trial. Hypothesis samples were assessed using blank trials following resampling. A repetition of the original positive instance and a negative instance resulted in about equal problem difficulty, while presentation of a new positive instance produced the best performance. Blank trial assessments corroborated the finding. It is concluded that memory for the initial focus is important in the resampling process.—*Journal abstract*.

6115. Preece, P. E. (U Exeter, England) **Mapping cognitive structure: A comparison of methods.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 1-8.—Compared 3 methods of mapping cognitive structure. Free and controlled word association tests and a tree-construction test, all using the same 15 mechanics concept words as stimuli or units, were administered to 28 graduate science students. Very similar patterns of relations among the words, well represented by a digraph model, were revealed by the 3 techniques, and graphic representations of these structures were produced. No agreement was obtained among individual measures of the degree of concept interconnectedness derived from each test. (30 ref)—*Journal abstract*.

6116. Radzicki, Józef. (Inst for Pedagogical Research, Warsaw, Poland) **The effect of some situational factors on probabilistic diagnosing.** *Polish Psychological Bulletin*, 1975, Vol 6(3), 147-156.—Tested a probabilistic diagnosing in a risky situation in which the S could acquire as much information as he wished before stating his diagnosis. 16 22-30 yr old females and 44 18-42 yr old males were asked to make judgments as to which of a certain number of populations of known parameters a drawn sample belonged. It was found that the number of cognitive responses and amount of acquired information increased, and the subjective probability of correctness of diagnosis decreased, parallel with a rise in the number of alternative states of nature. Results suggest that the subjective value of information acquired through cognitive responses drops with the decrease of subjective uncertainty as to the real state of nature.—*Journal abstract*.

6117. Rosch, Eleanor & Mervis, Carolyn B. (U California, Berkeley) **Family resemblances: Studies in the internal structure of categories.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 573-605.—Conducted 6 experiments with a total of 1,076 college students to explore the hypothesis that the members of categories which are considered most prototypical are those with most attributes in common with other members of the category and least attributes in common with other categories. In probabilistic terms, the hypothesis is that prototypicality is a function of the total cue validity of the attributes of items. In Exps I and III, Ss listed attributes for members of semantic categories which had been previously rated for degree of prototypicality. High positive correlations were obtained between those ratings and the extent of distribution of an item's attributes among the other items of the category. In Exps II and IV, Ss listed superordinates of category members and listed attributes of members of contrasting categories. Negative correlations were obtained between prototypicality and superordinates other than the category in question and between prototypicality and an item's possession of attributes possessed by members of contrasting categories. Exps V and VI used artificial

categories and showed that family resemblance within categories and lack of overlap of elements with contrasting categories were correlated with ease of learning, reaction time in identifying an item after learning, and rating of prototypicality of an item. It is argued that family resemblance offers an alternative to criterial features in defining categories. (36 ref)—*Journal abstract.*

6118. Rosch, Eleanor. (U California, Berkeley) **Cognitive reference points.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 532-547.—Employed 2 methods to test the hypothesis that natural categories (e.g., colors, line orientations, and numbers) have reference point stimuli (e.g., focal colors, vertical and horizontal lines, and numbers that are multiples of 10) in relation to which other stimuli of the category are judged. In Exp I, using 960 native speakers of English, Ss placed pairs of stimuli into sentence frames consisting of linguistic "hedges" (e.g., "...is essentially...." Results were that the supposed reference stimuli were most often placed in the 2nd (reference) slot. In Exp II, with 48 undergraduates, the S placed a stimulus in physical space to represent his feeling of the psychological distance of that stimulus from another spatially fixed stimulus. Results show that, when supposed reference stimuli were fixed, other stimuli were placed closer to them than vice versa. Results have substantive implications for the understanding of internal structure of categories and methodological implications for the mapping of reference points, quantification of linguistic intuitions, and the assumption of symmetry in psychological distance judgments. (21 ref)—*Journal abstract.*

6119. Rosenberg, Seymour & Kim, Moonja. (Rutgers State U) **The method of sorting as a data-gathering procedure in multivariate research.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 489-502.—Compared 2 variants of the sorting method: single sort, in which each respondent is given only 1 opportunity to sort the items; and multiple sort, in which the respondent is given several opportunities, each time on a different basis. Kinship terms served as stimulus materials for 330 college students. Multidimensional scaling solutions showed large differences between the 2 methods. Most Ss ignored the most obvious dimension (sex of the terms) when they believed they had only 1 opportunity to indicate the dimensions in the set. Hierarchical clustering completely failed to represent the minority of Ss who did not ignore the given dimension. Results indicate that a multiple set of judgments from each set of respondents may be superior to a single set for certain stimulus domains. The kinship data indicate that male and female Ss emphasized different kinship dimensions but that aggregated multiple-sort data did not appear to reflect the cognitive dimensions present in any given individual. (27 ref)—*Journal abstract.*

6120. Sahu, Shantilata. (Utkal U, Bhubaneswar, India) **Need for cognitive consistency: The effect of time and education.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 38-40.—Hypothesized that (a) any initial inconsistency among cognitions will exist when cognitions are in the formative stage and (b) the need for consistency will increase with close temporal contiguity between the elicitation of 2 related cognitions. 62 high school and 63 postgraduate students'

attitudes toward science and religion were assessed either successively or with a 7-day gap. Results support the hypotheses.—*Journal abstract.*

6121. Satterly, David J. (U Bristol, School of Education, England) **Cognitive styles, spatial ability, and school achievement.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 36-42.—Studied the interrelationships of intelligence, field independence, analytic cognitive style, and spatial and perceptual abilities among 201 males, age 10-11 yrs. The contribution of cognitive style to the prediction of differences in attainment in English and mathematics was also investigated. Substantial overlap was confirmed between field independence and intelligence, but there were significant residual correlations between field independence and mathematics and haptic perception after intelligence was held constant. Analysis of covariance confirmed the significance of differences between field-independent, intermediate, and field-dependent males in mathematics and haptic perception. Principal components analysis indicated the separability of cognitive style from factors of general ability, spatial ability, and perceptual speed. (25 ref)—*Journal abstract.*

6123. Staller, Joshua & Sekuler, Robert. (Northwestern U, Cresap Neuroscience Lab) **Children read normal and reversed letters: A simple test of reading skill.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 539-550.—A total of 72 above- and below-average readers in grades 3, 5 and 7 named letters under 2 conditions (reading levels were determined by the Metropolitan Achievement and STEP reading tests). In 1 condition, letters were presented in normal orientation. In the other condition, letters were presented in left-right mirror image orientation. The ratio of (a) naming time on normal letters to (b) naming time on mirror image letters was calculated for each child. Good readers had lower ratios than poor readers. This was due primarily to the faster naming of normal letters by good readers. Good and poor readers named mirror image letters at similar speeds. One possible explanation of the results is that the skilled readers had a better memory for the normal orientation of the letter shapes. Another explanation is that skilled readers processed more peripheral information, when naming, than their less skilled counterparts, but that this peripheral processing was curtailed when transformed text was presented. (15 ref)—*Journal abstract.*

6124. Sunshine, Phyllis M. & di Vesta, Francis J. (Pennsylvania State U) **Effects of density and format on letter discrimination by beginning readers with different learning styles.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 15-19.—Investigated the processing requirements in letter discrimination for 40 1st graders with reflective-impulsive and field-dependent-field-independent learning styles. Field dependence was measured by the Children's Embedded Figures Test, and impulsivity was measured by the Matching Familiar Figures Test. The discrimination task, presented in vertical and horizontal formats and in high- and low-

density arrangements, consisted of matching each of 12 letterlike symbols with 1 of its 12 transformations. Results support all a priori hypotheses: (a) Impulsivity reflectivity was related only to number of errors and latency. (b) Field dependency-independency was unrelated to latency but interacted with contextual arrangements. Field dependents made more errors than field independents on high-density and horizontal presentations. Interpretations are made in terms of the feature analysis processes employed by beginning readers with different learning styles.—*Journal abstract.*

6125. Svenson, Ola. (U Stockholm, Psychological Lab, Sweden) **A unifying interpretation of different models for the integration of information when evaluating gambles.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 187-192.—Discusses experimental results reported by L. Sjöberg (1968), N. H. Anderson and J. C. Shanteau (1970), and A. Tversky (1967) on the structure underlying judgments of the utility of gambles. Although the authors find different models applicable to their data, it is shown that they may all have the same theoretical basis. Differences in experimental design such as stimulus ranges and response measures used in the experiments may explain the divergent results reported earlier.—*Journal abstract.*

6126. Till, Robert E.; Johnston, Carroll D. & Jenkins, James J. (U Minnesota, Minneapolis) **Effects of orienting tasks and instructions about associative structure on free recall and clustering.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 349-351.—Six groups, comprised of 139 undergraduates, in a 2×3 design, performed orienting tasks during the presentation of a randomized list of nonadjacent associative pairs. Groups performed 1 of 3 tasks: rhyming, pleasantness rating, or "taking dictation" (control). On the other dimension, groups were told about the associative structure and its potential facilitation of recall at 1 of 2 times: before hearing the list or after hearing it. All Ss were forewarned of the recall test. Amount of recall and associative clustering were significantly lower for the rhyming groups than for either the pleasantness rating or control groups. No difference was obtained as a function of when groups were told about the associative structure. The nature of the orienting task appears to be far more important than intention to recall and knowledge about the list structure.—*Journal abstract.*

6129. August, Gerald J.; Rychlak, Joseph F. & Felker, Donald W. (Purdue U) **Affective assessment, self-concept, and the verbal learning styles of fifth-grade children.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 801-806. To investigate the relationship between a child's self-concept (Piers-Harris Children's

Self-Concept Scale) and learning of affectively assessed verbal material, 134 5th-grade children (72 female and 62 male) learned paired associate nouns which they had pre-rated for likability. As predicted, both high self-concept girls and boys learned more effectively those nouns which they had assessed as "liked." This effect was less for the middle self-concept girls. Low self-concept girls and middle and low self-concept boys appeared to learn their "disliked" nouns faster. The only effect of an external reinforcement procedure was a decrement in total performance. Results suggest that learning along an affective dimension of meaningfulness can be influenced by personality-related variables such as self-concept.—*Journal abstract.*

(U Arkansas, Little Rock) **Effects of interpolated activity on short-term kinesthetic memory.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 331-333.—Compared the effects of motor and verbal interpolated activities on short-term retention of grip tensions with the effects of unoccupied retention intervals. The basic measure was absolute error made in attempts to reproduce an initial grip tension after retention intervals of 0, 5, 10, or 20 sec. Both verbal (counting backward by 3's) and motor (a kinesthetic analog to counting backward) tasks increased absolute error, as linear functions of retention interval, relative to a control. Short-term kinesthetic decrement functions were similar to those reported for auditory and for visual stimuli, suggesting some common process(es) underlying verbal, visual, and kinesthetic short-term memory.—*Journal abstract.*

6146. Davelaar, Eileen & Coltheart, Max. (Reading U, England) **Effects of interpolated items on the association effect in lexical decision tasks.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 269-272.—D. E. Meyer et al (1972) reported that in a lexical decision task, the word association effect was maintained when 2 associated words were separated by an unassociated word but was eliminated when the 2 were separated by a nonword. They suggested that the effect was eliminated in the latter case because a negative decision may result in a "resetting" of the memory system to a neutral level. The present investigation comprised a partial replication of the above study using 30 college students. Associated words were separated either by unassociated words, pronounceable nonwords, or unpronounceable nonwords. Results indicate that the word association effect was significant regardless of whether the intervening item was a word or a nonword; and, in addition, the pronounceability of the nonword did not influence the magnitude of the effect. Data provide further support for the spreading excitation model.—*Journal abstract.*

(Carleton U, Ottawa, Canada) **Helplessness or expectation incongruity: Effects of aversive stimulation on subsequent performance.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 10(4), 411-417.—In 3 experiments with 96 17-59 yr old undergraduates, it was observed that (a) failure in 1 task disrupts subsequent performance on both a similar and a dissimilar task; (b) if initial failure occurs on a complex task, then subsequent performance is not disrupted as in the case where initial failure occurs on a simple task; and (c) initial success on a task mitigates the disruptive effects of failure. Moreover, the initial immunization treatment need not be on the same task as the failure or subsequent test treatments. Results are interpreted in terms of a helplessness notion and the role of expectation-outcome incongruity. (16 ref)—*Journal abstract*

6149. Durling, Rich & Schick, Connie. (Bloomsburg State Coll) **Concept attainment by pairs and individuals as a function of vocalization.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 83-91.—A concept attainment task comparing vocalization and nonvocalization by pairs and individuals was conducted using 84 female college student volunteers, who solved 4 3-attribute conjunctive problems. Vocalizing pairs and individuals vocalizing to a peer apparently learning the task were superior to nonvocalizing pairs. Further distinction between 2 problem-solving processes, strategy process (measured by focusing ratio) and monitoring (measured by ratio of untenable hypotheses), was demonstrated. In terms of overall effectiveness, vocalizing pairs were superior; individuals vocalizing to a confederate, individuals vocalizing to the E, and nonvocalizing individuals were intermediate, in that order; and nonvocalizing pairs were consistently inferior. Ss in all conditions improved over problems on all measures. Implications for educational applications are discussed. (25 ref)—*Journal abstract*.

6152. Eysenck, Michael W. (U London, Birkbeck Coll, England) **Extraversion, arousal, and speed of retrieval from secondary storage.** *Journal of Personality*, 1975(Sep), Vol 43(3), 390-401. Assigned 52 undergraduates to 1 of 4 groups on the basis of scores on the Extraversion scale of the Eysenck Personality Inventory and on the General Activation scale of the Activation-Deactivation Adjective Check List. Ss learned 2 lists composed of categorically related groups of words, with the number of categories and the number of words in each category varied. Memory was probed by simultaneously presenting the S with a category name and an item-position cue and recording the recall latency. Results show that activation and extraversion interactively determined the recall latency for both category and item recall. Results are considered in light of arousal theory. (30 ref)—*Journal summary*.

6153. Flexser, Arthur J. & Bower, Gordon H. (Stanford U) **Further evidence regarding instructional effects on frequency judgments.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 321-324.—Previous experimental reports have provided contradictory evidence regarding instructional effects on frequency judgments. An experiment was performed to clarify these findings, in which frequency discrimination was compared for 2 groups of a total of 24 undergraduates. One group was instructed as to the nature of the forthcoming frequency judgment task, while the other was told to prepare for a unspecified memory task. To avoid the possibility of response bias effects, the frequency discrimination coefficient, a correlational measure, was used to assess performance. W. C. Howell's (see PA, Vol 51:113) finding of no instructional effects on frequency judgments was replicated. An attempt is made to reconcile this result with the finding by I. Begg and E. J. Rowe (see PA, Vol 49:3643) that Ss in a continuous frequency judgment task gave unusually accurate mean frequency judgments compared to Ss who were tested following study of all items. (15 ref)—*Journal abstract*.

6154. Freund, Joel S.; Sanders, Kitty; Bell, Ronny J. & Jennings, Beverly. (U Arkansas) **Associations as cues in recognition memory.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 364-366.—Conducted an experiment with 180 college students to test the possibility that the improved recognition performance which results from instructing Ss to produce associations to study items is an artifact of the distributed practice (MP-DP) effect. 4 groups of 30 Ss were presented a list of 50 high-frequency words with instructions to (a) repeat each word aloud twice (REP); (b) pronounce each word, produce an association, and repeat the word (PAR); (c) pronounce each word and produce an associate to it (PA); (d) no particular instructions (control). 2 other groups were presented the study words with an additional word in parentheses next to each study item. This additional word was either a high associate (condition FAR) or an unrelated word (condition FNR). Both groups pronounced the study item, the parenthesized word, and then repeated the study item. All Ss were then given a 2-alternative, forced-choice recognition test. Results indicate that instructions to produce associations facilitated recognition performance and that this facilitation was not an artifact of the MP-DP effect. Further, having Ss actively produce an association was more beneficial than having them read one which was provided.—*Journal abstract*.

6155. Geller, E. Scott & Clower, Carol M. (Virginia Polytechnic Inst & State U) **Incidental probability learning: Effects of task-relevant vs. irrelevant stimulus dimensions.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 649-651.—Studied relative effects of probabilities associated with task-relevant and irrelevant stimuli in a probability learning paradigm. Four groups of 24 undergraduates each received different training experiences prior to sequentially predicting 200 occurrences of a green or yellow color. For 200 training trials Ss predicted the shape of arrows outlined on a green or yellow background. During training the 2 arrow shapes and background colors varied on independent probability distributions (e.g., each dimension either 75:25 or

50:50); during testing the colors varied on a 75:25 schedule. Regardless of the distribution of background colors during training, Ss who received a 75:25 distribution of arrow shapes during training predicted significantly more occurrences of the more probable color during testing than did Ss who received a 50:50 distribution of arrow shapes. Thus, the frequency bias associated with task-relevant stimuli in a probability learning paradigm influenced subsequent predictions of another stimulus dimension, but the probability distribution of the irrelevant stimulus dimension in the 1st task did not affect subsequent prediction strategies for the same dimension.—*Journal abstract.*

6156. Gorfain, David S. & Schulze, Nancy. (Adelphi U) **Contextual encoding and recovery from interference in the Brown-Peterson paradigm.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 569-571.—Notes that short-term memory in the Brown-Peterson paradigm has consistently shown enhanced performance on a trial following a long intertrial interval (ITI) as compared to performance in the absence of such an ITI. Whereas the fact of dissipation of interference has been clearly documented, its mechanism is not as well understood. The nature of the activity required of the subject during the long ITI was manipulated to assess the hypothesis that the amount of improvement obtained is a function of the contextual change produced during the ITI. Ss were 40 college students. The data indicate that such an interpretation is a tenable explanation of release from proactive interference over a long ITI.—*Journal abstract.*

6158. Hata, Yoshiko. [The effect of training to form associations on the mediation learning with verbal labeling.] (Japn) *Japanese Journal of Psychology*, 1975(Oct), Vol 46(4), 183-190.—In 3 experiments, a total of approximately 252 5- and 7-yr-olds were successively given stimulus-label (S-V), V-R, and S-R training and a mediation test. In S-V training, Ss were trained to label "Tuki" (moon) with the letters A and B and "Umi" (sea) with the letters C and D. In V-R training Ss were taught to associate "Tuki" with a right keypressing response and "Umi" with a left one. In S-R training, Ss learned to associate the letter A with the right keypressing response and the letter C with a left keypressing response. Results show that for 5-yr-olds, V-R training had no significant effect on the occurrence of a mediated response, while in 7-yr-olds, it had a facilitative effect. In 5-yr-olds the overlearning in V-R training had no effect on mediation performance, while overlearning in S-V training had a facilitative effect. (English abstract)—*English summary.*

6159. Helstrup, Tore. (U Bergen, Psykologisk Inst, Norway) **Interference effects in short-term memory.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 184-186.—In 2 experiments with 20 undergraduates, the modality relation between memory task and interference task was investigated. With visual and verbal tasks, variations in modality relation did not influence the total amount recalled. The usual serial position effect was observed when memory and interference tasks were of different modalities. The amount of recall was a function

of the memory strategies used by the Ss, "active" strategies producing highest recall.—*Journal abstract.*

6160. Hull, A. J. (MRC, Applied Psychology Unit, Cambridge, England) **Nine codes: A comparative evaluation of human performance with some numeric, alpha and alpha-numeric coding systems.** *Ergonomics*, 1975(Sep), Vol 18(5), 567-576.—Used short-term memory techniques to study the relative performance of similar groups of Ss with different types of high-capacity alpha, numeric, or alpha-numeric coding systems. Ss were women between 22 and 60 yrs of age. Coding systems of equivalent informational value, but of varying length and content of code, were not psychologically equivalent for the human operator; results show that the codes best processed were either very short, with not more than 6 items per code recalled or, with longer codes, those arranged in pronounceable units. 6165. Kausler, Donald H.; Majcher, Laura L. & Conover, Jerry N. (U Missouri, Columbia) **Schematic exemplars as items in multiple-item recognition learning.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 472-474.—Used schematically related dot patterns (i.e., distortions of a common prototype) as either the right or the wrong items of a multiple-item recognition learning task. Data from 30 undergraduates show that relative to a control list containing unrelated items, the presence of related right items yielded facilitated performance but only early in practice. By contrast the presence of related wrong items yielded an inhibitory effect early in practice. Results suggest that shared features are more likely to be extracted from the information present in right items than from the information present in wrong items.—*Journal abstract.*

6166. Kimmel, H. D. & Gurucharri, F. W. (U South Florida) **Operant GSR conditioning with cool air reinforcement.** *Pavlovian Journal of Biological Science*, 1975(Oct-Dec), Vol 10(4), 239-245.—2 groups of 20 male undergraduates each were individually run in a soundproof chamber heated to 115° and humidified to 100%. Ss in the experimental group received brief presentations of cool air contingent upon emitted GSRs during a 20-min acquisition period. Controls were matched for operant rate and were yoked to receive cool air on a response-independent schedule. Both groups had significantly increased rates of unelicited GSRs during acquisition, with the experimental Ss' curve rising more rapidly and both groups attaining equivalent terminal levels. During extinction, both groups maintained high levels of responding and did not differ. Examination of basal skin conductance data ruled out an activation hypothesis. In the controls, terminal response frequency was significantly correlated with percentage of fortuitous response-contingent reinforcement. It is concluded that both groups were conditioned, with the controls receiving intermittent reinforcement sufficiently often to elevate their responding. Cool air appears to be an effective reinforcer of unelicited GSRs, perhaps more effective than those reinforcers used in previous studies. (15 ref)—*Journal abstract*.

(Bell Lab, Murray Hill, NJ) **Memory without organization: Properties of a model with random storage and undirected retrieval.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 495-531.—Describes and analyzes a very simple spatial model of memory storage and retrieval. The postulated memory is without organization in the sense that neither the place of storage nor the order of search during retrieval is influenced by the nature of the information being stored or retrieved. The memory consists of a 3-dimensional space containing a large number of homogeneously distributed loci at which data may be stored. Data received near each other in time are stored at nearby locations. Access is by an undirected expanding-sphere search. The model exhibits a wide variety of quantitatively and qualitatively humanlike behavior with respect to both standard learning and forgetting paradigms and with respect to frequency effects and other phenomena in word processing. (U Tokyo, Japan) **Influence of average information per symbol and display time upon short-term memory for visual stimuli.** *Japanese Psychological Research*, 1975(Jul), Vol 17(2), 72-78.—In 2 experiments, the span of short-term memory for a very brief visual display was investigated using both redundant and nonredundant sequences of alphanumeric symbols generated by a digital computer with a cathode-ray tube graphic display. The memory span, expressed in terms of average length of correctly reproduced sequences, was found to decrease monotonically to an asymptotic value as the average amount of information per symbol increased, while it increased almost linearly with the increase in the display time. An experimental equation was derived to approximate these relationships based on an interpretation of the processes of visual perception in terms of the span of instantaneous vision and the rate of visual scanning.—*Journal abstract*.
6171. Mohan, Jitendra & Mohan, Vidhu. (Guru Nanak U, Amritsar, India) **Personality determinants of effect of disinhibitor on reminiscence.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 53-55.—Analyzed the personality determinants of the effect of disinhibiting stimulus on reminiscences in a pursuit rotor task. 40 university females, divided into 4 groups on the basis of their scores on the Maudsley Personality Inventory, served as Ss. In a 300-sec work period, a disinhibiting light flash was introduced for 2 sec after 290 sec of practice. Results indicate the negative influence of this disinhibitory stimulus on the reminiscence on the part of extraverted Ss. The dimension of neuroticism failed to give any definite indication. 6174. Perry, David G. & Garrow, Helen. (U Queensland, Brisbane, Australia) **The "social deprivation-satiation effect": An outcome of frequency or perceived contingency?** *Developmental Psychology*, 1975(Nov), Vol 11(6), 681-688.—Evaluated the contributions of frequency and contingency of reinforcement to the deprivation-satiation phenomenon. 72 3rd and 4th graders heard the word *good* either twice (deprivation) or 16 (satiation) times either contingently upon some action on their part, contingently upon some action of the E's, or noncontingently (at random). This was followed by a discrimination test under continuous reinforcement with the word *good*. All Ss showed high performance except the group exposed to the high frequency of noncontingent reinforcement. A postexperimental interview revealed that all groups except the high-frequency noncontingent group had interpreted the E's approval words as having been contingent on their behavior during treatment. Results support E. Y. Babad's (1972) thesis that the perceived contingency of reinforcement is a more powerful determinant of its subsequent reinforcement effectiveness than is its frequency per se.—*Journal abstract*.

6177. Reardon, Eugene; Polzella, Donald & Brown, Thomas V. (U Dayton, Research Inst) **Re-examination of trace storage in free recall.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 383-393.—Used cued recall to investigate 2 opposing theories of trace storage in free recall, the trace organization at storage hypothesis and the trace organization at retrieval hypothesis. 25 undergraduates sorted 84 unrelated words into 28 groups of 3 words and then were asked to recall the sorted words without cues, with cue doublets taken from within each sorted group, or with cue doublets combined at random from the input words. Results strongly support the contention that the acquisition of a list of unrelated words involves the storage of cohesive subjective groups and that accessibility to subjective groups may be provided via test cues selected from the input list. 6181. Rosch, Eleanor. (U California, Berkeley) **The nature of mental codes for color categories.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 303-322.—Used the technique of priming to study the nature of the mental representations generated by color names. The logic of the technique is that a prime can only facilitate a response if it contains some of the information needed for the response. The name of a basic color category, in primed trials, and the word *blank*, in unprimed trials, were presented to Ss in advance of a pair of colors. 6 experiments were conducted, employing a total of 190 undergraduates. In Exps I and III, it was found that for responses of *same* to physically identical colors, a prime presented 2 sec in advance of a color pair facilitated responses to good and inhibited responses to poor members of basic color categories. In other experiments the amount of practice and the interval of time between the prime and presentation of the stimulus were varied. It is concluded that the cognitive representation of color categories contains information used in encoding physical color stimuli and that the representation reflects the prototype structure of color categories. 6182. Rosenbloom, Lorne K. & Pulton, T. William. (U Victoria, Canada) **Recognition after tachistoscopic presentations of complex pictorial stimuli.** *Canadian Journal of Psychology*, 1975(Sep), Vol 29(3), 195-200.—400 colored slides taken by amateur photographers were shown to 12 male university students at 80, 160, or 1000 msec. Recognition memory for the stimuli was assessed by a 2-alternative forced choice task. High recognition rates were found for all conditions of the exposure times. Results are interpreted in light of the prior finding by M. C. Potter and A. Levy (see PA, Vol 43:12253) of low recognition rates under tachistoscopic conditions, and as showing that a single visual fixation can produce high recognition rates. 6184. Sausley, William H. (U California, Berkeley) **Memory for serial position.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Aug), Vol 14(4), 418-429.—Studied memory for serial position by requiring serial position recall of a word list which varied in sequence on each study trial in 2 experiments with a total of 180 undergraduates. Exp I tested for memory of words by transfer between serial and free recall. Exp II compared performance during serial recall of the same list of words to a control with different lists of words. Serial recall produced a stable level of performance and little learning. The apparent lack of accumulation in memory suggested that the transformation of temporal sequence into serial position is limited in extent. It is hypothesized that serial recall learning requires a particular combination of general memory factors, the transformation to serial position being useful for initially distinguishing items in memory. (15 ref)—*Journal abstract*.
6185. Silver, Avrum I. & Greco, Tommy S. (U Georgia) **A comparison of the effects of vicariously instigated classical conditioning and direct classical conditioning procedures.** *Pavlovian Journal of Biological Science*, 1975(Oct-Dec), Vol 10(4), 216-225.—2 groups of 12 undergraduates each received either 2 or 16 paired classical conditioning trials beyond the peak CR. A 3rd group of 12 Ss received the same stimuli as in the 16 postpeak condition but in an unpaired and random order. A 4th group of 12 Ss did not receive any prior direct conditioning. The stimuli were delivered directly to the S. All 4 groups were then exposed to vicariously-instigated classical conditioning. This consisted of having Ss observe a model who received the same CS as was delivered during direct conditioning. The CS was paired with feigned arm movement of the model, simulating a reaction to shock. When compared to direct conditioning, the vicarious conditioning resulted in smaller GSR magnitudes for both the CRs and UCRs. It is suggested that previous experience with direct classical conditioning has an attenuating effect on GSR magnitude during a vicarious situation. A postexperimental questionnaire supported the results.—*Journal abstract*.
6186. Sowder, Larry. (U Oregon, Mathematics Resource Project) **Transfer between two settings for some concept attainment tasks.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 905-908.—Studied achievement in and transfer between 2 domains in 2 experiments with a total of 147 undergraduates. The booklet-administered tasks involved conjunctive and disjunctive attribute identifications over the typical concept of attainment domain (geometric) and a domain using medical symptoms. Exp I, with 90 Ss, showed that tasks in the 2 domains were of like difficulty, that disjunctive tasks were more difficult than conjunctive, and that transfer for disjunctive tasks was different for

the 2 domains. Exp II, with 57 Ss, used the tasks of Exp I except that all tasks were presented in written form. The transfer effects of Exp I did not appear, although the other findings recurred. Generalizing results of concept attainment studies across domains is supported, if the modes of presentation are the same.—*Journal abstract.*

6187. Spector, Amos & Laughery, Kenneth R. (Oakland U) **Rehearsal as a control process.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 373-376.—Conducted a probe experiment using lists of 4 consonant-vowel-consonant word pairs, manipulating the opportunity to rehearse between the end of the list and the onset of the probe. Ss were 36 undergraduates. Following the test on the last list, Ss were asked to write down as many of the responses (words) from the entire experiment as they could remember. Rehearsal resulted in significantly better performance on the probe responses, but there was no difference between the rehearsal and no-rehearsal conditions on the final free recall of response items. Results support the notion that rehearsal does not automatically increase the response strength of items in the long-term store.—*Journal abstract.*

6188. Thelen, Mark H.; Dollinger, Stephen J.; Roberts, Michael C. & Akamatsu, T. John. (U Missouri, Columbia) **Model consequences and model affect: Their effects on imitation.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 478-480.—Studied 90 1st-3rd graders' imitation of a buttonpressing response as a function of model consequences and model affect. 3 levels of model affect (positive, neutral, and negative) were orthogonally combined with 3 levels of model consequences (positive, neutral, and negative). There were no significant main or interaction effects. However, under positive model affect, Ss who observed the positive consequences model imitated significantly more than Ss who observed the no-consequences model. A difference between comparable groups was not found under neutral model affect conditions. A 2nd experiment with 50 Ss replicated these findings.—*Journal abstract.*

6189. Tinsley, Jeanne B. & Renner, K. Edward. (U Illinois, Champaign) **Self-punitive behavior with changing percentages of reinforcement: The proper role of discrimination.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 448-458.—Past research on self-punitive behavior has been interpreted as supporting a theoretical explanation based on a vicious circle rather than a discrimination hypothesis. Using rats, K. B. Melvin (see PA, Vol 39:7278) found that self-punitive behavior is not reduced when discrimination is aided by changing the percentage of shock trials from acquisition to extinction. It is argued that this research is inconclusive because it is based on a misinterpretation of what is the critical discrimination for extinction, namely the new response punishment contingency. Using 60 male undergraduates, results of the present study provide evidence that Ss can and do discriminate the change in percentage, but continue to show self-punitive behavior until they make the discrimination that responding results in shock rather than escape.—*Journal abstract.*

6190. Toga, Arthur W. (St Louis U) **Strategy in auditory recognition memory.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 517-519.—12 undergraduates were presented with lists of up to 6 digits in length.

each followed by a "probe" digit. They then searched the memorized lists for the presence or absence of the test item. Reaction times (RTs) were used to study the strategies employed in high-speed recognition scanning. Parallel increases of RTs for both positive and negative responses as a function of list length were found. However, the serial position of the probe digit produced no significant differences in average RTs. Data support the indication of a serial exhaustive, as opposed to self-terminating, search in high-speed scanning for "presence" in immediate memory.—*Journal abstract.*

Motivation & Emotion

6197. Arkes, Hal & Clark, Patricia. (Ohio U) **Effects of task difficulty on subsequent preference for**

visual complexity. *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 395-399.—48 female undergraduates rated on a 1-13 Likert scale their preference for 4 environmental scenes which differed in complexity. Ss were then given 30 sec to solve each of 10 3-, 5-, or 7-letter single-solution anagrams. Ss then rated 4 new slides which were of the same complexity level as the slides seen during the 1st session. Change scores were calculated by subtracting the preference ratings at each complexity level during the 1st session from the rating at the corresponding complexity level during the 2nd session. The Anagram Complexity \times Slide Complexity interaction was significant; the complexity of the slides showing the most positive change scores was inversely related to the complexity of the anagrams attempted. Results are discussed in terms of optimal level of stimulation theories.—*Journal abstract.*

6198. **Bohlin, Gunilla & Kjellberg, Anders.** (Uppsala, Psykologiska Inst, Sweden) **Self-reported arousal: Factorial complexity as a function of the subject's arousal level.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 203-208.—The factorial stability of a previously constructed 6-factor checklist for self-reported arousal was studied in 3 different situations which were conceived of as inducing different levels of arousal (i.e., in the evening before going to bed, at a lecture, and at an examination). The analyses showed that the 6 factors obtained in the Lecture group were reduced to 5 in the Examination group and to 4 in the Evening group. This reduction was due to a combination of the items from pairs of the original factors into 1 factor. Significant differences between the 3 groups were obtained in all factors but one. Results are regarded as support for the usefulness of the 6-factor instrument, the implication being that 1 or 2 of the factors in some situations might be redundant. The relevance of the results for a previously proposed model of arousal is discussed.—*Journal abstract.*

6200. **Brickman, Philip & Hendricks, Michael.** (Northwestern U) **Expectancy for gradual or sudden improvement and reaction to success and failure.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 893-900.—Five male and 5 female undergraduates were randomly assigned to each of 16 conditions in a $2 \times 2 \times 2 \times 2$ design, using expected pattern of performance improvement (gradual or sudden), expected level of final performance (success or failure), actual pattern of improvement (gradual or sudden), and actual level of final performance (success or failure) as independent variables. Ss expecting gradual improvement performed better on a reaction time task than Ss expecting sudden improvement. Ss expecting gradual improvement and Ss expecting success both showed greater improvement during the test when they appeared to be failing, whereas Ss expecting sudden improvement and Ss expecting failure both showed greater improvement when they appeared to be succeeding. Ss expecting gradual improvement and Ss expecting success felt better when experiencing gradual improvement or success,

whereas Ss expecting sudden improvement or failure felt better when experiencing sudden improvement or failure. It is suggested that the temporal shape of a performance expectancy is as important as the final level of performance expected. (29 ref)—*Journal abstract.*

6201. **Fennell, G. R.** (Fordham U, Lincoln Ctr) **What is a situation? A motivational paradigm.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 259-269.—Presents a view of motivational and reinforcement phenomena and uses it as the basis for a taxonomy of situations. 2 situation variables, component and type, are identified in the motivational paradigm. Items used in the stimulus-response inventories of anxiousness and hostility are analyzed in terms of situation component and type to illustrate sources of ambiguity in situation specification, and the prediction of situation construction in ambiguous situations. The 2 situation variables are coordinated to W. Mischel's (1968) person variables in a formulation for the interaction of persons and situations as a function of situation type within component.—*Journal abstract.*

6204. **Gerber, Wayne S. & Routh, Donald K.** (U North Carolina, Chapel Hill) **Humor response as related to violation of expectancies and to stimulus intensity in a weight-judgment task.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 673-674.—In a study of humor disguised as a psychological task, 60 undergraduates judged an initial series of 10 weights which was either light or heavy and then a shift weight which was either light, medium, or heavy. Degree of humorous response varied with the discrepancy of the shift weight and its absolute magnitude.

6205. **Harris, Mary B. & Smith, Robert J.** (U New Mexico) **Mood and helping.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 215-221.—Tested whether helping someone puts the helper in a better mood, and whether people in a good mood are more likely than controls to help with a task maintaining their positive mood but no more likely to help with a task leading to a negative mood. 80 female undergraduates participating in a study in which they (a) had an interaction with a confederate (C) designed to put them in a good or neutral mood, (b) rated their mood, (c) rated some neutral pictures, and (d) were requested to rate some potentially elating or depressing pictures. Ss who were induced to help C or who were given candy by her rated themselves as feeling nicer than those having a more neutral interaction. Neither their interaction with C, the type of pictures they were asked to rate, nor their self-reported mood, with the exception of happiness, was significantly associated with number of pictures rated or time spent helping. Those rating the depressing pictures became more depressed than those rating the cheerful pictures. It is suggested that the lack of significant findings might be due either

to the fact that the effect of a good mood on helping declines over time or to the fact that rating pictures was so enjoyable that it was not considered altruistic. (17 ref) —*Journal abstract.*

6211. Saklofske, D. H. (U Otago, Dunedin, New Zealand) **Aesthetic complexity and exploratory behavior.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 363-368.—To test the hypothesized relationship between exploratory behavior and stimulus complexity, 15 paintings comprising 3 levels of complexity were derived from ratings by 30 1st-yr nursing students. A further 30 Ss were requested to view the compositions for as long as they wished, and a 3rd group of 30 Ss were asked to write any questions they might have in response to each painting. Data show a monotonic relationship between complexity and looking time. Total questions and specific interrogations were most frequent for complex stimuli. Yes-no questions did not vary with rated complexity. (17 ref) —*Journal abstract.*

6212. Sanders, Glenn S. & Baron, Robert S. (U Iowa) **The motivating effects of distraction on task performance.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 956-963. Conducted 2 studies with a total of 72 undergraduates to assess whether distraction has driveline effects on task performance. In both studies, the effects of distraction over all trials interacted significantly with the nature of the task; distraction tended to facilitate the performances of simple tasks and significantly impaired performance on complex tasks. Moreover, analyses focusing upon drive carryover effects generally replicated these effects: when distraction was momentarily suspended, performance on simple tasks was facilitated in both studies (compared to

nondistracted controls), whereas performance on the complex task used in Study 2 was still impaired. Results of Study 2 indicate that lack of impairment on the complex task in Study 1 on such trials was due to practice effects of repeated testing. Results indicate that distraction (a) has driveline properties and (b) does not invariably impair performance.—*Journal abstract.*

6213. Silverman, Franklin H. & Silverman, Ellen-Marie. (Marquette U) **Effect of threat of shock for being disfluent on fluency of normal speakers.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 353-354.—Normal adults' mean disfluency frequency during the threat-of-shock reading was lower than during nonthreat readings. Thus, threat of shock for being disfluent may be a condition which differentiates stutterers from nonstutterers, since stutterers have been reported to become less fluent under this condition.

6219. Klein, Gary A. (US Air Force Human Resources Lab, Wright-Patterson Air Force Base, OH) **Effect of attentional demands on context utilization.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 25-31.—Three experiments studied the prediction that utilization of contextual information will be reduced by the presentation of secondary tasks requiring attention. Ss in all experiments were primarily undergraduates. Context utilization was measured using a word boundary task that compared performance on passages with and without contextual information. Exp I ($n = 64$) used unclear materials to increase attentional demands, and significantly reduced context utilization. However, Exp II ($n = 64$) suggests that these results could be explained by changes in performance rate. Exp III ($n = 96$) used a digit recall task to produce attentional demands and significantly reduced context utilization. Results are discussed in terms of the importance of a limited-capacity operational memory for reading performance.—*Journal abstract.*

6220. Megas, James C. & Coe, William C. (Texas Tech U) **Hypnosis as role-enactment: The effect of positive information about hypnosis on self-role congru-**

ence. *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 132-137.—Evaluated the effect on self-role congruence of providing favorable information about hypnosis while establishing rapport on the Stanford Hypnotic Susceptibility Scale (SHSS), Form A. A questionnaire was developed to assess 66 undergraduates' congruence with the hypnotic role before they were hypnotized. Ss were divided into high, medium, and low congruence samples, and 1/2 of each sample was randomly assigned to 1 of 2 conditions: (a) Information condition Ss were administered the SHSS in the standardized manner. (b) No-information Ss were administered the SHSS with the usual rapport section omitted. All Ss were reassessed with the self-role congruence questionnaire before they were hypnotized. Results show that positive information had no significant effect on congruence scores, and positive information had no effect on hypnotic susceptibility. (23 ref)—*Journal abstract*.

6221. Moses, J. M. et al. (Naval Health Research Ctr, San Diego, CA) **Dynamics of nap sleep during a 40 hour period.** *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 627-633.—Examined the sleep of 8 adult males in equally spaced naps during a 40-hr period. 10 additional Ss were sleep-deprived for 40 hrs with 1-hr periods of exercise given in place of naps. One recovery night followed the 40-hr period for both groups. Total sleep time and the amount of stage REM during the naps were negatively related to the circadian-temperature cycle. Stage REM frequently appeared within 10 min of stage 1 onset and the normal sequence of stages REM and 4 were altered, demonstrating that the organization of sleep within a nap is quite different from that in monophasic nocturnal sleep. Auto-correlation and cross-correlation analyses showed that the relation of sleep stages from hour to hour in normal continuous baseline sleep was altered in nap-to-nap comparison. Naps had a recuperative value in terms of maintaining the normal amounts of sleep stages on the recovery night; recovery sleep for the exercise group showed typical sleep-loss effects. 6226. Blum, Stephen L.; Balsiger, Dean; Ricci, Joseph S. & Spiegel, Douglas K. (U South Dakota) **Effects of early exposure to ventral gland odor on physical and behavioral development and adult social behavior in**

mongolian gerbils. *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1210-1219.—Compared 34 pairs of male and female gerbils reared by ventral gland-excised and intact parents. Repeated measurements before and after puberty failed to reveal an effect of gland odor exposure on body weight, ventral gland size, open-field defecation, and time of vaginal opening. Exposed Ss were more attracted than nonexposed Ss to a strange male's gland odor during preference tests involving "marked" and "unmarked" paper strips. Opposite-sex pairs of exposed Ss engaged in more social behavior than did nonexposed pairs, but there was no difference in fighting frequency or, during extended cohabitation, in fecundity. While early exposure to gland odor apparently does not affect physical maturation, it may enhance later responsiveness to stimuli (gland odors) that are useful in locating conspecifics and that facilitate social interactions between previously unacquainted gerbils. (20 ref)—*Journal abstract*.

6227. Dickinson, Robert T. & Schaeffer, Robert W. (Auburn U) **Lick rates in infant Mongolian gerbils.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 509-510.—Studied licking rates as a function of age in 1 male and 6 female infant Mongolian gerbils over a 20-day period. Data support previous research by showing that infant and adult gerbil lick rates differ, with mean momentary lick rates increasing with age. The magnitude of these differences was small and did not contradict the lick rate invariance hypothesis. In contrast to previous data, however, lick rate variability was relatively constant over time.—*Journal abstract*.

6228. Drickamer, Lee C. (Williams Coll) **Daylength and sexual maturation in female house mice.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 561-570.—Female ICR/Alb mice reared in constant light matured significantly later than mice maintained under 0, 6, 12, or 18 hrs of light/day. Results suggest that constant illumination disrupts the normal physiological and behavioral activity rhythms and delays the attainment of sexual maturity. (24 ref)

6229. Eimon, Dorothy; Morgan, M. J. & Sahakian, B. J. (U Cambridge, Psychological Lab, England) **The development of intersession habituation and emergence in socially reared and isolated rats.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 553-559.—46 male and 46 female hooded Lister rats were weaned at 17 days and then reared in isolation or in social groups. Intersession habituation of locomotor activity in the open field was tested at 15, 25, and 45 days. Contrary to some previous reports, the 15-day-old Ss showed significant habituation. At 45 days, however, the isolates showed very little habituation compared to the social Ss. The isolates showed a similar pattern of development in their emergence into the open field. It is suggested that isolation does not result in an arresting of development, but rather in the formation of behavior patterns otherwise absent in normally reared rats.—*Journal abstract*.

6230. Fischer, Gloria J.; Davis, Stephen J. & Nord, John A. (Washington State U) **Prehatch color stimulation effects on color pecking preferences and color discrimination learning in White Leghorn chicks.** *Develop-*

mental Psychobiology, 1975(Nov), Vol 8(6), 528-531.

Conducted 4 experiments with a total of about 324 White Leghorn chicks to study the effects of color on young embryos with colored light at 2 intensity levels. Both posthatch color pecking preferences (exps I and II) and color discrimination learning (exps III and IV) were unaffected. Results confirm and extend a prior finding of no pre- and posthatch colored light stimulation effect on posthatch color preferences in ducklings. The color pecking preferences found replicated prior findings with chicks; however, they differed from the approach color preferences observed in color discrimination learning. —*Journal abstract.*

6232. Jakubczak, L. F. (VA Hosp, Gerontological Psychology Research Lab, St Louis, MO) **Re-entrainment of food intake of mature and old rats to the light-dark cycle.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 491-493.—Determined whether there are age-related decrements in the re-entrainment of food intake of rats following an inversion of the light-dark cycle in an experiment using 17 male ACI/Mai rats aged either 220 or 785 days. The primary dependent variable was grams of food eaten during each 12-hr period (light on from 6:00 AM to 6:00 PM; light off from 6:00 PM to 6:00 AM). Results indicate that (a) prior to the light reversal the older Ss ate more during the light phase of the light-dark cycle than the younger Ss but did not differ from them during the dark phase and (b) the older Ss entrained their food intake at a slower absolute rate than the younger Ss but at an equal relative rate. Results suggest that senescent rats are as adaptable to changes in their environment as mature rats. (15 ref) —*Journal abstract.*

6233. McCarty, Richard & Southwick, Charles H. (Johns Hopkins U, School of Hygiene & Public Health) **The development of convulsive seizures in the grasshopper mouse (*Onychomys torridus*).** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 547-552.—Administered open-field tests to 29 male and 50 female southern grasshopper mice at 10-day intervals from 30 to 100 days of age. Convulsive seizures occurred in 9 males and 23 females during at least 1 of the open-field tests. No significant differences appeared in the seizure characteristics of male and female Ss. The potential use of this species as an animal model of human epilepsy is discussed. (16 ref)—*Journal abstract.*

(ARC Inst of Animal Physiology, Cambridge, England) **Ability of the pig to distinguish between conspecific urine samples using olfaction.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 121-125.—Used operant conditioning techniques to train female pigs to distinguish between odors of urine from different animals. Results suggest that this ability could possibly be used for individual identification and provide further evidence for the transmission of social information via odor. (16 ref)

6235. Moore, Frank R. (Clemson U) **Influence of solar and geomagnetic stimuli on the migratory orienta-**

tion of Herring Gull chicks. *Auk*, 1975(Oct), Vol 92(4), 655-664.—Conducted 420 orientation trials with Lake Huron Herring Gull (*Larus argentatus*) chicks to test the effect of solar and geomagnetic stimuli on orientation behavior. Results indicate the existence of a sun compass mechanism in this species. Under clear sky conditions Ss exhibited a statistically significant southerly heading (182°), a direction that corresponds to the heading juveniles selected during winter dispersal (179°). When solar cues were lacking, the headings were random. It is suggested that geomagnetic stimuli possibly influence orientation as the preferred heading of Ss (head magnets—212°) deviated significantly from that of controls (head brass—154°). Such stimuli may alter but do not disrupt chick orientation. (32 ref)—*Journal abstract.*

6236. Morgan, M. J.; Eison, D. F. & Nicholas, D. (U Cambridge, Psychology Lab, England) **The effects of isolation rearing on behavioural inhibition in the rat.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 615-634.—The possibility that isolation-rearing in the rat affects the development of inhibitory mechanisms was studied in a series of experiments with a total of 74 female hooded rats. It was found that socially-isolated rats were (a) slower to learn both a lever-panel alternation, a and 2-lever alternation schedule of reinforcement; (b) more persistent than controls in pressing a lever for food when a supply of identical "free food" was introduced into the operant chamber; but (c) similar to controls in their response to preloading with food, a procedure which inhibited leverpressing to the same extent in the 2 groups. Finally, it was shown in a separate experiment that the effects of increased food deprivation on leverpressing in the presence of free food were qualitatively different from the effects of social isolation, and therefore the social/isolate difference cannot be interpreted as motivational. The possible contributions of neophobia to the difference are discussed. It is concluded that isolates may well suffer from a disinhibitory defect, but that there are probably other effects of isolation in addition. (50 ref)—*Journal Abstract.*

6237. Pinkowski, Benedict C. **Yearling male Eastern Bluebird assists parents in feeding young.** *Auk*, 1975(Oct), Vol 92(4), 801-802.—Reports an observation in Michigan of a male yearling which, after it had left its nesting and produced 2 fledglings, returned to its birthplace and helped the older adults care for their second brood. Scarcity of habitat acceptable to the *Sialia sialis* is suggested as an explanation for the behavior.

6238. Preciado, Manuel C. & Capps, Mary J. (U Minnesota) **Visual stimulation: Effects on vestibular habituation.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1149-1153.—Studied the influence of various forms of visual stimulation presented during the course of vestibular habituation to a caloric stimulus, using 32 adult cats. Eye movements which were either complimentary or in opposition to the induced vestibular nystagmus were produced with an optokinetic drum. In addition, the effect of visual fixation during vestibular-response periods was studied. In all cases, Ss that received visual stimulation during the majority of the caloric trials habituated more slowly than

did Ss that received all the habituation trials in total darkness. Data conflict with previous reports of vestibular-visual interactions. Possible explanations for the discrepancy include species differences, distraction provided by the visual stimuli, and the transfer of learning from the dark to light conditions. (18 ref)—*Journal abstract*.

6239. Royce, Joseph R. & Poley, Wayne. (U Alberta, Edmonton, Canada) **Invariance of factors of mouse emotionality with changed experimental conditions.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 479-487.—Used data from 1 unpublished and 2 published studies to compare the factors of autonomic balance, motor discharge, acrophobia, territoriality, tunneling-1, and tunneling-2. Each study included 19 measures from 5 tests of emotionality: open field, straightaway, pole, cell, and hole-in-wall. In the 1st study, the measures taken were part of a large test battery. In the 2nd study, a reduced test battery included only the 19 measures. In the 3rd study, this reduced battery was used again, but Ss were injected with psychoactive drugs prior to testing. Ss in the 1st study were tested as part of a 6 × 6 diallel table. In the 2nd and 3rd studies, 2 emotionally contrasted strains (SWR and SJL) were tested. Each population was refactored by alpha factoring with varimax, followed by promax rotations. Factors obtained were compared by quantitative means using *S*-index and *r*, coefficients of factor matching. Although support was obtained for the invariance of all 6 factors, results indicate invariance as being strongest for motor discharge and acrophobia and weakest for tunneling-1 and tunneling-2 factors. (21 ref)—*Journal abstract*.

6240. Russell, P. A. (U Aberdeen, King's Coll, Scotland) **Sex differences in rats' response to novelty measured by activity and preference.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 585-589. 12 male and 12 female black hooded rats were familiarized to 1 compartment of a test box and then given access to this and a novel compartment. Females spent more time in the novel compartment than males did, and this difference was found to be independent of a possible difference in familiarity with the familiar compartment arising from the females' higher frequency of ambulating and rearing with sniffing during familiarization. This is evidence of a sex difference in response to novelty independent of activity differences. Females also had shorter approach latencies to the novel compartment. These sex differences could reflect differences in either fearfulness or curiosity. (16 ref)—*Journal abstract*.

6242. Andrews, Emir A. & Bravemen, Norman S. **The combined effects of dosage level and interstimulus interval on the formation of one-trial poison-based aversions in rats.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 287-289.—Conducted an experiment with 180 adult male albino rats. Ss were allowed to drink a novel solution of sodium saccharin which was followed .5, 1.5, 4.5, 7.0, 13.5, or 24.0 hrs later by

intubation of a .9, 2.7, 8.1, or 12.15% solution of sodium chloride (NaCl). 3 days after the single training trial, consumption of saccharin was again measured. Significant differences between groups were found. When consumption by experimental groups at each CS-UCS delay was compared with that of the isotonic NaCl .9% control group, it was found that all groups showed aversions at delays of .5, 1.5, and 4.5 hrs. Ss intubated with 8.1 or 12.15% NaCl solution also showed aversions at a delay of 7.0 hrs, and those intubated with the 12.15% solution showed an aversion at a delay of 13.5 hrs. No NaCl concentration used produced aversions at a CS-UCS interval of 24.0. Results reflect differences in the effectiveness of a range of NaCl concentrations in producing 1-trial aversions at long CS-UCS intervals.—*Journal abstract*.

6244. Barbaree, H. E. & Weisman, R. G. (McMaster U, Hamilton, Canada) **On the failure of transfer of control from separately conducted Pavlovian conditioning to free-operant avoidance conditioning in rats.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 498-511.—Conducted 4 experiments with a total of 184 female Fischer 344 strain albino rats. In Exp I presentation of a tone previously correlated with footshock produced an increase in the rate of Ss' footshock avoidance responding, while presentation of a tone previously correlated with tail shock had no reliable effect on the rate of footshock avoidance responding. In Exp II a tone correlated with tail shock elicited heart-rate conditioned responses but had no reliable effect on the rate of subsequent footshock avoidance responding. In Exp III presentation of a tone previously correlated with footshock, and a tone previously correlated with tail shock in separate groups produced increases in the rate of tailshock avoidance responding. In Exp IV a tone correlated with tail shock in 1 setting accelerated tailshock avoidance responding in a 2nd setting. Interaction between UCS and negative reinforcer modifiability by skeletal responding may contribute to the pattern of results obtained. (17 ref)—*Journal abstract*.

6245. Beatty, William W.; Studelska, Daniel R. & Gerth, Jeffrey M. (North Dakota State U) **Some aspects of the development of sex differences in DRL behavior.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 622-624.—Conducted 2 experiments, using 8 female and 12 male laboratory-born rats in Exp I and 25 male and 26 female experienced Holtzman rats in Exp II. Adult female Ss acquired efficient DRL performance more rapidly than males. This sex difference was not observed in Ss that began training as weanlings because both young males and females acquired efficient DRL performance about as rapidly as adult females and more rapidly than adult males. It is suggested that, although it is possible that proficiency on the DRL task declines with age in males, differences in the effortfulness of the response or the incentive value of the reward may explain the observed age difference. (15 ref)—*Journal abstract*.

6246. Bolles, Robert C.; Uhl, Charles N.; Wolfe, Mark & Chase, Paul B. (U Washington, Seattle) **Stimulus learning versus response learning in a discriminated punishment situation.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 439-447.—Compared the suppression of barpressing by 10 female Long-Evans rats under 2 kinds of conditions. Under one condition the response was occasionally punished by shock in the presence of a signal. Suppression to the signal was quickly acquired, indicating rapid learning about the signal-shock relationship (stimulus learning). Under the other condition the response was occasionally punished in the presence of the signal, but additional free shocks were given in the absence of the signal. The slow acquisition of suppression found in this case indicated that there was, at best, only gradual learning about the response-shock relationship (response learning).—*Journal abstract.*
6247. Bond, Nigel & Harland, Wayne. (Macquarie U, School of Behavioural Sciences, North Ryde, Australia) **Higher order conditioning of a taste aversion.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 295-296.—Conducted an experiment with 24 male Wistar rats. 2 groups each received 5 drops of NaCl solution from a dropper placed directly inside the mouth. The experimental group was then injected with lithium chloride to establish a conditioned taste aversion. The control group was injected 24 hrs later. After a recovery day the above procedures were repeated. On the next day both groups received 5 drops of a saccharin solution followed immediately by 5 drops of the NaCl solution. Subsequent preference tests established that the experimental group had learned an aversion to the saccharin solution as a result of its pairing with the NaCl solution which had previously been associated with poisoning. Results demonstrate that higher order conditioning of a taste aversion can be established using tastes as both the 1st-order and the 2nd-order stimulus.—*Journal abstract.*
6248. Braveman, Norman S. (Memorial U of Newfoundland, St John's, Canada) **Formation of taste aversions in rats following prior exposure to sickness.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 512-534.—Three experiments were conducted with a total of 104 male hooded rats given pretraining ip injections of lithium chloride or methylscopolamine solutions. Findings extend those of earlier studies and show that rats form weaker conditioned taste aversions if they are exposed to a sickness-inducing agent prior to a single training trial. The present experiments appear to rule out the possible confounding factors that during pretraining (a) Ss became addicted to the drugs that were intended to induce sickness during training, (b) drug tolerances were created and hence reduced the effectiveness of the same or different sickness-inducing agents used to induce sickness during training, or (c) associations between other stimuli and sickness were formed and interfered with or blocked the formation of subsequent taste aversions. It is concluded that the associative capacity of sickness can be reduced through preexposure (34 ref)—*Journal abstract.*
6249. Brennan, James F. (State University Coll New York, Buffalo) **Differential response gradients to a Pavlovian safety signal following active avoidance training in young and adult rats.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 277-281.—Conducted an experiment with 18 albino 22-day-old Sprague-Dawley rats and 18 120-day-old male rats. Following 300 training trials in 2-way shuttle avoidance signaled by a tone (CS+), 2 groups each of weanling and adult Ss were given Pavlovian discrimination training in which the CS+ was followed by inescapable shock, and a more intense tone (CS-) signaled no shock. An additional group at each age level received both tones paired randomly with shock or no shock. Subsequent generalization tests along the frequency dimension indicated that both pups and adults tested at the CS+ intensity showed similar gradients of frequency control. Gradients for the adults tested at the CS- intensity tended to be inverted, with least responding at CS-, a result not found in the young Ss. Results are considered in light of Pavlovian extradimensional influences on the control of avoidance behavior. (15 ref)—*Journal abstract.*
6250. Burkholder, Joel; Deitchman, Robert; Haude, Richard H. & Sanders, Raymond E. (U Akron) **Observing behavior in the albino rat: A within-subjects' comparison of increasing levels of visual complexity.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 523-529.—Tested 54 male CD strain Charles River rats for complexity preference using a nonlocomotor response. Each S was presented an array of photographic slides containing an incremental series (1, 2, 5, and 25) of complexity elements. All photographic slides were randomized both within and across Ss. Each photographic slide of each level of complexity was repeated 3 times. Results of an analysis of covariance, with luminance as the covariate, show that cumulative viewing time increased with an increase in stimulus complexity. The relationship between looking and level of complexity was different, when covariance procedures were used, from the relationship obtained by multiple linear regression. 6252. Chiszar, David. (U Colorado) **Laboratory mice (*Mus musculus*, C57/BL6J) do not exhibit fear in the presence of a rattlesnake.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 377-378.—In an experiment with 23 mice, experimental Ss traversed as many squares during 5 min in an open field containing a rattlesnake (*Crotalus enyo*) as did control mice tested in the same open field without the snake. Additional Ss were placed into quart jars and lowered into a cage containing 6 hungry rattlesnakes which exhibited great interest in the Ss. Some of these mice simply observed the rattlesnakes, while others observed the rattlesnakes killing and devouring mice. The open-field ambulation of these Ss (with or without a rattlesnake in the open field) did not differ from the controls. Moreover, Ss tested with a snake in the open field touched the snake (particularly the rattle) an average of 4 times during the 5-min trial. It is concluded that these mice exhibit no obvious signs of fear in the presence of a rattlesnake.—*Journal abstract.*

frequency generalization. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2331.

6254. Clements, Maureen & Lien, Jon. (Coll Cape Breton, Sydney, Canada) **Effects of tactile stimulation on the initiation and maintenance of the following response in Japanese quail (*Coturnix coturnix japonica*).** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 301-304.—Examined effects of tactile contact with an imprinting stimulus object on the initiation and maintenance of the following response in 180 neonatal Japanese quail. Tactile contact with an imprinting stimulus object was permitted during a pre-exposure period and/or during a following test. Results indicate that following was stronger when tactile contact was permitted during either the pre-exposure or test periods than when such contact was not given. Following occurred sooner when contact was permitted during the pre-exposure period than during following only or when no contact was permitted. The greatest strength of following occurred when tactile stimulation was permitted during both pre-exposure and testing periods. Results support the hypothesis that tactile stimulation can facilitate both the initiation and maintenance of following behavior, and this is interpreted as being consistent with T. C. Schneirla's (1965) theory. *Journal abstract.*

6255. Couch, James V. (Madison Coll) **Behavioral contrast and inhibitory stimulus control.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 347-358.—2 experiments with a total of 36 White Carneaux pigeons examined the presumed relationship between behavioral contrast and inhibitory stimulus control. In Exp I, Ss were exposed to mult VI 1-min VI 1-min or mult VI 5-min VI 5-min during baseline training prior to mult VI 1-min VI 5-min discrimination training. Half of the Ss received a timeout (TO) component during baseline in order to reduce the degree of contrast during discrimination training. Only 3 of 8 Ss receiving the TO showed contrast while all other Ss showed various degrees of contrast. Postdiscrimination generalization gradients indicated excitatory rather than inhibitory control by the stimulus associated with the VI 5-min schedule. During baseline training in Exp II, responding to all the generalization stimuli was reinforced. In addition, some Ss received the TO stimulus. Ss were next exposed to mult VI 1-min ext, mult VI 1-min VI 5-min, or just the VI 5-min component. Generalization gradients indicated inhibitory control by the stimulus associated with ext or VI 5-min for 19 of 20 Ss even though some Ss did not show contrast. Results question the presumed relationship between behavioral contrast and inhibitory stimulus control. (17 ref)—*Journal abstract.*

6256. Crabtree, Mark S. & Kruger, Brian M. (Wright State U) **Free choice of signaled vs unsignaled scrambled electric shock with rats.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 352-354.—After forced exposure to both sides of a shuttlebox, 15 male Long-Evans hooded rats were given a choice between signaled scrambled electric shock in one half and unsignaled scrambled shock in the other. Interstimulus intervals between tone and shock were 2, 4, 8, 16, or 32 sec. Signal offset contingencies were off 1 sec before shock, off at shock onset, or off at shock offset. The main finding of no preference between signaled and nonsignaled shock

supports the view that signaled shock will be preferred only when it is modifiable.—*Journal abstract.*

6257. Czerny, Paul & Thomas, Roger K. (U Georgia) **Sameness-difference judgments in *Saimiri sciureus* based on volumetric cues.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 375-379.—Applied Piaget's theory and methods to the study of the phylogenetic development of cognitive abilities. It was asked whether squirrel monkeys have the prerequisite skills for conservation of quantity, and, specifically, whether they might respond differentially to equivalent and unequivalent volumetric cues. Ss were 4 wildborn adult male experienced squirrel monkeys. All Ss responded significantly and differentially to pairs of identical objects or pairs of objects similar only in volume vs pairs of objects which differed in volume. It is concluded that squirrel monkeys have the prerequisite skills for the conservation of quantity. Discussion includes methodological problems associated with demonstrating conservation in nonhumans as well as the potential usefulness of Piaget's theory for phylogenetic studies of intelligence. (24 ref)—*Journal abstract.*

6258. de Castro, John M. (Georgia State U) **Meal pattern correlations: Facts and artifacts.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 13-15.—Used the feeding behavior of 37 male albino rats to demonstrate that significant postprandial correlations could be obtained from unordered raw data when actual intake was used as the measure of meal size. When meal duration was used instead, substantially lower correlations were obtained. It was further demonstrated that caution must be used when correlating ratio measures of feeding behavior. If the ratios are not independent then significant correlations can be obtained due to statistical bias alone. Implications and suggestions for the analysis of meal patterns are discussed. (22 ref)—*Journal abstract.*

6259. Devine, James V. & Jones, Luther C. (U Texas, El Paso) **Matching to successive samples: A multiple-unit memory task with rhesus monkeys.** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 438-440.—Extended the delayed matching-to-sample task to a multiple-unit memory procedure for 2 male rhesus monkeys by increasing the number of samples shown in succession prior to the matching test. Ss were capable of reconstructing the order of presentation of 3 successively presented samples. The task is seen as an animal analog of human memory tasks.—*Journal abstract.*

6261. Einsiedel, Albert A. (Case Western Reserve U) **The development and modification of object preferences in domestic White Leghorn chicks.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 533-540.—Examined the time course of adaptation to a new object in 140 chicks after having established strong preferences for a previous stimulus (during the 1st 3 days of life). By interchanging the stimuli to which S was exposed, and by confining S exclusively with the new object for some period of time, the new preference was predicted to develop as a function of the duration of exposure.

Results confirm that prediction with a monotonic increase in preference as a function of hours of exposure. The establishment of a preference for the new object was rapid, as indicated by a significant shift in preference after 5 hrs. (15 ref)—*Journal abstract*.

6262. Franchina, Joseph J. & Schindele, Timothy E. (Virginia Polytechnic Inst & State U) **Nonshock confinement duration and shock- and safebox similarity during escape training in rats.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 297-300.—60 female hooded rats received 70 shock-escape training trials with shock- and safeboxes similar or dissimilar to each other and nonshock (safebox) confinement durations of 5 or 20 sec. (Shock-box confinement duration prior to shock onset was 5 sec.) In each confinement condition performance under the similar shock-safe condition was reliably poorer than that under the dissimilar condition. Safebox confinement duration negligibly affected performance under the dissimilar condition, while in the similar condition increasing confinement duration reliably facilitated performance. Comparisons with control data suggest that facilitation of escape was due to the relative shock-safe confinement duration rather than to absolute safebox confinement.—*Journal abstract*.

6263. Gibbon, J.; Locurto, C. & Terrace, H. S. (New York State Psychiatric Inst, New York) **Signal-food contingency and signal frequency in a continuous trials auto-shaping paradigm.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 317-324.—Studied 20 male White Carneaux pigeons in an auto-shaping procedure which programmed 2 types of trials represented by hues on the response key. 3 groups were studied with a positive correlation between 1 of the signals and food (contingent groups). 2 noncontingent groups were studied in which the correlation between the signals and food was eliminated by programming food with the same probability following either signal. One noncontingent group had a high density of reinforcement produced by adding reinforcement in the other signal, at the same rate as programmed in the positive signal for the contingent groups. The other noncontingent group experienced the same number of reinforcements as the contingent group with the least frequent positive trial, but these reinforcements were distributed with equal probability across the signals. Ss in the contingent groups with intermediate or infrequent positive signals all acquired reliable pecking. No Ss in the noncontingent groups showed reliable responding. Ss in the contingent group with a frequent positive signal also showed no reliable pecking. This result suggests that more than 1 noncontingent group is informative for assessing the role of differential reinforcement probability in the acquisition of auto-shaped keypecking. In particular, a noncontingent group which controls for the frequency of reinforced trials is an appropriate reference group. (21 ref) *Journal abstract*.

6264. Gilbert, R. M. (Addiction Research Foundation, Toronto, Canada) **Meal-size effects on schedule-induced ethanol and water consumption.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 575-577.—Gave 6 male hooded food-deprived rats an unpredictable number of 45-mg pellets every 90 sec during daily 2-hr sessions. Fluid was available for 15 sec in the middle of each 90-sec interval: For 2 Ss the fluid was water, for

2 Ss it was 5% ethanol, and for 2 Ss it was 10% ethanol. When 1 or 5 pellets were being presented, the proportion of all drinking occurring in intervals following the larger meal increased with ethanol concentration. When zero or 1 pellet was being presented, the proportion following the larger meal declined with ethanol concentration. When 1 or 5 pellets were delivered, the differences in proportion largely reflected differences in the number of intervals in which drinking occurred, but when zero or 1 pellet was delivered, the differences in proportion were due mainly to differences in the amount drunk per interval. It is concluded that the role of meal size in schedule-induced polydipsia remains puzzling.—*Journal abstract*.

6265. Gordon, William C. (State U New York, Binghamton) **The use of untrained index response in a conditioned suppression paradigm.** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 452-454.—Describes an index response requiring no prior training and no manipulation of motivational states. An experiment with 48 male albino Sprague-Dawley rats which exemplifies the use of this index response in a conditioned suppression paradigm is reported.

6266. Gruber, Samuel H. & Schneiderman, Neil. (U Miami, Rosenstiel School of Marine & Atmospheric Sciences, FL) **Classical conditioning of the nictitating membrane response of the lemon shark (*Negaprion brevirostris*).** *Behavior Research Methods & Instrumentation*, 1975(Sep), Vol 7(5), 430-434.—5 lemon sharks received 100 daily presentations of light flash as the CS and electric shock as the UCS in a classical conditioning situation. The CRs and UCRs consisted of extensions of the nictitating membrane. Separate control groups of 5 Ss each received either (a) no CS or UCS, (b) CS alone, or (c) completely random presentations of CS and UCS. Few CRs occurred in the experimental group at the outset of conditioning, but the percentage of CRs during the 2nd half of the 1st acquisition session exceeded 95%. Conditioning stabilized above 95% CRs during the last 5 acquisition sessions. These responses could not be attributed to pseudoconditioning, sensitization, or other nonassociative factors. When the experimental group was subsequently given 6 CS-alone sessions, the course of extinction was gradual. Results are similar to those previously obtained during classical conditioning of the nictitating membrane in rabbits. (18 ref)—*Journal abstract*.

6267. Haralson, John V.; Groff, Charlene I. & Haralson, Sally J. (California State U, Los Angeles) **Classical conditioning in the sea anemone, *Cribra xanthogrammica*.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 455-460.—Although earlier attempts to classically condition sea anemones have yielded inconclusive results, using light as CS and shock as UCS in the present study, conditioning as distinguished from sensitization and pseudoconditioning was demonstrated in 30 anemones. Procedural controls included substitution of light alone, shock alone, and random light and shock in place of paired light-shock trials. Responses measured were electrical output and folding of the oral disc. The CR was distinguished from the UCR to light and the UCR to shock in terms of response latency of both electrical and behavioral measures. (17 ref)—*Journal abstract*.

6268. Harrison, Robert G. & Schaeffer, Robert W. (Anclote Manor, Tarpon Springs, FL) **Another test of the Premack principle.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 565-568.—Conducted an experiment which failed to support D. Premack's (1965) assertion that a rate reduction in the reinforcing response of a reinforcement contingency, relative to the precontingency baseline rate of that response, is necessary for the occurrence of reinforcement. Ss were 2 adult female Dublin SDD/DR rats. The implications of the finding for reinforcement theory are discussed, and it is proposed that reinforcement contingencies have potential importance for evaluating animal intelligence.—*Journal abstract.*

6269. Harzem, Peter; Lowe, C. Fergus & Davey, Graham C. (University Coll North Wales, Bangor) **After-effects of reinforcement magnitude: Dependence upon context.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 579-584.—On a fixed-interval schedule with 3 male hooded rats the duration of the post-reinforcement pause was found to be an increasing function of the magnitude of the preceding reinforcer. This relationship was observed when 2 magnitudes were contrasted closely in time, but not when the Ss were trained on each magnitude until the establishment of stable responding. After the behavior was stable, the effect of the magnitude of reinforcement re-emerged when 50% of the scheduled reinforcers were omitted. Thus, the positive relationship between the magnitude of reinforcement and the duration of the post-reinforcement pause depended on the context of presentation of a given magnitude.—*Journal abstract.*

6270. Hilgert, Larry D. & Meunier, Gary F. (Ball State U) **The interaction of deprivation and delay of reinforcement under a fixed-ratio schedule of responding.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 635-637.—Studied interaction of deprivation and delay of reinforcement in an operant framework, using 4 250-day-old food-deprived male Sprague-Dawley rats. They were exposed to a series of conditions within a counterbalanced design. The 4 conditions represented the orthogonal combinations of amount of delay (0 and 10 sec) and levels of deprivation (75 and 85%), with deprived weights adjusted in proportion to those of 6 free-feeding controls. Conclusions concern the finding that the effect of a delay in reinforcement is magnified by an increase in deprivation and the value of searching for such interactive effects in operant research.—*Journal abstract.*

6273. Hulbe, Stewart H. & Campbell, Catherine E. (Johns Hopkins U) **"Thinking ahead" in rat discrimination learning.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 305-311.—If Ss chose S+ in a brightness discrimination in a T-maze, they experienced, on that run

and over 4 forced runs to S+ which followed, a pattern of reinforcement in which quantity of reward in the goalbox increased from 0 to 14 food pellets, decreased from 14 to 0 food pellets, or varied randomly. If Ss erred and chose S-, reinforcement was withheld, and they were forced a 2nd time to 0 reward in the S- goalbox. Ss were 34 female Sprague-Dawley rats. Results indicate that rats readily learn the brightness discrimination under these conditions, the animals exposed to the sequentially increasing pattern learning somewhat slower than the others. This was true in spite of substantial delay of reward. Theoretical accounts based on perseverative inhibitory or facilitatory tendencies, or upon frustration, fail to describe the data accurately. Instead, analysis of the data shows that Ss were accurately anticipating the quantity of reward to be obtained on each run, running fast for large quantities and slowly for small. (20 ref) —*Journal abstract.*

6274. Hyde, Thomas S. & Trapold, Milton A. (Case Western Reserve U) **Effects of reinforcement-paired stimuli on general activity.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 282-286. Performed 2 experiments with a total of 28 male Simonson albino rats to explore the mechanisms responsible for the increase in activity that occurs in response to stimuli which have been paired with reinforcement (S' c R). Exp I showed a sharp increase in activity to S' c R -paired stimuli under conditions in which Ss were not required to perform any instrumental response to obtain the S' c R. This result seemed to rule out reinforcement of instrumental food getting behavior as the mechanism responsible for the learned activity increases. Exp II used an "omission training" procedure to further explore the mechanisms underlying the activity increase. S' c R was omitted on those trials on which activity increases were present during the stimulus. In this condition, no increases in activity were observed during the stimulus. There was, however, the characteristic increase in activity in a yoked-control group which received the same number and distribution of stimulus-paired S' R s. Results of Exp II open the possibility that increases in activity to S' c R -paired stimuli could be due to the adventitious reinforcement of motor behavior rather than the Pavlovian conditioning of a motivational state.—*Journal abstract.*

6275. Kanarek, Robin B.; Adams, Kimberly S. & Mayer, Jean. (Harvard U, School of Public Health, Boston) **Conditioned taste aversion in the Mongolian gerbil (*Meriones unguiculatus*).** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 303-305.—Examined the development of a conditioned taste aversion to a novel food in 12 Mongolian gerbils. Ingestion of an orange-flavored sucrose solution was followed by ip injections of 3 ml/100 g body weight of .15 M LiCl, 4 ml/100 g body weight of .15 M LiCl, or 3 ml/100 g body weight of saline. 2-bottle preference tests between the sucrose solution and water showed that LiCl-injected Ss developed an aversion to the sucrose solution, consuming a significantly smaller percentage of the solution than saline-injected Ss. The aversion was maintained for at least 2 wks following the injection of LiCl. Results extend the conditioned taste aversion phenomenon to another species and stress the importance of this type of

learning in the survival of the animal in its natural habitat.—*Journal abstract.*

6277. King, Glen D. (Auburn U) **The enhancement of schedule-induced polydipsia by FR-20 and FR-80 lick-contingent shock.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 542-544.—7 food-deprived female albino Dublin SDD/DR rats with electrode attachments to the backs of their necks were divided into 2 groups, a FR-20 lick-contingent-shock group (4 Ss) and an FR-80 lick-contingent-shock group (3 Ss). Ss were exposed to 5 successive experimental phases, including (a) a baseline phase during which 100 food pellets and water were freely available; (b) a fixed time 1-min reinforcement schedule phase during which the 100 pellets were delivered intermittently; (c) an FR lick-contingent-shock phase which was the same as the reinforcement schedule phase with the addition that Ss were given a .1-mA .5-sec shock for the 1st 20 or 80 postpellet licks in the interpellet interval; (d) a replication of Phase 2; and (e) a replication of Phase 1. Water intake under intermittent schedules of reinforcement increased when specifically "punished" with the mild electric shock for both groups, with the FR-80 group showing larger increments than the FR-20 group. Increments in water intake associated with shock presentation appeared to be due to an increase in lick-burst length and frequency of initiation of drinking.—*Journal abstract.*

6280. Levitan, Lee. (U Minnesota, Minneapolis) **Tests of the Rescorla-Wagner model of Pavlovian conditioning.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 265-268.—Tested several predictions from R. A. Rescorla and A. R. Wagner's (1972) model of Pavlovian conditioning. For 2 groups totaling 11 male albino rats, each of 2 CS was independently paired with shock until asymptotic suppression developed. They were then presented simultaneously for a 2nd phase: for 1 group, UCS intensity was not changed between phases, while for the 2nd group it was increased. The compound lost associative strength in the 1st group but not in the 2nd. For a 3rd group of 6 Ss, the 1st phase was run using only 1 CS. During compound conditioning, the same UCS was used to reinforce the compound formed by adding a novel CS; no change in suppression was seen during compound conditioning. Other predictions were made concerning additive summation, and these were confirmed, as were predictions concerning a test phase in which the CSs were again presented singly. Evidence strongly supports the Rescorla-Wagner model.—*Journal abstract.*

6281. Maki, William S. (North Dakota State U) **Sustained attention: Stimulus control determined by schedule of cue production interacting with cue duration.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 312-316.—In a study of sustained attention ("vigilance"), 4 experienced White Carneaux pigeons performed a conditional discrimination in a 3-key operant chamber. Pecking a white center key initiated a 0.2- or 2.0-sec cue (a red or green disk). The side keys then displayed white disks, and a peck on the right or left key was reinforced depending on whether the preceding cue was red or green. Pecks on the white center key initiated the cue according to 1 of 2 schedules of cue production (FR 1 or VI 7.5 sec). Control of side key choices by 0.2-sec cues was disturbed by transition from FR 1 to VI 7.5 and recovered after the schedule of cue production changed from VI 7.5 back to FR 1. Control of choices by 2.0-sec cues was not affected by changing schedules of cue production. Rates of pecking the cue were higher than rates of cue-producing responses. (21 ref)—*Journal abstract.*

6282. Marcattilio, A. J. (Colorado State U) **Performance and nonperformance learning under partial reinforcement.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 530-532.—10 male Sprague-Dawley rats were trained to learn a maze in the traditional manner, while a 2nd group of 10 rats was hand-carried through the maze (during pretraining) for an equal number of trials. Throughout the experiment, reinforcement was available on every 3rd trial for all Ss. When Ss in the 2nd group were allowed to traverse the maze in the usual manner during testing, they made fewer errors and exhibited lower running time as compared to the traditionally trained Ss. Furthermore, both groups exhibited fewer errors and lower running times on trials immediately following reinforcement than on reinforced and prereinforced trials. Results suggest that instrumental performance is not a prerequisite for learning.—*Journal abstract.*

6283. McCain, Garvin & Cooney, John. (U Texas, Arlington) **PCE I: The effects of three reward magnitude shifts.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 523-526.—36 male Holtzman rats were run in a straight alley. Groups were given 46 trials to large (L) or small (S) reward. This was followed by multiple shifts so that groups given reinforcement patterns LLLL, LSSL, LSLL, SSSS, SLLS, and LSLS were formed. A significant positive contrast effect was achieved on the 2nd and 3rd shifts to L. In extinction, groups terminating in L were least resistant to extinction.—*Journal abstract.*

6285. Mellgren, Roger L.; Haddad, Nabil F. & Conkright, R. K. (U Oklahoma) **Punishment and resistance to extinction using a within-subjects design.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 388-390.—Administered to 40 male Holtzman rats intermittent punishment (IP) in one alley and continuous food reinforcement (CRF) in a discriminately different alley using a within-S design such that punished-to-reinforced trial transitions occurred to the IP alley or to

the CRF alley. A 3rd group was given IP in both alleys, but punished-to-reinforced trials occurred in only 1 of the alleys. All 3 groups showed increased resistance to extinction relative to a CRF control group (i.e., an intermittent punishment effect). However, the absence of any within-S differences in resistance to extinction failed to support the hypothesis that phenomena produced by partial reinforcement are also produced by the IP procedure. The applicability of partial reinforcement theories to intermittent punishment and the boundary conditions of these theories is considered.—*Journal abstract.*

6286. Mellgren, Roger L.; Haddad, Nabil; Williams, Jerry D. & Conkright, R. K. (U Oklahoma) **Resistance to continuous delay of reinforcement or extinction following partial delay or partial reinforcement in acquisition: A direct comparison.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 459-467.—100 male Sprague-Dawley albino rats received either partial reward (PR) or partial delay (PD) in acquisition with 1, 2, or 3 delay or nonreward trials followed by an immediately rewarded trial or 1 delay or nonreward trial followed by an immediately rewarded trial. These 4 groups were then split in half and given either continuous delay or continuous nonreward (extinction) in a "response persistence" phase. In addition, 2 continuously reinforced groups, one experiencing continuous delay and the other experiencing extinction, were included. Results show that response persistence was greater when PD groups were given continuous delay rather than extinction, but the opposite was true for PR groups. The "length" (1, 2, or 3 vs 1 nonreward or delay trial) also transferred to the response persistence phase with the length 1, 2, and 3 conditions being more persistent than the 1-length conditions. Results are discussed with respect to theoretical notions of response persistence.—*Journal abstract.*

6287. Meltzer, Donald & Howerton, D. Lynn. (Southern Illinois U) **Sequential effects of signaled and unsignaled variations in reinforcement magnitude on fixed-interval performance.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 461-464.—9 hooded rats were reinforced for barpressing on a FI 3-min schedule. Every odd-numbered interval ended with a 2-pellet reinforcement. Even-numbered intervals ended with either a 1- or a 3-pellet reinforcement. During nondiscrimination sessions (i.e., Ss could not predict the number of pellets they would receive) a light was on during the even-numbered intervals; no light was on during the odd-numbered intervals. During discrimination sessions, light plus tone was presented in intervals which ended with 1 pellet, and light plus click was presented during intervals which ended with 3 pellets. Ss were able to discriminate between these auditory stimuli and made more responses during the last half of an interval following a 1-pellet reinforcement during discrimination sessions as compared to nondiscrimination sessions. Results indicate that behavioral contrast was produced by the discriminative stimuli. (22 ref)—*Journal abstract.*

6288. Miller, Laurence & Judd, Susan. (Western Washington State Coll) **Superimposing a stimulus correlated with response independent food on operant behavior using delayed and simultaneous conditioning procedures.** *Bulletin of the Psychonomic Society*,

1975(Nov), Vol 6(5), 481-483.—In a study with 8 male albino rats, a 10-sec stimulus (CS) correlated with response-independent food (UCS) was superimposed on food-maintained leverpressing. The UCS occurred at either beginning, middle, or end of the CS. In the 1st instance, the rate of responding during the CS was less than or greater than the rate in the absence of the CS. In the 2nd instance, the rate of responding during the CS was greatest and also exceeded the rate in the absence of the CS during the initial 5 sec preceding the UCS. During the 5 sec of CS subsequent to the UCS, the rate of responding was less than that in the absence of the CS for most Ss but was greater for some Ss. In the 3rd instance, the rate of responding during the CS was greater than that in the absence of the CS.—*Journal abstract.*

6289. Modaresi, Heidar A. (U California, Riverside) **One-way characteristic performance of rats under two-way signaled avoidance conditions.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 484-497.—In Exp I, the conflict in a 2-way active avoidance was reduced by allowing 32 male albino rats to avoid 1 of 2 levels of shock by running onto a safe platform which covered half of the grid floor. Performance characteristics of 1-way avoidance were obtained regardless of the shock intensity. Groups with no platform showed poor performance. Exp II with 10 Ss suggested that the facilitatory effect of the platforms was not due to the cue associated with platform removal. Results suggest that (a) rats can quickly learn to enter a spatially aversive location, (b) fast avoidance learning may be obtained in a 2-way setting, and (c) rats seem capable of selective association of environmental and aversive stimuli. (20 ref)—*Journal abstract.*

6290. Moore, John N. & McHose, James H. (Southern Illinois U) **The effects of delay of reward on negative contrast effects associated with reductions in reward magnitude.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 497-500.—Reports results of 3 runway experiments with a total of 96 male albino rats in which Ss received a reduction in the magnitude of delayed (15 sec) or immediate reward (8 or 1 food pellets). The experiments differed in the number of pre- and postshift trials (24, 30, or 20 preshift and 18, 30, and 16 postshift trials in Exps I, II, and III, respectively) and in the distribution of these trials over days (all on the same day in Exp I, 1 preshift trial on Day 1, 2 on Day 2, and 3/day thereafter and 15 postshift trials each day in Exp II, and 2 of each per day in Exp III). Results show that in each experiment, reduction in the amount of delayed reward yielded a more pronounced depression of postshift performance than did a comparable reduction in the amount of immediate reward. Data suggest that the extent of the negative contrast effect attending a reduction reward magnitude is greater when all rewards are delayed rather than delivered immediately following the instrumental response. The appropriateness of a "reinforcement level" approach to a theoretical accounting of these findings is noted.—*L. Gorsey.*

6293. Parisi, Thomas & Matthews, T. James. (U Rochester) **Pavlovian determinants of the autoshaped keypeck response.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 527-529.—3 groups of a total of 24 male White Carneaux pigeons were autoshaped to peck a key following 3 pretreatments in which the keypeck was prevented by a barrier which separated the S from the response key and the hopper. The experimental group (Group PR) received explicit pairings of the keylight and the hopper cues, while the control groups received either a random pairing of the keylight and hopper cues (Group RC), or no stimuli (Group CH). Group PR autoshaped most quickly, with Groups CH and RC following in order. A significant difference between Groups PR and RC indicated that the Pavlovian pairing operation is central to the acquisition of the autoshaped keypeck response.—*Journal abstract.*
6294. Powell, Robert W.; Kelly, William & Santisteban, David. (U South Florida) **Response-independent reinforcement in the crow: Failure to obtain autoshaping or positive automaintenance.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 513-516.—In 3 experiments, only 3 of a total of 17 crows developed appreciable responding under autoshaping procedures similar to those which reliably engender responding in pigeons. This occurred despite variations in species of crows (*Corvus brachyrhynchos* or *Corvus ossifragus*), fixed vs variable intertrial interval, duration of intertrial interval, type of reinforcer, level of test chamber illumination, and the presence or absence of a response-reinforcer dependency. 10 Ss were subsequently exposed to shaping through the method of successive approximation, and all were conditioned to keypeck reliably within a relatively brief period. When 3 of these Ss were again exposed to keylight-food pairings (automaintenance), their responding attenuated over time to near the zero level. An explanation of the behavioral differences between crows and pigeons studied under similar conditions is offered, based primarily upon differences in the feeding behavior of the 2 species in their natural environments. (21 ref)—*Journal abstract.*
6295. Robertson, Lynn C. & Anderson, Suzanne C. (U Nevada, Reno) **The effects of differing type and magnitude of reward on the contrafreeloading phenomenon in rats.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 325-328.—Conducted an investigation with 30 Long-Evans pigmented male rats to determine the effects of the magnitude of reward on contrafreeloading, using food or water as reward. 2 quantities were selected for each level of reward quality—a 20-mg-pellet and a 45-mg-pellet food reward and a .01-cc and a .1-cc water reward. 7 days of training were followed by 3 test sessions. There was a significantly higher percent of contrafreeloading demonstrated with food as reward than with water and a higher number of barpresses with small reward than with large. It is argued that a more appropriate measure should include reference to performance during training. In this approach, contrafreeloading with food and water were virtually the same.—*Journal abstract.*
6296. Rose, Guenter H. & Collins, Jeremiah P. (U California, Neuropsychiatric Inst, Los Angeles) **Light-dark discrimination and reversal learning in early postnatal kittens.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 511-518.—During the early postnatal period 12 kittens were trained in a visual discrimination task involving light-dark stimuli to determine the age of onset of visual control of learned behavior. A Y maze was used with escape from water as the reinforcer. Ss were able to master the discrimination within the 5th wk of life. The relevance of this result to electrophysiological measures of maturation is discussed. (20 ref)—*Journal abstract.*
6297. Rosellini, Robert A. & Terris, William. (U Pennsylvania) **Incentive shift in the rat following training to resist punishment.** *Learning & Motivation*, 1975(Nov), Vol 6(4), 421-438.—Used an incentive shift paradigm to test for the similarity of fear and frustration in a total of 150 male Holtzman albino rats. In Exp I Ss trained to resist electric shock punishment showed neither a negative contrast effect nor any performance decrement when reward was shifted from 10 to 1 pellet. Exp II replicated the basic findings of Exp I but also showed that punishment training did not influence the magnitude of performance shift for Ss receiving increases in reward magnitude. Exp III additionally found that Ss sensitized to punishment showed an increase in negative contrast effect. Results support the hypothesized functional similarity between conditioned fear and conditioned frustration with learned persistence or sensitivity to one generalizing to the other as suggested by A. Amsel's (1972) theory of persistence. (29 ref)—*Journal abstract.*

6302. Scavio, Michael J. (California State U, Fullerton) **Classical-classical transfer: CR interactions involving appetitive and aversive CSs and USs.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 475-477. —Conducted a 3-stage transfer experiment to determine whether the compound presentation of 2 CSs, originally paired with UCS with opposite hedonic properties, would influence previously established CR activity in 24 albino rabbits. In the 1st stage, tone-CS and water-UCS presentations were employed to condition the rabbit's jaw-movement response. In the 2nd stage, the nictitating membrane response was conditioned using light-CS and shock-UCS pairings. In the 3rd stage, the tone and light stimuli were successively presented without UCSs and with jaw-movement and nictitating membrane CRs being recorded. Results indicate that prior jaw-movement conditioning disrupted the initial acquisition of the nictitating membrane CR; compound tone and light presentations obliterated jaw-movement performance; and minimal cross-modal generalization of the nictitating membrane CR occurred to the tone on compound CS presentations. Results support opponent-process motivational interpretations of Pavlovian mediational effects. —*Journal abstract.*

6303. Shanab, Mitri E.; Melrose, Saimi & Young, Ted. **The partial reinforcement effect sustained through blocks of continuous water reinforcement.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 261-264. —Attempted to replicate and extend a study by G. E. MacDonald and L. de Toledo (see PA, Vol 53:707) which failed to find a partial reinforcement extinction effect (PREE) under water reinforcement conditioning. 30 thirsty male albino Sprague-Dawley rats received either partial or continuous water reinforcement in Phase I. In Phase II, half of the partially rewarded Ss were shifted to continuous reinforcement while the other half continued to receive partial reinforcement. The continuously reinforced Ss continued to receive the same reinforcement conditions as before. In Phase 3, all Ss underwent extinction. Results show both a highly significant and a sustained PREE. The need for investigation of known behavioral phenomena as a function of different reinforcers is emphasized. (36 ref) —*Journal abstract.*

6304. Sherman, Jack E. & Spitzner, Joseph H. (U Colorado) **Some factors controlling the interaction between response-dependent and response-independent schedules of reinforcement.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 625-628. —Studied response rate interactions in 4 male Sprague-Dawley rats following a shift from (a) a multiple schedule in which 2 stimuli, S_1 and S_2 , were both correlated with response-dependent reinforcement (mult VI 1 min VI 1 min) to (b) a multiple schedule in which S_1 was now correlated with response-independent reinforcement (mult VI 1 min variable time (VT) 1 min). Concomitant with the decrease in the rate of responding in the VT component,

there was a decrease during the VI component. The nature of the interaction suggested that responding appropriate to the VT component may have generalized to the VI component. To test this, in Exp II an effort was made to accentuate the differences between the components of the multiple schedules and consequently to reduce the degree of interaction. For 4 male Sprague-Dawley rats, 2 had a different reinforcer correlated with each component, and 2 had a different response lever correlated with each component. Results of the separate-reinforcer treatment were not consistently different from those of Exp I. The separate-lever treatment, however, resulted in decreased negative induction interaction and lower rates of responding during the VT component. —*Journal abstract.*

6306. Smith, Harriet J.; King, James E.; Witt, Edwin D. & Rickel, John E. (U Arizona) **Sameness-difference matching from sample by chimpanzees.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 469-471. —2 adult chimpanzees were trained on a same-different matching-from-sample task with 5 levels of difficulty. The development of hypotheses by both Ss during each phase was analyzed. In Phase I, both Ss initially showed considerable position and random responding, both of which decreased as correct and $\frac{2}{3}$ -correct responding increased. In all the later, more difficult phases, however, position responding was minimal, random responding characterized the beginning of each phase, and correct responding characterized the end of each phase. —*Journal abstract.*

6307. Staddon, J. E. & Frank, Janice A. (Duke U) **Temporal control on periodic schedules: Fine structure.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 536-538. —Analyzed variations in terminal keypecking in 7 adult male White Carneaux pigeons. All Ss were run on FI-33 sec or FI-120 sec or fixed time schedules of food reinforcement. Sessions terminated after approximately 60 food deliveries. Data suggest that the temporal pattern of the terminal response on periodic schedules depends on when responding begins. Ss responded faster the later in an interval they began responding. —*Journal abstract.*

6308. Stone, James M. & Greenough, William T. (Northwestern U, Medical School) **Excess neonatal thyroxine: Effects on learning in infant and adolescent rats.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 479-488. —Compared neonatally thyroxine-injected ($\mu\text{g/g}$) Sprague Dawley rats with injected and nonhandled controls on passive and active avoidance and a geotactic cold-escape discrimination in 4 experiments with a total of 297 Ss. Thyroxine-injected infant Ss were superior to controls on active avoidance, inferior on passive avoidance, and equal on discriminated escape. Adolescent Ss which had received postnatal thyroxine were inferior to controls in Lashley III maze acquisition whether or not they had received supplementary thyroxine at the time of training. Data suggest that differences in locomotor activity, rather than in learning ability, account for early

behavioral effects and that changes other than endocrine disturbances account for the adult deficits. Results are compatible with previous contentions that excess neonatal thyroxine disrupts the timing of brain development. (29 ref)—*Journal abstract*.

6309. Tarpay, Roger M. & Sawabini, Frederick L. (Bucknell U) Stimulus facilitation of delayed reward performance as a function of the cue's spatial position. *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 385-387.—Administered 30 shock escape trials with a 3-sec delay of shock offset to 30 Sprague-Dawley rats. A light cue presented during the delay facilitated performance significantly more when the light was located over the lever as opposed to being located on the opposite wall. It is concluded that orientation, in part, plays a significant role in determining the extent to which cues facilitate delayed-reward performance.—*Journal abstract*.

6310. Thomka, Michael L. & Rosellini, Robert A. (DePaul U) Frustration and the production of schedule-induced polydipsia. *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 380-384.—Conducted 2 experiments with a total of 42 male Holtzman rats to test the hypothesis that frustration mediates the production of schedule-induced polydipsia. In Exp I, a group in which reward was reduced from 6 to 2 pellets of food in an operant chamber was found to increase water intake compared to a group maintained at 2 pellets reward. In Exp II, Ss trained to approach food on a partial reinforcement schedule in a runway subsequently showed lower levels of water intake in the operant test for polydipsia than Ss given continuous reinforcement during runway training. Results are interpreted as supporting a frustration hypothesis of schedule-induced polydipsia and are discussed within the context of persistence theory. (28 ref)—*Journal abstract*.

6311. Timberlake, William & Grant, Douglas L. (U Indiana, Bloomington) Auto-shaping in rats to the presentation of another rat predicting food. *Science*, 1975(Nov), Vol 190(4215), 690-692.—Used a live rat fastened to a platform as a predictive stimulus (PS) for food. Based on a stimulus substitution hypothesis, it was predicted that rat Ss should treat the predictive rat as food, gnawing or biting it; however, since social behavior elicited and supported by the PS is also potentially related to feeding, Ss would also be expected to incorporate the PS into a social feeding pattern, increasing their frequency of approach and social contact. Behaviors of an experimental group of 5 male albino Wistar rats were compared with those of 3 control groups of 5 rats each. During acquisition Ss received 30 10-sec presentations of the PS on a variable time schedule with a mean interstimulus interval of 60 sec. For the experimental Ss each presentation of the CS was followed by a food pellet; the other groups either received a block of wood as the PS or no food or a combination of treatments. Results show that rats can be autoshaped to approach and contact a live rat, but not a block of wood, which predicts the delivery of food. The form of contact with the PS could not be predicted from the stimulus substitution hypothesis, but depended on the nature of both the PS and the reward. It is suggested that autoshaped behavior reflects the conditioning of a

system of species-typical behaviors commonly related to the reward, and that behavior in the presence of the PS will depend on which behaviors in the conditioned system are elicited by the PS.—*L. Gorsev*

6312. Todorov, Joao C. & Ferreira, Julio R. (U Brasilia, Brazil) Reinforcement parameters and schedule interaction: Performance maintained by multiple schedules. *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 652-654.—Conducted an experiment with 4 male adult pigeons from uncontrolled derivations of *Columba livia*. Keypecks were maintained under a multiple VI, VI schedule of reinforcement. Changes in response rates in both schedule components were observed for conditions where reinforcement frequency and magnitude (duration of access to food) differed between components. Reinforcement frequency was more potent than reinforcement magnitude in determining response rate, but the effects of both variables depended also on component duration and on presence or absence of time-out separating components.—*Journal abstract*

6313. Topping, Jeff S. & Ford, Thomas W. (Mississippi State U) A within-subject comparison of three response-elimination procedures in pigeons. *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 257-260.—Compared the response-eliminating properties of omission training, extinction training, and a variable-time schedule in 6 male White Carneaux pigeons after training on a VI schedule. Results indicate that both omission training and extinction training eliminated responding significantly more efficiently than did the variable-time schedule, although they did not differ significantly from each other in their response-eliminating effects. In addition, response rates during the variable-time schedule tended to increase above baseline (i.e., positive behavioral contrast) in all Ss by the end of training. (20 ref)—*Journal abstract*.

6314. Uhl, Charles N. & Eichbauer, E. Arthur. (U Utah) Relative persistence of avoidance and positively reinforced behavior. *Learning & Motivation*, 1975(Nov), Vol 6(4), 468-483.—In Exp I with 12 male albino rats and in Exp II with 16 White Carneaux pigeons, Ss were trained on a schedule in which identical response dependencies applied to intermittent receipt of positive reinforcement (PR) for 1 group and avoidance (AV) of shock for a 2nd group. After obtaining comparable stable training performance for groups PR and AV, persistence tests were conducted with a traditional extinction (EXT) procedure vs response-independent (FREE) delivery of positive reinforcers or shocks. In both experiments, response elimination was rapid in EXT for groups PR and AV, and responding tended to be maintained in groups PR and AV in the FREE persistence test. Results contradict the widely held assumption that avoidance behavior is unusually resistant to extinction, and they call for a reexamination of elimination of avoidance responding. (25 ref)—*Journal abstract*.

6315. Wagner, Allan R. & Terry, William S. (Yale U) Backward conditioning to a CS following an expected vs. a surprising UCS. *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 370-374.—Trained 29 male New Zealand White rabbits in eyelid conditioning with a

"backward" arrangement of UCS followed by CS. When such a CS was tested alone it was observed to produce substantial conditioned responding if the UCS had been arranged to be "surprising" during the backward pairings but not if it had been arranged to be "expected". The comparisons were made in a within-Ss design where the surprisingness of the UCS on the different pairing occasions was manipulated by preceding the UCS by discriminative CSs which were otherwise either never followed by the UCS (CS-) or consistently followed by the UCS (CS+). Results may have implications for the nonmonotonic course of responding seen during backward conditioning, as a UCS is at first surprising, but then expected on the basis of contextual cues. (19 ref)—*Journal abstract*.

6316. Warren, J. M. (Pennsylvania State U) **Overtraining, extinction, and reversal learning by kittens.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 340-342.—2 groups of kittens ($N = 26$) received 0 or 112 overtraining trials after learning a brightness discrimination. Both groups underwent extinction of differential choice responses and then learned the reversed brightness discrimination. Overtrained and nonovertrained Ss did not differ significantly in rate of reversal learning, and both groups showed a significant preference for the old positive stimulus when differential reinforcement was reinstated in reversal training. According to N. S. Sutherland and N. J. Mackintosh (1971) these results show that kittens lack stable attention and should be inept in dealing with reversal and probability problems. This is not the case, raising doubts about the adequacy of their account of interspecies differences in learning by vertebrates.—*Journal abstract*.

6317. Weiss, Stanley J. (American U) **Additive summation by stimulus compounding irrespective of behavioral contrast during discrimination training: An investigation with positive reinforcement and avoidance schedules.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 359-369.—The similarity in the discrimination training leading to behavioral contrast and that preceding tests producing response enhancement to combined discriminative stimuli suggested that the 2 phenomena might be related. This was investigated by determining if contrast in discrimination training was necessary for this outcome of stimulus compounding. A total of 14 male hooded rats were used in 2 experiments. Responding to tone, light, and to the simultaneous absence of tone and light ($T + L$) was maintained during baseline training by food reinforcement in Exp I and by shock avoidance in Exp II. During subsequent discrimination training, responding was reduced in $T + L$ by programming nonreinforcement in Exp I and safety or response-punishment in Exp II. In Exp I, 1 S exhibited positive behavioral contrast (e.g., tone and light rates increased while his $T + L$ rate decreased). In Exp II, Ss punished in $T + L$ showed contrast in tone and light, this being the 1st demonstration of punishment contrast on an avoidance baseline with rats. During stimulus compounding tests, all Ss emitted more response to tone-plus-light than to tone or light (additive summation). An analysis of the terminal training baselines suggests that the factors producing these results seem unrelated to whether or not contrast occurred during discrimination

training. It is concluded that the stimulus compounding test reveals the operation of the terminal baseline response associations and reinforcement associations conditioned on these multicomponent free-operant schedules of reinforcement. (34 ref)—*Journal abstract*.

6318. Zaborik, Donna M. & Bean, Carol A. (Cornell U) **Resistance of "recovery" flavors to later associations with illness.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 309-312.—Gave 3 groups of a total of 30 male CD rats 4 days of exposure to saccharin solution: for the recovery group, exposure to saccharin was paired with recovery from thiamine deficiency; the Familiarity group was given saccharin without experiencing either illness or recovery from illness; the Recovery-Familiarity group was given saccharin after recovering from thiamine deficiency. When these groups were later given saccharin solution followed by an ip injection of .3 M LiCl, only the Familiarity and Recovery-Familiarity groups showed a strong long-lasting aversion to saccharin solution. Results are discussed in relation to the previously observed effects of novelty on food preferences and taste aversions in the rat.—*Journal abstract*.

6319. Zolman, James F.; Pursley, David G.; Hall, Joyce A. & Sahley, Christie L. (U Kentucky, Medical Ctr) **Form preferences in successive discrimination learning of young chicks.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1180-1191.—In 4 experiments the effects of form and orientation pecking preferences of a total of 100 1- and 3-day old Vantress X Arbor Acre chicks on successive discrimination learning were determined using heat reinforcement. Results indicate that (a) the young chick has both circle and vertical orientation pecking preferences that are present during at least the 1st 3 days after hatching; (b) when either of these preferred cues is the nonreinforced cue, the young chick has difficulty in learning not to respond to it but learns quickly not to respond to an unpreferred cue; and (c) these pecking preferences can be modified by heat reinforcement, and the effects of this conditioning is evident in subsequent extinction and retention tests. It is concluded that form and orientation preferences, like brightness and color preferences, are important developmental constraints on conditioning of the young chick. (31 ref)—*Journal abstract*.

Social & Instinctive Behavior

6320. Adamec, Robert. (Dalhousie U, Halifax, Canada) **The behavioral bases of prolonged suppression of predatory attack in cats.** *Aggressive Behavior*, 1975, Vol 1(4), 297-314.—Investigated the behavioral differences between rat-killing cats and non-rat killers. Ss were a total of 44 male mongrel cats. Killers and nonkillers were found to fall at opposite ends of a continuum of predisposition to respond defensively to a variety of environmental threats. Nonkillers were most defensive, displaying aggressive-defensive predatory attacks in contrast to the aggressive attacks of killers. Data support the hypothesis that suppression of killing among non-rat killers is the result of an enhanced sensitivity to external threat.—*Journal abstract*.

6321. Ader, Robert. (U Rochester, Medical & Dental School) Competitive and noncompetitive rearing and shock-elicited aggression in the rat. *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 337-339.—Beginning at 21 days of age, rats were housed 10 per cage in a competitive environment (a large cage containing a single food and water source) or a noncompetitive environment (a large cage containing multiple food and water sources). At maturity, matched pairs of Ss from within a single rearing cage were tested for shock-elicited fighting over 5 100-trial sessions. In each of 2 experiments, Ss reared in the noncompetitive environment displayed more aggressive behavior than Ss reared in the competitive environment.—*Journal abstract*.
6322. Alvarez, Fernando. (Estación Biológica de Doñana, Seville, Spain) Social hierarchy under different criteria in groups of squirrel monkeys, *Saimiri sciureus*. *Primates*, 1975(Dec), Vol 16(4), 437-455.—Results of a study with 12 squirrel monkeys in 2 groups, indicate that under different criteria the individual members of the groups showed different social capacities. The ranking of the Ss was much the same for restraining and genital display. The hierarchies for approaching and following fitted well with each other, showing few similarities with the above 2. Location of individual ranks for withdrawing tended to be the opposite to that of approaching and following. Restraining and genital display showed quasi-linear hierarchies, with males on top and females at the bottom of them. For approaching, following, withdrawing, and genital inspection the results varied from quasi-linear structure to circular or even unisexual arrangement. As a rule the animals behaved towards partners close in rank to themselves. Several individual roles could be isolated: an alpha male role, directing restraining and genital display to all other partners more frequently than any of them towards him, basing his ability more in adequate distribution of total performance among social partners than in high total frequency; an omega male role under the same criteria, whose function would be to connect with the hierarchy of females; and a scapegoat role, a very passive female receiving all kinds of attention from most Ss. (17 ref)—*Journal abstract*.
6323. Alvarez, Fernando. (Estación Biológica de Doñana, Seville, Spain) Conditions of observation and social distance in groups of squirrel monkeys, *Saimiri sciureus*. *Primates*, 1975(Dec), Vol 16(4), 465-470.—Studied 12 squirrel monkeys to investigate the influence of observation conditions on social distance between Ss in captivity. Results indicate that with observer visible to the animals and recording by talking into a tape recorder, Ss did not show a consistent pattern of social distance as reflected by actual space and frequency of bodily contacts, whereas when the observer was concealed, looking through a 1-way vision screen and recording silently by marking on paper, Ss tended to group in unisexual clusters, with that of the females showing higher cohesiveness.—*Journal abstract*.
6324. Barefoot, John C.; Aspey, Wayne P. & Olson, James M. (Carleton U, Ottawa, Canada) Effects of partner novelty on affiliation in the rat. *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 655-657.—Three experiments, with a total of 92 male albino Sprague-Dawley Ss, explored the relationship between novelty and affiliation in rats. In Exp I Ss housed either alone or in pairs were tested for 5 consecutive days with either the same partner or a stranger each day. Partner novelty led to more mutual approach than did familiarity, but only among individually housed Ss. However, a sampling difference existed between 1 of the paired-housed groups and the other Ss. Therefore, only paired-housed Ss were used in Exp II employing the same procedure. Familiar S pairs affiliated less than did pairs of strangers. In Exp III, Ss run for 1 day with a stranger again showed more mutual approach than did pairs of cagemates. Results suggest that rats discriminate between individual conspecifics in making affiliative choices and that their choices are based on a preference for novelty.—*Journal abstract*.
6325. Bert, J.; Balzamo, E.; Chase, M. & Pegram, V. (Inst de Neurophysiologie et de Psychophysiologie, Marseilles, France) The sleep of the baboon, *Papio papio*, under natural conditions and in the laboratory. *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 657-662.—Studied the sleep pattern of 16 baboons under 2 conditions: (a) in a laboratory at Marseilles with S immobilized in a restraining chair in a soundproof cubicle; (b) in an African reserve, with Ss housed in a large cage placed in its natural environment. Sleep in the laboratory was longer (by 24 min) and richer in stage 3 and paradoxical sleep. In Africa, however, there was much more stage 1 sleep, it was more fragmented, and stages 2 and 3 and paradoxical sleep episodes were of shorter duration. Records made in Africa indicate that sleep is independent of slight environmental changes (day length, brightness of the moon, variations in temperature, calls of predators). But the comparison of the 2 series of results reveals the reorganization which occurred when the S was exposed to such different conditions. This adaptation to the environment affected, unequally, the various slow sleep stages and paradoxical sleep. In fact, the major modifications occurred in stages 1 and 3 of slow sleep and in paradoxical sleep, while stage 2 appeared to constitute the stable, unmodifiable nucleus of sleep.—*Journal summary*.
6326. Blakemore, Colin & Cummings, Rosalyn M. (U Cambridge, Physiological Lab, England) Eye-opening in kittens. *Vision Research*, 1975(Dec), Vol 15(12), 1417-1418.—Presents observational data from 61 kittens which show that natural eye-opening occurs between 3 and 12 days after birth, well before the "sensitive" or "plastic" period (from 3 to 14 wks after birth), during which monocular deprivation causes permanent changes in cortical binocularity, with consequent behavioral deficits.
6327. Blanchard, Robert J.; Fukunaga, Kenneth; Blanchard, D. Caroline & Kelley, Michael J. (U Hawaii) Conspecific aggression in the laboratory rat. *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1204-1209.—In 2 experiments, attacks by dominant colony males of a domesticated rat strain (Sprague-Dawley; $N = 48$) on conspecific strangers introduced into the colony included both a full range of threat displays and actual biting attack. These dominant males attacked and bit both anesthetized and unanesthetized

strangers, but threat displays and bites to anesthetized rats were limited. Lesions resulting from these bites were nonrandomly distributed, with most damage to the head and upper back and very few bites to ventral surfaces. When introduced strangers were left in the colonies for several days, 66% were killed, indicating that domesticated rats are capable of lethal attacks on conspecifics without external provocation.—*Journal abstract.*

6328. Box, Hilary O. (U Reading, England) **A social developmental study of young monkeys (*Callithrix jacchus*) within a captive family group.** *Primates*, 1975(Dec), Vol 16(4), 419-435.—Quantitative data were collected on the behavior of one captive family group of common marmoset monkeys over approximately 6 mo, which included a period immediately before the birth of a 3rd set of twins, and up to the birth of the 4th set. Data were consistently collected on marking, autogrooming, and social grooming, and on 3 general categories of play behavior. In addition, observations were recorded on the carrying of infants by other members of their family, until the end of the 4th wk after the birth. The study demonstrated quantitative changes in the behavior of the juvenile and adult members of the family, and indicated the time scale of increasing involvement of the youngest monkeys in some of the major patterns of behavior in the life of a family social unit.—*Journal abstract.*

6329. Crews, David P. (Rutgers State U) **Social factors associated with the male in the control of reproduction in the female lizard *Anolis carolinensis*: The role of courtship and aggression.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2892-2893.

6330. Davis, Stephen F. et al. (Austin Peay State U) **Contrafreeloading as a function of early environmental rearing conditions.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 595-597.—Reared 4 groups of 9 male albino Holtzman rats for 45 days in 1 of 4 environments (2 enriched, a normal, and a deprived, respectively). Following the rearing period, all Ss were administered an 11-day training-testing session consisting of exposure to free food, barpress training, and choice between obtaining food freely or via barpressing. Results indicate that Ss reared in the deprived environment preferred to barpress significantly more than all other groups. Attention is directed toward a consideration of manipulatory behavior in explaining the results.—*Journal abstract.*

6331. Dippner, Robert F. (Northeastern U) **Dark adaptation in the American red squirrel.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2965.

6333. Emory, G. R. (San Diego State U) **Comparison of spatial and orientational relationships as manifestations of divergent modes of social organization in captive groups of *Mandrillus sphinx* and *Theropithecus gelada*.** *Folia Primatologica*, 1975, Vol 24(4), 293-314.—Studied a group of 5 mandrills and a group of 5 gelada monkeys in a zoo. Major topics were modes of attention, centripetal vs acentric social organization, and use of space. Visual attention and bodily orientation to the dominant male, as well as group cohesion were more

intense among the centripetal geladas. Six species of Old World monkeys are compared in terms of their social organization, morphology, behavior, and ecology. (57 ref)—*W. K. Redican.*

6334. Emory, G. R. (Uffculme Clinic, Birmingham, England) **The patterns of interaction between the young males and group members in captive groups of *Mandrillus sphinx* and *Theropithecus gelada*.** *Primates*, 1975(Sep), Vol 16(3), 317-334.—Studied the child-rearing climate of *Mandrillus sphinx* (mandrills) and *Theropithecus gelada* (geladas) for 2 wks in a zoo situation. The social interactions between the young male of each group and their respective group members are described and examined in detail, noting similarities and differences. Possible factors affecting the findings are suggested (notably small sample size, age differences, and group compositional differences). (16 ref)—*Journal abstract.*

6335. Estep, D. Q.; Lanier, D. L. & Dewsbury, D. A. (U Florida) **Copulatory behavior and nest building behavior of wild house mice (*Mus musculus*).** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 329-336.—Examined the copulatory and nest building behaviors of wild house mice in an attempt to study the effects of domestication on these behaviors. In Exp I, 17 male and 17 female Ss were observed on 68 tests of copulatory behavior, each carried to a satiety criterion of 90 min with no intromissions. The basic copulatory pattern was found to be identical to that of domesticated strains of house mice. However, the wild housemice appeared more extreme in certain of the quantitative aspects of copulatory behavior than most inbred strains. In Exp II, 9 male and 10 female wild house mice and 10 male and 10 female C57BL/6J inbred house mice were tested for nest building behavior for 28 consecutive days. The nest building of wild house mice appeared similar to that of most domesticated house mice, although wild house mice used less cotton in building than did domesticated animals. (34 ref)—*Journal abstract.*

6336. Flannelly, Kevin & Lore, Richard. (Rutgers State U, Douglass Coll) **Dominance-subordinance in cohabiting pairs of adult rats: Effects on aggressive behavior.** *Aggressive Behavior*, 1975, Vol 1(4), 331-340.—Following an initial intruder aggression test, 10 pairs of adult male rats matched on aggressiveness were formed. The 1st 20 min of paired cohabitation were used to determine dominance and subordinance between pair members. Residents judged to be dominant from this observation session gained significantly more weight during cohabitation and exhibited significantly more aggression on the 2nd aggression test than their subordinate counterparts. Significant correlations among various measures of aggression were found, but open field performance did not correlate with the measures of aggression nor did changes in open field scores reflect changes in aggression. (17 ref)—*Journal abstract.*

6337. Fuselier, Penelope H. (Louisiana State U and A&M) **Status as a variable in determination of social entrainment.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2966-2967.

6338. Gouzoules, Harold. (U Wisconsin, Madison) **Maternal rank and early social interactions of infant stumptail macaques, *Macaca arctoides*.** *Primates*, 1975(Dec), Vol 16(4), 405-418.—The social interactions

of 6 infant stump-tail macaques in a captive colony. *Journal of the American Association of University Professors*, 1975(Sep), Vol 6(3), 295-316.

the infants are described, and paternal behavior directed toward infants is discussed. Episodes in which a male appeared to use a baby to regulate his behavior with another monkey ("agonistic buffering") are described. Significant correlations were found between paternal behavior and the following factors:

- (a) number of submissive behaviors received, (b) amount of social contact, (c) amount of time spent in contact with infants, and (d) amount of time spent in contact with infants who were not his own.

6339. Gregory, Estelle. (California State U., Los Angeles) A hamster by any other name is still not a rat. *Developmental Psychology*, 1975(Nov), Vol 8(6), 573.

While studies of the effects of food deprivation on behavior have been conducted with rats, hamsters, and gerbils, no studies have been conducted with hamsters. The present study was designed to determine whether constant weight gain is necessary to maintain normal behavior. But once the weight gain was 10%, the hamster may have to be deprived to 50% of body weight before it will seek food.

6340. Hall, David F. & Latané, Bibb. (Ohio State U.) Acceptance and preference for inter- and intraspecies social contacts in rats. *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 245-247.—Compared social attraction to stimulus rats or gerbils tethered in an open field in single stimulus (social acceptance) conditions to the proportion of time spent in contact with each stimulus animal in a 2-stimulus (preference) condition. 36 male Sprague-Dawley rats served as Ss. Stimulus rats were both more accepted and preferred than gerbils, and a greater proportion of total contact time was given to rats in the 2 stimulus condition. The presence of either a stimulus rat or of a stimulus gerbil in the open field had significant fear reducing properties for rat Ss, but rats were more effective than gerbils. Results suggest that social contact is regulated but, as with food preferences, there is an affective element in social attraction in rats. (15 ref.)—*Journal abstract*.

6341. Izawa, Kosei. (Japan Monkey Ctr., Inuyama, Japan) Foods and feeding behavior of monkeys in the upper Amazon basin. *Primates*, 1975(Sep), Vol 16(3), 295-316.—Twice for a total of 16 mo, the foods and feeding behaviors were studied for 10 species of monkeys, particularly in the 2 study areas established in the basin of the River Peneya. 67 adult monkeys were collected for morphological study, and an analysis was made of their stomach contents. Some characteristics of food habits were made clear by means of direct observations in the wild and the analysis of the stomach contents. (20 ref.)—*Journal abstract*.

6342. Kaufman, I. Charles. (U. Colorado, Medical Ctr., Primate Lab for Bio-Behavioral Studies, Denver) Learning what comes naturally: The role of life experience in the establishment of species typical behavior. *Ethos*, 1975(Sum), Vol 3(2), 129-142.—Advances the general thesis that species are predisposed to learn more easily from species-typical life experiences. With respect to the 2 types of macaques studied, the thesis states more specifically that the differences in social relations and particularly in maternal behavior are the particular species-typical life experiences that are crucial to the

social development of infants in each species so they grow to maturity. *Journal abstract*.

6343. Ley, Ronald. (State U. New York, Albany) Open field behavior, emotionality during fear conditioning, and fear motivated instrumental performance. *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 608-610.—Made open-field activity and open-field defecation measures of 84 male young-adult hooded rats prior to a series of 35 fear-conditioning trials. Although activity and defecation were not correlated, defecation measures made during fear conditioning were found to be negatively correlated with open-field activity and positively correlated with open-field defecation. Findings are interpreted as support for the hypothesis that open-field emotionality is an index of general drive. Subsequent studies are suggested.

6344. Lonowski, Daniel J.; Levin, Robert A. & Larson, Scott D. (Southern Illinois U., Carbondale) Mouse killing and carrying by Maudsley and Long-Evans strain rats. *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 629-631.—Investigated the incidence of mouse killing and carrying in 3 strains of rats. Both sexes of the Maudsley reactive, Maudsley nonreactive, and Long-Evans rats served as Ss, totaling 189. The highest incidence of killing was observed among male reactives (44%), a intermediate incidence in Long-Evans males (24%), and a low incidence in the Maudsley nonreactive males (8%). Female reactives, female Long-Evans, and female nonreactives showed similar low incidences of killing (14%, 13%, and 11%, respectively). Male and female nonreactives and female reactives showed the highest percentages of carrying (78%, 87%, and 81%, respectively) with male reactives at an intermediate percentage (48%).

6345. Morgan, Michael & Elinor, Dorothy. (U. Cambridge, England) Incentive motivation and behavioral inhibition in socially-isolated rats. *Physiology & Behavior*, 1975(Oct), Vol 15(4), 405-409.—10 female hooded Wistar rats reared from weaning in social isolation made more lever presses than 20 controls on an alternating 2-lever DRL schedule of reinforcement and obtained fewer rewards. Isolates showed an increased tendency both to anticipate reward on the correct lever and to persevere on the lever which last gave reward, but their anticipatory deficit was relatively more marked. It is suggested that isolates act as if under an effectively higher level of food motivation. Measurement of home-cage food intake showed that the normal daytime depression of food intake was less marked in isolates than in socially grouped Ss. (21 ref.)—*Journal abstract*.

6346. Potegal, M.; Marotta, R. & Gimino, F. (NY State Psychiatric Inst., New York) Factors in the waning of muricide in the rat: I. Analysis of intra- and intersession decrement. *Aggressive Behavior*, 1975, Vol 1(4), 277-290.—Studied 11 Long-Evans hooded rats to determine whether muricide decrements in Ss demon-

strated (a) faster decreases in successive sessions and (b) "dishabitation." It was found that if each mouse killed by an S was removed from the rat's home cage and replaced immediately by another live mouse, the rate of killing declined within 1- and 3-hr sessions. Muricide could not then be dishabituated by either a "nonspecific" stimulus (a loud noise) or a specific change in target characteristics (a frog substituted for the mouse). By systematically varying intersession intervals, it was shown that 1 hr of ad lib killing produced a monotonically decreasing suppression of muricide over the succeeding 96 hrs. Ss performed an interesting kind of forward digging which was influenced by both dishabituating stimuli and killing; this may be a form of displacement behavior. (22 ref)—*Journal abstract*.

6347. Reynierse, James H. & Gleason, Kathryn. (Old Dominion U) **Determinants of planarian aggregation behavior.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 343-346.—Using a filter technique, 5 experiments with approximately 548 planarians examined the role of chemical and visual cues in recruiting individual planarians to established aggregations. Results indicate that *Cura foremani* depend upon a combination of chemical and visual cues, while *Planaria dactyligera* depend almost entirely on chemical cues for aggregation formation.—*Journal abstract*.

6348. Rowell, Thelma E. (U California, Berkeley) **Growing up in a monkey group.** *Ethos*, 1975(Sum), Vol 3(2), 113-128.—Theorizes that social development of primates is a process that continues throughout life, and that younger animals can alter the behavior of older ones as well as vice versa. Infants bring highly specific infantile stimuli to an interaction, and while they are learning about older animals, they may themselves be contributing to the social development of their partners. Juveniles learn the traditional customs of their troop concerning diet, routes, and dangers. In return they enlarge the tradition as during their characteristic exploratory play they discover new properties of the environment which may be learned from them by older kin. It is in terms of such reciprocal relationships that the selective advantage of living in close-knit permanent troops may be understood.—*Journal abstract*.

6349. Scott, J. P. (Bowling Green U, Ctr for Research on Social Behavior) **Violence and the disaggregated society.** *Aggressive Behavior*, 1975, Vol 1(3), 235-260.—Reviews the evidence that social disaggregation is a major cause of destructive violence in nonhuman animal societies. The multifactorial theory of agonistic behavior is modified into a polysystemic theory which relates factors on each level to each other in an integrated model. It is suggested that disaggregation of systems on any level may lead to maladaptive violence. Disaggregations of ecosystems and social systems are more probable and hence more dangerous than those of physiological and genetic systems. Applications of these findings to human affairs are discussed, both as explanations and as guides to positive action. (84 ref) *Journal abstract*.

6350. Singh, Mewa. (U Mysore, India) **Mother-infant separation in rhesus monkey living in natural environment.** *Primates*, 1975(Dec), Vol 16(4), 471-476.—4 mothers were separated from the infants in 2 free-ranging groups of rhesus monkeys. Infants were ob-

served for 3 stages: preseparation, separation, and postseparation. Separation caused a marked decrease in play in the infant. Crying and restlessness increased. During postseparation, a significant increase in mother's approach behavior towards the infant was observed. Results are similar to those of laboratory studies done by B. Seay et al (1937).—*Journal abstract*.

6351. Strayer, F. F.; Taylor, M. & Yanciw, P. (York U, Downsview, Canada) **Group composition effects on social behaviour of captive squirrel monkeys (*Saimiri sciureus*).** *Primates*, 1975(Sep), Vol 16(3), 253-260.—Feral and semiferal squirrel monkeys form sexually segregated subgroups. Observation of social interaction among more than 20 laboratory animals revealed significant differences in social behavior as a function of group composition. Females were more active in unisexual groups. They engaged in more affiliative behavior and were less often the target of agonistic attack. Adult females with young avoided adult males. "Aunts" and nulliparous females initially avoided these same males, but later spent over 50% of their time in close proximity to them. Results are discussed in terms of squirrel monkey social ecology, and successful child rearing.—*Journal abstract*.

6353. Warner, Robert R.; Robertson, D. Ross & Leigh, Egbert G. (U California, Santa Barbara) **Sex change and sexual selection.** *Science*, 1975(Nov), Vol 190(4215), 633-638.—Uses research on the reproductive biology of bluehead wrasse (*Thalassoma bifasciatum*), a labrid fish, to present a unified mathematical theory, in terms of selection of individuals, of the circumstances favoring sex change. The disadvantage of changing sex, the conditions that reverse this disadvantage, and the optimum age of changing sex when one sex does gain fertility more rapidly than the other are examined. The phenomenon is also studied of male dimorphism, involving small nonterritorial males and large territorial ones, that arises when a runaway sexual selection among members of the transformed or older sex (usually male) permits a small difference in size or age to confer a disproportionate difference in fertility. Field observations are reported. The mathematics suggest that animals should change sex if one sex gains in fertility much more rapidly with age than the other, although the costs of changing the reproductive anatomy of animals which practice internal fertilization or whose females are viviparous or bear large eggs may be enormous. (24 ref) *L. Gorsey*.

6354. Wells, Robert N. & Cone, Al L. (Lynchburg Training School & Hosp, VA) **Changes in the burst lick rate of albino rats as functions of age, sex, and drinking experience.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 605-607.—Conducted 2 studies to investigate momentary lick rate in the albino rat as a function of age. Charles River Ss were used. In Exp I, 24 Ss were tested at 25, 35, and 55 days of age in a longitudinal design. In Exp II, 2 additional groups of 24 Ss each were tested, one only at 35 days and the other only at 55 days, to complete a cross-sectional design at

the 3 ages. Lick rate developed linearly as a function of age except that cross-sectional males were somewhat slower at 55 than 35 days. Findings are consistent with an earlier report by A. A. Cone et al (1975) that uninterrupted lick rates provide a sensitive measure for dipsogenic treatments and are in direct conflict with earlier reports that infant rats lick at adult rates.—*Journal abstract.*

6358. Fite, Katherine V. & Rosenfield-Wessels, Sheila. (U Massachusetts, Amherst) A comparative study of deep avian foveas. *Brain, Behavior & Evolution*, 1975, Vol 12(1-2), 97-115.—The foveas of 9 avian species, initially selected for the presence of a deep fovea and representing a wide range of eye sizes and ecological habits, were studied with quantitative light microscope techniques. Considerable variation was observed in the location and configuration of the avian foveas, although they appeared to be "convexiculate" in shape when compared with the fovea of the rhesus monkey. Comparisons of foveal cell densities (receptor nuclei and ganglion cells) across species showed an increase in the average number of cells/visual degree with increasing eye size; similarly, an increase occurred in receptor nuclei relative to ganglion cell density. Thus, smaller eyes showed a coarser retinal grain and a lower "coincidence ratio" of receptors to ganglion cells than was found in the largest eyes. 2 foveas were seen in the red-tailed hawk, the goshawk, sparrow hawk, and least tern. The central fovea was more differentiated, with greater densities of both receptor nuclei and ganglion cells than was observed in the temporal fovea of the same species. Further conclusions, particularly with respect to potential visual acuity, await quantitative measurements of foveal cone densities across species. (41 ref)—*Journal abstract.*

Neurology & Electrophysiology

6365. Adamec, Robert E. (Dalhousie U, Halifax, Canada) The neural basis of prolonged suppression of predatory attack: I. Naturally occurring physiological differences in the limbic systems of killer and non-killer cats. *Aggressive Behavior*, 1975, Vol 1(4), 315-330.—Studied 12 rat-killing cats and 14 non-rat killing cats to establish an index of neural function of the amygdala related to its long-term inhibitory function in preying. The epileptic excitability of the basolateral amygdala was found to correlate with differences in predatory and defensive predisposition of killers and nonkillers. The threshold for elicitation of afterdischarge (ADT) in the amygdalas of killers was higher than the ADTs of nonkillers. Furthermore, non-rat killers with the lowest ADTs had the weakest attack tendencies and were most sensitive to a variety of environmental threats in addition to those posed by prey. These differences in excitability were not found in control areas lateral to the amygdala or in the ventral hippocampus. The possibility that ADT is a behaviorally relevant measure of a long-term predatory suppression function of the amygdala is discussed.—*Journal abstract.*

6366. Baugher, Daniel M. (Rutgers State U, New Brunswick) An examination of the nonspecific skin resistance response. *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 254-256.—Investigated various aspects of the nonspecific skin resistance response in 34 male undergraduates. Nonspecific activity was directly related to subjective reports of arousal and performance in a vigilance task, indicating that it may be a useful measure of arousal. In addition, the stability of nonspe-

cific activity was relatively high across similar experimental conditions but was rather low across dissimilar conditions, suggesting that this activity does not possess any strong "trait-like" characteristics.—*Journal abstract.*

(Johns Hopkins U, Medical School) **Catecholamines in the brains of genetically obese rats.** *Brain Research*, 1976, Vol 101(1), 165-170.—Based on previous studies which suggest a relationship between feeding behavior and levels of brain catecholamines (CA), the possibility that CA levels may be altered in animals which regulate their food intake and body weight in an abnormal manner was investigated. Data from female genetically obese Zucker rats, nonobese littermates, and nonobese non-littermates indicate that norepinephrine, but not dopamine, concentrations are significantly different in 2 brain regions (paraventricular nucleus and the median eminence) of obese and normal animals. (25 ref)

6372. Dykes, R. W. (Dalhousie U, Halifax, Canada) **Nociception.** *Brain Research*, 1975, Vol 99(2), 229-245.

Reviews supporting research for the gate control theory and other current hypotheses of the physiology of pain, focusing on data on afferent fibers entering the dorsal horn, its cellular constituents, the role of spinal pathways, and the putative relay cells of the spinothalamic tract. Gate theory hypothesizes that cells in the dorsal horn of the spinal cord act as a gate to the anterolateral pathway subserving pain. Although the neurophysiological basis of pain is poorly understood and more adequate information is needed, it appears that there are cells which respond only to nociceptive input

and relay this information centrally. It also appears that in the dorsal horn the arriving cutaneous input is subjected to modifications which cannot be attributed only to the effect of large fibers on small ones, since these changes are organized by receptor type and peripheral typology. The importance of dorsal horn organization in nociception is emphasized, and its possible relationship to the mechanisms of acupuncture and electroanalgesia is noted. (105 ref)—L. Gorsey.

6374. Fuchs, Albert F. & Kimm, Joseph. (U Washington, Regional Primate Research Ctr, Seattle) **Unit activity in vestibular nucleus of the alert monkey during horizontal angular acceleration and eye movement.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1140-1161.—Recorded single units from the vestibular nuclei of 4 unanesthetized rhesus monkeys that were rotated in the horizontal plane while simultaneously pressing individual buttons in a controlled array that turned with them. The relationships of unit discharge to eye movements and to horizontal acceleration were examined. During sinusoidal horizontal head accelerations, all units with vestibular sensitivity displayed a periodic modulation of discharge frequency about their resting rates. There was almost an equal number of Type I units (responding to ipsilateral acceleration) and Type II units (responding to contralateral acceleration). Results suggest that the vestibular nuclei may be an important prenuclear structure for coordinating vestibular and oculomotor inputs to motoneurons. The discharge patterns of both unit types associated with voluntary eye movements were appropriate to participate in compensatory eye movements of vestibular origin. (43 ref)—*Journal summary.*

6377. Gregory, Estelle. (California State U, Los Angeles) **Comparison of postnatal CNS development between male and female rats.** *Brain Research*, 1975, Vol 99(1), 152-156.—Investigated whether the rate of cell growth of 2 areas of the nervous system is equivalent between male and female albino Wistar rats at 2, 7, 16, 25, and 35 days of age. Although no significant differences in the size of hippocampal cells were observed between sexes, pyramidal cell volume differ-

ences were observed at 35 days of age; the larger cell volume of the male may reflect a less mature cell with possibly fewer synaptic connections.

6378. Hoffmann, K.-P. & Sherman, S. Murray. (Johannes Gutenberg U, Inst für Zoologie, Mainz, W Germany) **Effects of early binocular deprivation on visual input to cat superior colliculus.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1049-1059.—Recent work has demonstrated at least 3 distinct inputs to the superior colliculus in normal cats: (a) the W-direct retinotectal pathway; (b) the Y-direct retinotectal pathway; and (c) the Y-indirect pathway which involves Y-cells in the retina and lateral geniculate nucleus plus complex cells in cortex. These impulses were studied in 5 cats raised with binocular eyelid closure by studying the electrophysiological properties of 164 collicular neurons. After such binocular deprivation, the Y-indirect pathway was missing and the Y-direct pathway appeared reduced, although the W-direct input seemed unaffected. Despite the loss of the Y-indirect input collicular activation to electrical stimulation of cortex seemed normal. Receptive-field correlates to this loss of Y-direct and Y-indirect input were found in the binocularly deprived Ss. Compared to collicular neurons in normal Ss, those in deprived Ss exhibited abnormally strong dominance by the contralateral eye, loss of directional selectivity, and loss of responsiveness to fast visual stimuli. Data suggest that the corticotectal input dominates collicular receptive-field properties in normal and monocularly deprived cats, whereas in binocularly deprived cats, the remaining retinotectal input dominates these properties. (25 ref)—*Journal summary*.

6379. Horch, K. W.; Clark, F. J. & Burgess, P. R. (U Utah, Medical Coll) **Awareness of knee joint angle under static conditions.** *Journal of Neurophysiology*, 1975(Nov), Vol 38(6), 1436-1447.—In 4 experiments, it was found that the ability of Ss to match the angle of a passively positioned knee joint by active positioning of the opposite leg was nearly constant with time from 15 sec to 3 min. However, Ss' ability to match this angle from memory was equally good. It is suggested, therefore, that knowledge of joint angle after movement has ceased does not necessarily require ongoing input from tonic peripheral receptors. Sensations associated with a 1.5-2-mm maintained indentation of the skin of the forearm completely faded within approximately 2 min. If the skin was indented at a rate less than 0.1 mm/sec to a similar amplitude, Ss often experienced no sensation. In contrast to the skin, there was persistence of the sensation of knee joint position while the joint was stationary. Movements of the knee at very slow rates while producing no reliable sensation of movement, resulted in a definite sensation of altered position, once a displacement of about 3-4° had been attained. 6381. Kaplan, Harriett. (New York State Inst for Basic Research in Mental Retardation, Staten Island) **What triggers seizures in the gerbil, *Meriones unguiculatus*?** *Life Sciences*, 1975(Sep), Vol 17(5), 693-698.—To deter-

mine the nature of the stimulus triggering seizures in gerbils, the effectiveness of novelty (N; a strange environment), extra stimulation (ES; swinging by the tail), and extra stimulation plus novelty (ES + N) was tested in 36 Ss. All conditions triggered some seizures, but the N condition and the ES + N condition, while not differing from each other, were significantly more effective than the ES condition alone. However, in Ss with 6 or more seizures, all 3 conditions were almost equally effective. In those with 4 seizures or less, the ES + N condition was the most effective while the ES was the least effective. Novelty in the form of a strange environment appears to be the most effective means of triggering seizures in gerbils; however, its effectiveness is directly related to its stress-inducing properties.—*Journal abstract*.

6382. Menoff, Anne; Carran, Archie & Riddell, William I. (State University Coll New York, Brockport) **Skin conductance level as a function of time after shock.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 617-618.—Assessed the effect of time after shock on conductance level of the rat at 0 sec, 30 sec, 2 min, 15 min, 30 min, and 1 hr following shock. Ss were 10 adult female Holtzman rats. Results indicate that, although the time after shock is a significant factor in conductance level, the relationship is not linear, and the greatest increase in conductance is still present 15 min following termination of the shock.—*Journal abstract*.

6383. Öhman, Arne; MacLean, Vivien & Lader, Malcolm. (U Uppsala, Sweden) **Concomitant short-term changes in the auditory response, the EEG, and reaction-time performance in relation to the temporal parameters of stimulation.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 177-183.—Conducted 2 experiments with a total of 14 adult Ss in which short-term habituation of the auditory evoked response (AER) was examined using discrete trains of click stimuli and averaging across trains. In Exp I the stimuli consisted of randomly interspersed trains of regular clicks, at 3- or 10-sec interstimulus interval (ISI). In Exp II the ISIs were also short or long but were irregular varying between 2.4 and 3.6 sec in the former case and 6-12 sec in the latter. The N₁-P₂ component of the AER diminished within the 3-sec trains especially for the regular stimulation; no such development occurred with the longer ISI. The total voltage in the background EEG and the reaction times to the stimuli showed essentially similar changes. The possible mechanisms governing the response decrement are discussed, and it is concluded that the data may be interpreted in terms of P. M. Groves and R. F. Thompson's (see PA, Vol 45:2046) dual-process theory of habituation. (18 ref)—*Journal abstract*.

6384. Oleson, Terrence D.; Ashe, John H. & Weinberger, Norman M. (U California, School of Biological Sciences, Irvine) **Modification of auditory and somatosensory system activity during pupillary conditioning in the paralyzed cat.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1114-1139.—Investigated the role of sensory systems in the development of behavioral conditioned responses by recording multiple-unit activity in the auditory and somatosensory pathways during Pavlovian conditioning of the pupillary-dilation respon-

ses of 9 paralyzed cats. Establishment of conditioned pupillary-dilation responses to white noise CS+ (reinforced CS), pupillary discrimination between the CS+ and a tone CS- (nonreinforced), and subsequent discrimination reversal were examined. Multiple unit responses to the acoustic CS+ were significantly enhanced in the auditory cortex, cochlear nucleus, and somatic cortex, but not in the cuneate nucleus. Although somatic cortex showed conditioning and discrimination, greater stimulus specificity was found in the auditory system. These and other results suggest that sensory system changes are not essential for the initial associative process. A hypothetical model which explains the development of pupillary and sensory system conditioned responses, is also presented. (36 ref)—*Journal summary*.

6385. Otero, Jesus B. (NIMH, Lab of Neurophysiology, Bethesda, MD) **Comparison between red nucleus and precentral neurons during learned movements in the monkey.** *Brain Research*, 1976, Vol 101(1), 37-46.—4 female rhesus monkeys were trained to depress a hold key for 2 sec. After this hold period, either a red or a green cue lamp appeared in a random sequence. The red lamp required Ss to move their hands from the hold key to a target button within 1 sec of the cue. The green lamp required continued depression of the hold key for 1 sec following presentation of the cue. In comparing post-stimulus and peri-response latencies of 48 red nucleus (RN) and 46 precentral gyrus (PG) units related to the arm movement triggered by the red lamp, the onset of activity in most RN units occurred after the onset of activity in most PG neurons. This delay between PG and RN was even greater than the delay between PG and postcentral gyrus. Because the RN receives powerful inputs both from the sensorimotor cortex and from cerebellum, it seems possible that the activity in RN was dependent on the combined action of these 2 inputs, with sensory feedback from movement (relayed via postcentral gyrus and/or cerebellum) being one input, and a central program from cerebellum and/or precentral gyrus being the other input. (25 ref)—*Journal abstract*.

6386. Passingham, R. E. (U Oxford, England) **Changes in the size and organisation of the brain in man and his ancestors.** *Brain, Behavior & Evolution*, 1975, Vol 11(2), 73-90.—Reviews the literature and describes changes in brain size during the evolution of man's ancestors and during man's development. It is shown that differences in size are accompanied by changes in the proportions of the brain and that selection pressures have been greater for some parts (e.g., the cerebellum, neocortex, and association cortex) than others. 6388. Reichmanis, Maria; Marino, Andrew A. & Becker, Robert O. (State U New York, Upstate Medical Ctr, Syracuse) **Electrical correlates of acupuncture points.** *IEEE Transactions on Biomedical Engineering*, 1975(Nov), Vol 22(6), 533-535.—Measured skin conductance over putative acupuncture points on the large intestine and pericardium meridians and compared them with those from anatomically similar locations

devoid of acupuncture points. At most acupuncture points on most Ss there were greater electrical conductance maxima than at control sites.

6389. Rust, John. (U London, Inst of Psychiatry, England) **Cortical evoked potential, personality, and intelligence.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1220-1226.—The averaged cortical evoked potential (CEP) was measured from 296 males (84 twins, 149 prisoners, and 63 miscellaneous Ss; mean ages 24.2, 29, and 27 yrs, respectively) in 2 studies and was then correlated with scores on intelligence and personality tests. For both studies, auditory stimuli were used with bipolar electrode placement to the Cz and T3 scalp positions. In the 1st study, stimulus intensity was 95 db. Intelligence was measured with the Mill Hill Vocabulary Scale and personality with the Psychoticism, Extraversion, and Neuroticism Questionnaire. Study 2 used additional stimuli at 75 and 55 db. Intelligence was measured with Raven's Progressive Matrices. The State-Trait Anxiety Inventory was also given. Neither study found any relation between the CEP and IQ or personality. However, more bored Ss showed larger CEP amplitudes. (23 ref)—*Journal abstract*.

6390. Salmon, Lenin E. (U North Carolina, Greensboro) **Effects of arousal and attention on contingent negative variation and evoked potentials in humans.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2289-2290.

6391. Samanin, Rosario & Garattini, Silvio. (Istituto Ricerche Farmacologiche, Milan, Italy) **The serotonergic system in the brain and its possible functional connections with other aminergic systems.** *Life Sciences*, 1975(Oct), Vol 17(8), 1201-1210.—A review of neurophysiological, biochemical, and pharmacological findings suggests that there is an interaction between serotonergic and noradrenergic neurons in the brain. A functional relationship between serotonin and dopamine has also been proposed, although evidence for this relationship is limited and circumstantial. It is noted, however, that methodological limitations in the field make it difficult to accept or reject with certainty any hypothesis. It is concluded that whatever the mechanism involved in the serotonergic and other aminergic systems in the brain, any knowledge which provides further details on the interaction of neurotransmitters will have important implications for neuropharmacology and the treatment of various disorders, particularly those related to parkinsonism. 6392. Schafer, Edward W. & McKean, Charles M. (U California, Langley Porter Neuropsychiatric Inst, Brain Behavior Research Ctr, San Francisco) **Evidence that monoamines influence human evoked potentials.** *Brain Research*, 1975, Vol 99(1), 49-58.—Measured latency and flash-pattern differentials of the visual evoked potential (VEP) from 4 7-18 yr old retarded phenylketonuric humans, while systematically manipulating rates of amine synthesis in the CNS. Stimulation of monoaminergic activity in the visual processing system, either by lowering inhibitory levels of phenylalanine through dietary restriction or by a properly balanced administration of amine and catecholamine precursors (tryptophan and/or levo-5-hydroxytryptophan or levo-tyrosine),

shortened VEP latencies and permitted the development of a discriminative brain response to patterned stimuli. The close temporal relationship between these electrophysiological changes and the neurochemical manipulations following treatment initiation or discontinuation suggest that monoamines play a significant role in the mediation of human sensory evoked potentials. 6393. Siegel, Jerome M. (VA Hosp, Neuropsychological Research, Sepulveda, CA) **REM sleep predicts subsequent food intake.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 399-403.—In a study with 2 female and 4 male undisturbed cats fed ad lib, REM sleep time in a 12-hr period accurately predicted food intake in the subsequent 12-hr period. In all but 1 of the Ss, the correlation between REM sleep and subsequent food intake was negative. REM sleep was a better predictor of food intake than either waking, slow-wave sleep, or previous food intake. When Ss were fed only during the 12-hr day period, it was found that REM sleep at night, during which no food was available, no longer predicted food intake. (24 ref)—*Journal abstract.*

6394. Siegfried, John B. (Pennsylvania Coll of Optometry) **The effects of checkerboard pattern check size on the VECP.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 306-308.—Studies have shown that there is an optimal size of element in a checkerboard pattern, used to stimulate the visual system, for eliciting the visual evoked cortical potential (VECP). This size of element is between 8 and 25 min of visual angle. Since most studies have not reported fixation or location of fixation on the pattern, the present study was performed in which fixation was specified at a location which insured a constant illumination of the fovea regardless of check size. The resulting function, VECP amplitude vs check size, resembled previously obtained functions, indicating either that previous Ss were fixating or that fixation is not important for these results.—*Journal abstract.*

6395. Spear, Peter D. & Baumann, Thomas P. (Kansas State U) **Receptive-field characteristics of single neurons in lateral suprasylvian visual area of the cat.** *Journal of Neurophysiology*, 1975(Nov), Vol 38(6), 1403-1420.—Studied the visual receptive fields of 213 cells in the lateral suprasylvian visual cortex (LS area) in cats anesthetized with nitrous oxide. It was found that 81% of the cells were directionally selective. They responded poorly to stationary stimuli flashed on or off, but gave a directionally selective response to stimuli moving through the receptive field. About 7.5% of the cells responded to stimuli moving in any direction, and 5% of the LS area cells gave their maximum response to stationary stimuli flashing on and/or off. About 6.5% of the LS area cells had diffuse receptive fields or gave indefinite responses to light. Other findings are discussed. (57 ref)—*Journal summary.*

6396. Tanabe, T.; Iino, M. & Takagi, S. F. (Gunma U, Medical School, Maebashi, Japan) **Discrimination of odors in olfactory bulb, pyriform-amygdaloid areas, and orbitofrontal cortex of the monkey.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1284-1296.—Compared odor discrimination ability of the lateroposterior position of the orbitofrontal cortex (LPOF) to that of the anterior

pyriform cortex (AP), the medial portion of the amygdala (MA), and the olfactory bulb (OB) using 22 male rhesus monkeys and 8 odors. In the OB, 12.5% of the cells responded to only 1 odor, and the cells which responded to 5 odors were most numerous (25%). In the AP and MA, no differences in response patterns were found. Cells that responded to 3 odors were most numerous (34.3%). In the LPOF 50% of the cells responded to only 1 odor. Using 3 similar and 5 different odors, it was found that the ability to discriminate odors was more advanced in the LPOF than in the lower olfactory areas. The lower olfactory areas, however, appear to play a significant role in the discrimination of odors which belong to different categories. It is concluded that the odor discrimination ability improves along the olfactory nervous system from the lower to the higher areas and that a fine and specific discrimination of odor is performed in the LPOF. 6397. Teyler, Timothy J.; Cuffin, B. Neil & Cohen, David. (Harvard U) **The visual evoked magnetoencephalogram.** *Life Sciences*, 1975(Sep), Vol 17(5), 683-691.—Compared the amplitude and latency of response of the visually evoked EEG response (VER) and magnetoencephalogram (MEG), which measures the magnetic field normal to the scalp. Responses from 3 volunteers were analyzed as a function of stimulus intensity and the angular distribution of the MEG around the head; a search was also made for high frequency components of the MEG (>100 Hz). MEG and VER both showed an increased amplitude of response as a function of stimulus intensity. In contrast to the VER, the latency of the MEG did not decrease as a function of stimulus intensity. As with the VER, the MEG contained no high frequency components greater than the experimental noise. (26 ref)—*Journal abstract.*

6398. Urban, I. & de Wied, D. (U Utrecht, Rudolf Magnus Inst for Pharmacology, Netherlands) **Inferior quality of RSA during paradoxical sleep in rats with hereditary diabetes insipidus.** *Brain Research*, 1975, Vol 97(2), 362-366.—Reports experiments on the qualitative aspects of rhythmic slow activity (RSA) during paradoxical sleep (PS) in male Brattleboro rats with hereditary hypothalamic diabetes insipidus. 2 homozygous (HO) and 2 heterozygous (HE) Ss were implanted with chronic electrodes in the dorsal hippocampus and the neck muscles to record RSA and EMGs, respectively. 2 wks after surgery, 5 habituation sessions were given to each S in a sound attenuating cage followed by 10 experimental sessions. During 4 sessions each S received a placebo and in the remaining 6 sessions, Ss received subcutaneous injections (1 and 2 μ g/100 g body weight) of desglycinamide-8-arginine vasopressin (DG-AVP). RSA was recorded during PS. There were differences in the quality of the RSA during PS between the HO and the HE Ss. Treatment with DG-AVP, an analog of vasopressin which does not ameliorate symptoms of diabetes insipidus, almost completely normalized RSA. The inferior quality of RSA during PS in the absence of vasopressin and the beneficial effect of vasopressin treatment support the hypothesis that vasopressin plays an important role in the consolidation of learned responses. (U Oregon, Medical School) **Cortical evoked potentials recorded from the guinea pig without averaging.** *Acta Oto-Laryngologica*, 1975(Jul-Aug), Vol 80(1-2), 7-12.—Comparison of electrode records obtained from the pial surface, without averaging, with those obtained from electrodes on the dura, with averaging, shows that removal of the dura and direct recording of the potential from the pia appears most appropriate for acute experiments; averaging procedures with potentials from the dura appear most appropriate for chronic studies. (26 ref)

6401. Walsh, Roger N. & Cummins, Robert A. (Stanford U) **Mechanisms mediating the production of environmentally induced brain changes.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 986-1000.—Notes that as yet no satisfactory explanation has been advanced to explain the mechanisms mediating the anatomical and biochemical brain changes induced by exposing animals to environments rich in sensory stimuli. It is hypothesized here that a fundamental mechanism is the arousal response, since alterations in arousal appear to be concomitants of all such environmentally induced changes. The properties of the arousal reaction are discussed in terms of their possible relationship to the neurological changes induced, and evidence is presented indicating that this mechanism may be common to several areas of environmental stimulation research which have previously been thought of as separate investigative fields. Several possible tests of the hypothesis are presented, and an underlying cellular response sequence transducing electrical into biosynthetic activity is discussed. (4% p ref)—*Journal abstract*.

6402. Weizenbaum, Freya & Colavita, Francis. (U Pittsburgh) **Behavioral and electrophysiological changes in visual sensitivity following prolonged exposure to constant light.** *Experimental Neurology*, 1975(Sep), Vol 48(3, Pt 1), 440-446.—Exposed a total of 16 female Holtzman rats in 2 experiments to 440 ft-c of either continuous light (LL) or cyclic light (LD) for 12 wks. Then the 75% visual difference threshold was measured by means of an adaptive behavioral psychophysical technique. The difference threshold of the LL Ss was 2.2 log units higher than that of the LD, indicating that visual sensitivity was greatly reduced following exposure to constant light. In addition, an electrophysiological measure, the early receptor potential, was employed to assess the functional capability of retinal receptor cells in LL and LD Ss to respond to light. The mean response of the LL retinas was 10 μ V and that of LD retinas 165 μ V. Data indicate that when the albino rat is exposed to constant light there is a significant decrease in visual sensitivity. The observed loss of sensitivity is probably due to a reduction in the number of rod outer segments and in the level of rhodopsin. (15 ref)—*Journal abstract*.

examples of binocular interaction effects when the images presented to the 2 eyes were of different qualities: image disparity, selective attention, the fixation effect, and color effects. Studies conducted to examine binocular interaction and related topics are examined, and suggestions for the direction of future research are presented.

6404. Winocur, Gordon. (Trent U, Peterborough, Canada) **Comments on Kirkby and Polgar's interpretation of caudate nucleus function.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 255-256.—Reports that the position of R. J. Kirkby and S. Polgar (see PA, Vol 53:4648) that the antero-dorsal caudate nucleus is important for 2-way avoidance conditioning (AC) is supported by recent experiments but that their argument against differential involvement of dorsal and ventral caudate regions in 1-way AC is less substantiated.

6405. Wolpaw, Jonathan R. & Penry, J. Kiffin. (NIH, National Inst of Neurological & Communicative Disorders & Stroke, Bethesda, MD) **A temporal component of the auditory evoked response.** *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 609-620.—Studied the 75-225 msec portion of the auditory evoked response (AER) in 32 normal adults at vertex (C_z) and temporal (T_1 and T_2) placements referred to a balanced, noncephalic reference electrode using a monaural 1 msec click stimulus delivered every 4.7 sec at 60 db above threshold. The C_z AERs showed the classic vertex response, a negative peak, N_1 , at 100 msec, followed by a positive peak, P_1 , at 160-200 msec. The T_1 and T_2 AERs were similar to the C_z AERs from 0 to 80 msec and from 200 to 250 msec. They differed significantly from the C_z AERs from 80 to 200 msec. While N_1 , P_1 , is apparently a product of widespread areas of cortex, it is concluded that the T complex is probably a product of secondary auditory cortex. 6406. Aschoff, J. & von Saint Paul, U. (Max-Planck-Institut für Verhaltensphysiologie, Seewiesen, W Germany) **Brain temperature in the unanesthetized chicken: Its circadian rhythm of responsiveness to light.** *Brain Research*, 1976, Vol 101(1), 1-9.—Recorded temperatures continuously for 4 days in the brains of 8 unanesthetized moderately restrained male White Rock, New Hampshire, and Cornish chickens kept in light-dark cycles of 30:30 or 60:60 min duration. Results show that light has a stronger arousing effect on the chicken in the morning and in the evening than in the middle of the day or night. (24 ref)

6407. Beach, Frank A. (U California, Berkeley) **Behavioral endocrinology: An emerging discipline.** *American Scientist*, 1975(Mar-Apr), Vol 63(2), 178-187.—Research on the endocrine effects on behavior has not yet developed general laws or comprehensive theories, but has progressed far enough to show where the important problems lie and the principle methods by which they are likely to be solved. 4 interrelated categories are specified: covariation, mediating mechanisms, contingency in covariation, and interaction and independencies. The research literature related to each of these categories is reviewed. At present behavioral

endocrinology reflects that too much research has concentrated on sexual behavior and gonadal hormones. As more effort is applied to the study of hormonal contributions to learning, nonsexual social behavior, and a variety of other behaviors such as feeding, sleeping, and adjusting to stress, this imbalance of research effort will be corrected. (24 ref)—G. S. Speer.

6408. Beach, Frank A. (U California, Berkeley) **Variables affecting spontaneous seminal emission in rats.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 91-95.—The frequency of spontaneous seminal emission (SE) by 22 isolated Long-Evans rats was not increased when estrous females were housed in adjacent cages. Coital ejaculation during mating tests temporarily inhibited the production of SE, and inhibition was more marked after 5 than after 1 ejaculation with a female. Males experiencing only 1 coital ejaculation tended to resume production of SE somewhat sooner if they were exposed to stimuli from estrous females than if such stimuli were lacking. The possible functional significance of spontaneous and self-induced noncoital seminal emission which is common in a variety of mammals is discussed. (21 ref)—*Journal abstract*.

6409. Bell, C. R. (U Manchester, England) **Effects of lowered temperature on time estimation.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 531-538.—Lowered the body (ear) temperature of 14 male Ss 18-23 yrs old in order to examine its effect upon performance of a task requiring estimation of an interval of 60 sec. Although there was some evidence that Ss counted more slowly at lower body temperatures, the inconsistency of the effect was such that it cast doubt on the hypothesis of a "biochemical clock" or "metabolic pacemaker" in the brain said to subserve human time estimation of brief intervals. (19 ref)—*Journal abstract*.

6410. Broughton, Roger. (U Ottawa, Canada) **Biorhythmic variations in consciousness and psychological functions.** *Canadian Psychological Review*, 1975(Oct), Vol 16(4), 217-239.—Research indicates that indices of conscious awareness of external and internal events exhibit both ultradian approximately 90-100 min (in adulthood) and circadian 24-hr variations. The phylogenetically older ultradian rhythm represents the basic rest-activity cycle (BRAC) of N. Kleitman (1963), is continuous, and appears to contain alternation of mental activity of thought-like and fantasy type at this periodicity in wakefulness and in NREM and REM sleep. This suggests continuous cyclic alternation of relative predominance of the left and right hemispheres inherent in the BRAC. Superimposed circadian fluctuations of consciousness in a diurnally active adult typically show lowest levels in the 1st hrs after usual sleep onset and a later dip at about 5-6:00 AM if the person remains awake. After a night of sleep, daytime consciousness and performance improve in the morning, usually show an early afternoon "post-lunch dip," a sustained increase in the late afternoon and early evening, and a decrease before sleep onset. It is postulated that cortical, mainly prefrontal, hyperpolarization in NREM sleep resets the cortex for renewed high-level perceptual awareness the next day. Consciousness is not a static attribute but shows definite biorhythmic fluctuations in level and type. (French abstract) (4/ p ref)—*Journal abstract*.

6411. Detweiler, Richard A. & Zanna, Mark P. (Drew U) **Physiological mediation of attitudinal responses.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol 33(1), 107-116.—Attempted to ascertain the best model of the relationship between stimuli, physiological responses, and attitudes. 20 undergraduates were asked to indicate their attitudes toward various notions after having received various bogus information about how they responded physiologically to the stimuli. Results indicate that (a) in general, attitudes appear to be physiologically mediated; (b) physiological mediation of attitudes is strongest when prior knowledge about the stimuli is low but is independent of prior attitudes about the stimuli; (c) bogus physiological feedback does not seem to be verbally mediated; and (d) the most fruitful distinction between types of bogus feedback is between any feedback vs no feedback, not between change vs no change or between increase vs decrease in response.—*Journal abstract*.

6412. Gatchel, Robert J. (U Texas, Arlington) **Locus of control and voluntary heart-rate change.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 634-638.—Investigated the effects of locus of control on voluntary control of heart-rate change. 16 male and 16 female undergraduates were randomly assigned to 1 of 2 heart-rate change groups: increase or decrease. The groups were counterbalanced for locus of control (as measured by the Internal-External Control Scale) and sex. No heart-rate feedback was provided to Ss, and all Ss performed the appropriate task for 2 sessions. Results indicate that during the initial session, internals were better able to increase their heart-rates than externals; the externals were better able to decrease their heart-rates than internals. This association, however, diminished to nonsignificance in the 2nd session.—*Journal abstract*.

6413. Goldfoot, D. A. et al. (Wisconsin Regional Primate Research Ctr, Madison) **Multiple ejaculations during prolonged sexual tests and lack of resultant serum testosterone increases in male stump-tail macaques (*M. arcotides*).** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 547-560.—Observed the sexual behavior of 4 male and 4 female adult stump-tail macaques in standardized 3-hr heterosexual pair tests. The males achieved from 11 to 19 ejaculations during a single test, thus apparently exceeding any other primate studied under laboratory conditions. The stage of the menstrual cycle was not related to the performance of the male or female. Progressive increases in the interejaculatory interval (IEI) occurred for all 4 males for the initial 2-4 ejaculations of the series, and then either a plateau or a transient decrease in this measure occurred. Blood samples drawn immediately before and after behavioral testing as well as at comparable intervals 1 wk prior to behavioral testing showed that serum testosterone values were not influenced by multiple ejaculations. Instead, decreased levels of serum testosterone were encountered on the 2nd blood sample of the day for most males, regardless of whether sexual behavior occurred. The possibility that the decreases were related to stress effects of handling is discussed. It is only tentatively concluded, therefore, that repeated copulation to ejaculation over a 3-hr period did not result in

appreciable changes in testosterone levels. (28 ref)

6427. Cohen, David B. (U Texas, Austin) **Eye movements during REM sleep: The influence of personality and presleep conditions.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1090-1093.—Assigned 17 males scoring high and 14 scoring low on the Maudsley Personality Inventory Neuroticism scale to a positive or negative (ego threat) presleep condition. Ss then slept a single night in the laboratory. The negative condition elicited significantly more REM density than did the positive condition. There was a significant interaction for Groups \times Conditions, indicating that low neuroticism Ss had greater REM density in the negative condition and less REM density in the positive condition, compared to high neuroticism Ss under either condition. The low neuroticism Ss in the negative condition showed a discrepancy between greater REM density but less admission of stress on a presleep mood questionnaire compared to high neuroticism Ss. Results support the hypothesis that REM density is a correlate of stress-induced arousal that is subject to the modifying effects of individual differences. (18 ref)—*Journal abstract.*

6428. de Jong, Mels A.; Van den Bergh, Anton W. & de Jong, Arnold J. (Jan Swammerdam Inst, le Constan-tijn Huygensstraat, Amsterdam, Netherlands) **Hypnosis, stimulus preference and autonomic response.** *Psychotherapy and Psychosomatics*, 1975, Vol 26(2), 78-85.—Conducted a study with 80 social work students to investigate whether stimuli consisting of beautiful and ugly colors as judged by human Ss elicit different autonomic response patterns. The autonomic functions recorded

were heart rate (HR), respiration rate, skin conductance, number of GSRs (nGSR), and also eye movements, as an index of somatic activity. In order to obtain strong responses (i.e., to avoid inhibition of "natural" responses by anxiety due to the laboratory setting, post-hypnotic suggestions were used regarding the nature of the stimuli the Ss were to expect. It appeared that for all but one autonomic function, differences could be found between beautiful and ugly stimuli (i.e., during the ugly stimuli more "activation" occurred). The direction of HR change during the beautiful stimuli was opposite to those of the other functions. Effect of hypnosis on autonomic response could be substantiated for HR and nGSR. Apart from hypnosis it seems likely that the whole experimental set-up may have helped to reduce "experimental anxiety." It is concluded that response specificity for pleasant and unpleasant stimuli seems to exist.—*Journal abstract.*

6429. Eriksson, Carl-Gunnar. **A multivariate analysis of indicators of heart rhythms.** *Göteborg Psychological Reports*, 1975, Vol 5(7), 19 p.—Studied the interrelations of different indicators of heart rhythm. 21 indices were scored from a 30-sec recording from 30-yr-old males. 2 dimensions were needed to describe the variations among the Ss at rest, one grouping indicators of the level of heart rate, and the other the variability of the interbeat intervals. 6430. Harris, Victor A. & Katkin, Edward S. (State U New York, Buffalo) **Primary and secondary emotional behavior: An analysis of the role of autonomic feedback on affect, arousal, and attribution.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 904-916.—Notes that research on the attribution of affect using false physiological feedback has been interpreted as support for the view that emotion is primarily a cognitive state, not dependent upon autonomic arousal. This view differs from traditional psychophysiological approaches to the role of autonomic activity in emotional experience. Recent social-psychophysiological studies have attempted to integrate the traditional physiological techniques with the cognitive model. These studies are examined, and some conceptual propositions concerning the relations among arousal, affect, and attribution are advanced. (37 ref)—*Journal abstract.*

6431. Jenkins, C. David et al. (Boston U, Medical School, Div of Psychiatry) **Blood platelet aggregation and personality traits.** *Journal of Human Stress*, 1975(Dec), Vol 1(4), 34-46.—Studied 46 male undergraduates at rest and after submaximal treadmill exercise. Associations were found between the duration of platelet aggregation and scores from the California Psychological Inventory and self-administered anxiety scales (State-Trait Anxiety Inventory and Bendig's short form of the Taylor Manifest Anxiety Scale). The more socially adequate, poised and dominant persons, those with more mature ego development and less overt anxiety, had platelets with more prolonged aggregation reactions to the in vitro introduction of noradrenalin. Irreversible aggregation of platelets occurred more regularly to lower in vitro concentrations of noradrenalin in platelet samples drawn from Ss who were less anxious and tended to be more rigidly defensive. 6432. Lamontagne, Yves; Hand, Iver; Annable, Lawrence & Gagnon, Marc-André (INRS-Santé & Research Unit, Hôpital St-Jean de Dieu, Montreal, Canada) **Physiological and psychological effects of alpha and EMG feedback training with college drug users.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 337-349.—Studied effects of alpha-wave EEG feedback and of EMG feedback on anxiety, on use of cannabis, and on duration and quality of sleep, in 17 male and 7 female college student volunteers. Ss were randomly assigned to an alpha, an EMG, or a control (sham feedback) group, and did not know which treatment they were receiving. Ss had more of the pertinent physiological responses during the 2nd half of each training session, but there were no gains from day to day. Ss reported less use of cannabis in the week before the experiment than during the preceding 6 mos. There were no changes in drug use from the week before training to the training week or to 1-mo and 3-mo follow-up periods. Significant and lasting improvements in sleep were made in all groups, including the control Ss. (French summary) (27 ref)—F. Auld.

6435. Myslobodsky, Michael S. & Rattok, Jack. (Tel-Aviv U, Ramat-Aviv, Israel) **Asymmetry of electrodermal activity in man.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 501-502.—Skin conductance responses were examined bilaterally in a group of 12 normal male graduate students, aged 25-36. 10 Ss were right-handed and 2 were left-handed. All right-handed Ss exhibited asymmetry in skin conductance response during verbal-numerical and visual-imagery tasks. With the visual activity, larger responses were found in the left hand; while during the verbal task, larger responses were recorded from the right hand. Results provide evidence of hemisphere asymmetry of the electrodermal activity orienting response control mechanisms. (16 ref)—*Journal abstract*.

6436. Parasuraman, R. (U Aston Birmingham, England) **Response bias and physiological reactivity.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 309-313.—Adult males with high electrodermal activity (EDA) ratings discriminated a significantly greater number of tones than Ss with low EDA; this apparent superiority was not due to their superior sensitivity, but to a greater bias towards responding positively to signals. Possible mechanisms mediating individual differences in response bias and physiological reactivity are discussed.

6438. Tojo, Masaki. (U Tokyo, Japan) **[Relationship between infraslow wave of ear plethysmogram and psychic tension in comparison with skin potential reflex**

and heart rate.] (Japn) *Japanese Journal of Psychology*, 1975(Oct), Vol 46(4), 199-206.—Conducted 2 experiments with approximately 34 Ss to determine whether an infraslow wave (ISP), a 7-12 sec sine-like wave, is a physiological indicator of psychic tension. In Exp I, ISP, heart rate (HR), and skin potential reflex (SPR) were recorded during paired-associate learning. In Exp II, those measures were monitored under 3 different levels of motivation: task-orientation, ego-orientation, and punishment. ISP, HR, and SPR were shown to be reliable physiological indicators of psychic tension. It is suggested that these measures are related to different aspects of psychic tension. (English abstract) (29 ref)—*English summary*.

6439. Willer, Jean-Claude. (Faculté de Médecine St-Antoine, Lab de Physiologie, Paris, France) **[Effects of anticipation of pain on the nociceptive component of the flexor reflex.]** (Fren) *Physiology & Behavior*, 1975(Oct), Vol 15(4), 411-415.—Studied the effects of anticipation of pain on heart rate (HR), respiratory rhythm, and the nociceptive component of the flexor reflex. Both trained and naive Ss aged 20-30 yrs were used. A warning, given 10 min before the delivery of the painful stimulation, made the naive Ss anxious while the trained ones remained relaxed. The latter Ss showed a steady HR and respiratory frequency as well as a steady level in the nociceptive reflex threshold for the duration of the experiment. Two kinds of responses were exhibited by the naive Ss: One group showed increased HR and respiratory frequency as well as an initial increase in the reflex threshold; the other group showed decreased HR, increased respiratory frequency, and an initial decrease in the reflex threshold. In each of these subgroups, the time course of the reflex threshold showed a progressive evolution toward the threshold level of the trained Ss with a time course of 30-40 min. (46 ref)—*Journal abstract*.

Journal of Life Sciences*, 1975, Vol 5(1-2), 11-16.—Using stereotaxic techniques, 45 Swiss Webster mice were chronically implanted with stainless steel and 16 with platinum-iridium wire probes aimed at the dentate gyrus of the hippocampus. Following a recovery period, Ss were trained in a single-trial inhibitory avoidance task. Significant performance deficits were found in those Ss subsequently shown to have ferric ions (Fe³⁺) bilaterally located in the dentate gyrus. The presence of Fe³⁺ in other hippocampal subfields did not result in behavioral deficits. The Fe³⁺ are hypothesized to be of vascular origin. 2 hypotheses are suggested to account for the observed correlation between the

presence of Fe^{++} bilaterally in the dentate gyrus and the observed behavioral deficit. (17 ref)—*Journal abstract*.

6442. Carey, R. J. & Goodall, E. B. (State U New York, Upstate Medical Ctr, Syracuse) **Attenuation of amphetamine anorexia by unilateral nigral striatal lesions.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 827-834.—Experimental results in male Sprague-Dawley rats indicate that unilateral decreases in brain catecholamines can attenuate amphetamine-induced anorexia. Since the catecholamine depletion was predominantly a reduction in dopamine, a significant role for this catecholamine in the mediation of amphetamine anorexia is suggested.

6443. Czaja, John A. & Goy, Robert W. (U Wisconsin, Madison) **Ovarian hormones and food intake in female guinea pigs and rhesus monkeys.** *Hormones and Behavior*, 1975(Dec), Vol 6(4), 329-349.—Studied 12 intact and 45 ovariectomized guinea pigs and 8 intact and 14 ovariectomized rhesus monkeys during their ovarian cycles. In both species, the period of lowest food intake occurred around the expected time of ovulation. Feeding levels were lowest in the guinea pig during the time of estrus, estrus being estimated on the basis of vaginal membrane changes. Minimum food intake in the rhesus occurred prior to the midpoint of the menstrual cycle, on Day 13, approximately 15-16 days before the next menstruation. In ovariectomized Ss of both species, either multiple or single estradiol injections significantly lowered food intake. Single progesterone injections to such Ss had no significant effect on levels of feeding. (4 p ref)—*Journal abstract*.

6444. Espino, Conchita; Sano, Mary & Wade, George N. (U Massachusetts, Amherst) **Alpha-methyltryptamine blocks facilitation of lordosis by progesterone in spayed, estrogen-primed rats.** *Pharmacology, Biochemistry & Behavior*, 1975(Jul-Aug), Vol 3(4), 557-559.—In 2 experiments with a total of 20 female Sprague-Dawley rats, alpha-methyltryptamine, a drug which stimulates serotonergic receptors in the CNS, inhibited the induction of sexual receptivity in ovariectomized Ss by estradiol benzoate and progesterone. The drug had no effect on the sexual receptivity induced by estradiol benzoate alone. Data are consistent with the hypothesis that progesterone facilitates lordosis in estrogen-primed rats by inhibiting a serotonergic system in the brain. Data also suggest that estradiol and progesterone act on separate neurochemical systems to induce estrous behavior in rats. (16 ref)—*Journal abstract*.

6445. Gaito, John. (York U, Downsview, Canada) **Further results obtained with pairing of the "kindling effect" and the "transfer experiment."** *Physiological Psychology*, 1975(Sep), Vol 3(3), 237-239.—Experimental results in implanted rats given intracerebral injections of brain homogenate supernatant from donor rats confirmed the findings of earlier experiments in which ip injections of the supernatant retarded the development of shock-induced clonic convulsions.

6446. Hall, Nicholas R. & Luttge, William G. (U Florida, Medical Coll) **Maintenance of sexual behavior in castrate male SW mice using the anti-androgen, cyproterone acetate.** *Pharmacology, Biochemistry & Behavior*, 1975(Jul-Aug), Vol 3(4), 551-555.—Hypothesized that cyproterone acetate (C) might selectively block

the actions of dihydrotestosterone (D) and, via this action, function as an antiandrogen in male sexual behavior. Sexually experienced male SW mice, a strain previously shown to respond to D following castration, were divided randomly into 6 groups. Beginning on the day after castration, Ss received subcutaneous injections for 21 days of either testosterone (T), (D), (C), (T + C), (D + C), or vehicle. C significantly reduced seminal vesicle and body weights in all androgen treated groups. There was no evidence to support the contention that C selectively blocks the action of D. To the contrary, in sex tests C maintained palpations, thrust mounts, mounts with intromissions, and mounts with ejaculations. Indeed, only Ss receiving C alone or in combination with T or D exhibited ejaculations throughout the testing. Results suggest that in the SW mouse, C can work like an androgen in the maintenance of male sexual behavior. (38 ref)—*Journal abstract*.

6447. Isaac, W. & Kallman, W. M. (U Georgia) **Stimulants and lesions of the substantia nigra and red nucleus.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 471-474.—Examined the interaction of altered activity levels by stimulants and brainstem lesions in 18 male Cherokee-SD rats. Lesions of the substantia nigra and red nucleus significantly increased activity over control levels. The stimulant action of dextroamphetamine (0.8 mg/kg/day) and methylphenidate (6.4 mg/kg/day) was additive with lesion effects. In addition, stimulants disrupted the normal light-dark relationship with activity while the lesions did not. It is suggested that there are 2 functionally separate systems regulating locomotor activity.—*Journal abstract*.

6448. Jones, R. G. & Booth, D. A. (U Birmingham, England) **Low dose-response for 2-deoxy-D-glucose-induced feeding, and the involvement of peripheral factors.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 85-90.—Observed latencies to feed and meal sizes in 36 recently satiated Wistar rats injected ip with an isotonic solution of 2-deoxyglucose (2DG). The feeding response latency shortened monotonically with dose from about 0.3 mmole/kg to 0.5-0.6 mmole/kg, with an extended plateau up to debilitating doses. At modest doses, the latency to feed was shorter in adrenal demedullated Ss than in intact Ss, suggesting that the hyperglycemic response to 2DG partially inhibits feeding response. Food-deprived Ss took larger meals following 2DG injection if there had been recent rapid intestinal absorption of glucose. It is suggested that a major action of 2DG is to block the satiating consequences of the process of absorption, possibly at hepatic receptors. (18 ref)—*Journal abstract*.

6449. Kernek, S. P. & Kimeldorf, D. J. (Oregon State U, Radiation Ctr) **X-ray induced behavioral reactions and detection mechanisms in the shrimp.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 1-5.—Male Red Ghost shrimp were shown from behavioral and electrophysiological studies to respond to ionizing radiation. When exposed to X-rays at 52 R/sec, the majority of intact Ss could detect and avoid further irradiation by escaping into a shielded section of the test chambers. Ss continued to display escape responses after removal of eyestalks and antennae. Significant avoidance activity occurred with partial-body exposure and indicated the existence of

a radiation-sensitive receptor on the abdomen. Electretinograms elicited by beta- and X-radiation sources corresponded closely with the waveforms produced by visible light stimulation. Electroantennograms were recorded from isolated antennules following stimulation with glutamic acid, beta- and X-radiation. Bioelectrical potentials were recorded from swimmeret preparations with exposure to beta- and X-radiation. Electrophysiological evidence indicates that the eye, antennules, and possibly chemoreceptors on the abdominal segments serve as routes for detection of ionizing radiations. (15 ref)—*Journal abstract*.

6450. Kiser, R. Sanford & Lebovitz, Robert M. (Southwestern Medical School, Dallas, TX) **Monoaminergic mechanisms in aversive brain stimulation.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 47-53.—Examined the role of brain monoamines in the fearlike responses produced by electrical stimulation of the dorsal midbrain tegmentum (DMT) of 77 chronically implanted male albino rats. Electrical stimulation produced escape-seeking responses. Ss were then trained for stable stimulus escape using a decremental barpressing paradigm. Each barpress reduced the stimulation current by a predetermined fraction of the initial current level. Perceived aversive strength of the initial stimulus current was represented by an increasing function of the number of barpresses to escape. Administration of the catecholamine depleting drug alpha-methylparatyrosine yielded no change in barpressing relative to saline-injected controls. However, the serotonin depleting drug parachlorophenylalanine produced a marked increase in decremental barpressing compared to controls. Results suggest that fearlike responses to DMT stimulation may be dependent upon brain serotonin levels and relatively insensitive to levels of brain catecholamines. (27 ref)—*Journal abstract*.

6451. Kobrick, John L. (US Army Research Inst of Environmental Medicine, Natick, MA) **Effects of hypoxia on peripheral visual response to dim stimuli.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 467-474.—Obtained response times (RTs) of 9 18-25 yr old healthy male US Army personnel for detection of 48 flash stimuli distributed throughout the visual field during 3½-hr exposures to each of 4 hypoxia conditions (0, 13,000, 15,000, and 17,000 ft equivalent elevation). The luminances of all stimuli were set in common at the detection threshold value for the visual periphery. RTs were impaired in direct relation to hypoxic exposure severity, the peak impairments occurring within 90 min, followed by gradual recovery. Since the present results show less impairment than previous data for brighter stimuli using the same task, it is concluded that stimulus contrast is more critical to peripheral signal detection than absolute stimulus luminance, particularly under hypoxic exposure.—*Journal abstract*.

6452. Li, C. L. et al. (National Inst of Neurological & Communicative Disorders & Stroke, Bethesda, MD) **Acupuncture and hypnosis: Effects on induced pain.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 272-280.—Studied responses of 14 volunteers (mean age 27.6 yrs) to electrical stimulation near the supraorbital nerve under acupuncture, placebo-acupuncture, and hypnosis. As stimulation intensity increased, a minimum

sensation, a minimum pain, and then a maximum or intolerable pain sensation were produced. Under hypnosis the average intensity of the stimulus for producing these sensations was higher than before the trance induction. Under acupuncture and placebo-acupuncture no clear increase in current intensity was observed. Acupuncture, as well as hypnosis, did not consistently change blood pressure, pulse rate, EKG, respiratory rate, or EEG. (33 ref)—*Journal abstract*.

6453. Lindsay, D. R.; Cognie, Y.; Pelletier, J. & Signoret, J. P. (U Western Australia, Nedlands) **Influence of the presence of rams on the timing of ovulation and discharge of LH in ewes.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 423-426.—Studied the influence of the presence of the male on the ovulation process in 50 Ile-de-France ewes after estrus control by progestagens (intravaginal fluorogestone acetate) and pregnant mare serum gonadotrophin (PMSG). Permanent contact with the rams throughout estrus accelerated the ovulation and the appearance of the luteinizing hormone (LH) surge. Results suggest that the action of the presence of the male on ovulation is mediated by way of the ovulatory surge of LH. (17 ref)—*Journal abstract*.

6454. MacKenzie, Roderick A.; Burke, David; Skuse, Nevell F. & Lethlean, A. Keith. (Prince Henry Hosp, Unit of Clinical Neurophysiology, Sydney, Australia) **Fibre function and perception during cutaneous nerve block.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1975(Sep), Vol 38(9), 865-873.—Recorded neural responses of awake human Ss to electrical stimulation. Changes in the activity of individual fiber groups during blocking procedures were correlated with simultaneous alterations in the perception of standardized stimuli. Light touch sensibility in hairy skin appeared to depend on the integrity of A-beta-gamma fibers, cold and pinprick on A-delta fibers, and warmth and dull pain on C fibers. (25 ref)

6455. McHugh, Paul R.; Moran, Timothy H. & Barton, George N. (U Oregon, Health Sciences Ctr, Portland) **Satiety: A graded behavioral phenomenon regulating caloric intake.** *Science*, 1975(Oct), Vol 190(4210), 167-169.—Rhesus monkeys inhibited their feeding in response to intragastric nutrient preloads, so as to maintain a constant caloric intake. There was a definite dose-response relationship to calories which did not depend on the volume, caloric concentration, or nature of the nutrient. This accurate control was accomplished even though some of the preload remained in the stomach throughout the feeding period.

6457. Peck, Carol K. & Crewther, Sheila G. (Pomona Coll) **Perceptual effects of surgical rotation of the eye in kittens.** *Brain Research*, 1975, Vol 99(1), 213-219.—Reports results of discrimination training and data on visually guided behavior in 8 kittens with rotated eyes (less than 70°). The finding of good interocular transfer in these Ss is discussed in terms of data from strabismic humans and data from cats with larger rotations.

6458. Piquard, François; Schaefer, Adrien & Habery, Pascal. (U Louis Pasteur, Faculté de Médecine, Inst de Physiologie, Strasbourg, France) [Effects of glucose, aminoacid or lipid infusion on dietary self-selection in the rat.] (Fren) *Physiology & Behavior*, 1975(Jul), Vol 15(1), 41-46.—In chronically catheterized rats, aminoacidemic and lipidic infusions, led not only to a decrease, respectively, in protein and lipid intake, but also in glucid intake. Total caloric intake decreased more than caloric load. The existence of a hepatic chemosensitivity is hypothesized. (English & French summaries) (34 ref)
6459. Powers, J. Bradley. (U Michigan) **Anti-estrogenic suppression of the lordosis response in female rats.** *Hormones and Behavior*, 1975(Dec), Vol 6(4), 379-392.—Used the anti-estrogen, CI 628, to suppress the lordosis response induced by sequential injections of estrogen and progesterone in a total of 66 ovariectomized (OVX) Sprague-Dawley rats over 4 experiments. Appropriate doses of CI 628 completely abolished sexual receptivity in Ss administered estradiol benzoate (EB). This behavioral effect could be attenuated by providing increased quantities of EB or decreased quantities of CI 628. Anti-estrogenic effects on lordosis induced by free estradiol in saline (E) were assessed after first establishing behaviorally equivalent doses of EB and E. This was accomplished by determining thresholds for E-induced lordosis. OVX Ss were approximately 7 times less sensitive to E than to EB. CI 628 had no significant effects on E-induced lordosis, in contrast to the complete abolition of lordosis in Ss treated with behaviorally equivalent EB doses. A possible mechanism to explain this differential responsiveness of EB- and E-treated Ss is discussed. (37 ref)—*Journal abstract*.
6460. Price, Edward O. (State University Coll New York, Environmental Science & Forestry, Syracuse) **Hormonal control of urine-marking in wild and domestic Norway rats.** *Hormones and Behavior*, 1975(Dec), Vol 6(4), 393-397.—Administration of testosterone to castrated Long-Evans and wild genotype male rats indicated that the urine-marking response was hormone dependent, increased in both stocks over the response in controls, and persisted longer in wild than in domestic Ss. (25 ref)—*Journal abstract*.
6461. Ramaley, Judith A. (U Nebraska, Medical Ctr, Omaha) **Development of running activity in maturing rats: Dependence upon prior androgen exposure and ovarian function.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 25-29.—From experimental results it is concluded that the ovaries are not required for either the initiation of running activity or the later decline seen in mature rats but that the gradually increasing running seen in intact rats is directly related to ovarian function.
6462. Sainio, Kimmo & Putkonen, P. T. (U Helsinki, Inst of Physiology, Finland) **Sleep-waking cycle in rabbits after cerebral ischemia.** *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 663-666.—Results of a study with 17 adult rabbits indicate that cerebral ischemia of 4-6 min was followed by degradation of the EEG sleep-waking cycle, as determined from 3-hr afternoon records. Hyposomnia (i.e., reduction of slow wave and paradoxical sleep lasting approximately 2 days) was seen, with gradual normalization in case of survival. In the 1st postischemic days abundant 14-17 c/sec spindles appeared in the motor cortex against a low voltage desynchronized background, making the EEG of waking qualitatively different from control records. Results are discussed with reference to polygraphic studies in comatose patients, EEG phenomenology of drowsiness, and cerebral monoamines. (French summary)—*Journal summary*.
6463. Smith, Durwood J.; Joffe, Justin M. & Heseltine, Gilbert F. **Modification of prenatal stress effects in rats by adrenalectomy, dexamethasone and chlorpromazine.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 461-469.—Assigned 288 female Charles River (CD) rats to 4 treatment groups: chlorpromazine (CPZ) 2.1 mg/kg; dexamethasone (DEX) 38.7 µg/kg; adrenalectomy (ADX); and controls. Half the Ss in each group were stressed prior to mating and during gestation. Stress significantly reduced birth and weaning weights of control offspring but did not affect the weight of CPZ, DEX, or ADX offspring. At birth, DEX and ADX offspring, as well as offspring of partially adrenalectomized females, were significantly lighter than controls; at weaning, only the DEX animals displayed a weight deficit. Stress increased open field activity of ADX offspring but decreased the activity of DEX offspring while the performance of control and CPZ offspring was not affected. In a food deprivation test at 42 days there were significantly more deaths among male offspring of no-stress than of stress females, and stress offspring in all groups lost less weight than unstressed offspring in a food deprivation test at 69 days. Avoidance conditioning tests showed effects only in female offspring. Stress significantly decreased avoidances made by control offspring and increased avoidances made by DEX offspring. (39 ref)—*Journal abstract*.
6464. Snyder, Ron L. & Cheney, Carl D. (Brookfield Zoo, Dept of Design & Exhibitions, IL) **Homing performance of anosmic pigeons.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 592-594.—Conducted 2 homing experiments with control pigeons and pigeons whose nares (nostrils) were obstructed. A total of 86 mixed breed Ss were used. Anosmia reduced return success and extended flight times. Familiarity with the route cancelled much of the difference between groups. It is concluded that olfaction does appear to be a sense mode useful to homing pigeons.—*Journal abstract*.
6465. Stawarz, R. J. et al. (Vanderbilt U, Medical School) **On the significance of the increase in homovanillic acid (HVA) caused by antipsychotic drugs in corpus striatum and limbic forebrain.** *Psychopharmacologia*, 1975, Vol 43(2), 125-130.—The effect of various antipsychotic drugs on the blockade of dopaminergic receptors was examined by establishing dose-response curves for the increase of HVA and for the antagonism of dextroamphetamine-induced rotation in male Sprague-Dawley rats with unilateral lesions of the substantia nigra. A good quantitative correlation was found between dopaminergic blockade in the striatum as reflected by the effective dose for striatal HVA increase and the effective dose for rotational antagonism and the occurrence of extrapyramidal side effects in man. The effective dose for the increase in HVA in the limbic forebrain showed the same rank order of potency as those in the striatum:

haloperidol > pimozide > chlorpromazine > thioridazine > clozapine. Results thus demonstrate a very good correlation between the degree of dopaminergic blockade and the increase of extrapyramidal side effects in man, but suggest the possibility of a dissociation between dopaminergic blockade and antipsychotic activity.—*Journal abstract.*

6466. Stern, Warren C. et al. (Squibb Inst for Medical Research, Princeton, NJ) **Ontogeny of the levels of biogenic amines in various parts of the brain and in peripheral tissues in normal and protein malnourished rats.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 314-326.—Studied the development of serotonin, 5-hydroxyindoleacetic acid, and norepinephrine in the brain regions and peripheral tissues of normal and protein-deprived albino rats. Results show that rearing rats on a diet low in protein, but adequate in other respects, significantly elevated the brain amine content at most ages from birth to 300 days. (25 ref)

6467. Tanabe, T. et al. (Gunma U, Medical School, Maebashi, Japan) **An olfactory projection area in orbitofrontal cortex of the monkey.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1269-1283.—Studied an olfactory projection area in 46 anesthetized rhesus monkeys. Evoked potentials were recorded when the olfactory bulb (OB) was electrically stimulated in the lateroposterior position of the orbitofrontal cortex (LPOF), however, these potentials disappeared when the anterior pyriform cortex (AP) was aspirated or electrically destroyed. In almost the entire hypothalamic region, evoked potentials were recorded by the same stimulation of the OB. Ss were conditioned to discriminate 2 odors; when the LPOF was removed, their discrimination ability was decreased, but when other areas on the prefrontal cortex were removed, the ability was only slightly decreased. It is concluded that there is an olfactory pathway from the OB to the LPOF through the AP and the hypothalamus, but none through the thalamus, and that the LPOF plays an important role in odor discrimination. (48 ref)—*Journal summary.*

Electrical Stimulation

6468. Ángyán, L. (Medical U. Inst of Physiology, Pécs, Hungary) **Autonomic effects of hypothalamic self-stimulation in the cat.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 495-498.—Male continuous recordings of respiration, heart rate and arterial blood pressure in 21 cats during self-stimulation with systematically varied stimulus parameters. Acceleration in the respiration and heart rate and rise in the arterial blood pressure were generally obtained as direct effects of the stimulus train, which were followed by remarkable rebound-like after-effects. A close relationship was found between the leverpressing behavior and the peripheral autonomic effects of self-stimulation. The frequency of self-stimulation increased parallel with the amplitude of the autonomic responses to a certain level, and the S stopped self-stimulation whenever the amplitude of the autonomic effects exceeded this level. Results are consistent with the idea that the peripheral autonomic changes can modulate self-stimulation.—*Journal abstract.*

6469. Atrens, Dale M. & Becker, Frederick T. (U Sydney, Australia) **Assessing the aversiveness of intra-**

cranial stimulation. *Psychopharmacologia*, 1975, Vol 44(2), 159-163.—Compared 18 male albino Wistar rats performance to escape intracranial stimulation (ICS) in a shuttle-box, 2-lever box, and a single-lever Sidman avoidance situation. The 1st 2 tasks also provided concurrent rate-independent measures of the rewarding properties of ICS. The rate-independent measures of aversion (latency to escape ICS) obtained in the shuttle-box and 2-lever task were significantly correlated with each other but not with the leverpress rates on Sidman avoidance. A number of Ss that would not leverpress to initiate ICS would perform the locomotor response very vigorously to initiate the same ICS, suggesting that even rate-independent leverpress measures may not accurately reflect the motivational characteristics of ICS. It is suggested that the escape behavior is an independent phenomenon which merits further study in its own right. (16 ref)—*Journal abstract.*

6470. Bandler, Richard. (U Sydney, Australia) **Predatory aggression: Midbrain-pontine junction rather than hypothalamus as the critical structure?** *Aggressive Behavior*, 1975, Vol 1(3), 261-266.—Electrical stimulation of sites in the region of the ventromedial periaqueductal gray substance at the level of the midbrain-pontine junction elicited predatory attacks on rats by 13 cats, none of which spontaneously attacked rats. The intensity of stimulation required to elicit the attack was 3-4 times less than that required to elicit similar behavior by hypothalamic stimulation. Results suggest that anatomically distinct regions of the periaqueductal gray substance are concerned with the regulation of predatory and affective forms of aggressive behavior. The difficulty in reconciling these results with the preeminent role assigned the hypothalamus in the organization of predatory behavior is discussed.—*Journal abstract.*

6473. Bowden, D. M.; Galkin, T. & Rosvold, H. E. (U Washington, Regional Primate Research Ctr, Seattle) **Primate drinking system as defined by electrical stimulation of the brain (ESB).** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 103-111.—Examined 4 rhesus monkeys by ESB for drinking sites in structures that had been previously demonstrated to support drinking behavior. 3 yielded a significantly greater proportion of drinking sites than expected from the earlier study, and 1 yielded significantly less. As the exploration proceeded, the proportion of sites yielding drinking greatly increased in the drinkers and decreased in the nondrinker, and the ratio of stimulus-bound to nonstimulus-bound drinking sites increased in the drinkers and decreased in the nondrinker. 2 sites that had reliably supported drinking in the restraint chair failed to do so when telestimulated in a free environment, but instead yielded turning, walking, and climbing behavior. Results suggest that

ESB-elicited drinking is determined by stimulation of several overlapping systems, including ascending dopaminergic and cholinergic systems and a nonspecific cholinergic component of the reticular activating system. The learning of stimulus-bound drinking is proposed to have its neural locus within the system which mediates the prepotent response, rather than in a thirst system or general activation system. 6474. Demski, L. S. & Bauer, D. H. (Louisiana State U, Medical Ctr) **Eye movements evoked by electrical stimulation of the brain in anesthetized fishes.** *Brain, Behavior & Evolution*, 1975, Vol 11(2), 109-129.—Evoked several eye movements by electrical stimulation of the brain in 29 anesthetized green sunfish and 5 goldfish. Conjugate lateral rolling movements, similar to eye movements observed when an unoperated fish is rotated about its long axis, were evoked from the acoustico-lateral area of the medulla and the eminentia granularis and an adjacent medial portion of the cerebellum. Bilateral and unilateral backward rotations, similar to the eye movements observed when unoperated fish are rotated forward about the interopillary axis, were evoked from the medial longitudinal fasciculus and areas related to the oculomotor nerve. Bilateral forward rotations, comparable to the eye movements resulting when unoperated fish are rotated backward about the interopillary axis, were elicited by stimulation near the trochlear nerve roots in the valvula of the cerebellum; unilateral responses resulted from stimulation near the exiting trochlear nerves. Convergence was elicited by stimulation in the midline near the oculomotor complex and the medial longitudinal fasciculus, while unilateral vergence responses were triggered by stimulation in the medial longitudinal fasciculus and areas lateral to the oculomotor nucleus. (Worcester Foundation for Experimental Biology, Shrewsbury, MA) **The effect of chronic protein malnutrition on trans-callosal evoked responses in the rat.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 503-509.—Studied the trans-callosal evoked response (TCER) in 51 Sprague-Dawley rats born of female Charles River CD rats fed either a low S(8%) or normal (25%) protein diet beginning 5 wks prior to mating and throughout gestation and lactation. After weaning, pups were fed the same diets as their mothers. Bipolar (surface vs depth) stainless steel stimulating and recording electrodes were positioned at corresponding loci in the right and left sensorimotor cortices. TCERs were measured under urethane anesthesia using twice-threshold bipolar pulses of .1 msec duration at 13, 21, and 60-66 days of age. Evoked response latency was significantly greater in malnourished Ss at 13 days of age, whereas at adulthood no latency differences were seen. Poststimulation excitability (15-100 msec range) was not significantly affected by the dietary treatment. Results confirm previous reports on rats undernourished during development using sensory evoked potentials. By avoiding the use of extrinsic sensory stimulation, present data demonstrate a dietary effect on ontogeny of cortical evoked potentials independent of any possible effect on sensory receptor mechanisms. 6477. Gustafson, John W.; Lidsky, T. I. & Schwartzbaum, J. S. (Purdue U) **Effects of hippocampal stimulation on acquisition, extinction, and generalization of conditioned suppression in the rat.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1136-1148.—In 6 experiments, a total of 142 male Holtzman rats implanted with electrodes in the dorsal or ventral hippocampus received posttrial stimulation in training sessions with footshock reinforcement. Afterdischarges without overt seizures were consistently without effect on the rate of acquisition of suppression of licking during an auditory CS, although conditioning was retarded by the delivery of distracting stimuli following footshock. The rate of conditioning remained insensitive to elicitation of dorsal hippocampal afterdischarges (DHAD) despite subsequent alterations of session length, intertrial interval, and preexposure to the CS. However, faster extinction of suppression occurred following DHAD, suggesting a limited but essential role of the hippocampus in addressing stored information. (28 ref)—*Journal abstract*.

6479. Keene, James J. (U Puerto Rico, Medical School, San Juan) **Reward-associated excitation and pain-associated inhibition lasting seconds in rat medial pallidal units.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 97-114.—Prolonged changes during 10-sec poststimulus periods in unit firing rate following stimuli at reward sites in medial forebrain bundle and aversive midbrain reticular sites have been observed in unanesthetized postcollicular *cereveau isolé* rats. However, longlasting medial forebrain bundle-elicited inhibition and reticular-elicited excitation converged on single cells only in intralaminar thalamus. The present study postulated that a related brain region might also show opposite medial forebrain bundle and reticular responses, but the inverse of those seen in intralaminar thalamus. Using similar methods with 10 cats, convergence on single units of prolonged excitation by medial forebrain bundle and by reticular stimuli was typical in internal capsule and to a lesser extent amygdala. Ventral anterior-ventral lateral nuclei of thalamus were characterized by converging inhibition. Contrasting actions of the stimuli were observed in lateral pallidum. However, direct opposite effects, medial forebrain bundle-elicited excitation and reticular-elicited inhibition, were anatomically confined to a medial pallidal region. The opposite responses summated or cancelled when the medial forebrain bundle and reticular stimuli were given simultaneously. It is suggested that a medial pallidal-intralaminar thalamus system may be central to the neural coding of certain affective states, integrating these with motor control and sensory information. human subjects. *Brain Research*, 1975, Vol 88(1), 105-108.—Used the H reflex, a monosynaptic reflex obtained through electrical stimulation of the posterior tibial nerve while recording the surface EMG of the soleus muscle, to study recurrent inhibition (caused by a discharge of motoneurons) in human Ss. Possible origins of the resultant inhibitory actions are discussed, and it is suggested that the Renshaw interneurons are responsible for the recurrent inhibition phenomenon.

6481. **Pragay, Eva B. et al.** (Boston U, Medical School) **Effect of electrical stimulation of the brain on visually controlled (attentive) behavior in *Macaca mulatta*.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 203-220.—Electrical stimulation of various subcortical regions of the brains of 5 rhesus monkeys was conducted during the performance of a learned visual attention task which required Ss to press for a red (positive) stimulus and to withhold responses to green or blue (negative) stimuli. Errors in performance were more frequently induced by the stimulation of the lower brainstem (midbrain and pons) than that of the thalamus. Omission errors were most frequently elicited by stimulation of the mesopontine reticular formation or structures which are anatomically and functionally related to it. In contrast, commission errors resulted most frequently from the stimulation of specific sensory systems or from areas closely related to them. (26 ref) —*Journal abstract*.

6482. **Savage, G. E. & Roberts, M. G.** (Queen Mary Coll, London, England) **Behavioural effects of electrical stimulation of the hypothalamus of the goldfish (*Carassius auratus*).** *Brain, Behavior & Evolution*, 1975, Vol 12(1-2), 42-56.—19 food-satiated goldfish were stimulated in tanks containing food on the surface of the water and on the bottom of the tank. Various components of the feeding response were seen, and complete feeding was observed, which was elicited from sites in the postero-medial hypothalamus. Evidence is cited to support the supposition that the full response was due to a change in feeding motivation, rather than to changes in sensory or motor factors. Other types of behavior (e.g., fin movements and swimming) could not be identified as part of any normal ethological sequence. However, vertical movements and gas-spitting responses indicated a possible hypothalamic control of buoyancy. None of the behaviors observed was seen to change in a social context. 6483. **Smith, Carlyle T. & Miskiman, Donald E.** (Trent U, Peterborough, Canada) **Increases in paradoxical sleep as a result of amygdaloid stimulation.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 17-19.—8 male Holtzman rats were partially and selectively deprived of paradoxical sleep (PS) for a 16½-hr period and allowed to rest for a 7½-hr period each day. Test Ss were given mild unilateral amygdaloid stimulation for 1 min each day of a 5-day test period. There was a significant increase in PS during the rest periods of test Ss on stimulation days when compared to nonstimulated controls. The effect did not last beyond a 5-day period. Only subconvulsive behavior was observed in 2 test Ss. The similarity to the PS increases in this study to those seen in conventional learning and other situations are discussed. Receptive field properties of Area 18 cells and their responses to electrical stimulation of afferent and efferent pathways were measured and compared with those of Area 17. Numerous similarities were found between the 2 areas with regard to afferent and efferent connections and intrinsic organization. The structure of the receptive fields and their numerical distribution in Area 18 resembled those of Area 17. The same was true for the correlations between receptive field parameters and afferent and efferent connectivity. The main differences were that the Area 18 cells had larger receptive fields and responded to considerably higher stimulus velocities. It is suggested that these differences are caused by the fact that Area 18 received subcortical afferents of the Y-type, while the dominant input to Area 17 comes from the X-system. It is concluded that Area 18 is organized in a parallel manner to Area 17 and deals with other aspects of visual information. (24 ref) —*Journal summary*.

—After 11 days of leverpress training on a VI 30-sec schedule, separate groups of septally lesioned and normal male hooded rats ($N = 24$) were exposed for 10 days to 1 of 2 response-suppression procedures: extinction or differential reinforcement of other behaviors (DRO). Both procedures were effective in suppressing responding, with the septal Ss taking longer to reach the suppression asymptote than did the normals. All Ss then received 5 days of noncontingent food presentation. Under these conditions responding recovered to a much greater degree in Ss previously given extinction than in those given DRO. Further, septal Ss given extinction showed more recovery than did normals given extinction. (25 ref)—*Journal abstract*.

(U Pittsburgh) Sexual inhibition is reduced by rostral midbrain lesions in male rat. *Science*, 1975(Oct), Vol 190(4210), 169-171.—In a study with 46 sexually experienced male Long-Evans rats, electrolytic lesions in a circumscribed area of the rostral midbrain shortened the inhibitory period following ejaculation, thereby increasing the number of ejaculations achieved in 1-hr tests. These lesions also interrupted the dorsal norepinephrine bundle as reflected in a 63% reduction in telencephalic or cortical norepinephrine.—*Journal abstract*.

6496. Colby, John J. & Smith, Nelson F. (Providence Coll) Ability of rats with ventromedial hypothalamic lesions to work: Effects of ambient temperature. *Physiology & Behavior*, 1975(Jul), Vol 15(1), 31-35.—32 female Charles River albino rats with bilateral ventromedial hypothalamic (VMH) lesions decreased bar-pressing at FR 64 at high ambient temperatures. No significant decrease was noted at low temperatures for VMH Ss. 32 controls evidenced no response suppression at any temperature. Pause time for the VMH Ss at high temperatures suggests a VMH lesion-ambient temperature interaction.—*Journal abstract*.

6497. Dafters, Richard. (Glasgow U, Scotland) Active avoidance behavior following archistriatal lesions in pigeons. *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1169-1179.—Exp I examined the performance of 10 pigeons, 5 with bilateral medial archistriatal lesions and 5 sham-operated controls, in the acquisition and maintenance of a discrete-trial treadle-press avoidance response. The archistriatal Ss had longer response latencies and never attained the level of performance achieved by the controls. In Exp II, 8 pigeons learned a treadle-press response to avoid or escape shock on a signaled free-operant schedule. After 17 daily sessions, 4 Ss received bilateral lesions in the medial archistriatum, and 4 received control lesions in the neostriatum. After recovery from surgery, all Ss were returned to the experimental procedure. Avoidance of those Ss with archistriatal lesions was impaired relative to the postoperative level while that of the control group was unchanged. Results are interpreted in the light of earlier experiments showing reduced escape and avoidance behavior both in other avian species and in mammals with lesions in the amygdala, to which the archistriatum is considered homologous. (33 ref)—*Journal abstract*.

6498. Davis, Stephen F.; Harper, Wyatt E. & Seago, John D. (Austin Peay State U) Runway performance of normal, sham, and anosmic rats as a function of magnitude of reward and magnitude shift. *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 367-369.—Conducted a 2-phase experiment designed to yield information concerning the effects of magnitude of reward and magnitude shifts on the runway performance of normal, sham-operated, and surgically anosmic rats. Ss were 81 male Sprague-Dawley rats. 3 squads of normal, sham, and anosmic Ss were each divided into 3 subgroups that received small, multiple-pellet large, and single-pellet large reward, respectively, during the 1st

phase (51 trials). During Phase II (30 trials), all Ss received the small reward. Reward magnitude effects developed during Phase I but were shown only by the normal and sham Ss. Significant depression effects were shown during Phase II by all Ss shifted from large to small reward. However, the form of the performance decrements shown during Phase II differed considerably between normal and sham Ss and anosmic Ss.—*Journal abstract.*

6499. de Castro, John & Hall, Thom W. (Georgia State U) **Fornix lesions: Effects on active and passive avoidance behavior.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 201-204.—Tested 24 fornix-lesioned and 16 sham-operated rats on 1-way active avoidance acquisition, subsequent passive avoidance of the previously safe compartment, and acquisition and extinction of the passive avoidance of an electrified foodcup. Ss were 40 Sprague-Dawley male albino rats. Ss with lesions of the fornix made significantly more errors than controls in learning the 1-way active avoidance acquisition task and had significantly elevated freezing scores on both escape and avoidance trials. Lesioned Ss also made significantly more errors in the passive avoidance of the previously safe compartment. There were no significant differences found on either acquisition or extinction of the passive avoidance of an electrified foodcup. Results support the hypothesis that fornix destruction produces impaired performance on tasks which require a spatial discrimination. (19 ref)—*Journal abstract.*

6503. Goldstein, Melvin L. (Indiana U, Kokomo) **Amygdalotomized rats can learn the classically conditioned fear response: A preliminary report.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 613-614.

Preliminary results of a series of pilot experiments show that amygdalotomized rats can learn the classically conditioned fear response if a discriminative cue is included in the test situation (e.g., if they are run from a white background (shock compartment) to a black background (safe compartment). When the lesioned rats are run from a black shock compartment to a black safe compartment, there is a greater performance deficit. It is stated that the amount of fear reduction in the test situation is probably a more important variable than the amount of fear reduction in the acquisition of the fear response. The integrity of the

amygdaloid complex is probably not essential for the learning processes involved in classical fear conditioning. Other areas of the brain, such as the hippocampus, may be more directly involved in the acquisition and retention of classical fear conditioning and avoidance conditioning.—*Journal abstract.*

6504. Harrel, Lindy E.; Decastro, John M. & Balagura, Saul. (U North Carolina, Biological Sciences Research Ctr, Chapel Hill) **A critical evaluation of body weight loss following lateral hypothalamic lesions.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 133-136.—Results suggest that lateral hypothalamic lesions induce a metabolic impairment in rats and that these may indirectly influence weight loss by interfering with physiological signals (glucostatic, thermostatic, aminostatic, and lipostatic) responsible for the initiation of a meal. Such impairment may cause the periods of aphagia and adipsia following lateral hypothalamic lesions. (20 ref)

6505. Heffner, Henry & Masterton, Bruce. (Florida State U) **Contribution of auditory cortex to sound localization in the monkey (*Macaca mulatta*).** *Journal of Neurophysiology*, 1975(Nov), Vol 38(6), 1340-1358.—4 monkeys with lesions of the auditory cortex were tested for their ability to localize the source of brief sounds. Although those deprived bilaterally of primary auditory cortex were able to indicate the direction of a sound with near-normal acuity, they were unable to locate its source. This suggests that the role of auditory cortex in sound localization is not so much sensory or perceptual as it is auditomotor or associative. Thus, sound localization is added to loudness, pitch, and most other traditional attributes of sound as a dimension whose discrimination does not depend on auditory cortex. Future research should attempt to determine whether auditory cortex is necessary for any sensory discrimination whatever. (27 ref)—*Journal summary.*

6506. Hottman, Terry J.; Sanders, Robert E.; Rinck, Christine M. & Sheridan, Charles L. (U Missouri, Kansas City) **Further evaluation of a sensitive method for detecting experimental brain lesions.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 407-410.—Small unilateral cortical lesions were placed in either medial-anterior, lateral-anterior, or posterior cortex of 20 male Sprague-Dawley albino rats. Unilateral sham operations were performed on 8 Ss. All Ss had been trained prior to surgery with diametrically opposed visual habits mediated by opposite cerebral hemispheres. The opposing habits were, insofar as possible, evenly matched prior to surgery. After surgery, lesioned hemispheres, regardless of locus of lesion, were slower in acquiring the habit they mediated than were unlesioned hemispheres. Further, unlesioned hemispheres dominated in test trials in which Ss chose 1 of the 2 cue doors with both eyes open. Findings confirm that the "interocularly conflicting discrimination" baseline detects a role of extrastriate cortex in mediation of pattern discrimination habits. They further indicate that losses occur without regard to the various locations of lesion employed.—*Journal abstract.*

6508. Kow, Lee-Ming & Pfaff, Donald W. (Rockefeller U) **Sensory requirements for the lordosis reflex in female rats.** *Brain Research*, 1976, Vol 101(1), 47-66.—Reports results of 4 experiments which show that visual, auditory, and olfactory input were not necessary for the performance of the lordosis reflex by female rats. Since taste is not involved in this behavior, somatosensory input must be sufficient for triggering the lordosis reflex. Surgical cutaneous denervation markedly reduced the frequency and strength of lordosis. The most effective operation denervated the perineum, tailbase, posterior rump, and ventral flanks. These results agree with film observations and manual stimulation of lordosis. Effects of surgical cutaneous denervation were confirmed in experiments with local anesthesia produced by subcutaneous procaine injections. It is concluded that cutaneous mechanoreceptors in specific regions of hairy skin of the female rat play a crucial role in triggering the lordosis reflex. (26 ref)—*Journal abstract*.

6509. Larue, Christiane. (Coll de France, Lab de Neurophysiologie Sensorielle et Comportementale, Paris) **Prandial drinking and the disruption of meal patterns in olfactory bulbectomized rats.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 491-493.—To determine the cause of the disrupted feeding pattern in 11 bulbectomized and 7 recovered lateral hypothalamic-lesioned male Wistar rats and to study the role of prandial drinking in producing this feeding pattern, feeding and drinking patterns were simultaneously recorded. In the 5 controls, drinking occurred mainly before and after the meals. In bulbectomized Ss, drinking occurred also before and after the meal, but the main part of the meal-associated drinking took place during the numerous short pauses within the meal. In LH-recovered Ss the meal-associated drinking occurred in a very rapid alternation between eating and drinking during feeding bouts (prandial drinking) and not during the meal pauses. It is suggested that the nibbling pattern seen in LH-recovered rats as well as in bulbectomized rats is not due to the prandial drinking but results from the loss of an olfactory input to the LH area.—*Journal abstract*.

6510. Lénárd, L.; Sarkisian, Janna & Szabó, I. (Medical U, Inst of Physiology, Pécs, Hungary) **Sex-dependent survival of rats after bilateral pallidal lesions.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 389-397.—Studied the effects of unilateral and bilateral pallidal lesions in 2 experiments with 17 male and 17 female Wistar rats and 20 male and 20 female CFY rats. While unilateral lesions produced only transient aphagia and adipsia, the results of bilateral lesions were more severe. 16 of 30 Wistar rats survived the bilateral lesion and were followed until the 157th day. The majority of survivors were females. The recovery of males was slower than females. All the surviving Ss and also some of those which subsequently died ate and drank spontaneously. Similar results were obtained with the CFY rats. Data suggest that aphagia and adipsia, as well as the considerable weight loss causing the death of animals may be regarded as disorders of 2 partially independent mechanisms which occur more in male than female animals. (44 ref)—*Journal abstract*.

6512. MacDougall, James M.; Pennebaker, James W. & Stevenson, Michael. (Eckerd Coll) **Effects of septal lesions on social attraction in two subspecies of deer mouse.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 215-219.—Gave septal lesions to members of 2 subspecies of deer mouse (*Peromyscus maniculatus*) that differ in social gregariousness and tested them for pairwise sociability. Ss were 16 male *gracilis* and 54 *bairdi*. *Gracilis*, normally a highly social animal, became even more gregarious following septal damage, while *bairdi*, which normally shows avoidance of social contact, showed further reductions in sociability. Findings lend no support to a previous suggestion that septal lesions enhance sociability generally across species; instead, they suggest that reported increases in social contact in lesioned animals are a secondary consequence of the lesion's tendency to enhance predominant behavior patterns.—*Journal abstract*.

6513. Mass, R. & Kling, A. (Rutgers State U, Coll of Medicine & Dentistry, Piscataway) **Social behavior in stump-tailed macaques (*Macaca speciosa*) after lesions of the dorsolateral frontal cortex.** *Primates*, 1975(Sep), Vol 16(3), 239-252.—Observed the effects of dorsolateral frontal cortex ablations on quantified social interactions of stump-tail macaques within the context of the social behavior of a larger group. A caged group of 11 animals, 6 females and 5 males, was observed for 100 hrs pre-operatively. Postoperatively, 5 operates and 5 sham operates matched for sex, age, and rank were observed for 110 hrs. Aggression increased following surgery. The female operates ranked 3 and 5 fell to the bottom of the dominance hierarchy 2 mo after surgery. The fall in dominance as measured by displacement behavior was found to permeate several behavioral categories including presenting, threatening, and aggression. Female operates appeared to fall in inverse relationship to their ranks. Male operates showed minimal disruptions after surgery. It is suggested that the length of time between surgery and the outbreak of violence might represent the length of time required for subordinates to notice and confirm the behaviors resulting from attentional defects in the high-ranking female operates. 6515. Modianos, Doan T. (Texas Christian U) **Effects of habenular lesions upon the responsiveness of ovariectomized female rats to estrogen and progesterone.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2973-2974.

6516. Myhrer, Trond. (U Oslo, Inst of Neurophysiology, Norway) **Effects of stria terminalis sections on locomotor, avoidance, and alternation behavior in rats.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 245-248.—In a previous study, differential behavioral effects between medial and lateral fimbrial lesions were seen. However, since the lateral fimbrial lesions comprised the

stria terminalis and the medial fimbrial lesions did not, it seemed important to know the effects of selective division of the stria in the same behavioral tests. Present results, with 28 male Moll-Wistar Ss, show that section of the stria in rats improved 2-way active avoidance performance, whereas the behavior in open field, passive avoidance, and spontaneous alternation tests was not significantly changed. Thus, a reservation must be taken into account with regard to the finding that lateral fimbrial lesions improve 2-way active avoidance behavior. Results of stria terminalis sections are discussed in terms of a functional differentiation within the amygdaloid complex.—*Journal abstract.*

6517. Myhrer, Trond. (U Oslo, Inst of Neurophysiology, Norway) **Maze performance in rats with hippocampal perforant paths lesions: Some aspects of functional recovery.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 433-437.—Compared the performance of 2 groups of 8 male albino Moll-Wistar rats—one with lesions of the perforant paths projecting to the dorsal hippocampus (the D group) and one with lesions of the perforant paths to both the dorsal and ventral hippocampus (the DV group)—with the performance of 14 rats in lesioned control and intact control groups during 2 test sessions in the Hebb-Williams closed field maze. Both experimental groups displayed impaired maze learning in Session I. The DV group showed some recovery of function in Session II, and the D group was indistinguishable from controls. Results are discussed in terms of reduced sensory information to the hippocampal formation resulting from perforant paths lesions. It is suggested that the hippocampus is involved in relating new stimuli to previous experience. (18 ref)—*Journal abstract.*

6518. Paxinos, George. (U New South Wales, Kensington, Australia) **The septum: Neural systems involved in eating, drinking, irritability, muricide, copulation, and activity in rats.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1154-1168.—Measured eating, drinking, irritability, muricide, and copulation in 45 male albino Wistar rats before and after 1 of 3 coronal knife cuts in the septal region or a control operation. Activity was also measured postoperatively in the 3 experiments. Cuts posteroventral to the septum resulted in slight hypophagia, marked hyperdipsia, irritability, asexuality, and decrease in activity. Cuts of the fornix resulted only in slight decrease in activity. Cuts through the anterior septum resulted in irritability, slight hyposexuality, and slight decrease in activity. No significant correlations between the various behavioral effects were found. It is suggested that the neural pathways mediating eating, drinking, irritability, muricide, copulation, and activity are relatively distinct and that neural activity in the septal region probably does not influence behavior in any unitary fashion. (42 ref) *Journal abstract.*

6519. Pycock, C. J.; Donaldson, I. M. & Marsden, C. D. (U London, Inst of Psychiatry, England) **Circling behaviour produced by unilateral lesions in the region of the locus coeruleus in rats.** *Brain Research*, 1978, Vol 97(2), 317-329.—Male Wistar rats with unilateral lesions in the region of the locus coeruleus circled tightly to the opposite side when given up apomorphine (1 mg/kg) or levorotatory amphetamine (5 mg/kg). This circling behavior

was transient and disappeared within 30 days after surgery, and was seen mostly in Ss with severe unilateral destruction of the locus coeruleus, which caused on average a 55% reduction in the level of noradrenaline in the ipsilateral cerebral cortex. It was not marked in Ss with partial unilateral lesions of the locus coeruleus, which caused only an average fall in cortical noradrenaline of 22%. It was not seen in sham-operated Ss or Ss in which lesions were placed into adjacent structures. Dopamine in the ipsilateral striatum was increased 5 days after operation, when circling occurred, but had returned to normal by 30 days when circling had ceased. It is suggested that the lesion causes a reduction in impulse traffic in the ipsilateral nigrostriatal pathway and that circling is due to preferential stimulation of the ipsilateral striatal dopamine receptors by both drugs: apomorphine directly, and amphetamine by release of endogenous dopamine. (37 ref)—*Journal abstract.*

6520. Robinson, John S. & Voneida, Theodore J. (Brain Behavior Research Ctr, Sonoma State Hosp, Eldridge, CA) **Visual processing in the split-brain cat: Analysis of the single-hemisphere deficit.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 140-149.—Tested the hypothesis that unilateral loss after brain bi-section is the result of field defects produced by chiasm-section. In a study with 3 male cats trained on a same-different horizontal-vertical discrimination task, evidence was obtained to support a sensory interpretation of unilateral behavior loss, since sectioning the optic chiasm destroyed crossed visual fibers, eliminating the temporal visual half-fields. Ss' unilateral performance was not consistent with a sensory interpretation of monocular loss. First, there was no unilateral loss preoperatively when vision was reduced 50% by eye occlusion; also there was no unilateral loss after optic chiasm section but before corpus callosum section; and finally, after both structures were sectioned, there was a significant unilateral loss (as compared with binocular performance), but with asymptotic accuracy about the same for cue stimuli in nasal and temporal visual fields (i.e., for stimuli projecting to intact and denervated retina respectively). Data suggest, not a sensory loss, but the kind of single-hemisphere cognitive deficit in which task information (auditory or somesthetic cues) is experimentally confined to one brain half without any interference with receptor processes. (21 ref)—*Journal abstract.*

6521. Sclafani, Anthony; Gale, Steven K. & Springer, Delel. (Brooklyn Coll, City U New York) **Effects of hypothalamic knife cuts on the ingestive responses to glucose and insulin.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 63-70.—In 2 experiments with 36 female CFE rats, parasagittal knife cuts through the perifornical hypothalamus either medial or lateral to the fornix produced hyperphagia and obesity and altered Ss' ingestive responses to dilute glucose solutions. The lateral cut Ss drank less dilute glucose solution under both nondeprived and food-deprived conditions and displayed less of a feeding suppressive response to glucose ingestion compared to controls. The lateral cut Ss were also deficient in their feeding response to insulin-induced hypoglycemia. The medial cuts decreased the responsivity to glucose, but less so than the lateral cuts, and did not alter the ingestive response to insulin. Both

the medial and lateral cuts did not appear to change the S's responsivity to concentrated glucose solutions. The neuroanatomical and functional nature of the disorder responsible for these effects and its relationship to the hyperphagia-obesity syndrome are discussed. (29 ref)—*Journal abstract*.

6522. Solomon, Paul R. & Moore, John W. (U Massachusetts, Amherst) **Latent inhibition and stimulus generalization of the classically conditioned nictitating membrane response in rabbits (*Oryctolagus cuniculus*) following hippocampal ablation.** *Journal of Comparative & Physiological Psychology*, 1975(Dec), Vol 89(10), 1192-1203.—30 male and female New Zealand albino rabbits received 0 to 450 exposures of a tone CS prior to classical defensive conditioning of the nictitating membrane response based on an infraorbital eye shock UCS. Tone preexposure resulted in retarded conditioning in normal Ss, but was not present in Ss with bilateral dorsal hippocampectomy produced by aspiration. Controls with bilateral neocortical and callosal aspiration lesions demonstrated a latent inhibition effect similar to that shown by normal nonoperated Ss. The failure of CS preexposure to retard conditioning in hippocampal Ss was not due to differences in threshold of the conditioned response to the CS or to differences in response mechanisms as determined by tests of habituation and dishabituation of the UCR. A subsequent experiment with 24 Ss used combined-cue summation tests to confirm the fact that preexposure did not endow the tone with conditioned as well as latent inhibitory properties. Finally, tests of stimulus generalization along the auditory frequency dimension indicated flatter relative gradients for hippocampals than for nonoperated controls, with cortical controls in between. (40 ref)—*Journal abstract*.

6523. Thomas, John B. & Smith, Dennison A. (Wooster Coll) **VMH lesions facilitate baitshyness in the rat.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 7-11.—In 2 experiments, a total of 23 normal male and female Sprague-Dawley rats and 13 females with lesions of the ventromedial hypothalamus were compared on the acquisition of a single trial, long CS UCS interval, conditioning task (baitshyness). Ss with hypothalamic damage exhibited facilitated baitshyness when tested both shortly after and several months after surgery. The magnitude of the suppression observed in these Ss could not be related to either specific anatomical structures within the hypothalamus or to the amount of obesity exhibited following the lesions. Similarities and differences between the results of the present study and previous studies are discussed.—*Journal abstract*.

6524. Thomas, Roger K. & Weir, Vender K. (U Georgia) **The effects of lesions in the frontal or posterior association cortex of rats on maze III.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 210-214.—Conducted a study with 22 male hooded Ss to (a) examine an earlier suggestion that K. S. Lashley's (1929, 1941) law of equipotentiality received questionable support from the principal data used in its formulation and (b) compare the effects of lesions in the areas believed to represent frontal (MF) and parietal association cortex in the rat. Another frontal area (FP), often said to be an association area, was lesioned, and sham-

operated controls were included. Only the MF and parietal lesions led to postoperative retention deficits. It is suggested that Lashley's law, even in the limited context that he presented it, should no longer be reported uncritically. Further discussion considers the involvement of MF and parietal neocortex in spatially related behaviors and the need to focus on MF rather than FP cortex as the frontal association area. (33 ref)—*Journal abstract*.

(Louisiana State U) **A stereotaxic map of brainstem areas critical for locomotor responses in a novel environment.** *Bulletin of the Psychonomic Society*, 1975 (Sep), Vol 6(3), 327-328.—Recorded latencies to locomote from an illuminated compartment into a dark compartment in brain-damaged and control male albino Wistar rats. The distribution of lesions sustained by those Ss failing to enter the dark compartment within 10 min was plotted on the Massopust atlas, which identified those brainstem areas occupied by nigro-striatal and pallidofugal pathways.

6526. Voneida, Theodore J. & Mello, Nancy K. (Case Reserve U, Medical School) **Interhemispheric projections of the optic tectum in pigeon.** *Brain, Behavior & Evolution*, 1975, Vol 11(2), 91-108.—Studied the anatomical patterns of intertectal pathways in 25 White Carneaux pigeons (*Columba livia*) with modifications of the Nauta-Gygax silver technique following discrete unilateral tectal lesions. No homotopic connections between the 2 optic tecta were found. These data do not support an anatomical basis for the behavioral observation of interhemispheric reversal of left-right mirror-image patterns in monocularly trained pigeons. Degenerated fibers of passage were identified in the tectal commissure, the posterior commissure, the ventral tegmental decussation, and the supraoptic decussations. Preterminal fields were identified in the contralateral substantia grisea periventricularis of the tectum, lateral mesencephalic reticular nuclei, area pretectalis, nucleus linearis caudalis, nucleus posterovernalis, and lateral geniculate nucleus, pars ventralis. The possible significance of these findings is discussed with reference to behavioral, electrophysiologic, and neuroanatomic studies. (3 p ref)—*Journal abstract*.

6527. Yeo, C. H. & Savage, G. E. (Queen Mary Coll, London, England) **The tectal commissure and interocular transfer of a shape discrimination in the goldfish.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 291-298.—The tectal commissure of the fish has previously been shown to be required for interocular transfer of a learned motor response. The present study showed that interocular transfer of a differential, classically conditioned cardiac response occurred in 17 goldfish with sectional tectal commissures. This difference in performance is discussed, and the possibility of separate routes for transfer of motor and autonomic responses is suggested. (16 ref)—*Journal abstract*.

Drug Stimulation & Psychopharmacology

6528. Adams, Perrie M. & Barratt, Ernest S. (U Texas, Medical Branch, Galveston) **Role of biogenic amines in the effects of marijuana on EEG patterns in cats.** *Electroencephalography & Clinical Neurophysiology*,

1975(Dec), Vol 39(6), 621-625.—The results of pretreatment with drugs having selective action on brain biogenic amine levels on the subsequent effects of acute marihuana treatment were assessed in 18 adult male cats for behavior and EEG measures. Behavioral changes and alterations in the spontaneous EEG indicated that pretreatment with drugs affecting brain levels of 5-HT was most effective in altering the dual properties of acute marihuana treatment. The present findings support the interpretation that the availability of serotonin interacts with the effects of acute marihuana treatment but do not eliminate the possible involvement of other neurotransmitters in the action of marihuana. (French summary) (18 ref)—*Journal summary*.

6529. Amatruda, Thomas T. et al. (Harvard U, Medical School, Lab of Neurophysiology, Boston, MA) **Sleep cycle control and cholinergic mechanisms: Differential effects of carbachol injections at pontine brain stem sites.** *Brain Research*, 1975, Vol 98(3), 501-515.—In a study with 6 adult male cats, muscular atonia and cortical desynchronization, 2 signs of desynchronized sleep, were enhanced or suppressed by direct injection of carbachol (3 or 9 μ g) into the pontine brainstem. The positive effects were graded, being maximal in the gigantocellular tegmental field and less marked in adjacent nuclei. These positive effects were dose-dependent. Suppressive effects of carbachol were maximal in the region of the locus coeruleus and dose-dependent, but did not exceed those of the vehicle alone. Results support the hypothesis that cholinergic mechanisms of the pontine tegmentum are involved in desynchronized sleep generation. (30 ref)—*Journal abstract*.

6530. Anisman, H. & Cygan, Diane. (Carleton U, Ottawa, Canada) **Central effects of scopolamine and (+)-amphetamine on locomotor activity: Interaction with strain and stress variables.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 835-840.—In 2 experiments it was observed that both scopolamine and dextroamphetamine differentially affected activity in a total of 432 A/J, DBA/2J, and C57BL/6J mice. Following exposure to footshock, the disinhibitory effects of scopolamine were evident in all strains regardless of whether or not drug effects were observed prior to shock. With the inception of footshock, a strain dependent augmentation of amphetamine-induced locomotor activity was observed. The peripherally acting agents, methylscopolamine and para hydroxy-amphetamine, affected neither pre- nor postshock activity. FLA-63 reduced somewhat the excitatory effects of amphetamine, but the effectiveness of the enzyme inhibitor interacted with strain. Unlike the effects on general activity, FLA-63 entirely eliminated the amphetamine-shock synergism, thus implicating norepinephrine in mediating the shock-induced augmentation of amphetamine. 6531. Anielman, Seymour M.; Szechtman, Henry; Chin, Peter & Fisher, Alan F. (U Pittsburgh Medical School) **Tail pinch induced eating, gnawing and licking behavior in rats: Dependence on the nigrostriatal dopamine system.** *Brain Research*, 1975, Vol 99(2), 319-337.—In 6 experiments with 229 male albino rats, tail pinch induced a syndrome of eating, gnawing, and licking behavior in the presence of food. The

experiments assessed the effects on tail-pinch behavior of (a) the blockade of brain norepinephrine (NE) and dopamine (DA) by haloperidol, (b) specific DA-receptor blockade using spiroperidol and pimozide, (c) blockade of NE receptors by phentolamine and sotalol, (d) chemical denervation of the nigrostriatal bundle by 6-hydroxydopamine, and (e) synthesis inhibition of newly formed catecholamine (CA) amines vs release of CA stores. Estimation of CA turnover after tail-pinch was also performed. Data support the conclusions that (a) this is an unusually reliable phenomenon, demonstrable in each of the Ss tested; (b) eating is the predominant response to tail-pinch; (c) tail-pinch behavior is critically dependent on the nigrostriatal dopamine system; and (d) there are striking pharmacological parallels between tail-pinch behavior and schizophrenia. 6536. Brady, Kathleen; Herrera, Yolanda & Zenick H. (New Mexico Highlands U) **Influence of parental lead exposure on subsequent learning ability of offspring.** *Pharmacology, Biochemistry & Behavior*, 1975(Jul-Aug), Vol 3(4), 561-565.—Assessed CFE rat pups' learning ability following the exposure of one or both parents to lead acetate (Pb) from 30-90 days of age. At that time, parents were mated to yield 4 groups: Group Pb-Pb, both parents had received Pb; Group Pb-N, only the mother had received Pb; Group N-Pb, only the father had received Pb; and Group N-N, the control parents. Mothers were continued on their respective treatments throughout gestation and nursing. Testing of offspring began at 30 days of age, employing a black-white discrimination water T maze. Results reveal that the 3 Pb groups made more errors than the controls, but did not differ from one another. However, offspring in group Pb-Pb had longer swimming times than those in Groups Pb-N and N-Pb, who, in turn, had longer swimming times than Group N-N. Thus dual parental exposure was more severe than single parental exposure, which, however, still exerted a detrimental effect compared to control performance. (17 ref)—*Journal abstract*.

6537. Breese, George R. & Cooper, Barrett R. (U North Carolina, Medical School, Biological Sciences Research Ctr, Chapel Hill) **Behavioral and biochemical interactions of 5,7-dihydroxytryptamine with various drugs when administered intracristernally to adult and**

developing rats. *Brain Research*, 1975, Vol 98(3), 517-527.—Intracisternal administration of 200 μ g of 5,7-dihydroxytryptamine (DHT) in male adult Sprague-Dawley rats caused a prolonged reduction of brain serotonin and a depletion of brain norepinephrine (NE). The depletion of NE was antagonized by agents that inhibit uptake of NE as well as by several MAO inhibitors. Intracisternal injections of DHT (75 or 100 μ g) to 7-day-old neonatal Ss reduced brain serotonin and NE and produced a significant reduction of adult body weight. As in adults, pretreatment of neonatal Ss with pargyline (40 mg/kg) or desipramine (20 mg/kg) prevented DHT-induced depletion of NE without affecting depletion of serotonin. Behaviorally, treatment of adults with DHT facilitated acquisition of an active avoidance task and enhanced muricidal behavior and enhanced the depressant effects of 5-hydroxytryptophan on a fixed-ratio barpress response, suggesting that DHT-treated rats are supersensitive to serotonin in the CNS. (28 ref)—*Journal abstract*.

6538. Breese, George R.; Cooper, Barrett R. & Hollister, Alan S. (U North Carolina, Medical School, Chapel Hill) **Involvement of brain monoamines in the stimulant and paradoxical and inhibitory effects of methylphenidate.** *Psychopharmacologia*, 1975, Vol 44(1), 5-10.—Pretreated male Sprague-Dawley rats with reserpine (2.5 mg/kg) followed 24 hrs later by treatment with alpha-methyltyrosine (25 mg/kg) or U-14,624 (75 mg/kg), a dopamine-B-hydroxylase inhibitor. Methylphenidate-stimulated motor activity (5 mg/kg) was antagonized by alpha-methyltyrosine and enhanced after treatment with U-14,624, suggesting that release of newly synthesized dopamine is important to a locomotor stimulant action of methylphenidate. Evidence implicating brain serotonin in the actions of methylphenidate was obtained in Ss pretreated with pargyline or parachlorophenylalanine (PCPA). Administration of pargyline (50 mg/kg) 1 hr prior to methylphenidate reduced the locomotor activity induced by methylphenidate and this was antagonized by pretreatment with low doses of PCPA. Higher doses of PCPA caused a significant elevation of methylphenidate-induced activity which could be reduced by 5-hydroxytryptophan. Destruction of serotonergic neurons with 5,7-dihydroxytryptamine also potentiated methylphenidate-induced locomotion. Findings suggest that serotonergic fibers have an inhibitory function in brain. (22 ref)—*Journal abstract*.

6539. Brooks, D. C. (Cornell Medical Coll) **The effect of LSD upon spontaneous PGO wave activity and REM sleep in the cat.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 847-857.—Studied the effect of LSD on pontogeniculo-occipital (PGO) wave activity in 8 adult cats. Results include the following observations: (a) During the acute phase of LSD action (90-120 min), the PGO waves which appeared in the visual system were identical to those which normally accompany eye movement in the alert S (PGO \uparrow DW). (b) A pattern of 4-8/sec activity, not ordinarily present in the cortical EEG during arousal, began to dominate the recording in the intervals between PGO \uparrow DW as the dose of LSD was increased to a maximum of 800 μ g/kg. (c) Prolonged slow wave sleep followed the acute phase of drug action. There was a delay in the return of REM sleep and a delay in the

appearance of the PGO waves associated with this state (PGO \uparrow DR $_{\text{max}}$). Results oppose the hypothesis that the hallucinogenic effect of LSD is a result of the release of PGO \uparrow DR $_{\text{max}}$ into the state of wakefulness. (51 ref)—*Journal abstract*.

6540. Bryan, Karen S. & Ellison, Gaylord. (U California, Los Angeles) **Cholinergic modulation of an opposed effect of d-amphetamine and methylphenidate on the rearing response.** *Psychopharmacologia*, 1975, Vol 43(2), 169-173.—In 2 experiments with a total of 62 female Long-Evans hooded rats, Ss given ip dextroamphetamine engaged in frequent, short-duration rearing responses, whereas Ss given ip methylphenidate made less frequent, long-duration responses. The effects on this behavior of mixing amphetamine or methylphenidate with scopolamine or physostigmine suggest that this opposed action on rearing response duration is related to cholinergic-catecholaminergic balance. The anticholinergic agent scopolamine produced changes in rearing response duration similar to those produced by amphetamine, while the cholinergic agent physostigmine lengthened response duration and further potentiated this effect of methylphenidate. (25 ref)—*Journal abstract*.

6541. Bueno, Jose & Pfaff, Donald W. (Rockefeller U) **Single unit recording in hypothalamus and preoptic area of estrogen-treated and untreated ovariectomized female rats.** *Brain Research*, 1976, Vol 101(1), 67-78.—Used micropipettes to record single unit activity in the medial hypothalamus and preoptic area of 42 urethane-anesthetized ovariectomized female Sprague-Dawley rats. Some Ss had received long-term estradiol treatment, while others had been left untreated. In the medial preoptic region and bed nucleus of the stria terminalis, estrogen-treated Ss had fewer cells (compared to untreated Ss) with recordable spontaneous activity, due primarily to a loss of cells with very slow firing rates. In the basomedial hypothalamus, estrogen-treated Ss had more cells (than untreated Ss) with recordable spontaneous activity, due primarily to an increase in the number of cells with slow firing rates. Responsiveness of neurons to somatosensory stimulation was generally low. If present it was depressed by estrogen treatment in medial preoptic area and bed nucleus of stria terminalis, while it tended to be elevated by estrogen treatment in medial anterior hypothalamus and basomedial hypothalamus. Differences in the effects of long-term systematic estrogen treatment on medial preoptic neurons compared to basomedial hypothalamus are paralleled by differences in the control of lordosis by these neurons in female rats. (39 ref)—*Journal abstract*.

6542. Bushnell, Philip J.; Maloff, Perry & Bowman, Robert E. (U Wisconsin, Regional Primate Research Ctr, Madison) **Loss of inhibitory motor control following a subanesthetic dose of thiobarbiturate in rhesus monkeys.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 205-209.—Employed an operant paradigm to examine the magnitude and duration of the behavioral excitation induced in 6 monkeys by a subanesthetic dose of a short-acting thiobarbiturate drug. Thus, .5 hr following a 12.5 mg/kg iv injection of sodium thiamylal (Surital), the mean response rate of Ss previously trained to barpress for food reinforcement on a VI 30-sec schedule was increased threefold. By 3 hr postinjection, drug and

saline means were statistically indistinguishable and by 4 hrs they were virtually identical. Analysis of pauses and interreinforcement response rates from cumulative records showed a tendency for drugged Ss to respond in rapid bursts and undrugged Ss to maintain the steady, slow response rate characteristic of performance on a VI schedule. Possible CNS mediation of this behavioral excitation in terms of interference with inhibitory reticular formation processes is discussed. *Journal abstract.*

6543. Cain, Donald P. (U British Columbia, Kinsman Lab of Neurological Research, Vancouver, Canada) **Effects of insulin injection on responses of olfactory bulb and amygdala single units to odors.** *Brain Research*, 1975, Vol 99(1), 69-83. Investigated the effect of insulin injection on transmission of neural activity within the olfactory system of 152 anesthetized male hooded rats at the single unit level. Insulin (10 units/kg) changed the response to odors of approximately 27% of olfactory bulb units and 21% of amygdala units tested. Many were in the direction of an increase in response magnitude, but there were some reversals in response direction and other complex changes. There was no evidence of a selective facilitation of responses to food odor as compared to nonfood odors. Control observations of the response of thalamic somatosensory units to tactual stimulation showed no effects of insulin. Results suggest that hypothalamic hunger mechanisms normally interact with olfactory mechanisms to augment and otherwise change the response of some olfactory system units to various odors. (49 ref)—*Journal abstract.*

6544. Casswell, Sally. (U Auckland, Medical School, New Zealand) **Cannabis intoxication: Effects of monetary incentive on performance. A controlled investigation of behavioural tolerance in moderate users of cannabis.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 423-434.—Examined the effect of monetary incentive on the performance of 5 tasks after 2 heterogeneous groups of 24 experienced users of cannabis and 24 previously naive Ss (19-31 yr old volunteers) had smoked placebo material and 2 dose levels of cannabis. Their performance of the motivated Ss was compared with that of 2 nonmotivated matched groups. Dose-related impairment was found on 4 of the 5 tasks, supporting previous findings of cannabis-induced impairment of short-term memory, goal directed behavior, and choice reaction times. Results for 3 of the tasks suggest that the performance of the motivated Ss was less affected by the drug than was the performance of the nonmotivated. There was no difference between the performance of Ss naive and experienced with respect to drug use. (45 ref)—*Journal abstract.*

6545. Christian, S. L.; McClain, L. D.; Morin, R. D. & Benington, F. (U Alabama, Medical Ctr) **Blockage of LSD binding at its high affinity site on synaptosomal membranes by 1-methyl-1,2,5,6-tetrahydropyridine N,N-diethyl carboxamide.** *Experientia*, 1975(Aug), Vol 31(8), 910-911.—In a prior study it was found that rats pretreated with 1-methyl-1,2,5,6-tetrahydropyridine N,N-diethyl carboxamide (THPC) then used LSD showed less behavioral disruption or a sodium-activated release. The present study attempted to obtain more direct evidence for the blockade of LSD binding by

THPC. It was found that the binding of LSD to its high affinity site on the synaptosomal membrane was completely blocked by THPC added to a dialysis medium. It is pointed out that the design of THPC as a blocking agent was conceived at a theoretical level and now has been shown to modify activity of LSD at both a behavioral and a neuronal membrane level.—J. L. Andreassi.

6546. Colasanti, Brenda K.; Kosa, Jane E. & Craig, Charles R. (West Virginia U, Medical Ctr) **Appearance of wet dog shake behavior during cobalt experimental epilepsy in the rat and its suppression by reserpine.** *Psychopharmacologia*, 1975, Vol 44(1), 33-36. 5 adult female Sprague-Dawley rats rendered chronically epileptic by the implantation of cobalt in the right parietal cortex were simultaneously prepared with permanent cortical and temporalis muscle electrodes for longitudinal EEG and EMG recording. 5 Ss treated similarly with glass rods served as the controls. The number of wet dog shakes exhibited by the control Ss remained at a low and constant level over 18 days of recording. In contrast, shakes in the epileptic Ss began to increase by the 4th day after cobalt placement and remained significantly elevated up to the 18th day. Administration of reserpine to naive Ss or to cobalt epileptic Ss on Days 7 and 9 after implantation resulted in an almost complete suppression of shakes which endured over 3-5 days. Results suggest that the abnormally elevated shake response of the cobalt-epileptic rats and the spontaneous shake behavior of normal rats may be mediated by common neural pathways.—*Journal abstract.*

6547. Costall, B. et al. (U Bradford, Postgraduate School of Studies in Pharmacology, England) **Serotonergic involvement with neuroleptic catalepsy.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 859-868. Results in male Sprague-Dawley rats indicate that 5-hydroxytryptamine 5-HT function may be important, but not necessarily essential, for the cataleptic action of some neuroleptic agents. It is suggested that the actions of cerebral 5-HT and dopamine may be related; however, no firm conclusions can be made as to the relationship between 5-HT function, neuroleptic catalepsy, and antipsychotic effect. (23 ref)

6548. Crawford, F. T.; Dudek, Bruce C. & Lyman, Paul J. (Florida State U) **The effect of morning glory seeds upon extinction of a classically conditioned response in fish (*Tilapia mossambica*).** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 388-390.

Classically conditioned 24 Ss to a CS of 4 sec light off paired with a UCS of 0.5 sec shock for 10 trials/day over 10 days. In a double blind procedure, extinction trials of 10 trials/day for 4 days were given to Ss receiving either their normal feeding or that of ground morning glory seeds. The effect of the seeds significantly increased resistance to extinction. (19 ref)—*Journal abstract.*

6549. Crowley, Thomas J.; Hyndiger, Marilyn; Stynes, A. J. & Fenger, Alan (U Colorado, Medical Ctr, Postgraduate Biobehavioral Lab, Denver) **Monkey motor stimulation & altered social behavior during chronic methadone administration.** *Psychopharmacologia*, 1975, Vol 45(2), 135-144. Given singly and in dose of methadone to 5 groups of male rhesus monkeys. Motor activity counts were obtained during blocks of baseline, 10 weeks of

drug administration, and 3 wks of postdrug abstinence. Social behaviors of association, dominance, submission, and sexuality were counted 5 days/wk, and S weights, food eaten, and food-reinforced work were recorded. Plasma methadone levels were near those achieved in methadone clinics. Methadone produced mixed stimulation and sedation in the daytime. At night the Ss moved less while taking the drug. Associative behaviors were reduced by methadone, but dominance, submission, and sexual behaviors were not altered. Ss ate less while taking the drug, losing weight and working less for food. In these primates methadone had significant stimulant properties, impaired important social behaviors, and reduced the potency of food as a reinforcer of work. Results are compared with methadone's effects upon humans. (50 ref)—*Journal abstract*.

6550. Cutler, Margaret G.; Mackintosh, J. H. & Chance, M. R. (Glasgow Coll of Technology, Scotland) **Effects of the environment on the behavioural response of mice to non-ataxic doses of ethyl alcohol.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 841-846.—Examined the effects of ethyl alcohol on social behavior in a total of 120 CFW mice which were placed in different social contexts. In encounters between unfamiliar males, alcohol-treated Ss from a diverse environment showed more exploration on the bars of an unfamiliar cage and less social investigation than controls. In an encounter situation between males and females, male Ss given alcohol showed a significant increase in frequency and duration of all forms of social and sexual investigation other than mounts and attempted mounts. In a territorial situation, alcohol administration before territory establishment resulted, on each of 4 occasions, in the dominant S of the alcohol-treated group becoming despot over the whole enclosure, whereas after territory establishment this effect was not seen. The overall effect of alcohol was, therefore, to increase the type of behavior that was already stimulated by the test situation. The significance of these findings in relation to the differential effects of alcohol on different areas of the nervous system is discussed. (17 ref)—*Journal abstract*.

6551. Cutler, Margaret G.; Mackintosh, John H. & Chance, Michael R. (U Birmingham, Medical School, England) **Behavioural changes in laboratory mice during cannabis feeding and withdrawal.** *Psychopharmacologia*, 1975, Vol 44(2), 173-177.—Studied the effects of feeding cannabis in the diet by an ethological analysis of encounters between 80 male CFW mice. Tincture of cannabis was used which contained 1.8 mg/ml Δ -tetrahydrocannabinol (THC), 1.3 mg/ml cannabidiol, 0.3 mg/ml cannabichromene, and 0.6 mg/ml cannabinol. Approximately 23 mg of cannabis was ingested daily by each S. Administration of cannabis to dominant males resulted in a reduction of nonsocial activity and an increase in flight and in social and sexual investigation when compared with untreated controls, but the behavior of subordinate males was not significantly altered. The behavior of dominant males showed a rebound effect with an increase in aggression 1 wk after cannabis withdrawal. A preference feeding test demonstrated, however, that the treated Ss were not dependent on the cannabis-containing diet but consumed the control diet in preference. (22 ref)—*Journal abstract*.

6552. Dafny, Nachum. (U Texas, Medical School, Houston) **Selective field potential changes induced by L-dopa.** *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 189-202.—Average acoustic evoked responses following paired stimuli were recorded simultaneously from the caudate nucleus, globus pallidus, substantia nigra, ventromedial hypothalamus, arcuate nucleus, anterior hypothalamus, and medial geniculate body in 18 freely moving Holtzman albino rats implanted with permanent electrodes. Click stimuli evoked large-amplitude responses in all structures. The neuronal recovery function measured by consecutive paired click stimuli separated by varying time intervals differed among structures. Low doses (10 mg/kg) of pentobarbital increased the average acoustic evoked response and shortened the neuronal recovery function; a higher dose of pentobarbital (40 mg/kg) attenuated the average acoustic evoked responses in all 7 structures. Levodopa (100 mg/kg, ip) increased the average acoustic evoked responses recorded from caudate nucleus, globus pallidus, substantia nigra, ventromedial hypothalamus, and arcuate nucleus, but did not affect those from anterior hypothalamus and medial geniculate body. The neuronal recovery functions obtained from substantia nigra, anterior hypothalamus, and medial geniculate body were unaffected by levodopa or reserpine (1 mg/kg) while in the other structures; levodopa shortened the recovery time of the 2nd response, and reserpine reversed this phenomenon only in caudate nucleus. 2 hypotheses are proposed: (a) dopamine is not exclusively an inhibitory neurotransmitter or (b) the action of dopamine is to remove the inhibitory properties of the inhibitory interneurons. (24 ref)—*Journal abstract*.

6553. Dasberg, Haim H. (Jerusalem Mental Health Ctr, Outpatient Clinic, Israel) **Effects and plasma levels of N-desmethyldiazepam after oral administration in normal volunteers.** *Psychopharmacologia*, 1975, Vol 43(2), 191-198.—Diazepam and N-desmethyldiazepam, the latter as a separate drug, were orally administered to 6 paid normal volunteers, each drug during 7 days, 15 mg daily in divided doses. Using a randomized placebo-controlled double-blind design, subjective and observer ratings of a wide range of clinical effects were made. Results show that steady state plasma levels were reached on the 5th day; that N-desmethyldiazepam considering its lower clearance rates, is a longer acting drug than diazepam; that both substances induce hypnosedative effects, mood changes, and somatic disturbances and facilitate sexual behavior in normals; and that desmethyldiazepam is a more effective hypnosedative and mood-lowering substance. Further comparisons in anxiety patients are recommended in order to find out if the specific desmethyldiazepam effects are therapeutically favorable or disturbing. (30 ref)—*Journal Abstract*.

6554. Davenport, John W.; Hagquist, William W. & Hennies, Richard S. (U Wisconsin, Regional Primate Ctr, Madison) **Neonatal hyperthyroidism: Maturational acceleration and learning deficit in triiodothyronine-stimulated rats.** *Physiological Psychology*, 1975(Sep), Vol 3(3), 231-236.—21 Holtzman rat pups injected on postnatal Days 2-4 with subcutaneous doses of triiodothyronine (T₃) up to 4 μ g/g showed substantial accelera-

tions in the maturation of swimming behavior, righting reflexes, and eye opening which were greater than the accelerations produced by neonatal thyroxine (T_4) in a previous study. They also showed significantly higher activity in stabilimeter cages on postnatal Day 13 but not an expected earlier peak than 11 normal controls in the ontogeny-of-arousal functions obtained in stabilimeter testing. As adults, T_4 -treated Ss displayed large maze learning deficits which were comparable in size to those produced by fairly severe thyroid deficiency in the perinatal period. (18 ref)—*Journal abstract*.

6555. Davis, W. Marvin & Smith, Thomas. (U Mississippi, School of Pharmacy) **Morphine enhancement of shuttle avoidance prevented by α -methyltyrosine.** *Psychopharmacologia*, 1975, Vol 44(1), 95-97.—Gave 42 adult male Sprague-Dawley rats 6 days of training (180 trials) to make a 2-way (shuttle) avoidance response. Poor performers making less than 50% avoidances in the 6th block of 30 trials were given drug treatments on the next 2 days. Both morphine sulfate (15 mg/kg) and dextroamphetamine sulfate (1 mg/kg) increased the avoidance level by 70-100%. Prior treatment with α -methyltyrosine (50 mg/kg) prevented the effects of both drugs. Nalorphine hydrochloride (5 mg/kg) also blocked the effect of morphine. The action of α -methyltyrosine to block enhancement of avoidance indicated that this effect of morphine is attributable to a catecholamine-dependent excitatory component of its activity profile.—*Journal abstract*.

(Massachusetts Inst of Technology) **Differential behavioral and biochemical effects of regional injection of cycloheximide into mouse brain.** *Brain Research*, 1976, Vol 101(1), 171-176.—Summarizes a series of experiments which suggest localization of the effects of small stereotactically injected doses of cycloheximide (CXM) on protein synthesis and memory in female CD-1 mice. Behavioral data indicate a regional difference in the effects on retention of learned passive avoidance, with maximal amnesia following CXM injection into the striatum, hippocampus, amygdala, and posterior lateral thalamus. (16 ref)

6560. Einon, Dorothy & Tye, N. C. (U Cambridge, England) **Chlordiazepoxide and isolation induced timidity in rats.** *Psychopharmacologia*, 1975, Vol 44(1), 83-85.

Examined the effects of chlordiazepoxide (CDP) on emergence behavior in socially and isolation-reared 48 hooded Lister rats in 2 experiments. Low doses of CDP (4 mg/ml) decreased the emergence times of isolated Ss but had little effect on the emergence of social Ss. At

higher doses (7.5 mg/kg) the drug retarded emergence in all groups but there were no differential effects. Results do not support claims that rearing conditions influence the susceptibility of rats to CNS depressants; rather they suggest that particular levels of CDP selectively influence "emotional" behavior.—*Journal abstract*.

6563. Figler, Michael H. (Towson State Coll) **Twenty-four-hour retention of chlordiazepoxide (Librium)-attenuated threat behavior in male Siamese fighting fish (*Betta splendens*).** *Bulletin of the Psychonomic Society*, 1975 (Sep), Vol 6(3), 317-320.—In Exp I, 30 adult male Siamese fighting fish were used to study 24-hr retention of chlordiazepoxide-induced (30 μ g/ml) attenuation and facilitation of habituation of species-specific threat behavior. Ss, in a drug solution or plain water, were exposed to an undrugged conspecific stimulus fish for 40 min. After 24 hrs back in their home jars, all Ss were retested in plain water with the same stimulus fish. Chlordiazepoxide showed similar threat behavior attenuation in Sessions 1 and 2 as compared to the control situation. In Exp II, 21 Ss were immersed in 1 of the 2 treatments for the same time period with no stimulus fish present. After 24 hrs in their home environment, all Ss were tested in plain water with a stimulus fish present. Chlordiazepoxide attenuated threat behavior and facilitated its habituation 24 hrs after initial exposure to the drug. Results of Exp I appear to be due to sustained drug activity rather than transfer of drug-induced behavior from a drugged to a nondrugged state.—*Journal abstract*.

6564. File, Sandra E. & Wardill, Ann G. (U London, School of Pharmacy, England) **Validity of head-dipping as a measure of exploration in a modified hole-board.** *Psychopharmacologia*, 1975, Vol 44(1), 53-59.—Developed a modified hole-board with 4 holes in the floor, under which novel objects could be placed. 2 criteria for considering head-dipping as a measure of exploration were proposed: (a) that it should reflect novel aspects of the environment and (b) that exposure to the hole-board should result in information storage. Ss were a total of 173 male CFW mice and 69 male hooded Lister rats used in 3 experiments. That head-dipping reflected novelty was indicated by the longer duration of head-dips on initial exposure if objects were present, and also on a 2nd exposure when objects were introduced for the 1st time. Information storage was indicated by habituation on reexposure to the hole-board. A significant positive correlation between head-dipping in the 4- and 16-hole boards was obtained for rats, but not for mice. This provided some indirect evidence that rat head-dipping in the 16-hole-board also reflects exploration. Amphetamine (2 and 5 mg/kg, ip) decreased and alcohol (.4 and .8 g/kg) increased the frequency and duration of head-dips. (22 ref)—*Journal abstract*

6565. Fishman, Jack; Hahn, Elliot F. & Norton, Baiba I. (Albert Einstein Coll of Medicine, Yeshiva U) **Comparative in vivo distribution of opiate agonists and antagonists by means of double isotope techniques.** *Life Sciences*, 1975(Oct), Vol 17(7), 1119-1125.—6 male Sprague-Dawley rats were injected with mixtures of morphine-¹⁴C and naloxone-³H and the entry of the isotopes into the brain and various tissues was measured. Naloxone crossed the blood brain barrier 8-10 times faster than morphine. Increasing the dose of morphine from very low to pharmacological levels had little effect on the relative tissue distribution. (16 ref)
6566. Flood, James F.; Bennett, Edward L.; Orme, Ann E. & Rosenzweig, Mark R. (U California, Los Angeles) **Relation of memory formation to controlled amounts of brain protein synthesis.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 97-102.—Anisomycin, an inhibitor of brain protein synthesis, was used to control the time and duration of protein synthesis occurring in female C57Bl/Jf mice after they were trained on a 1-trial passive avoidance task. It was found that if synthesis was strongly inhibited for 6-8 hrs, a high percentage of the Ss was amnesic. However, if small amounts of protein synthesis were allowed to occur by permitting intervals of partial recovery of protein synthesis during the period of inhibition, then fewer Ss were amnesic. The longer the duration of this interval of controlled synthesis and the closer it occurred to training, the greater the percentage of Ss remembering the training.—*Journal abstract.*

6570. Ghoneim, M. M.; Mewaldt, S. P. & Thatcher, J. W. (U Iowa) **The effect of diazepam and fentanyl on mental, psychomotor and electroencephalographic functions and their rate of recovery.** *Psychopharmacologia*, 1975, Vol 44(1), 61-66.—Administered diazepam (10 or 20 mg), fentanyl (0.1 or 0.2 mg), or a placebo iv at weekly intervals to 10 healthy 21-25 yr old males. They were tested on a battery of psychological (e.g., backward digit span, simple reaction time, serial learning, and delayed recall) and EEG tests at 0.5, 2, 6, and 8 hrs following injection. Fentanyl had little effect on memory while diazepam reduced the ability to learn without increasing forgetting of material already acquired. By the 2nd hr postinjection, only the low dose of fentanyl had no residual effect. Recovery was complete by the 6th hr for all treatments according to the psychological tests except for the lagging effect of the high dose of diazepam on memory. The EEG effects of diazepam persisted beyond the end of the testing sessions while those of the high dose of fentanyl recovered by the 8th hr. (19 ref) —*Journal abstract.*
6571. Golub, Mari & Kornetsky, Conan. **Effects of testing age and fostering experience on seizure susceptibility of rats treated prenatally with chlorpromazine.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 519-524.—Offspring of female CD rats treated with 2 mg/kg chlorpromazine (CPZ) on Days 5-8 of gestation had lower seizure thresholds than offspring of saline-treated controls at 30, 60, 90, and 120 days of age. The CPZ-treated offspring were also heavier than controls prior to weaning. Further analysis using cross-fostered litters indicated that at least part of the drug effect on seizure thresholds took place before birth, although a postnatal component was also demonstrated. A striking effect of the fostering experience itself on the seizure threshold (fostering reduced the differences between the gestational treatment groups) prevented conclusions about the relative importance of prenatal and postnatal influences. (17 ref)—*Journal abstract.*
6572. Goudie, A. J. & Thornton, E. W. (U Liverpool, England) **Effects of drug experience on drug induced conditioned taste aversions: Studies with amphetamine and fenfluramine.** *Psychopharmacologia*, 1975, Vol 44(1), 77-82.—In 2 experiments with a total of 42 female albino rats, conditioned taste aversions (CTAs) established to 0.1% sodium saccharin by ip injections of fenfluramine hydrochloride (6 mg/kg) or dextroamphetamine sulfate (2.0 mg/kg) were significantly attenuated, but not abolished altogether, by chronic pretreatment (over 9 days) with the specific drug. Prior treatment with fenfluramine attenuated the aversive effects of amphetamine, but the converse was found not to be the case. Results refute the "unnatural need state" and "novelty" hypotheses of the effects of prior drug experience on the establishment of CTAs. An alternative explanation in terms of tolerance is considered, and the possible relevance of the results to studies of drug abuse in humans is discussed. (25 ref)—*Journal abstract.*
6573. Grimm, Veronika; Gottesfeld, Zehava; Wasserman, Ita & Samuel, David. (Weizmann Inst of Science, Rehovot, Israel) **The level of GABA in the brain and locomotor behavior.** *Pharmacology, Biochemistry & Behavior*, 1975(Jul-Aug), Vol 3(4), 573-578.—Gamma-aminobutyric acid (GABA) content was measured in the brains of a total of 65 male Wistar rats injected with ip amino-oxyacetic acid, di-N-propylacetate, or saline. Significant increases in GABA were found in the motor cortex and cerebellum after treatment with both drugs as compared to saline controls. Increased GABA levels were associated with interference with the smooth execution of learned locomotor acts, especially where balancing and coordination of the hind limbs were necessary. (17 ref)—*Journal abstract.*
6574. Groves, Philip M.; Wilson, Charles J.; Young, Stephen J. & Rebec, George V. (U Colorado) **Self-inhibition by dopaminergic neurons.** *Science*, 1975(Nov), Vol 190(4214), 522-529.—Describes experiments which

provide an alternative to the "neuronal feedback loop" hypothesis for the mode of action of certain psychotropic drugs. An alternative model suggests that the inhibition of neuronal activity produced in the pars compacta (PC) of the substantia nigra (SN) by systemic amphetamine may be achieved not by means of a neuronal feedback loop, but rather by the independent effect of amphetamine on a dopaminergic inhibitory mechanism intrinsic to the SN. Antipsychotic dopamine antagonists may also produce an increase in neuronal firing rates by the simultaneous but independent blockade of dopaminergic transmission in the neostriatum and PC of the SN. Although there is a neuronal feedback loop from the basal ganglia to the SN, evidence suggests that this is a positive feedback mechanism which consists of cholinergic interneurons innervated by ascending dopaminergic projections. The effects of the positive loop would be masked by the effects of amphetamine and dopamine antagonists on dopaminergic transmission in the caudate putamen and PC of the SN. It is suggested that this tonic dopaminergic inhibition may consist of a mode of neurohumoral regulation involving release of dopamine from the dendrites of dopaminergic neurons, acting on postsynaptic receptors to produce inhibition of neuronal firing, (i.e., self-inhibition).—*L. Gorsey.*

(U Chicago) **Antidepressant drugs affect dopamine uptake.** *Biochemical Pharmacology*, 1975(Oct), Vol 24(20), 1896-1898.—Reports that a number of widely used antidepressants inhibit dopamine uptake by Sprague-Dawley rat brain nuclei-free homogenates. Results show that maprotiline and desipramine are equipotent inhibitors and that chlorimipramine is a potent inhibitor.

6576. Harris, Lance A. (Michigan State U) **The effects of an acute administration of nitrous oxide on fear.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2931-2932.

6577. Haubrich, Dean R.; Wang, Paulina F.; Herman, Raymond L. & Clody, Donald E. (Squibb Inst for Medical Research, Princeton, NJ) **Acetylcholine synthesis in rat brain: Dissimilar effects of clozapine and chlorpromazine.** *Life Sciences*, 1975(Sep), Vol 17(5), 739-747.—Reports that treatment of male Sprague-Dawley rats with either clozapine or chlorpromazine (CPZ), in doses that produced equivalent changes in dopamine metabolism and avoidance responding, reduced the concentration of acetylcholine (ACh) in the corpus striatum, and that clozapine, but not CPZ, reduced the rate of synthesis of ACh. Results suggest that clozapine reduces cholinergic neuronal activity in the brain and that this effect may explain the lack of extrapyramidal side effects in psychotic patients treated with it. (29 ref)

6578. Holzman, Philip S. et al. (U Chicago) **Smooth-pursuit eye movements, and diazepam, CPZ, and secobarbital.** *Psychopharmacologia*, 1975, Vol 44(2), 111-115.—Examined the effects on smooth-pursuit eye tracking of single doses of chlorpromazine (0.667 and 1.334 mg/kg), diazepam (0.071, 0.142, and 0.284 mg/kg), and secobarbital (100 mg) in 5 male 21-28 yr olds. Only the barbiturate significantly affected the ability to follow a moving target with smooth-pursuit eye movements. In repeated testing of a single S, 130 mg of secobarbital

disrupted smooth-pursuit movements at least until 24 hrs after ingestion. (18 ref)—*Journal abstract.*

6579. Houser, Vincent P. (VA Hosp, Psychotropic Drug Lab, Perry Point, MD) **The effects of meprobamate upon the aversive threshold of rats.** *Bulletin of the Psychonomic Society*, 1975 (Sep), Vol 6(3), 325-326.—Determined the analgesic potency of orally administered meprobamate (50 or 100 mg) in 6 male Sprague-Dawley rats, using the spatial preference technique. This drug raised the aversive threshold when administered in a dose of 100 mg. This same dose, however, also significantly reduced the number of motor responses made during threshold testing. Results suggest that meprobamate produces its effects on the aversive threshold indirectly by inhibiting the execution of the escape response.—*Journal abstract.*

6580. Houser, Vincent P.; Cash, Randall J. & Van Hart, Dale A. **The effects of metiamide on the "activity-stress" ulcer in rats.** *Psychopharmacologia*, 1975, Vol 44(1), 37-41.—40 male Sprague-Dawley derived rats were housed in standard activity wheel cages and fed for only 1 hr/day. Ss were equally divided into 4 groups that received either saline, 12.5 mg/kg, 25 mg/kg, or 50 mg/kg of metiamide, an H₂ receptor antagonist, 3 times/day. All Ss died within 11 days and all demonstrated significant gastric lesions in the glandular fundus of the stomach. The 50 mg/kg group, however, demonstrated significantly fewer ulcers than the saline Ss and the lesions that did occur were significantly smaller than those noted in the controls. Several hypotheses which consider metiamide's effects on gastric secretion and motor activity are proposed. It is suggested that secretion of acid may be an important contributing factor in the formation of gastric ulcers in animals subjected to the "activity-stress" procedure.—*Journal abstract.*

6582. Huppert, Felicia A. & Iversen, Susan D. (U Cambridge, England) **Response suppression in rats: A comparison of response-contingent and noncontingent punishment and the effect of the minor tranquilizer, chlordiazepoxide.** *Psychopharmacologia*, 1975, Vol 44(1), 67-75.—Compared the behavioral effects of response-contingent and noncontingent shock in 4 experiments in terms of (a) suppression of an operant response (lever-pressing); (b) release from suppression following injection of the minor tranquilizer chlordiazepoxide, and (c) suppression of behavior in a situation not associated with shock. A total of 104 male hooded Lister rats were used. Results show that response-contingent shock produced far greater suppression of the operant response than did noncontingent shock, as well as greater suppression of behavior in a neutral environment following the shock experience. Chlordiazepoxide (10 mg/kg, ip) was more effective in releasing behavior from suppression when shock was response-contingent than when shock was noncontingent, a result which does not appear to reflect simply the greater suppression produced by response-contingent shock. (14 ref)—*Journal abstract.*

elicited attack in male and female cats. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2340.

6584. Islam, S. & Bureš, J. (Government Coll, Mardan, Pakistan) Interaction between the activity of an epileptic focus and discrete skilled movements in rats. *Electroencephalography & Clinical Neurophysiology*, 1975(Dec), Vol 39(6), 651-656.—Trained 16 Druckney male hooded rats to reach into a narrow feeding tube for small food pellets. The paw movements were photoelectrically detected. An epileptic focus established by local application of 1% picrotoxin on the exposed motor cortex increased the frequency of reaching with the ipsilateral paw and impaired reaching with the contralateral paw. Interictal discharge rate of all ipsilateral was increased by reaching in the same way as the slow activity ($<0.5/\text{sec}$) of contralateral foci. On the other hand, fast activity ($>0.5/\text{sec}$) of contralateral foci was decreased by reaching. Computer analysis of interictal discharge incidence during 512 msec before and after reaching onset showed that the brief facilitation of discharge (50 msec) during the actual movement was often preceded and followed by more prolonged inhibition (200 msec). The inhibition was better expressed in the contralateral hemisphere. Results are interpreted as due to changes of cortical excitability associated with reaching and to interference of the epileptic focus with the cortical elaboration of the skilled movement. (18 ref)—*Journal summary*.

6585. Johansson, Jan O.; Jarbe, Torbjörn U. & Henriksson, Bengt G. (Uppsala, Sweden) Acute and subcholine influences of tetrahydrocannabinols on water and food intake, body weight, and temperature in rats. *T.-I.-T. Journal of Life Sciences*, 1975, Vol 5(1-2), 17-28.—Studied the effects of hashish derivatives (Δ^1 - and Δ^1 -tetrahydrocannabinol, Δ^1 - and Δ^1 -THC) on a total of 108 male Sprague-Dawley rats in 3 experiments. In Exp I Ss given hashish, inhaled as smoke, showed a depression of water consumption comparable to Ss given 10 mg/kg of either of the THC. In Exp II a dose-related depression of water-and-food intake and reduction of body weight with gradual recovery was found in Ss maintained on a limited time of drinking schedule and subchronically treated with Δ^1 -THC. In Exp III with nondeprived Ss, Δ^1 -THC caused similar effects as in Exp II, although to a lesser extent. From both experiments it is concluded that there was an inhibition of even loss of body weight and that food intake was more severely depressed than water intake. Temperature recordings suggest that the predominant consequence of lower, behaviorally effective doses of THC on rectal temperature of rats is hyper- rather than hypothermia. (38 ref)—*Journal abstract*.

6586. Kay, David C. (National Inst on Drug Abuse, Addiction Research Ctr, Lexington, KY) Human sleep during chronic morphine intoxication. *Psychopharmacologia*, 1975, Vol 44(2), 117-124.—Studied the sleep of 6 opiate addicts (mean age, 33.8 yrs) for 11 nights during 3 phases of a chronic morphine cycle. The control phase consisted of 5 consecutive nights before morphine administration. The induction phase consisted of 1 night at 21-36 days after the onset of morphine administration, when the daily dose was 140-220 mg. The stable dose phase consisted of 5 consecutive nights after the Ss

had received 240 mg of morphine daily for 8-19 wks. Sleep was continuously monitored with EEG, EMG, and electrooculogram. Chronic morphine produced signs of a small but persistent sleep disturbance: delta sleep (early night) became less stable and shifted toward later in the night, waking state increased during the middle of the night, REM sleep decreased, the REM cycle increased, and bursts of delta activity increased. Although this disturbance persisted throughout the night, it was much less than that seen after single doses of morphine in a previous study. With chronic morphine, therefore, partial tolerance develops to the sleep disturbance produced by morphine. The small but persistent nocturnal arousal during chronic morphine contrasts with the sedation seen during chronic methadone. (36 ref)—*Journal abstract*.

6587. Key, B. J. (U Birmingham, Medical School, England) Effect of chlorpromazine on the interaction between phasic and tonic electrocortical arousal mechanisms. *Psychopharmacologia*, 1975, Vol 44(2), 179-185.—Studied the effect of chlorpromazine (5 mg/kg ip) on the rate of habituation of phasic arousal responses in cats carrying permanently implanted cortical recording electrodes. The overall effect of chlorpromazine was a marked shortening in the time taken to "train" the Ss, while still asleep, not to respond behaviorally or with tonic electrocortical changes to a particular auditory stimulus. (39 ref)

6588. King, Lucy J.; Cari, Juanita L. & Lao, Lauro. (Virginia Commonwealth U, Medical Coll) Cocaine and amphetamine modification of cerebral energy metabolism *In vivo*. *Psychopharmacologia*, 1975, Vol 44(1), 43-45.—At the time of maximal behavioral stimulation after ip injections of dextroamphetamine (5 mg/kg) in male white ICR mice, elevation of cerebral cortical levels of malate in the citric acid cycle and of the amino acid, alanine, was observed, suggesting that this drug has widespread effects on energy metabolism. Cocaine (20 mg/kg), in contrast, produced elevation of brain glucose but not of citric acid cycle substrates or amino acids at the time of maximal hyperactivity. These observations are discussed in terms of the mechanisms of action of these 2 CNS stimulants.—*Journal abstract*.

6589. Kleinknecht, Ronald A. & Donaldson, David. (Western Washington State Coll) A review of the effects of diazepam on cognitive and psychomotor performance. *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 399-411.—Studies evaluating the effects of Valium on psychomotor and cognitive functions are reviewed and integrated. The various tasks used to assess drug effects are classified into 6 major groups; reflex speed, critical flicker fusion threshold, attention and vigilance, decision making, learning and memory, and psychomotor performance. In all functions except simple reflexive responding, some indications of impaired performances were reported, the results being most definitive for the critical flicker fusion, where even small doses lowered the threshold, and for a slower performance on letter cancellation tasks. There also appeared to be some interaction between diazepam and alcohol. (49 ref)—*Journal abstract*.

6590. Kramis, R.; Vanderwolf, C. H. & Bland, B. H. (U Western Ontario, London, Canada) Two types of

hippocampal rhythmical slow activity in both the rabbit and the rat: Relations to behavior and effects of atropine, diethyl ether, urethane, and pentobarbital. *Experimental Neurology*, 1975(Oct), Vol 49(1, Pt 1), 58-85.—A series of experiments involving 33 hooded rats and 21 New Zealand white rabbits indicated that the hippocampus receives 2 nonspecific inputs from the brainstem, each capable of producing rhythmical slow activity (theta rhythm). One type of theta rhythm could be abolished by injections of atropine sulfate (5 mg/kg, iv, or 25-50 mg/kg, ip) but not by atropine methyl nitrate. Such theta activity typically occurred during ether or urethane anesthesia as well as during behavioral immobility in the undrugged state. A 2nd type of theta activity was relatively unaffected by large doses of atropine sulfate but was abolished selectively during ether or urethane induced anesthesia. Such theta activity typically occurred in waking animals only if motor movements were performed concurrently. Both types of theta activity could be elicited by electrical stimulation at sites in the hypothalamus or midbrain reticular formation. It is suggested that atropine resistant activation of the cerebrum plays a role in the emission and control of normal behavior and may mediate many of the behavioral effects of centrally acting drugs such as anesthetics, tranquilizers, or stimulants. (30 ref)—*Journal abstract*.

6591. Kuenzle, C. C. & Zeier, H. (U Zürich, School of Veterinary Medicine, Switzerland) **Chemical transfer of learned behaviour: No specific effect observed in rats trained to swim either of two mazes.** *Experientia*, 1975(Aug), Vol 31(8), 947-949.—Replicated a recent experiment that reported the successful transfer of detailed spatial information about a maze by injecting brain extracts of trained mice into naive recipients. Using rats, a swimming maze was employed as a precaution against odor cues. No evidence for information transfer was obtained under these conditions. (German summary)—*Journal summary*.

6592. Lagerspetz, Kirsti M. & Lagerspetz, Karl Y. (Swedish U, Turku, Finland) **The expression of the genes of aggressiveness in mice: The effect of androgen on aggression and sexual behavior in females.** *Aggressive Behavior*, 1975, Vol 1(4), 291-296.—A total of approximately 111 female TA and TNA mice selectively bred for aggressiveness or nonaggressiveness were injected with testosterone propionate (TP) at the age of 2 days and as adults, or they were injected as adults only. Aggressive and sexual behavior was then tested with female, receptive female, and male partners before, during, and after the latter TP treatment. The females that had received both TP treatments displayed as much or as little aggression as males of the same strain, leading to the conclusion that aggressiveness genes are not linked with the male sex chromosome, even though they depend on it for their expression. The sexual behavior of the females of both strains that had received both TP treatments was altered to the male type. In the females of the aggressive strain even adult treatment alone was sufficient for this change. It is noted that aggressiveness and male sexual behavior seem to be determined separately, although aggressiveness facilitates the display of male sexual behavior.—*Journal abstract*

6593. Leaf, Russell C. et al. (Rutgers State U, Graduate School, New Brunswick) **Chlordiazepoxide and diazepam induced mouse killing by rats.** *Psychopharmacologia*, 1975, Vol 44(1), 23-28.—In 4 experiments with approximately 3,000 adult male albino Holtzman rats, chlordiazepoxide HCl, at dose levels from 2.5 to 80 mg/kg, significantly increased the low base rates of mouse killing (3-9%). Maximal killing rates were obtained at doses from 7.5 to 20 mg/kg. Diazepam (1.25-10 mg/kg) was equally effective and several times more potent than chlordiazepoxide. Pentobarbital (10 or 20 mg/kg) did not increase killing. Killing induced by chlordiazepoxide was blocked by dextroamphetamine sulfate (.75 or 1.5 mg/kg), but not by levoamphetamine (1.5 mg/kg). Unlike pilocarpine-induced killing, the effects of chlordiazepoxide were not increased or decreased significantly by either peripherally or centrally active anticholinergic drugs, over wide dose ranges of these agents; nor were the effects of chlordiazepoxide increased by repeated daily administration. (25 ref)—*Journal abstract*.

6594. Liljequist, R. et al. (U Helsinki, Finland) **Effect of two weeks' treatment with thioridazine, chlorpromazine, sulpiride, and bromazepam, alone or in combination with alcohol, on learning and memory in man.** *Psychopharmacologia*, 1975, Vol 44(2), 205-208.—Conducted 2 experiments with healthy 20-25 yr old male students. In Exp I 20 Ss received bromazepam (6 mg 3 times/day for 2 wks), thioridazine (10 mg 3 times/day for the 3rd wk and 20 mg 3 times/day for the 4th wk), and placebo in a double-blind crossover study. In Exp II 20 Ss received sulpiride (50 mg 3 times/day for 2 wks), chlorpromazine (10 and 20 mg 3 times/day for the 3rd and 4th wks, respectively), and placebo. The tests used were paired associate learning with nonsense syllables and the WAIS Digit Span subtest. Before testing Ss took either an alcoholic or a nonalcoholic bitter drink (0.5 g/kg alcohol). Alcohol impaired learning capacity. Only bromazepam impaired learning significantly, and the combined effect of alcohol and bromazepam on learning capacity was very deleterious. The adrenolytic effect of drugs did not correlate with their effect on learning. It is concluded that caution is necessary when prescribing bromazepam for active out-patients at least in doses used in this study. (24 ref)—*Journal abstract*.

6595. Littleton, J. M. (U London, King's Coll, England) **The experimental approach to alcoholism.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 99-122.—Discusses the biochemical basis of physical and psychological dependence on ethanol, with particular reference to the role of acetaldehyde, monoamines, and amino acids. Preliminary results are presented in which the factors of environment, heredity, sex, age, and diet are shown to affect susceptibility of mice to ethanol dependence, and an attempt is made to relate the influence of these factors to the biochemical basis of dependence. (24 p ref)—*Journal abstract*

6596. Lonowski, Daniel J.; Levitt, Robert A. & Dickinson, William A. (Southern Illinois U) **Carbachol-elicited mouse killing by rats: Circadian rhythm and dose response.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 601-604.—Performed a dose-response analysis of cholinergically elicited aggression.

Bilateral doses of carbachol at 5, 20, 35, and 50 μ g were injected into the lateral hypothalamus of nonkiller female rats. Ss were 62 adult Long-Evans rats. One group was injected during the day, another at night. The most effective dose of carbachol eliciting aggression against mice was 20 μ g bilaterally administered at night (70% of Ss killed or attacked the mice). An injection of 20 μ g during the day, as well as injections of 5, 35, and 50 μ g during the day or night, were less effective.—*Journal abstract*.

6597. MacAvoy, Michael G. & Marks, David F. (U Otago, Dunedin, New Zealand) **Divided attention performance of cannabis users and nonusers following cannabis and alcohol.** *Psychopharmacologia*, 1975, Vol 44(2), 147-152.—Compared the effects of Δ -tetrahydrocannabinol (THC) and alcohol, and their combination, on divided attention performance between 32 male and female cannabis users and nonusers (mean age, 25 yrs). Performance by all Ss was significantly impaired following 2.6 and 5.2 mg THC but not at blood alcohol concentrations of 48 and 96 mg/100 ml. The combined effect of the 2 drugs depended upon prior experience with cannabis. A synergistic action occurred in nonusers while an antagonistic effect occurred in the group of users. Differences in the alcohol effects between users and nonusers provided evidence of cross-tolerance between cannabis and alcohol. A replication of the experiment using a within-Ss design with 3 levels of alcohol (placebo, 50 mg, and 100 mg/100 ml) and 3 levels cannabis (placebo, 2.62 mg, and 5.24 mg THC) showed no evidence of cross-tolerance, although users tended to be less impaired than nonusers under all treatments. (31 ref)—*Journal abstract*.

6598. MacPhail, Robert C. & Seiden, Lewis S. (U Chicago) *Psychopharmacologia*, 1975, Vol 44(1), 1-4.—4 male Sprague-Dawley rats performed during 35-min sessions under a schedule that arranged water delivery after every 40th response. Cocaine (1.0-16.0 mg ip) was administered 15, 30, 60, or 120 min prior to a session. When given 15 min prior to a session, cocaine (1.0-8.0 mg) in all Ss produced dose-related decreases in responding. The largest dose, when given 15 min pre-session to 2 rats, almost completely suppressed responding. Lengthening the time between drug injection and test session attenuated the rate-decreasing effects of cocaine (1.0-8.0 mg), but did not affect the almost complete suppression of performance seen with the largest dose. Small doses (1.0-4.0 mg) had no effect on the pause in responding that occurred after water delivery. The 8.0-mg dose lengthened the pause by approximately 9,000% and 650% when give 15 and 30 min prior to a session, respectively, but by less than 50% when give 60 or 120 min pre-session. It is concluded that cocaine effects depend on the dose as well as the time of its administration prior to testing. (21 ref)—*Journal abstract*.

6601. Marx, Jean L. **Learning and behavior (II): The hypothalamic peptides.** *Science*, 1975(Nov), Vol 190(4214), 544-545.—Reports ongoing research on hypothalamic control structures, peptides, which may have implications for treatment of Parkinson's disease and depression. Recent studies on melanocyte-stimulating hormone factors and parkinsonism and somatostatin and depression are described.

6602. Meltzer, Herbert Y. (U Chicago, Pritzker Medical School) **Plasma creatine phosphokinase levels in rats following lyseric acid diethylamide.** *Psychopharmacologia*, 1975, Vol 44(1), 91-93.—LSD (.6 mg/kg) injected ip or intramuscularly did not increase plasma creatine phosphokinase (CPK) activity in 54 male Sprague-Dawley rats. LSD did not produce an increase in serum CPK activity in Ss kept in a 2°C environment for 2 hrs. LSD also did not potentiate the increase in plasma CPK activity produced by restraint at 2°C or 24°C. It is suggested that the increases in serum CPK activity previously reported to occur in people who became psychotic following LSD ingestion are a consequence of the psychotic state itself rather than a direct effect of LSD. (23 ref)—*Journal abstract*.

6603. Mörmstad, Hakan. (U Lund, Faculty of Odontology, Malmö, Sweden) **Acute sodium fluoride toxicity in rats in relation to age and sex.** *Acta Pharmacologica et Toxicologica*, 1975(Nov), Vol 37(5), 425-428.—The 24 hr LD-50 dose for ip-injected sodium fluoride was determined in developing and young adult Sprague-Dawley rats of both sexes. Developing Ss tolerated 2½ times as much fluoride as the young adults when expressed as mg F/kg of body weight.

6604. Munkvad, I. (Sct. Hans Mental Hosp, Research Lab, Roskilde, Denmark) **The mechanism of action of psychopharmacological agents on behavior.** *Acta Pharmacologica et Toxicologica*, 1975, Vol 36(Suppl 2), 21-30.—Discusses the effect of antipsychotics on aggressiveness and abnormal social behavior, from anatomical, behavioral, and biochemical viewpoints. The possibility that disturbances in the balance between the aminergic and cholinergic systems cause aggressive behavior is considered. The antipsychotic properties of clozapine are discussed, and an amphetamine model of schizophrenia is presented. The ideal antipsychotic is seen as one that antagonizes psychotic behavior without affecting normal behavior. (34 ref)—*R. Tomasko*.

6605. Nakazawa, Yoichi et al. (Kurume U, Medical School, Japan) **Effects of thienodiazepine derivatives on human sleep as compared to those of benzodiazepine derivatives.** *Psychopharmacologia*, 1975, Vol 44(2), 165-171.—Studied the effects of 2 new thienodiazepine derivatives, clotiazepam and Y-7131, on normal human sleep in 5 male undergraduates. These effects were compared to those of 2 benzodiazepine derivatives, diazepam and nitrazepam, in 5 other male undergraduates. REM sleep was significantly decreased only with 2 mg of Y-7131, and rebound elevation of REM sleep did not follow in recovery Nights 1 and 2. Using a specially designed partial differential REM deprivation procedure, there was also no rebound elevation of REM sleep noted in recovery Night 2 following 2 mg of Y-7131.

REM sleep was not suppressed with 15 mg of clonazepam, 6 mg of diazepam, and 10 mg of nitrazepam when compared to the baseline night. With regard to NREM sleep, Stage 2 was significantly increased with 15 mg of clonazepam and 10 mg of nitrazepam, but slow-wave sleep was significantly decreased with 10 mg of nitrazepam. (28 ref)—*Journal abstract*.

6606. Ohi, Shuzo. (Tokyo U of Education, Japan) **[The effects of actinomycin D on the brain RNA synthesis and on the passive avoidance latency in the goldfish.]** (Japn) *Japanese Journal of Psychology*, 1975(Oct), Vol 46(4), 191-198.—In a study with 15 goldfish, the effect of actinomycin D (Act-D) on brain RNA synthesis was examined by injecting Ss intracranially with Act-D at 0.5, 3, 24, 48, and 72 hrs prior to intracranial injection of H-uridine. In a 2nd experiment, the effect of Act-D on passive-avoidance latency was examined by injecting 16 goldfish with 2-10 μ l Act-D; 16 controls were injected with distilled water. Results show that intracranial injection of Act-D inhibited approximately 70% of Ss' brain RNA synthesis from 3 hrs to 4 days later. Short-term memory was not blocked in Ss given passive-avoidance training but long-term memory was markedly blocked. It is suggested that brain RNA synthesis is not related to short-term memory but is necessary for long-term memory. (English abstract) (34 ref)—*English summary*.

6607. Okey, Allan B. & Truant, Greg S. (U Windsor, Canada) **Cannabis demasculinizes rats but is not estrogenic.** *Life Sciences*, 1975(Oct), Vol 17(7), 1113-1117.—Cannabis resin (54% tetrahydrocannabinol) caused dose-related decreases in the development of testis, prostate, and seminal vesicles when administered in the diet to immature male Wistar rats. Bioassays and estrogen-receptor studies showed no estrogenic activity in cannabis resin. Cannabis resin was also given ip to immature female rats; there was no stimulation of uterine growth at doses up to toxic levels (200 mg/kg/day). It is concluded that demasculinization and possible feminization by cannabis are not due to simple estrogen-like action on male tissues.—*Journal abstract*.

6608. Oppenheim, R. W. & Reitzel, J. (North Carolina Dept of Human Resources, Research Div, Raleigh) **Ontogeny of behavioral sensitivity to strychnine in the chick embryo: Evidence for the early onset of CNS inhibition.** *Brain, Behavior & Evolution*, 1975, Vol 11(2), 130-159.—Studied the development of behavioral sensitivity to strychnine in the White Leghorn chick embryo between Day 7 of incubation and 1 day posthatching. The earliest response to systemically applied strychnine was a marked depression of spontaneous motility at high concentrations of the drug. About 2 days later, strychnine induced a statistically reliable increase in spontaneous motility (hyperactivity). This consisted of a brief (1-2 min) excitatory response, which was followed by a return to baseline activity levels in the case of low drug concentrations or a depression of activity in the case of higher concentrations. By 11 days of incubation the brief excitatory response had increased to 4 min. For the 1st time at 16 days myoclonic convulsions were observed following strychnine. At the same time the sensitivity of the embryo to strychnine increased, compared to earlier stages. By 18 days strychnine most often induced an

immediate convulsive response without the preceding brief hyperactivity. The systemic application of glycine at 9 and 13 days produced a slight, but statistically reliable, depression of ongoing spontaneous motility, consistent with what one might expect if glycine were acting as an inhibitory neurotransmitter. Biochemical, electrophysiological, and neuroanatomical evidence is reviewed in an attempt to support the suggestion that the data may reflect the presence of strychnine-sensitive postsynaptic inhibitory processes in the spinal cord. Comparative data on the relative onset of excitatory and inhibitory processes in the developing spinal cord are also discussed. It is concluded that inhibitory mechanisms appear rather early during vertebrate neurogenesis. (5 p ref)—*Journal abstract*.

6609. Orcutt, James D. (Florida State U) **Social determinants of alcohol and marijuana effects: A systematic theory.** *International Journal of the Addictions*, 1975, Vol 10(6), 1021-1033.—Presents a social-psychological theory of the effects of the recreational use of drugs, and discusses the application of the theory in comparative research on normal drug use. (31 ref)

6610. Paalzow, Gudrun & Paalzow, Lennart. (Uppsala, Biomedical Ctr, Sweden) **Enhancement of apomorphine-induced inhibition of vocalisation after-discharge response by theophylline.** *Life Sciences*, 1975(Oct), Vol 17(7), 1145-1151.—Reports that apomorphine increased dose-dependently, the threshold for the vocalization afterdischarge (VA) in male Sprague-Dawley rats, this effect being abolished by pimozide and potentiated by theophylline. A combined treatment with theophylline and levodopa also elevated the VA threshold. Results indicate that the pharmacological response after theophylline can be modulated by dopamine receptor interactions. (24 ref)

6611. Pappenheimer, J. R. et al. (Harvard U, Medical School) **Extraction of sleep-promoting factor S from cerebrospinal fluid and from brains of sleep-deprived animals.** *Journal of Neurophysiology*, 1975(Nov), Vol 38(6), 1299-1311.—Sleep-promoting factor (factor S) was extracted, partially purified, and concentrated from cerebrospinal fluid and from acid-acetone extracts of brainstem and cortex of sleep-deprived goats and sheep. Concentrated fractions were infused intraventricularly in rats and in rabbits. Sleep-promoting activity was assayed by a decrease in nocturnal locomotor activity of rats and by durations and amplitude of slow-wave cortical EEG in rabbits. Results show that 20-fold concentrates of cerebrospinal fluid or material from 1 g cortex or brainstem of sleep-deprived goats or sheep depressed locomotor activity of rats to about 50% of normal during the 1st 6 hrs, with complete recovery the following night. In rabbits, the equivalent of 3 g brain tissue increased the duration of slow-wave sleep for about 7 hrs subsequent to infusion. Sleep induced by exogenous factor S in rabbits was characterized by slow-wave EEG. (16 ref)—*Journal abstract*.

6612. Pert, Agu & Maxey, George. (Biomedical Lab, Experimental Medicine Branch, Edgewood Arsenal, MD) **Asymmetrical cross-tolerance between morphine and scopolamine induced antinociception in the primate: Differential sites of action.** *Psychopharmacologia*, 1975, Vol 44(2), 139-145.—Two experiments explored

the role of the cholinergic system in mediating morphine induced analgesia in the rhesus monkey. Findings imply that morphine and scopolamine do not exert their antinociceptive effects through identical neural substrates, although a certain degree of overlap between such substrates was indicated. (29 ref)

6613. Pert, Agu. (Biomedical Lab, Experimental Medicine Branch, Edgewood Arsenal, MD) **The cholinergic system and nociception in the primate: Interactions with morphine.** *Psychopharmacologia*, 1975, Vol 44(2), 131-137.—In Exp I a shock titration task was used to evaluate the antinociceptive properties of 5 different classes of cholinergic compounds in 4 rhesus monkeys. Only scopolamine and high doses of physostigmine were effective in evaluating the shock threshold. The apparent antinociceptive effect of physostigmine, however, was difficult to separate from its nonspecific behavioral depressant effect and was probably not related to an increase in cholinergic tone. Exp II examined the interaction of morphine (2.0 mg/kg) with arecoline, scopolamine, and physostigmine using the same 4 Ss of Exp I. Only scopolamine (0.05 and 0.1 mg/kg) and high doses of physostigmine (0.1 mg/kg) interacted with morphine in the shock titration paradigm. The multiplicative interaction of morphine with scopolamine was confirmed in Exp III with 5 new Ss over a wider range of doses. It is concluded that morphine and the cholinergic compounds produce antinociceptive effects through different mechanisms of the pain system. (23 ref)—*Journal abstract.*

6614. Quenzer, Linda F. & Feldman, Robert S. (St Elizabeth's Hosp, Lab of Preclinical Pharmacology, Washington, DC) **The mechanism of anti-muricidal effects of chlordiazepoxide.** *Pharmacology, Biochemistry & Behavior*, 1975(Jul-Aug), Vol 3(4), 567-571.—In 3 experiments with a total of 35 male Sprague-Dawley mouse-killing rats, muricidal activity was suppressed by ip chlordiazepoxide (CDP). At appropriate doses the CDP effect was reversed by repeated testing, by pretreatment with CDP, and by concomitant dosing with caffeine. This points to the general behavioral depressant action of CDP which undergoes tolerance as being primarily responsible for the antimuricidal activity of CDP. (25 ref)—*Journal abstract.*

6615. Rabin, Joan S. **Effects of varying sucrose reinforcers and amobarbital sodium on positive contrast in rats.** *Animal Learning & Behavior*, 1975(Nov), Vol 3(4), 290-294.—Studied the effect of quantity and quality of reinforcement on performance change following a shift to uniform high reward in 4 groups of albino male Sprague-Dawley rats totalling 72 Ss. 20 or 200 licks of a 5 or 20% sucrose solution constituted the 4 incentive conditions. 2 additional S groups were run in the high (20%-200 licks) and low (5%-20 licks) reward conditions to determine how amobarbital sodium, an emotional depressant, influences incentive shift performance. All 6 groups received 60 preshift runway trials (6/day), followed by 30 high reward trials. 24 extinction trials contrasted drugged and normal performance relating to high and low reward. Postshift positive contrast appeared in all nondrugged groups. An emotional base for positive contrast is considered. (27 ref)—*Journal abstract.*

6616. Refsum, Helge & Landmark, Kaud. (U Oslo, Inst of Pharmacology, Norway) **The effect of a calcium-antagonistic drug, nifedipine, on the mechanical and electrical activity of the isolated rat atrium.** *Acta Pharmacologica et Toxicologica*, 1975(Nov), Vol 37(5), 369-376.—In the concentration range from 0.5 to 1,000 μ g/l, nifedipine caused a dose-dependent decrease in the spontaneous atrial rate and amplitude of contractions, and atrial arrest occurred in some experiments with the highest drug concentrations. Ss were female albino Wistar rats. The drug also caused a dose-dependent decrease in contractile force of stimulated left atria, while the threshold current required to drive the atria was unchanged. Nifedipine caused a dose-dependent increase in the sinus node recovery time. Results indicate that calcium ions are necessary for pacemaker activity in the sino-atrial node, but not essential for maintaining atrial refractoriness and excitability. (24 ref)—*Journal abstract.*

6617. Roszkowski, A. P.; Schuler, M. E.; Marx, M. & Edwards, J. A. (Inst of Clinical Medicine & Organic Chemistry, Syntex Research, Palo Alto, CA) **A central nervous system depressant-antidepressant.** *Experientia*, 1975(Aug), Vol 31(8), 960-962.—Describes a new tricyclic agent which may be suited for mixed anxiety-depressive therapy. The agent, 5-(3-dimethylaminoprop-1-enylidene)-5H-dibenzo[a,d]cycloheptane maleic acid salt (DMPD), exerts antidepressant effects and is simultaneously a potent CNS depressant. In experimental tests DMPD showed antidepressant effects which efficiently reduced reserpine-induced hypothermia in mice. Behavioral studies indicated that DMPD, in dosage levels as low as 10 mg/kg, produced ataxia, wobbly gait, and disorientation in mice, showing its effectiveness as a CNS depressant. It is suggested that such dual activity may be of clinical interest for treatment of mixed anxiety and depression.—J. L. Andreassi.

6618. Rowe, Thomas C. (U South Dakota) **Modification of stimulation-bound behavior by trifluoperazine and amphetamine in rats.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2347.

6619. Rónai, András Z. & Vizi, Sylvester E. (Ssemelweis U of Medicine, Budapest, Hungary) **The effect of lithium treatment on the acetylcholine content of rat brain.** *Biochemical Pharmacology*, 1975(Oct), Vol 24(19), 1819-1820.—Administered ip lithium chloride (200 mg/kg twice daily) to adult albino rats for 5 days. Results show that lithium, at concentrations which may occur in patients treated with the drug, can inhibit acetylcholine synthesis in the rat CNS.

6620. Sahgal, A. & Iversen, S. D. (U Cambridge, England) **Colour preferences in the pigeon: A behavioural and psychopharmacological study.** *Psychopharmacologia*, 1975, Vol 43(2), 175-179.—In 2 experiments 10 London pigeons were tested in an operant apparatus and found to have marked color preferences, blue being preferred over green, followed by yellow and red. The effects of 2 tranquilizers, diazepam and chlorpromazine, were studied, and it was found that diazepam released responding, and chlorpromazine suppressed it. Diazepam also tended to abolish color preference, while chlorpromazine was effective only at the highest dose

used (5.00 mg/kg). Implications of these findings, particularly in relation to the design of experiments and to the aversiveness of certain stimuli, are discussed. (16 ref)—*Journal abstract*.

6621. Sakata, Toshiie; Fuchimoto, Hideaki; Kodama, Junichi & Fukushima, Masataka. (Kyushu U, Faculty of Medicine, Fukuoka, Japan) **Changes of brain serotonin and muricide behavior following chronic administration of theophylline in rats.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 449-453.—In 2 experiments with a total of 94 male albino Wistar rats, temporal modification of amygdaloid serotonin (5-hydroxytryptamine; 5-HT) content and the resultant muricide behavior, compared to isolated and olfactory bulbectomized rats, were studied after chronic theophylline administration. Theophylline (28.0 mM, ip) raised amygdaloid 5-HT after Day 28 and amygdaloid 5-hydroxyindoleacetic acid (5-HIAA), its deaminated metabolite, after Day 7. Theophylline applied for 29 days elevated 5-HT and 5-HIAA in the amygdala, the diencephalon and the brainstem, but not in the cortex. Theophylline reduced latency and maintained tendency to kill, even after overnight muricide tests. The 5-HT content of the amygdala decreased in bulbectomized rats. The discrepancy between brain 5-HT changes and aggressive behavior is discussed. (17 ref)—*Journal abstract*.

6622. Sandman, Curt A. et al. (Ohio State U) **Enhancement of attention in man with ACTH/MSH 4-10.** *Physiology & Behavior*, 1975(Oct), Vol 15(4), 427-431.—Administered a 15-mg infusion of ACTH-melanocyte stimulating hormone (MSH) 4-10 or a control solution to 20 healthy 21-30 yr old men for 4 hrs. Behavioral testing after the infusion indicated that Ss who received ACTH/MSH 4-10 were less anxious (State-Trait Anxiety Inventory) and had better visual memory (Benton Visual Retention Test) than control Ss but the predominant effect of the heptapeptide was to increase visual attention (rod-and-frame test). It is suggested that ACTH/MSH 4-10 may be uniquely coded for attentional functioning. (29 ref)—*Journal abstract*.

6623. Sanger, D. J. & Blackman, D. E. (U Birmingham, England) **The effects of tranquilizing drugs on timing behaviour in rats.** *Psychopharmacologia*, 1975, Vol 44(2), 153-156.—Elicited timing behavior in 6 male albino rats by a schedule which required responses to be spaced at least 15 sec apart to produce food reinforcement (DRL-15 sec). Several doses of both chlordiazepoxide (1, 3, 10, and 30 mg/kg) and phenobarbitone (3, 10, 30, and 100 mg/kg) disrupted timing behavior by increasing overall response rates, although the highest dose of each of these 2 drugs produced sedative effects. Chlorpromazine (0.3, 1.0, 3.0, and 5.6 mg/kg) produced mainly a decrease in overall response rates. Both chlordiazepoxide and phenobarbitone markedly increased the percentage of interresponse times less than 1.5 sec in duration (response bursts). Chlorpromazine had no consistent effect on response bursts. Reduction of Ss' body weights from 85 to 75% of their preexperimental levels had no effect on operant performance, suggesting that the effects of the drugs were probably not due to actions on motivational processes. (25 ref)—*Journal abstract*.

6624. Sanghvi, Indravadan & Gershon, Samuel. (Yale U, Medical School) **Effect of acute and chronic iprindole on serotonin turnover in mouse brain.** *Biochemical Pharmacology*, 1975(Nov), Vol 24(22), 2103-2104.—In a study with Swiss-Webster male mice, ip administrations of iprindole (20 mg/kg) given acutely or chronically for 3 wks had no significant effect on the rate of 5-hydroxytryptamine (5-HT; serotonin) synthesis or turnover time on the rate of 5-HT accumulation after pargyline. Data indicate that iprindole may have some inhibitory effect on MAO, especially after chronic administration. (19 ref)

6625. Sara, Vicki R. & Lazarus, L. (Garvan Inst of Medical Research, St Vincent's Hosp, Sydney, Australia) **Maternal growth hormone and growth and function.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 489-502.—Administered either 10 or 100 µg or 1 or 3 mg of porcine growth hormone subcutaneously each day from Day 7 to Day 20 of gestation to pregnant female Wistar rats. Cortical neurone proliferation was determined in 75 Ss from the litters of the female Ss. Results showed a significant increase in brain weight and cortical neurone number as determined by the incorporation of labeled thymidine into DNA and subsequent autoradiography. Learning performance of 42 male and 31 female 110-day-old Ss was enhanced in a series of conditional discriminational tasks. Data suggest that growth hormone increases the ability to respond to additional or complex stimuli in the environments. (2 p ref)—*L. Gorsey*.

6626. Sari, Atsuo et al. (Yamaguchi U, Medical School, Japan) **Effects of psychotropic drugs on canine cerebral metabolism and circulation related to EEG: Diazepam, clomipramine, and chlorpromazine.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1975(Sep), Vol 38(9), 838-844.—Examines separately the effects of diazepam, clomipramine, and chlorpromazine on cerebral metabolic rate (CMR) and cerebral blood flow (CBF) in 18 dogs. After the administration of diazepam or clomipramine, cerebral cortical oxygen consumption (CMR/O₂) decreased significantly by a maximum of 17% and 13% of control within 10 min and 15 min, and returned to control at 120 min and 90 min, respectively. Chlorpromazine, however, decreased by a maximum 10% of control, a level which continued throughout the period of observation. Reduction in CMR/glucose was followed by the reduction in CMR/O₂ at an interval during the early stages CMR/O₂ depression. Diazepam produced a significant decrease in CBF accompanied by a reduction in CMR/O₂, but neither clomipramine nor chlorpromazine had any effect on CBF in spite of reduction in CMR/O₂. Reduction in CMR/O₂ both with diazepam and clomipramine was accompanied by slow wave activities of EEG, but with chlorpromazine reduction in CMR/O₂ was accompanied by less pronounced slow wave activities. It is concluded that the 3 drugs are cerebral metabolic depressants. (24 ref)—*I. Davis*.

6627. Sathananthan, Gregory L.; Sanghvi, Indravadan; Phillips, Neil & Gershon, Samuel. (New York U, Medical Ctr, Neuropsychopharmacology Research Unit) **MJ 9022: Correlation between neuroleptic potential and stereotypy.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 701-705.—Reports results of 2 studies, 1 with acute schizophrenic patients and 1 with dogs. Results

show a close correlation between the blockade of amphetamine-induced stereotypy in dogs and the neuroleptic potential in schizophrenia, strengthening the claim that stereotypy in dogs could be used as an animal model for human psychoses.

6628. Sato, M. & Sawada, M. (U Oregon, Health Sciences Ctr) **Selective blocking action of LSD on inhibitory dopamine receptors.** *Neuropharmacology*, 1975(Nov), Vol 14(11), 883-886.—Recorded dopamine-induced postsynaptic responses of both excitatory and inhibitory types from identified neurones of *Aplysia californica* ganglion. A 30-sec exposure to 0.1 μ M LSD significantly depressed the inhibitory responses to 1 mM dopamine, while a 60-sec exposure to 10 μ M LSD did not alter the excitatory responses to 0.1 mM dopamine. Dose-response curves obtained from cells with inhibitory receptors indicate that the mode of LSD interaction was noncompetitive.—*Journal abstract*.

6629. Schaefer, András; Komlós, Márta & Seregi, András. (Hungarian Academy of Sciences, Inst of Experimental Medicine, Budapest) **Lipid peroxidation as the cause of the ascorbic acid induced decrease of adenosine triphosphatase activities of rat brain microsomes and its inhibition by biogenic amines and psychotropic drugs.** *Biochemical Pharmacology*, 1975(Oct), Vol 24(19), 1781-1786.

6630. Seliger, Deborah L. (Rutgers State U, Camden) **Dose-response effects of *d*-amphetamine on passive avoidance learning in the rat.** *Psychopharmacologia*, 1975, Vol 44(2), 191-193.—Assessed trials and errors to learning a passive avoidance response in 63 male albino Sprague-Dawley rats injected subcutaneously with dextroamphetamine (0-7 mg/kg). Both measures indicated dose-response effects on responding; Ss under either low or high doses made significantly fewer errors and took significantly fewer trials to learn the response than did middle-dosage Ss. The scores of the lower and higher dosage Ss did not differ from the nondrug control group. Results are discussed in terms of amphetamine stereotypy.—*Journal abstract*.

6631. Sellman, R.; Kanto, J.; Rajola, E. & Pekkarinen, A. (U Turku, Finland) **Induction effect of diazepam on its own metabolism.** *Acta Pharmacologica et Toxicologica*, 1975(Nov), Vol 37(5), 345-351.—Administered 10 mg iv diazepam to 7 psychiatric patients and 13 healthy volunteers. There was a significantly lower increase of diazepam concentrations in the plasma of patients than in healthy Ss. In psychiatric Ss, the iv diazepam caused a significantly lower mean increase of diazepam concentrations in the plasma than in 12 psychiatric patients treated without diazepam and significantly higher increases in the concentrations of N-demethyldiazepam. (18 ref)—*Journal abstract*.

6632. Shih, Tsung-Ming; Khachaturian, Zaven S.; Barry, Herbert & Reisler, Kurt L. (U Pittsburgh, Medical School) **Differential effects of methylphenidate on reticular formation and thalamic neuronal activity.** *Psychopharmacologia*, 1975, Vol 44(1), 11-15. In 2 experiments with 37 male albino Wistar rats and 10 adult cats, iv administration of methylphenidate (1 or 2 mg/kg) markedly attenuated the unit discharge rate in the mesencephalic reticular formation. Concurrently this drug enhanced the neural activity in the primary sensory

nuclei of the thalamus. The differential effects of methylphenidate on these 2 neural systems suggest a possible mechanism by which it may improve attentive processes in hyperkinesia. (29 ref)—*Journal abstract*.

6633. Sicé, Jean; Levine, H. D.; Levin, J. Joseph & Haertzen, Charles A. **Effects of personal interactions and setting on subjective drug responses in small groups.** *Psychopharmacologia*, 1975, Vol 43(2), 181-186.—Subjective responses induced by secobarbital and meprobamate were evaluated in 4 \times 4 controlled trials in small groups of healthy young medical students ($n = 36$) over 4 mo. Drug effects were mainly influenced by attitudes toward the project, personal interactions, and anticipations of the Ss. The effects of some of these factors were similar to and at least as powerful as those which are usually considered characteristic of sedatives and stimulants. The same factors, however, did not apparently affect objective responses. (18 ref)—*Journal abstract*.

6634. Siegfried, Bert; Waser, Peter G.; Borbély, Alexander A. & Huston, Joseph P. (U Zürich, Inst of Pharmacology, Switzerland) **Pavlovian conditioning of eating induced by spreading depression in cortex, striatum and hippocampus of rats.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 71-78.—Triggered a wave of spreading depression in male Sprague-Dawley albino rats by injection of 0.5-2.0 μ l 25% KCl solution. In Exp I successful conditioning was demonstrated in 20 Ss involving 7 cortical, 5 caudate, and 8 hippocampal spreading depression sites. 4 Ss failed to show any conditioned eating. A control group of Ss, in which cortical spreading depression did not induce eating, showed no increase in eating in the presence of the CS after conditioning trials. Exp II confirmed the results obtained in Exp I. Classical conditioning was successful in 11 Ss, involving 6 cortical and 5 caudate spreading depression sites. Neither the pseudoconditioning (14 Ss) nor the NaCl control group (8 Ss) showed eating in the presence of the CS. In both experiments the conditioned eating underwent gradual extinction. (18 ref)—*Journal abstract*.

6635. Södersten, P. (U Göteborg, Sweden) **Receptive behavior in developing female rats.** *Hormones and Behavior*, 1975(Dec), Vol 6(4), 307-317.—Studied the development of sexual behavior in 4 experiments with a total of 458 female Wistar rats. Lordosis behavior in response to manual stimulation was induced in 100% of 19-day-old Ss by treatment with 10 μ g estradiol benzoate (EB) and 0.5 mg progesterone (P), and earwiggling was displayed at earlier ages. During normal development, vaginal opening preceded the display of the 1st receptivity in most cases; the 1st behavioral sex cycles tended to be prolonged and irregular, but the subsequent cycles were of regular 4 or 5 days duration. Although treatment of immature (18-, 23- or 28-day-old) Ss with EB (10 μ g) and P(0.5 mg) or with EB (0.025, 0.25, or 2.5 μ g until vaginal opening occurred) resulted in precocious vaginal opening and display of sexual receptivity, the treatment did not advance the development of behavioral cyclicity. Progesterone (0.25 mg/100 g body weight) facilitated the display of sexual receptivity in EB-primed ovariectomized immature and adult Ss. Evidence is presented that

behavioral sensitivity to estrogen increases with age.—*Journal abstract.*

6636. Speciale, S. G.; Nowaczyk, T. & Jouvet, M. (U Claude-Bernard, Lyons, France) **Chick phasic bioelectric activity at the time of hatching and the effects of previous nialamide injection.** *Brain Research*, 1976, Vol 101(1), 148-154.—Examined whether paradoxical sleep (PS) could be suppressed in newborn White Leghorn chicks by the administration of MAO inhibitors (nialamide) during the period of active neurochemical and neurophysiological development. Results show that nialamide (10 mg/kg) injected into the chick embryos caused a significant decrease in PS and indicate the possible use of the embryo-chick model to test the role of PS in innate behavior by comparing the degree of PS suppression with changes in stereotypic behavior. (25 ref)

6637. Squire, Larry R. & Becker, Carl K. (VA Hosp. San Diego, CA) **Inhibition of cerebral protein synthesis impairs long-term habituation.** *Brain Research*, 1975, Vol 97(2), 367-372.—Experiments with male hybrid mice (C3H \times BALB/c) showed that inhibition of cerebral protein synthesis by anisomycin impairs long-term habituation. Habituation was studied with an innate suppression technique, which assesses S's responsiveness to loud auditory stimuli (conspecific distress cries) as indicated by the capacity of these stimuli to interrupt drinking. After Ss had been allowed to drink undisturbed for 7 days, distress cries were presented during their daily drinking period. Subcutaneous and ip injections of anisomycin (30 mg/kg) and lithium chloride (150 mg/kg) were given. Previous findings have shown that cerebral protein synthesis is required for long-term memory of discrimination training and active and passive avoidance learning; it is suggested that this idea can be extended to habituation, a phylogenetically primitive form of long-lasting behavioral plasticity. 6641. Ungerer, Arielle; Marchal, Daniele; Ropartz, Philippe & Weil, Jacques-Henry. (U Louis Pasteur, Lab de Psychophysiologie, Strasbourg, France) **Aversive effects and retention impairment induced by acetoxycycloheximide in an instrumental task.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 55-62.—In 3 experiments with male Swiss mice, acetoxycycloheximide (AXM),

subcutaneously injected during the 1st 3 min following acquisition of a nondiscriminative instrumental learning task, induced an aversion for the food reinforcement which had been associated with the training and with the pharmacological treatment. The high number of nonreinforced responses preceding the 1st reinforced response (RR) that Ss performed when tested 6 days after AXM treatment, was not due to forgetting of the lever significance but to this aversion. Ss treated with AXM showed low levels of leverpressing response and long latencies for their 1st RR; this deficit did not seem to be due only to food reinforcement aversion; it disappeared, as well as food aversion, when food reinforcement which had been associated with the learning situation and to treatment, was added to the daily feeding regimen during treatment-test interval. More than 90% of cerebral protein synthesis was inhibited during the 5 hrs following AXM injection. Findings are interpreted as an indication that AXM does not affect memory consolidation of a nondiscriminative instrumental learning. (28 ref)—*Journal abstract.*

6642. Van Wimersma Greidanus, Tj. B. et al. (U Utrecht, Rudolf Magus Inst for Pharmacology, Netherlands) **The effects of dogfish MSH's and of corticotrophin-like intermediate lobe peptides (CLIP's) on avoidance behavior in rats.** *Hormones and Behavior*, 1975(Dec), Vol 6(4), 319-327.—Tested recently purified melanocyte-stimulating hormones (MSHs) from dogfish pituitary tissue on extinction of a conditioned avoidance response (CAR) in 23 male Wistar rats. CLIPs from dogfish and porcine origin were tested for an effect on avoidance extinction as well. All peptides appeared to delay extinction of the CAR. Results suggest that the pituitary contains various peptides which influence adaptive behavior. The observation that MSH was more potent in delaying extinction of the CAR than CLIP leads to the conclusion that the behavioral active sequence of the ACTH molecules is located in the N-terminal part rather than in the C-terminal part of the polypeptide. 6643. Vander Maelen, Ann L.; Strauss, Milton E. & Starr, Raymond H. (Wayne State U) **Influence of obstetric medication on auditory habituation in the newborn.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 711-714.—Examined auditory habituation in 24 newborns, using E. Conway and Y. Brackbill's (1970) procedure, with the addition of a test for dishabituation, and state observations. Significant response decrement was observed in all infants; a majority responded to the dishabituation stimuli. Rate of habituation varied with number of state changes, intensity of stimulation required to initially elicit a response, and, for infants initially responsive to an 80-db signal, level of obstetric medication (analgesics and anesthetics).—*Journal abstract*

6644. Weisen, Bernard & Gott, C. Thomas. (U Rochester, Medical & Dental School) **A microanalysis of drug effects on fixed ratio performance in pigeons.** *Journal of Pharmacology & Experimental Therapeutics*, 1972, Vol 180(2), 189-202.—Pigeons trained to peck a lighted key on an FR 30 schedule of food presentation received various dose levels of amphetamine sulfate, sodium pentobarbital, or imipramine hydrochloride. Perform-

ance was gauged in terms of the 30 interresponse times (IRTs) within the ratio. The 1st IRT of the ratio, the time between reinforcement and the 1st response, increased in a dose-related fashion after amphetamine and imipramine and decreased after pentobarbital. Subsequent IRTs displayed similar alterations, but the magnitude of the effect depended, in part, on ordinal position within the ratio. Further analyses revealed that changes in the incidence of IRTs greater than 1 sec correlated closely with the mean IRT changes, leading to the hypothesis that drugs act mainly on the cohesiveness of the FR pattern. Changes in the character of the interval histograms revealed further, more subtle alterations, which could be viewed as springing from changes in response topography.—*Journal abstract.*

6645. Winter, J. C. (State U New York, Medical School, Buffalo) **The effects of 2,5-dimethoxy-4-methylamphetamine (DOM), 2,5-dimethoxy-4-ethylamphetamine (DOET), *d*-amphetamine, and cocaine in rats trained with mescaline as a discriminative stimulus.** *Psychopharmacologia*, 1975, Vol 44(1), 29-32.—Administration of a range of doses of DOM and DOET to female CFN rats in which saline functioned as S⁺UD (discriminative stimulus) and mescaline as S⁻ (nonreinforced stimulus) revealed that a dose of 0.3 mg of either DOM or DOET was equivalent to the training dose of mescaline (10 mg/kg). When tested in Ss in which mescaline served as S⁺UD DOM and DOET were likewise found to mimic mescaline. In contrast, doses of dextroamphetamine and cocaine (1 and 30 mg/kg, respectively), which were equivalent to the training dose of mescaline as S⁻ did not result in responding appropriate for the mescaline condition when mescaline was trained as S⁺UD. When DOET (0.3 mg/kg) was substituted for saline as S⁻ no evidence of discriminated responding was obtained in the course of 50 sessions. Data suggest that those effects of mescaline in the rat which function as a discriminative stimulus are better correlated with prehallucinogenic LSD-like activity in man than with hallucinogenic activity per se. Thus, these effects in rats represent a necessary but not a sufficient condition for prediction of hallucinogenic activity in man. (24 ref)—*Journal abstract.*

6656. Ojha, A. B. (Ministry of Defence, Dept of Psychological Research, New Delhi, India) **Rumor research: An overview.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 56-65.—In an effort to extract useful information on rumors, the literature on the subject was examined with particular focus on wartime rumors. It was found that little could be borrowed, not even pieces of information pertaining to modes of transmission and exaggeration. If used without proper scrutiny, some of the results could be misleading. Academics are silent over even preliminaries on construction and preparation of rumors. The structural aspects similarly remain notably untouched. 2 academic misconceptions appear to have misdirected psychologists' efforts: (a) inadequate attention to a comprehensive conceptual model at the very outset and (b) the notion that in an age of rapidly growing mass media technology, rumors are fast losing their respectability. They also explain why many important facets of rumor remain at best only partially explored. Removing these misconceptions and attempting to fulfill S. Schachter and N. Burdick's demand (see PA, Vol 30:2818) for a reexamination of concepts of rumor is expected to attract more people to the field with new sets of questions. (40 ref)—*Journal abstract*.

6657. Vandamme, F. (State U Ghent, Belgium) **Synthesis against reductionism.** *Communication & Cognition*, 1975, Vol 8(1), 13-22.—Briefly discusses the problem of integrating scientific knowledge. Limitations of a reductionistic approach are noted and advantages of a synthetic approach are described.—R. L. Cook.

6658. Villani, Kathryn E. (Columbia U) **Personality/life style and television viewing behavior.** *Journal of Marketing Research*, 1975(Nov), Vol 12(4), 432-439.

Analyzed data collected in 1971 from 955 adult female heads of households. Ss completed a psychographic questionnaire designed to determine their personality and life-style characteristics and a 2nd questionnaire which measured television viewing behavior. Results indicate that audiences are relatively heterogeneous in terms of psychographic characteristics but these variables appeared to be of limited value for describing audience composition or predicting viewing behavior. Language & Speech

6659. Abram, Albert S. (City U New York) **Minimal auditory cues for distinguishing Black from White**

talkers. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4454.

6660. Brenner, Sten-Olof & Hjelmquist, Erland. **Personality and the structure of speech processes.** *Göteborg Psychological Reports*, 1975, Vol 5(12), 27 p.—Notes that the definition of utterance is often considered crucial in transcription or segmentation of natural speech processes, as it might give differently structured speech processes. This problem was investigated through comparison of speech processes resulting from different definitions of utterances. Ss were 8 teacher candidates with extreme values in intelligence, verbal competence, and flexibility. It was shown that process characteristics from the different processes were consistently positively correlated, although the level of internal dependencies and mean level of speech complexity differed. When related to person characteristics, all the types of speech processes were useful in the psychological interpretation of interaction patterns. It was found that persons high in intelligence and verbal competence had a high level of speech complexity and that flexible persons had a speech process that was independent or rich in information. 6661. Goyvaerts, Monique. (U Antwerp, Belgium) **Recent advances in language acquisition.** *Communication & Cognition*, 1975, Vol 8(1), 45-67.—Suggests that meaningfulness, displacement in time and place, and productivity and creativity are properties necessary and sufficient for defining language. Research in communication in subhuman primates and on language acquisition in children is consistent with the hypothesis that the left hemisphere is responsible for sequential, rule-governed processing, and that a lack of hemispheric specialization may limit subhuman species to primary language processed in a visual-spatial mode. (53 ref)—R. L. Cook.

6662. Graham, Jean A. & Heywood, Simon. (Oxford U, England) **The effects of elimination of hand gestures and of verbal codability on speech performance.** *European Journal of Social Psychology*, 1975, Vol 5(2), 189-195.—6 male university students were required to describe line drawings of 2-dimensional shapes at 2 levels of verbal codability, with and without using hand gestures. Elimination of gesture affected speech performance by changing the semantic content of utterances and the proportion of speaking time spent pausing; numbers of words, numbers of pauses, mean pause length, and semantic content were related to the verbal codability of the stimulus material. The number of hesitations was related to both gesture and level of codability. (French & German summaries)—*Journal abstract*

6663. Iritani, Toshio. (Tokai U, Kanagawa-Ken, Japan) **Symposium on psycholinguistic approaches to language and thought (Tokyo, August 14, 1972).** *International Journal of Psycholinguistics*, 1975, No 3, 83-84

6664. Kachuck, Beatrice L. (Brooklyn Coll, City U New York) **Dialect in the language of inner-city children.** *Elementary School Journal*, 1975(Nov), Vol 76(2), 104-112.—Investigated the dialect of 20 Black children from the inner city. The features studied were omission of the final "S" in verbs, omission of the copula, and nominal reiteration. The typical child did

not use these speech habits consistently. Omission of the copula occurred the most often.—A. J. Ter Keurst.

6665. McElroy, Colleen J. (U Washington, Seattle) **Semantic differentiation as a result of code switching.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4708-4709.

6666. Oakan, Robert D. (Clark U) **Language, comprehension, and comprehension difficulties.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2906.

6667. Oksaar, Els. (U Hamburg, W Germany) **Psycholinguistics, language and changing social structures.** *International Journal of Psycholinguistics*, 1975, No 3, 41-58.—Starting from the viewpoint that psycholinguistics has also to take into account the interaction of language and social structure in order to explain the emergence and choice of alternative linguistic forms, this paper discusses some cases of up- and downgrading of concepts and the change of a morphological rule. These cases can be categorized as linguistic indices of changing social attitudes and systems. Examples are given from German (West Germany) and Swedish from the occupational and professional field. A total of 159 students were tested. The main questions are: How are the changing social relations and attitudes in the hierarchically typed occupational sector verbalized? What are the conditioning factors which determine the choice and creation of new professional designations (when the occupation is not a new one) and the semantical change of the former ones? Some of the competing designations are analyzed by means of the semantic differential technique in order to show its applications in inter- and intralingual language confrontations. (French & Russian summaries) (27 ref)—*Journal summary*.

6668. Oléron, Pierre. (U René Descartes, Paris V, Lab de Psychologie Génétique, France) **On the role of stems in the identification of words.** *International Journal of Psycholinguistics*, 1975, No 3, 59-66.—Studied the role of letter stems in the identification of printed words. 7 stemmed letters—b, d, g, h, l, p, and t—were used. For each of these letters, 12 words were selected, $\frac{1}{2}$ having the letter initially and $\frac{1}{2}$ having the letter in the last or next to last position, these words being matched for frequency. One half of the stimuli were constituted by suppressing the body of the stemmed letter, the other half by suppressing the stem. 2 groups of 13 university students were to identify the words thus mutilated. Results show that the suppression of the letter's body had more detrimental effects on identification than the suppression of the stem. Results are discussed in relation to the information given by these 2 kinds of elements as a result of the types used and of the place of letters in the word. (French & Russian summaries)—*Journal summary*.

6671. Sankoff, David & Lessard, Réjean. (U Montréal, Ctr de Recherches Mathématiques, Canada) **Vocabulary richness: A sociolinguistic analysis.** *Science*, 1975(Nov), Vol 190(4215), 689-690.—A regression analysis of lexical diversity in the informal speech of 120 mature speakers of French in Montreal showed no direct effect of socioeconomic level or residential milieu. All social effects were mediated by a single variable: educational attainment. A continuing enrichment of productive vocabulary with increasing age was also found.

6672. Slama-Cazacu, Tatiana. (U Bucharest, Lab of Psycholinguistics, Romania) **Topicality of psycholinguistics (International events, August-September, 1972).** *International Journal of Psycholinguistics*, 1975, No 3, 67-81.—Discusses the trends for psycholinguistics as expressed at several international congresses (e.g., 3rd International Congress of Applied Linguistics, Recent Advances in Learning Psychology, 11th International Congress of Linguists, and 2nd Summer School of Computational Linguistics).

6673. Stanis, Barbara. (U Warsaw, Poland) **Meaning and interpretation.** *Semiotica*, 1974, Vol 11(4), 347-358.—Outlines a formal logical theory of natural-language semantics. Traditional objections to such a theory identify context-dependence with changeability of meaning. A notation is proposed which preserves these features as independent; it is argued that they must be independent if a semantic theory is to be possible. In particular, acceptance of changeability of meaning is held to preclude any semantic theory. Applied to sentences only, the theory distinguishes between the meaning of a sentence, an absolute fixed property, and its interpretation, which is a property relativized to situational and linguistic context. Synonymity and ambiguity are interpretation features, preserved as such in the notation. The requirements for a psychological correlate of the theory are outlined: (a) a set of sentences representing knowledge of linguistic and extra-linguistic contexts of utterances, (b) a representation of shared general knowledge, and (c) a system of rules controlling the use of both of these representations in interpreting sentences of fixed meaning. Other, ordered, rules would decide between all admissible interpretations.—C. A. Sherrard.

Literature & Art

6674. Carson, Joan. (Coll New Rochelle) **Visionary experience in *Wuthering Heights*.** *Psychoanalytic Review*, 1975(Spring), Vol 62(1), 131-151.—Suggests that Brontë's *Wuthering Heights* can be read on 3 levels: literal plot action, an underlying psychological level portraying a regression to childhood and the primal situation, and a level congruent with the other 2 which consists of the archetypal experience of the night sea journey. (46 ref)—G. S. Speer.

6675. Crowley, Francis E. (State U New York, Buffalo) **Henry James' *The Beast in the Jungle* and *The Ambassadors*.** *Psychoanalytic Review*, 1975(Spring), Vol 62(1), 153-163.—The novel and the short story are seen as the romantic quest, the hero's search for libidinal fulfillment and release from the anxieties of life.—G. S. Speer.

6676. Ebel, Henry. (Richmond Coll, City U New York) **Caesar's wounds: A study of William Shakespeare.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 107-130.—Suggests that Shakespeare and Freud, moving along radically different routes, reached similar conclusions. The erotic and oedipal atmosphere of *Julius Caesar* is homosexual.—G. S. Speer.

6677. Farber, Ada. (Bryn Mawr Coll) **Segmentation of the mother: Women in Greek myth.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 29-47.—Notes that the Greeks expressed some of their infantile sexual wishes in myths, and important among these wishes are those associated with the Oedipus complex. For this reason many female characters appear as segments of the mother, while the whole mother is rarely observed.—G. S. Speer.

6678. Fischer, Susan L. (Duke U) **Psychological and esthetic implications of role-change in selected plays by Calderón.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4197.

6679. Geha, Richard. (Hampstead Child-Therapy Clinic, London, England) **For the love of Medusa: A psychoanalytic glimpse into gynecocide.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 49-77.—Matricide, real or fantasy, is examined as rescue and murder. Both the manifest content and the underlying currents of the fantasy are considered, with examples drawn from mythology, fiction, and clinical material. (59 ref)—G. S. Speer.

6680. Hirsch, Gordon D. (U Minnesota) **Charles Dickens' Nurse's Stories.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 173-179.—Five "Nurse's Stories" are briefly examined for latent content, and are felt to be variations on the primal scene fantasy or experience. Examined the way they shed light on some of the earliest influences on the novelist.—G. S. Speer.

6681. Huss, Roy. (Queens Coll, City U New York) **Grimms' The Table, the Ass, and the Stick: A drama of the phallic stage.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 165-171.—Suggests that Freud's view of the psychosexual stages of development, rather than either Jung's or Adler's seems to provide the most psychological content for this fable.—G. S. Speer.

6682. Lynch, David. (Brandeis U) **Yeats's final questions: A psychological study.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4270.

6683. Magee, Laura J. (Arizona State U) **An experimental study of the effects of selected television viewing and previous art experience on aesthetic judgment.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3699.

6686. Reid, Stephen. (California State U, Northridge) **The Apology of Socrates.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 97-106.—Depicts Socrates as a

universal saint who appeals to the wish in each of us to be free of obligations to others. It is the absence of the need for love which is at the heart of his popularity.—G. S. Speer.

6687. Waldoff, Leon. (U Illinois) **The father-son conflict in Prometheus Unbound: The psychology of a vision.** *Psychoanalytic Review*, 1975(Spr), Vol 62(1), 79-96.—Presents a psychoanalytic interpretation of the conflict between Jupiter and Prometheus in Shelley's *Prometheus Unbound*. The utopian vision of the poem is felt to be psychologically sounder than generally acknowledged. (25 ref)—G. S. Speer.

6688. Zuck, John E. (Lafayette Coll) **Religion and fantasy.** *Religious Education*, 1975(Nov-Dec), Vol 70(6), 586-604.—Literary fantasy as found in the works of C. S. Lewis and J. R. Tolkien are held to awaken religious impulses in people who have been injured by the contemporary technological world. Relationships of fantasy to myth, Jungian concepts, and "protean man" are discussed.—R. D. Kahoe.

DEVELOPMENTAL PSYCHOLOGY

6689. Anderson, Robert H. (U Nebraska, Medical Ctr, Meyer Children's Rehabilitation Inst, Omaha) **Fetal phosphenes and newborn pattern preferences.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 571-572.—Suggests that prior visual experience during intrauterine life with phosphenes (i.e., images induced by mechanical or electrical stimulation of the visual system) may be able to explain newborn human infants' preferences for patterned visual stimuli. It is also suggested that phosphene patterns are manifestations of preformed neuron networks and that they may be induced by pressure conditions existing during the intrauterine period.

6690. Berry, Kenneth K. (U Nebraska, Medical Coll, Psychiatric Inst, Omaha) **Developmental study of recognition of antecedents of infant vocalizations.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 400-402.—The identification of antecedents of infant vocalizations was asked of 321 7-13 yr olds. 4 categories were used: pain, hunger, birth, and pleasure. All Ss performed at better than chance level, with older Ss performing as well as a prior sample of adults. The only significant variable found was age; older Ss performed better than younger. It is concluded that children can reliably identify the antecedents of infant cries.—*Journal abstract.*

6691. Clayton, Vivian & Jellison, Jerald M. (U Southern California, Andrus Gerontology Ctr) **Preferences for the age and sex of advisors: A life span approach.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 861-862.—Determined age and sex characteristics of persons who would be sought for advice on a variety of issues by 5 groups having mean ages ranging from 16.15 to 74.82 yrs. Results indicate a convergence of preferences for advisors in the middle years of life and show that male and female middle-aged and old Ss prefer a greater number of male advisors than the younger age groups.

6692. Colby, Anne. (Columbia U) **Logical operational limitations on the development of moral judgment.**

Dissertation Abstracts International, 1973(Nov), Vol 34(5-B), 2331.

6693. Collis, G. M. & Schaffer, H. R. (U Strathclyde, Glasgow, Scotland) **Synchronization of visual attention in mother-infant pairs.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 315-320.—Recorded the visual behavior of 16 infants and their mothers in a novel situation containing a number of salient stimuli (4 large, brightly colored balls). There was a general tendency for mother and infant to look together toward the same object rather than toward different objects. Further, this visual co-orientation was found to result from mothers following the directions of the infant's spontaneous looking behavior. These observations indicate 1 way in which the mother's behavior becomes synchronized with that of the infant.—*Journal summary*.

6694. Connors, Margaret M. (St John's U) **The relationship between behavioral and electrophysiological measures of central nervous system maturation in infancy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2924-2925.

6695. Farber, Susan L. (Columbia U) **Sex and class differences in the development of intrusive and incorporative behaviors.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2927-2928.

6696. Flink, Ernest W. (U Northern Colorado) **The relationships between, and the effects of training on, Piagetian conservation tasks and self-concept development.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2281.

6697. Giblin, Paul T. (Ohio State U) **The development of recursive thinking and altruism in boys grades one, three and five.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2283-2284.

6698. Glenwick, David S. & Burka, Aden A. (Kent State U) **Cognitive impulsivity and role-taking skills in elementary school children.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 547-552.—Examined the relationship between cognitive impulsivity and perspective-taking ability in 53 4th graders. Significant correlations were found between males' (but not females') perspective-taking skills (assessed by M. J. Chandler's test of egocentrism) and both dimensions of impulsivity (i.e., accuracy and latency) on the Matching Familiar Figures Test. Self-regulatory private speech is postulated as a possible construct mediating the development of role-taking skill, accurate matching performance, and a reflective tempo. Implications of the present results for programs attempting to modify cognitive style and future investigations of the development of other cognitive and personality variables are discussed. (16 ref)—*Journal abstract*.

6699. Kenzie, William R. (U Toronto, Canada) **Children's ability to control experimental variables.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4875-4876.

6700. Knudson, Mary E. (U Oregon) **Sex differences in dominance behavior of young human primates.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2430.

6701. Lahners, C. Edwards. (U Cincinnati) **Perceptions of aging parents in the context of disengagement theory.** *Genetic Psychology Monographs*, 1975(Nov), Vol

92(2), 299-320.—E. Cumming and W. E. Henry's (1961) disengagement theory of aging was investigated by instructing 89 sons and daughters of parents in 4 aged groups to describe their parents in middle and old age. Various personality and social measures were used, including bipolar adjective checklists, depression, optimism, and control scales. Results indicate that at least 2 factors, institutionalization and activity level, exerted an effect on the perceived changes in aged parents. 2 groups—one institutionalized and the other noninstitutionalized but without formal activities, were described as being disengaged (e.g., withdrawn socially, self-absorbed, as well as powerless, pessimistic, and depressed). The other 2 groups who were noninstitutionalized and involved in outer-world recreational and vocational activities were not seen as disengaged in any way in old age. The personality variable internal-external control of reinforcement may serve as an antecedent to withdrawal behaviors in the aged. (39 ref)—*Journal abstract*.

6702. Layton, Barry. (St Louis U) **Perceptual noise and aging.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 875-883.—Presents evidence pertaining to the hypothesis that aging is characterized by a decrement in the ability to suppress irrelevant stimuli (perceptual noise). Although studies in the various sensory modalities generally support a perceptual noise hypothesis of aging, most of the evidence is marred by serious structural weaknesses. It is concluded that the heuristic value of such a unifying hypothesis seems, however, to justify further investigation aimed at correcting these flaws. (28 ref)—*Journal abstract*.

6703. Miyazaki, Masaaki; Mori, Toshiaki & Kakigi, Shoji. **Developmental study of human visual and auditory evoked responses.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 595-598.—Conducted 2 studies with a total of 66 kindergartners, 2nd and 5th graders, and college students to investigate (a) the development of visual evoked response by varying the physical factor of photic stimulus size and the psychological factor of age and (b) the development of auditory evoked response on habituation trials. Results show that visual evoked response decreased in amplitude as a function of age and increased as a function of stimulus size. The auditory evoked response also decreased in amplitude as a function of age, while no prominent habituation of evoked response over the trial blocks was observed.—*Journal abstract*.

6704. Moore, Terence W. (U Aarhus, Inst of Psychology, Denmark) **Exclusive early mothering and its alternatives: The outcome to adolescence.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 255-272.—Investigated later development, up to midadolescence, of 147 males and females who had had either exclusive care by their mothers up to age 5 yrs or daily substitute care ("diffused mothering") for a substantial proportion of their earlier lives. The outcome of the contrasting regimes, exclusive vs diffused mothering, is reported for each sex at various ages from 6 to 17 yrs, and the validity of these findings is critically examined. The mothers' personalities and attitudes are investigated as a possible co-determinant of the observed outcome. Developmental patterns of behavior tendencies, intelligence, and attainment are traced to discover when inter-group differences

first appeared. Conditions of substitute care are examined, and evidence from subsamples cited on the apparent effects of unstable regimes, age of commencement, and group vs individual care. All findings are compared with those of other investigators, and a theoretical interpretation is offered. (65 ref)—*Journal abstract*.

6705. Packard, Sandra P. (Indiana U) **Creative tempo in children's art production.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4883-4884.

6706. Parton, David A. & Siebold, James R. (U Iowa) **Nurturance and imitation: The mediating role of attraction.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 859-860.—Based on the theory that attraction for stimuli increases when the stimuli are associated with reward, it was hypothesized that the impact of nurturance on imitation may result from nurturance increasing S's attraction for the model. Data from a total of 72 1st graders and 24 preschool children in 2 studies show a significant relationship between nurturance and attraction but not between nurturance and imitation, suggesting that nurturance may be an antecedent condition that determines attraction and thereby influences imitation.

6707. Resnick, Michael B. (U Florida) **Language ability and intellectual and behavior functioning in economically disadvantaged children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2908-2909.

6708. Ritti, Alyce R. (Columbia U) **Social functions of children's speech.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2289.

6709. Sandgrund, Alice S. (Columbia U) **The relationship between condition at birth and later development: A longitudinal study.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2951-2952.

6710. Shoobs, Dorothy S. (New York U) **The relationship between exposure to light and neonatal developmental behavior in the infant of low birth weight.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2740.

6711. Solkoff, Norman & Matuszak, Diane. (State U New York, Buffalo) **Tactile stimulation and behavioral development among low-birthweight infants.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 33-37.—Administered the Neonatal Behavioral Assessment Scale to 6 premature infants both prior to and following a nursery program of enriched tactile stimulation. The same instrument was administered twice to a control group of 5 prematures who received no intervening "extra" stimulation. Whereas control Ss showed changes of 2 or more points on only 2 of the instrument's 26 scales, experimental Ss showed positive changes of 2 or more points on 11 scales. There were no differences in weight gain between the 2 groups.—*Journal abstract*.

6712. Witte, Kenneth L. (U Arkansas) **Paired-associate learning in young and elderly adults as related to presentation rate.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 975-985.—Reviews studies comparing the paired-associate learning of adults as related to age and presentation rate. The review indicates that the acquisition of young adults is superior to that of the elderly and that the shorter the anticipation (but not confirmation) interval, the greater the age difference in acquisition. It is concluded that the age-related deficit in performance

reflects both the effects of performance factors and the effects of a learning disability. The reversibility of the learning disability is also discussed. (48 ref)—*Journal abstract*.

6713. Wohlwill, Joachim F. (Pennsylvania State U) **Children's responses to meaningful pictures varying in diversity: Exploration time vs. preference.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 341-351.—Compared the functions relating complexity to 2 different response variables: voluntary looking time vs preference, considered as measures of an information-extraction and an aesthetic mode of response, respectively. Possible age differences in each of these functions were also tested. 192 1st-8th graders were presented with 2 sets of stimuli: one taken from scenes of the physical environment scaled for diversity, the other representing constellations of postage stamps, varying from all identical to all different. In the case of the environment set, results support the hypothesis that the 2 response measures relate differentially to diversity, with looking times increasing monotonically with diversity, whereas preference peaked in the middle of the diversity scale, falling off irregularly to either side; for the stamp set the difference between the 2 functions emerged in attenuated form. Age differences for these functions were relatively slight. Results are discussed in relation to theories of increases with experience in preference for complexity. (28 ref)—*Journal abstract*.

6714. Yamazaki, Aisei. [Tactual pattern cognition and manual contour tracking behavior.] (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 180-187.—Studied the effect of contour tracking on visual identification of geometric figures. In Exp I, 43 Ss 3-7 yrs old, after tracking the contour of a geometric figure hidden behind a screen, were asked to identify the same figure visually from a group of 4 figures. Each of 12 trials was videotaped and analyzed. Ss with 50% tracking showed 8 correct responses out of 12, and the number of errors decreased beginning at 4-5 yrs of age. In Exp II, 26 Ss who had made more than 6 errors out of 12 trials in Exp I were assigned to experimental and control groups. The experimental group was trained in contour tracking. The effect of training was significant ($p < .01$).—S. Choe.

Cognitive & Perceptual Development

6715. Anderson, Daniel R. & Well, Arnold D. (U Massachusetts, Amherst) **Hale and Stevenson's failure to find a developmental trend in the effects of distraction: A floor effect.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 363-365.—Argues that G. A. Hale and E. E. Stevenson's (see PA, Vol 53:4905) failure to find any developmental distraction effects in a short-term memory task is due to a statistical artifact. It is argued that Hale and Stevenson failed to observe a relatively large distraction effect for 5-yr-olds because these Ss were performing at about chance level under distraction conditions and that developmental differences in distractibility appear most clearly in rapid information processing tasks not in relatively unspeeded tasks as used by Hale and Stevenson.

6716. Aronson, Karin. (U Lund, Sweden) **Egologic and standard logic in concept organization: A develop-**

mental study of sorting strategies. *Psychological Research Bulletin, Lund U*, 1975, Mono No 1, 35 p.—Investigated the organization of language concepts in 40 nursery school children and 80 2nd and 3rd graders. Ss were required to apply sorting strategies to 9 picture cards, each differing in color, form, and representation. The strategies named "egological" were most common among younger Ss, their reports being based on partial identity and on diffuse family resemblances. Egological concepts of a pseudological type were almost exclusively overly narrow. Strategies termed "standardlogical" increased in accessibility with age—the developmental sequence being noncomprehension, comprehension and production—and in functional integration as shown in criterion shifts. (24 ref)—*Journal abstract*.

6717. **Barratt, Barnaby B.** (Harvard U) **Training and transfer in combinatorial problem solving: The development of formal reasoning during early adolescence.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 700-704.—Studied training and transfer effects in combinatorial problem solving to explore the emergence of combinatorial competence as an aspect of the development of formal reasoning and to examine the effectiveness of a training procedure based on principles of "programmed discovery." 80 12-14 yr olds participated in a pretest, 2 training or placebo sessions, an immediate posttest, and a delayed posttest 2 mo later. Significant increases in combinatorial skill with age were shown, and the expression of this skill was significantly facilitated if problems involved "concrete" material of low complexity. With the oldest Ss, training produced significant improvements in performance on combinatorial tasks that were markedly different from the training items in both content and modality. Significant improvements over time and with practice were also evident with the older Ss.—*Journal abstract*.

6718. **Becker, Neal W.** (U Southern California) **The relationship between parent-child reciprocity and the child's mental level.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3978.

6719. **Bornstein, Marc H.; Kessen, William & Weiskopf, Sally.** (Princeton U) **Color vision and hue categorization in young human infants.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 115-129.—2 studies examined the organization of color perception in a total of 165 4-mo-old infants. In Study 1, Ss looked at selected spectral stimuli repeatedly until their visual attention waned. The stimuli represented instances of basic adult hue categories (blue, green, yellow, and red). Following habituation, Ss were shown a series of wavelengths which were the same as or different from the stimuli first seen. Analyses of infant attention indicate that infants categorize wavelengths by perceptual similarity (i.e., they see hues in the spectrum much as adults do). In Study 2, infants who looked at the alteration of 2 wavelengths from the same hue category habituated as did Ss who looked at the repetition of a single wavelength from that category, but Ss who looked at 2 wavelengths from different categories habituated at a slower rate. Data suggest a high degree of organization of the color world prior to language acquisition. (1½ p ref)—*Journal abstract*.

6720. **Bowl, Alan D.** (U Victoria, Canada) **Note on conservation differences for Indian and White children.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 361-362.—Results in Canadian Indian and White 7-8 yr olds show no significant difference across groups for the Piagetian conservation of length task; however, conservation of volume and the ability to conserve both length and volume resulted in a higher proportion of successful performances for the White group.

6721. **Brodzinsky, David M.** (Rutgers State U, Douglass Coll) **The role of conceptual tempo and stimulus characteristics in children's humor development.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 843-850.—143 6-, 8-, and 10-yr-old boys were classified into 1 of 4 conceptual tempo groups (reflective, impulsive, fast-accurate, slow-inaccurate) on the basis of the Matching Familiar Figures Test. Ss then were individually presented with cartoon stimuli varying in cognitive complexity and level of affectivity. The measures of humor were spontaneous mirth, funniness ratings, and humor comprehension. Results indicate that both humor comprehension and appreciation varied as a function of conceptual tempo, with reflective Ss generally displaying the highest comprehension scores and impulsive Ss displaying the greatest spontaneous mirth. Humor comprehension and appreciation also varied as a function of cognitive complexity and affectivity of the cartoons. (17 ref)—*Journal abstract*.

6722. **Brown, Ann L. & Murphy, Martin D.** (U Illinois, Children's Research Ctr, Champaign) **Reconstruction of arbitrary versus logical sequences by preschool children.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 307-326.—Studied the ability of preschool children to construct and reconstruct ordered sequences in 4 experiments. In Exp I, 38 Ss copied, with a model present or absent, the order of items pegged on a clothesline. In Exps II-IV, a total of 93 Ss reconstructed ordered series of pictures from memory. In all experiments, the orders were either logical or arbitrary. Results show that reconstruction of an arbitrary series of events is within the problem solving capacity of 4-yr-old children if (a) reconstruction takes place in the presence of the model or follows immediately upon the removal of the model and (b) the original sequence is presented simultaneously. If, however, the lag between viewing and reconstruction was increased and/or the original set was not viewed simultaneously, as a unit, performance declined. The provision of an inherent order to the items within a set, either by introducing a connective narrative, or a depicted logical sequence, was sufficient to maintain that order over time and to provide a unifying cohesion to the items when viewed successively. (38 ref)—*Journal abstract*.

6726. Cicirelli, Victor G. (Purdue U) **Effects of mother and older sibling on the problem-solving behavior of the younger child.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 749-756.—Determined the effects of aid from mother or older sibling on the child's problem-solving behavior in relation to the sex of the 2 siblings and family size. Ss were 120 1st-grade children with a 3rd- or 4th-grade sibling, half from 2-child families and half from larger families; the 4 possible sex combinations were equally represented. Ss worked on practice problems alone or were aided by sibling or mother prior to testing. Ss with older brothers performed as well alone as after aid by sibling or mother, whereas Ss with older sisters showed more advanced problem solving after aid by sibling or mother. Ss with same-sex siblings solved the problems more rapidly; family size had no effect. Results are interpreted in terms of family interaction patterns. (39 ref)—*Journal abstract*.

6727. Coryell, Jane. (Boston U, Sargent Coll of Allied Health Professions) **Children's lateralizations of images of the self, others, and objects.** *American Journal of Occupational Therapy*, 1975(Oct), Vol 29(9), 535-538.—90 kindergartners and 2nd and 4th graders were shown photographs of themselves, another person, and a symmetrical television set. Ss were asked to point to one side of the image as specified on each of the 3 pictures. When the 3 pointing tasks were made nearly equivalent by providing an example for each task, by not requiring verbal labels, and by requiring roughly the same cognitive level of relational judgment, there was a significant difference among school grades and image responses. The response of pointing to the side of the image diagonally across from the side of the example occurred more often in older Ss and most often for the object in all 3 grades.—*Journal abstract*.

6728. Cross, Henry A. & Cantrell, David P. (Colorado State U) **When does the Moss-Harlow effect occur in discrimination reversal contexts?** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 503-504.—Tested for the presence of the Moss-Harlow effect (i.e., when performance in a 2-object discrimination is better after nonrewarded single-object information trials with the negative object than following rewarded information trials with the positive object) in a discrimination reversal context with 14 3- and 5-yr-old children. The effect was not found, although it normally is in preschoolers. Results are consistent with other studies with children using the reversal paradigm but not with studies using monkeys. The divergent findings may reflect species differences or the extent of Ss' experience in reversal situations. Researchers are advised against the use of the technique solely to familiarize Ss with test stimuli in Moss-Harlow effect research.—*Journal abstract*.

6736. Evans, Judith L. (U Massachusetts, School of Education, Amherst) **Learning to classify by color and by class: A study of concept discovery within Colombia, South America.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 3-14.—Administered the Evans-Segall Concept Discovery Task to 331 Colombian 1st, 3rd, and 5th graders from schools of different degrees of urbanization and social class to ascertain the ease with which perceptual and abstract bases for equivalence could be utilized by individuals of differing ages, social classes, and environments. Results indicate that the classification

process follows the developmental stages indicated by research in other cultures. Schoolchildren use perceptual cues (e.g., color) as the basis of equivalency grouping without difficulty, and the ease with which they are able to use the abstract class criteria is dependent upon their grade in school (rather than age) and, to some extent, whether the child lives in an urban or more rural environment. Experiential factors associated with school attendance may also be significant in children's ability to use abstract class groups.—*Journal abstract.*

6739. Forman, George E.; Kuschner, David S. & Dempsey, Jean. (U Massachusetts, Human Development, Amherst) **Visual decentration: From stereometric points to planeometric forms.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 343-352.—19 Black 3-yr-olds chose to put blocks together to produce good continuation across stereometric edges. 4 mo later they began to produce good continuation across planeometric edges. A group of 15 White 4-yr-olds chose to produce symmetrical forms rather than simply to align edges. Symmetrical form was produced across planeometric surfaces but not across stereometric contours. Data suggest that visual decentration is first a shift from looking at single points touched to single points displaced from touch and, at a still later age, a shift to the organization of many points. The failure of the older group to produce a symmetrical form across stereometric contours could have resulted from the cultural press to planeometric information.—*Journal abstract.*

6741. Gaylord, Susan A. & Marsh, Gail R. (Duke U, Medical Ctr) **Age differences in the speed of a spatial cognitive process.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 674-678.—Studied 10 right-handed young males (aged 18-24) and 10 right-handed elderly males (aged 65-72) with normal or corrected to normal vision. Older Ss responded slower than younger Ss on a spatial task which required them to rotate mentally a perspective drawn figure in order to judge whether it was congruent with a 2nd figure. Decision time was partitioned into 2 components: (a) the time taken for the "mental rotation" process and (b) the time taken for the remaining processes such as stimulus encoding and motor output. Both components required more time in the elderly group. The increase with age in the component of decision time representing rotational processes was similar to those increases seen by other investigators examining age-dependent differences in time required for memory-scanning processes using verbal-stimuli.—*Journal abstract.*

6742. Giattino, Jill & Hogan, Jeanne G. (Herbert H. Lehman Coll, CUNY) **Analysis of a father's speech to**

his language-learning child. *Journal of Speech & Hearing Disorders*, 1975(Nov), Vol 40(4), 524-537.—Analysis of a father's speech to his 3-yr-old daughter indicates that declarative (35%) and interrogative (34%) sentences occurred most often. Smaller percentages of exclamatory (9%) and imperative (6%) sentences were found. The father rarely repeated his own utterances and almost never expanded the child's utterances. The child rarely immediately imitated her father's utterances.

speech, and race of fourth, fifth, and sixth grade pupils. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3833.

6752. Handel, Amos. (U Haifa, Israel) **Attitudinal orientations and cognitive functioning among adolescents.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 667-675.—Examined the pattern of relations of attitudinal orientations to cognitive functioning in 950 Israeli 7th graders. Following the 1966 study by J. S. Coleman et al, attitudinal orientations were represented by measures of locus of control, self-concept, and educational aspirations. Multiple regression analyses showed that 18.1-31.6% of the total variance in 4 measures of cognitive functioning was associated with attitudinal orientations, while only 10.6-18.9% of the total variance in these measures was associated with socioeconomic background variables. In the least economically advantaged group, locus of control was the most potent attitude variable; in the complementary 2 groups of higher socioeconomic status, more of the variance in cognitive functioning was associated with self-concept and aspirations than with locus of control. (U Lancaster, England) **Transitive inferences by 4-year-old children?** *Developmental Psychology*, 1975(Nov), Vol 11(6), 875-876.—Data from 2 experiments with 20 4-yr-old children show that when adequate precautions are taken to prevent problems of memory, young children can make transitive inferences.

6757. Heidenheimer, Patricia. (Washington U, St Louis) **The strategy of negation and the learning of antonymic relations.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 757-762.—Hypothesized that the antonym response, common in children's word associations after the age of 6 yrs, may be explained as a derivative phenomenon that appears subsequent to the emergence of a strategy of negation. It is argued that negation leads to the operation of opposition, which precedes the relating of the antonym units. 80 4-6 yr olds were tested with 15 antonym pairs from J. Deese's (1965) list of adjectives that elicit one another as opposites. 40 Ss were presented the "unmarked" member of the

antonym pair as the stimulus word and 40 the "marked" member. There was evidence for the emergence of a negation strategy prior to the statistically significant increase in antonym responding. No difference was found in the production of antonyms under the conditions of stimulus presentation. Data support the hypothesis that the marked member of the antonym pair is not learned by the young child as a derivative of the unmarked member, but is abstracted independently from learned contexts prior to its relating with the other member in the pair. (18 ref)—*Journal abstract*.

6758. Ishii, Kyoko. [The effect of cognitive discrepancy and identification on observational learning.] (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 137-142.—Studied whether affiliation is a necessary condition of observational learning, or whether the change in cognitive structure is sufficient. 63 5-yr-old Ss were assigned to 2 affiliation and 2 nonaffiliation groups and a control group. The affiliation and nonaffiliation situations were experimentally created. The baseline of Ss' play activities with blocks and clay was pre-established in terms of preference and duration of Ss' contact with either type of toy. The experimental groups were subdivided into high- and low-discrepancy groups. For the high-discrepancy groups, the model chose only 1 kind of toy, either blocks or clay, whereas for the low-discrepancy groups the model's attention was equally divided between both types. Results indicate that observational learning takes place regardless of the degree of affiliation when the discrepancy is low; but when the discrepancy is high, affiliation accelerates learning, whereas nonaffiliation does not. (English summary) (20 ref)—S. Choe.

6759. Jusczyk, Peter W.; Kemler, Deborah G. & Babis, Elliott A. (U Pennsylvania) **A developmental comparison of two types of visual mnemonics.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 327-340.—Evaluated the effectiveness of 2 kinds of visual mnemonics (mental imagery instructions and picture presentation) in comparison to an uninstructed control condition. 54 Ss were included from each of 3 age groups: 1st grade, 4th grade, and adult (undergraduates). 3 types of memory tests (free recall, cued recall, and recognition) were used to assess performance. While both mental imagery and picture mnemonics reliably facilitated cued recall and recognition for 1st- and 4th-grade Ss, there were no reliable differences between the adult groups. In contrast, only adults showed significant facilitation under free recall testing. Qualitative analyses of memory gave no indication that the kinds of information stored under the 3 instruction conditions are different. (22 ref)—*Journal abstract*.

6760. Kagan, Jerome. (Harvard U) **Resilience in cognitive development.** *Ecce*, 1978(Sum), Vol 3(2), 231-241.—Points out that for most of this century developmental psychology has favored that side of the irreversibility-reversibility argument that posits irreversible effects from early experience. The extreme form of that position is as unlikely as the opposite extreme, which assumes complete capacity for resilience of all dispositions at any age. It is urged that the receptive reader should move just a little closer toward the latter view.

The first messages written on the tabula rasa may not be the most difficult to erase.—*Journal summary.*

6761. Karst, Thomas O. (Medical Coll of Ohio, Toledo) **Effect of speed instructions on the microgenetic development of children's word associations.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 443-448.—45 1st-, 3rd-, and 5th-grade males associated to word lists under standard and speeded conditions. Younger Ss and Ss in the speeded condition produced relatively more developmentally immature and fewer developmentally mature responses. Interactions between the 2 factors of age and experimental condition were not demonstrated.—*Journal Abstract.*

6762. Keating, Daniel P. & Caramazza, Alfonso. (U Minnesota, Inst of Child Development) **Effects of age and ability on syllogistic reasoning in early adolescence.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 837-842.—Assessed the influence of age and ability on linear syllogistic reasoning in early adolescence by presenting 109 11- and 13-yr-old Ss of 2 levels of ability (bright and average assessed by the Iowa Test of Basic Skills) with 64 3-term series problems (e.g., "If John is better than Bill, and Bill is better than Tom, then who is the best?"). The effect of ability was quite dramatic even with verbal grade equivalent and Raven's Standard Progressive Matrices scores as covariates, whereas the effect of age was marginally significant and confounded with both. Comparison to H. H. Clark's (1969) adult sample showed that the pattern of errors was essentially similar for adolescents and adults, but more similar for the average than the bright Ss. Implications for a theory of intellectual precocity are discussed.—*Journal abstract.*

6763. Keller, Barbara B. (U Virginia) **Developmental and sex differences in performance of the brief Conceptual Style Test.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 419-422. Administered the brief (19-item) Conceptual Style Test to 85 1st, 3rd, and 6th graders. Analytic and relational responses were tabulated. An analytic response is one in which visual stimuli are grouped on the basis of similarity of stimulus elements. A relational response is one in which the grouping of the stimuli is based on a functional relationship between the stimuli. The number of analytic responses produced increased with age. This is consistent with previous findings in which the 30-item Conceptual Style Test was used. Although no sex differences were found in conceptual style, the developmental trend for males appeared to differ from that of females. One advantage of the 30-item test is that it appears to elicit a higher percentage of scorable analytic and relational responses in 1st graders than does the brief form.—*Journal Abstract.*

6764. Kingsley, Phillip. (U Zambia, Lusaka) **The development by Zambian children of strategies for doing intellectual work.** *H.D.R.U. Reports*, 1974, No 24, 20 p. Tested approximately 110 7-10 yr old Zambian schoolchildren and 5 10 yr old nonschoolchildren on several tasks designed to reveal their spontaneous use or failure to use various mental strategies and mediating activities to aid their performance. On a memory task it was found that schoolchildren used rehearsal more and had better memory scores than nonschoolchildren; no significant age-related increase in use of rehearsal was

found for nonschoolchildren through the age range (which included the usual school entry age). On several quantitative problems, schoolchildren showed no more tendency than nonschoolchildren to use rudimentary quantitative strategies, including simply counting, although significantly more of them possessed some basic quantitative skills like counting. There was a significant age-related increase among nonschoolchildren in use of quantitative strategies. School is thus implicated as a factor in activating mediating strategies in some kinds of tasks but not in others. Results are discussed in terms of cultural factors in intelligence and cognitive development, and implications for education and mental testing are noted. (18 ref)—*Journal abstract.*

6765. Kousoulas, Eva P. (New York U) **The relation between the development of Piagetian concepts of God and rain and age, religion and sex among suburban children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2902-2903.

6766. Lasky, Robert E.; Syrdal-Lasky, Ann & Klein, Robert E. (Inst Nutrición, Ctr América, Panamá) **VOT discrimination by four to six and a half month old infants from Spanish environments.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 215-225.—Tested 30 4-6.5 mo old infants from monolingual Spanish speaking homes for discrimination of bilabial stop consonants differing in voice onset time (VOT). Discrimination was determined by the habituation and dishabituation of the orienting reflex as indexed by cardiac deceleration. Ss were placed in 1 of 3 groups which were used to determine whether bilabial stops with VOT values of -60 and -20 msec, -20 and +20 msec or +20 and +60 msec could be discriminated. Ss were presented 8 trial blocks of 10 repetitions of a CV syllable which were followed by 2 trial blocks of 10 repetitions of a different CV syllable. The only difference between the CV syllables presented during the trial blocks was the VOT value. Ss in the -20 and +20 msec group could not discriminate these stimuli while the Ss in the -60 and -20 msec group and the +20 and +60 msec group did. Results correspond to those reported for infants from English speaking families but not to those reported for Spanish-speaking adults. Results suggest that experience has little effect in determining bilabial stop phonetic categories in 4-6.5 mo old infants. (22 ref)—*Journal abstract.*

6767. Lester, Barry M.; Klein, Robert E. & Martinez, Sonia J. (U Florida) **The use of habituation in the study of the effects of infantile malnutrition.** *Developmental Psychobiology*, 1975(Nov), Vol 8(6), 541-546.—Studied habituation of the orienting response (OR) to assess possible attentional deficits associated with infantile malnutrition. 40 trials of a pure tone stimulus were given to 8 marginally nourished and 8 malnourished 13½-mo-old male infants. Results show that the initial OR to stimulus onset, as measured by the magnitude of cardiac deceleration, was significantly larger in marginally nourished than in malnourished infants. Marginally nourished infants showed significant increases in OR magnitude to changes in tonal frequency whereas the malnourished infants did not. Results provide evidence of an attentional deficit associated with infantile malnu-

trition that is likely to interfere with subsequent learning. (21 ref)—*Journal abstract*.

6769. Liben, Lynn S. (U Rochester, Ctr for Development, Learning, and Instruction) **Long-term memory for pictures related to seriation, horizontality, and verticality concepts.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 795-806.—To evaluate Piaget and Inhelder's (1973) hypothesis that memories are related to operative levels, 82 kindergarten and 101 4th-grade children were shown pictures involving seriation, horizontality, and verticality and were asked to reproduce them 1 wk and 5 mo later. In addition, tasks to assess seriation, horizontality, and verticality concepts were given to half of the children in the fall and to all children in the spring. Although there were some significant correlations between memories and operative levels, the relations were quantitatively weak and were undermined by several serious disconfirmations. Furthermore, although long-term memory improvements did occur, these were not systematically linked to individuals' operative development, nor did they occur significantly more often than memory deteriorations.—*Journal abstract*.

6773. Marmor, Gloria S. (Princeton U) **Development of kinetic images: When does the child first represent movement in mental images?** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 548-559.—An experiment investigated at what age children could represent movement in imagery. 20 5-yr-olds and 20 8-yr-olds were asked whether 2 stimuli were the same or different in shape. The 2 stimuli were either presented in the same orientation or 1 stimulus differed from the other by clockwise rotation of 30° (0.52 rad), 60° (1.05 rad), 120° (2.09 rad), or 150° (2.62 rad). Ss were instructed to visually imagine the counterclockwise rotation of one shape into the position of the other to help make the judgment. For both 5- and 8-yr-olds, reaction times increased as a linear function of angular discrepancy between stimuli. Imagery of counterclockwise rotation in their imagery. Findings conflict with Piaget and B. Inhelder's (1971) thesis that imagery representing movement first emerges when children are 7-8 yrs of age. —*Journal abstract*

children. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2972.

6775. McKinney, James D. & Banerjee, Cora. (U North Carolina, Frank Porter Graham Child Development Ctr, Chapel Hill) **Concept attainment by reflective and impulsive children as a function of memory support.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 417-418.—20 reflective and 20 impulsive White 4th graders (chosen from scores on the Matching Familiar Figures Test) were given concept attainment problems under 1 of 2 memory support conditions. Results indicate that memory aids during problem solving were more beneficial to impulsive than to reflective Ss.

6776. Meyer, Jerome S. & Elkind, David. (State University Coll, New York, Geneseo) **From figurative to operative expectancy in the perceptual judgments of children.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 814-823.—Conducted 2 studies on "figurative expectancy," the tendency to make perceptual judgments on the basis of temporal patterns. In Exp I, 60 4-9 yr old children were shown 4 series of animal pictures in which the relative strengths of the temporal patterns were varied. Results show (a) a significant decrease with age in figurative expectancy and (b) significantly more figurative expectancy in the case of a strong temporal sequence linked with a weak critical figure than in the case of a weak temporal sequence linked with a strong critical figure. In Exp II, 66 4-yr-old children were shown a single series of pictures presented at different rates and with critical figures that were ambiguous or nonambiguous. Results show that there was more figurative expectancy the more rapid the rate of presentation. There was also an ambiguity effect showing more figurative expectancy judgments the greater the ambiguity of the critical figure. Results support Piaget's theory of perceptual development.—*Journal abstract*.

6778. Moerk, Ernest L. (California State U, Fresno) **Verbal interactions between children and their mothers during the preschool years.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 788-794.—Observed 20 2-5 yr olds and their mothers while they interacted verbally in an unstructured situation. Quantitative as well as categorical aspects of the interactions were analyzed. Both types of dependent variables were found to change with the age and the language level of the children. Close mutual adaptation of both partners for the quantitative as well as the qualitative dimension were demonstrated. The correlation patterns between the types of utterances allow the abstraction of a "primitive" and an advanced cluster of language-teaching learning behaviors. The stability and generalizability of these trends are discussed.—*Journal abstract*

6779. Mori, Toshiaki & Miyazaki, Masaki. [Organization of memory in early childhood.] *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 170-174.—Studied the occurrence of clustering while memorizing 16 words in 4 categories. Ss were 135 children in 3 age groups (3-5 yrs). 3 modes of presentation were used: random, random with pretrain-

ing in categorization, and block presentation. Results show that memory organization increases with age, and that clustering depends not only on age but also on experimental conditions such as pretraining and modes of presentation.—S. Choe.

6780. Mounoud, Pierre & Bower, T. G. (U Geneva, Switzerland) **Conservation of weight in infants.** *International Journal of Cognitive Psychology*, 1974-1975, Vol 3(1), 29-40. —Conservation of weight is defined as the ability to affirm that the weight of an object remains invariant during the transformations of the form of the object. It is known to be achieved at a conceptual level at about 9 yrs of age. The behavior of 6-21 mo old infants was studied using 30 infants in an arm tension experiment and 54 in a force grip experiment. Results indicate that infants develop a sensorimotor form of conservation between 6 and 18 mo of age. (French summary) —*Journal abstract*.

6783. Nagae, Seiji. (Hiroshima U, Japan) **[Effects of relevancy of verbal labels on shape recognition in children.]** (Japn) *Japanese Journal of Psychology*, 1975(Jun), Vol 46(2), 59-67. —Conducted 2 experiments with a total of 96 kindergartners and 2nd graders to investigate the roles of the verbal label and developmental level on the recognition of a representative feature (RF) and a nonrepresentative feature of shapes. In Exp I Ss were given a recognition test following stimulus predifferentiation training. Results show that (a) Ss' recognition of the RF was better under the relevant verbal labeling condition than under the irrelevant, (b) 2nd graders were more accurate than kindergartners in the recognition of RF, and (c) the relevant verbal labels were effective with kindergartners but not with 2nd graders. In Exp II kindergartners received preliminary training for spontaneous labeling of the shapes. They were then given a recognition test following either relevant verbal labeling or observation training. When spontaneous verbal labeling training was given, Ss showed superior recognition performance to that of Ss receiving conventional observation training. (20 ref)

—*English abstract*.

6784. Nelson, Katherine. (Yale U) **The nominal shift in semantic-syntactic development.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 461-479. Analyzed transcripts of 24 spontaneous speech samples from 18 2-yr-olds classified by early Referential (R) or Expressive (E) Speech Type and mean length of utterance (MLU) level (above or below 2.5) in terms of noun and pronoun use in sentences. At higher MLU levels both more sentences and more pronouns were produced than at lower MLU levels. E Ss used a balance of nouns and pronouns at both levels. There was a decrease in the use of nouns for R Ss and an increase for E Ss. Overall, 47% of all nominals as well as 72% of all nominals used in sentences, were pronouns. There were no major changes

with development in either the abstract semantic relations expressed or in the discourse function served. The data are interpreted in terms of 2 contrasting courses of development, one beginning with a lexical emphasis and the other with a syntactic emphasis, which tend to converge between 2 and 3 yrs of age. (17 ref)—*Journal abstract*.

6785. Nelson, Keith E. & Kosslyn, Stephen M. (New School for Social Research, Graduate Faculty Ctr) **Semantic retrieval in children and adults.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 807-813. Studied the processes by which 15 undergraduates and 48 8-, 11-, and 13-yr-olds retrieved semantic information from long-term memory. Ss were timed as they judged whether sentences pairing animal names and properties (e.g., "A lion has a mane") were true. Relationships between animal names and properties were varied in 2 ways: properties were at (a) 1 of 3 levels of "saliency" (rated association strength) and (b) 1 of 3 levels of specificity. Closely comparable results were obtained at each age level. Sentences with highly salient properties were verified more quickly than were those with less salient properties, and statements with low-specificity properties were verified more quickly than sentences with more specific properties. (20 ref)—*Journal abstract*.

6786. Niizato, Shiori & Yoshikawa, Junko. **[Modeling effects in learning of lending-borrowing behavior in young children.]** (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 154-164. —Hypothesized (a) that modeling as the discriminative stimulus facilitates acquisition of new behaviors, (b) that modeling increases the frequency of the occurrence of previously learned behaviors, (c) that vicarious reinforcement accelerates the modeling behavior, and (d) that generalization takes place in different situations. 24 matched pairs of 5-6 yr old Japanese children, assigned to 4 groups (3 experimental and 1 control), were exposed to films depicting 4 experimental conditions in which models colored the outlined pictures of fruits. Ss then colored pictures of flowers, and arranged 9 different color boards. The lending-borrowing behavior was categorized on 3 levels. The hypotheses were generally supported except that the affect of vicarious reinforcement showed only a tendency in the desired direction. (English summary)—S. Choe.

6787. Odom, Richard D.; Cunningham, Joseph G. & Astor, Eileen C. (Vanderbilt U) **Adults thinking the way we think children think, but children don't always think that way: A study of perceptual salience and problem solving.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 545-548. —In 2 studies, a total of 20 undergraduates and 30 3rd graders were given a series of tasks requiring the use of cognitive operations associated with traditional conservation problems. While the adults showed an inability to solve the critical problem in the series, the children solved it easily except in the case when the irrelevant information was made highly salient. Results support an account emphasizing perceptual change rather than traditional cognitive change accounts of the development of problem solving. *Journal abstract*.

6789. Pinard, Adrien. (U Montreal, Canada) [The compatibility of the notions of stage and décalage in Piaget's theory.] (Fren) *Canadian Psychological Review*, 1975(Oct), Vol 16(4), 255-260.—Argues that the notion of horizontal décalage used by Piaget to explain most of the asynchronisms observed in the child's mental development is not inconsistent with the notion of stage, to the extent that these décalages apply to different concepts. When the décalages apply to different contents within a same concept, the nature of an intermediate stage of mental development must then be defined. Instead of conceiving an intermediate stage as a mixture of preoperational and operational behaviors, it is suggested that due to a lack of self-criticism and to a merely extensive type of mental generalization, the intermediate child's reasoning never exceeds the preoperational level even though it may often appear to be operational. (French abstract)—*English abstract*.
6790. Prather, Alfred G. An introduction to a new construct of the thinking process commonly called the mind. *Psychology*, 1975(Aug), Vol 12(3), 20-23.—Discusses the maturation process of the mind. Mental maturity occurs when the positive subconscious merges with the positive conscious, and is promoted by a learning of values rather than subject matter. Schizophrenia results from a person not having an abundance of correct, positive information recorded in his thinking process as he attempts to mature. Teaching positive attitudes and correct understanding is encouraged.

6792. Robinson, W. P. (U Southampton, England) The dialogue of deficit and difference in language proficiency. *International Journal of Psycholinguistics*, 1975, No 3, 27-40.—Subcultural differences in the use of the units and structures of languages have been variously interpreted as stemming from genetic and/or environmental differences and/or deficiencies or dismissed as methodological artefacts. It is noted that some of the polarizations in the associated controversies have arisen because research workers have themselves failed to be explicit and precise in their own use of language. The present paper posits that a reconciliation of oppositions would, on present evidence, be most simply achieved if we were to refer to the lower working class performance as manifesting a relative deficiency in the referential function of language, attributable to differential learning opportunities. The factors most likely to be responsible for this will affect not only mastery of language but also the acquisition of 1st and 2nd order knowledge and the motivation to acquire more. (French & Russian summaries) (23 ref)—*Journal summary*.

6798. Ruff, Holly A. & Turkewitz, Gerald. (Briarcliff Coll) Developmental changes in the effectiveness of stimulus intensity on infant visual attention. *Developmental Psychology*, 1975(Nov), Vol 11(6), 705-710.—Tested the hypothesis that the effectiveness of stimulus intensity declines with age. Stimulus intensity was manipulated by varying the size of pairs of bull's-eye and striped patterns. 50 infants from 6 wks to 24 wks of age were shown 18 pairs of stimuli in which there were 5 different sizes of each pattern. Infants 10 wks and younger responded on the basis of size, looking more at the larger sizes. The older Ss looked more at the bull's-eye regardless of its size or the size of the striped pattern paired with it. Possible mechanisms underlying this shift are discussed, and the concept of stimulus intensity is considered. (15 ref)—*Journal abstract*.
6799. Salzinger, Suzanne & Patenaude, Jeanne W. (New York State Psychiatric Inst, Biometrics Research Unit, New York) Children's judgment of length and shift in the presence of an anchor stimulus as a function of stimulus presentation and verbal response. *Genetic Psychology Monographs*, 1975(Nov), Vol 92(2), 157-174.—83 preschool children's judgments of length of lines under unanchored and anchored conditions were examined as a function of type of stimulus presentation and class of verbal responses used. It was found that acquisition of a scale of length was facilitated by a multiple in comparison to a single stimulus array and, to a lesser extent, by ordinal in comparison to nominal verbal responses. Resistance to shift when Ss were subjected to a long anchor stimulus was enhanced by training with the ordinal verbal response and the single stimulus presentation. Results are interpreted in terms of the context in making the children attend to either the relative or absolute aspects of the judgment task. (23 ref)—*Journal abstract*.
6800. Sanders, Jo A.; Sterna, Harvey L.; Smith, Michael & Sanders, Raymond E. (U Akron) Modification of concept identification performance in older adults. *Developmental Psychology*, 1975(Nov), Vol 11(6), 824-829.—A sequential training procedure combining operant and cumulative learning hierarchy principles was found effective in reducing the decrement in concept identification performance typically observed in older adults. 20 male and 20 female Ss were randomly assigned given a pretest and posttest, each involving a 3-category

unidimensional concept identification problem. The training and reinforced-training Ss were given 3 training sessions between pretest and posttest. Training involved a programmed learning sequence designed to facilitate the development of an effective solution strategy. Control Ss were given only the pretest and posttest, while practice Ss were given 3 additional practice sessions. Substantial improvement was found in both the training and reinforced training groups, but only slight improvement obtained in the practice and control groups. Results are consistent with recent conceptions of cognitive and intellectual development in the older adults in which performance deficits are largely attributed to experiential factors. (15 ref)—*Journal abstract*.

6801. Scholl, Dennis M. & Ryan, Ellen B. (U Notre Dame) **Child judgments of sentences varying in grammatical complexity.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 274-285. A nondifferentially reinforced forced-choice procedure demonstrated that responses of 24 5- and 24 7-yr-old children varied as a function of the grammatical complexity of stimulus sentences. Ss judged sentence stimuli of 2 types (negatives and *wh*-word questions), each having 3 levels of grammatical complexity (2 primitive and 1 well formed). After each stimulus presentation, Ss pointed to the adult or the child in a photograph, depending on who was judged to have produced that utterance. Performance of the 2 age groups did not differ for the question stimuli, for which Ss pointed to the adult more frequently as the grammatical complexity of *wh*-word questions increased. In response to the negative sentences, the older group attributed more well formed stimuli to the adult than primitive ones. While the younger group pointed to the adult more frequently for well formed negatives than for the middle level negatives, they made more adult responses than expected to the least complex negatives. (16 ref)—*Journal abstract*.

6802. Seitz, Sue & Stewart, Catherine. (Waisman Ctr on Mental Retardation & Human Development, Madison, WI) **Imitation and expansions: Some developmental aspects of mother-child communications.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 763-768. Videotaped 2 groups each of 9 children (age ranges = 18-26 mo and 48-61 mo, respectively) in a free-play setting with their mothers. Interactions were analyzed for relationships between mothers' and children's speech with regard to complexity and usage of selected speech types. Mothers' expansions of child utterances were positively related to the younger, but not the older, children's imitations of mothers' speech. Mothers' sentence complexity was positively related to younger, but not older, children's frequency of responding to questions. Child speech that is responsive to mothers' speech seems to provide a gauge by which mothers tailor their language complexity, allowing the child to exert an influence on his language environment. —*Journal abstract*.

6803. Slater, Alan M. & Findlay, John M. (U Exeter, England) **Binocular fixation in the newborn baby.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 248-273. Conducted 3 experiments on the newborn baby's ability to fixate binocularly, using the corneal reflection technique. 2 criteria for consistent

binocular fixation were assessed: (a) the 2 eyes will be optically more divergent when fixating more distant targets; and (b) each eye will be scored as being on-target when corrections for the expected deviations of the pupil center from the fixated stimulus are introduced. In Exp I, vertical arrays of lights were separately shown at distances of 10 and 20 in from the Ss' eyes (with the retinal image size and luminance of the stimuli held constant). The 12 newborn Ss reliably converged to both stimuli, the optical divergence of the pupil centers of the eyes increasing with presentation of the more distant stimulus. In Exp II, Ss reliably converged to a similar stimulus at 10 in, but not to one at 5 in; many Ss fixated this stimulus with monocular vision. In Exp III, different stimuli were presented at constant distance (10 ± 1 in) from the eyes. The majority of the 15 Ss binocularly fixated all 3 stimuli. It is concluded that the newborn baby possesses the ability to fixate binocularly an appropriately presented stimulus and has the basic requirements for binocular vision. (16 ref)—*Journal abstract*.

6804. Smith, Linda B.; Kemler, Deborah G. & Aronfreed, Justin. (U Pennsylvania) **Developmental trends in voluntary selective attention: Differential effects of source distinctness.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 352-362. Tested the hypothesis that an inability to separate incoming information into discrete messages is a source of young children's relatively poor performance in selective attention tasks. 27 kindergartners and 2nd and 5th graders were assigned to 3 conditions of varying distinctness between central and distractor information given in a continuous matching task in which S is required to track the position of a stick figure. The effects of the 3 different distractor types were assessed on individually determined and matched baselines of performance on the central task in the absence of distraction. Whereas 2nd- and 5th-grade Ss were most accurate when the distinctness of the messages was high, the opposite pattern occurred in kindergartners. Kindergartners performed as if the task required divided attention. The older Ss used a more appropriate focusing strategy, but 2nd graders had particular difficulty when the messages were not distinct. Equally notable was the 2nd graders' success in focusing when the source discreteness was arranged. (21 ref)—*Journal abstract*.

6808. Stewart, Jean & Sinclair, Hermine. (U de Genève, École de Psychologie et des Sciences de

l'Education, Switzerland) **Comprehension of questions by children between 5 and 9.** *International Journal of Psycholinguistics*, 1975, No 3, 17-26.—Children distinguish questions from other types of utterances addressed to them from a very young age, probably from the onset of speech (S. Ervin-Tripp, 1970). The present study examined the comprehension of *Wh*-questions in English in 5-9 yr olds. 39 Ss were of English mother tongue, and 7 spoke a different language at home but always used English fluently at school. Recent research both on *Wh*-questions and on auxiliary verbs indicates that both structural subsystems pose problems for children below the age of 5 yrs. The present study shows that these difficulties were not yet overcome by the age of 9. A tentative interpretation is given, but comparative research in different languages is necessary before results of the experiment can be generalized. (French & Russian summaries)—*Journal summary*.

6809. Swoope, Karen S. (Arizona State U) **Acquisition of the b, d, p, q discrimination among kindergarten children as related to the reversal shift phenomenon.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4010.

6810. von Wright, Johan M.; Gebhard, P. & Karttunen, M. (U Turku, Finland) **A developmental study of the recall of spatial location.** *Journal of Experimental Child Psychology*, 1975(Aug), Vol 20(1), 181-190.—Studied recall of the spatial location of objects in 4-object arrays with 5, 8, 12-13, and 18-23 yr-old Ss, using pictorial materials. A total of 496 Ss were employed in 2 experiments. Recall of location was good in the youngest Ss (about 50% correct of 40 objects) and improved with increasing age in much the same way as recall of item information. Presenting related objects in a common context induced a uniform "recall strategy" and led to much better recall at all age levels than presenting objects as unrelated items but did not differentially improve location recall. A description of the recall test prior to learning improved both item and location recall in the oldest age groups when related but not when unrelated objects were used. Instructions to attend to the location of objects did not affect location recall; intentional and incidental learning of location yielded similar results at all age levels.—*Journal abstract*.

6811. Walden, Toini A. (U Southern California) **The classification skills of five, six, and seven year old bilingual, biliterate, and monolingual children.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3856-3857.

6812. Walesa, Czeslaw. (Catholic U Lublin, Psychometric Lab, Poland) **Children's approaches to chance- and skill-dependent risk.** *Polish Psychological Bulletin*, 1975, Vol 6(3), 131-138.—Analyzed the dependence of risk taking on S-related factors: age, sex, level of skill; and on object-related factors: source and form of probability, and amount of payoff, in 8-16 yr olds. Experiments with urns and roulette-like instruments reveal a predominance of risky decisions and gain-oriented motives in Ss of 8-10 yrs and of conservative decisions and loss-oriented motives in Ss of 14-16 yrs. 8-10 yr old males were more risk-minded than females of the same age. The approach to risk was not significantly differentiated by proportion of hits in 8-10 yr olds,

whereas the opposite was the case at the age of 14-16. A significantly higher risk was taken when the source of uncertainty was skill rather than chance. Greater risks were taken when probability was small and compound. Increase in payoff promoted risk-mindedness in 8-10 yr olds and conservatism in 14-16 yr olds. (24 ref)—*Journal abstract*.

6813. Wellman, Henry M.; Ritter, Kenneth & Flavell, John H. (Arizona State U) **Deliberate memory behavior in the delayed reactions of very young children.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 780-787.—34 3-yr-olds (Exp I), 23 2-yr-olds (Exp II), and 30 3-4 yr olds (Exp III) were presented a memory task that required recalling a particular location at the end of a delay. At the beginning of the delay, half of the children were instructed to remember the location and half were instructed simply to wait. 3-yr-olds who were instructed to remember were observed to engage in behaviors during the delay which seemed to increase their recall, in contrast to 3-yr-olds who were instructed to wait. Additional observations in Exp III also showed that a positive relation existed between such delay period memory behavior and later recall. This differentiated, deliberate memory behavior was not observed for 2-yr-olds.—*Journal abstract*.

6815. Williams, Tannis M. & Aiken, Leona S. (U British Columbia, Vancouver, Canada) **Auditory pattern classification: Continuity of prototype use with development.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 715-723.—Studied the development of the ability to classify auditory patterns in 26 males and 26 females at each of 5 age levels: 2nd, 6th, 10th, and 12th grades, and adult (undergraduates). Ss were required to state whether each 5-element pure tone sequence came from the training class. Both accuracy and feature use in classification were remarkably consistent across age, and regression analyses indicated that the age changes were due to differences in perceptual achievement rather than process. Performance at all age levels was highly predictable from the physical pattern characteristics, in particular, the similarity between patterns and their prototypes. Results are similar to those obtained in an analogous developmental study by L. S. Aiken and T. M. Williams (1973) involving visual patterns, and suggest that the processes of pattern perception are applicable across stimuli, modalities, and the age range studied.—*Journal abstract*.

6816. Wozny, Cecilia D. (Rutgers State U) **The effects of culture and education on the acquisition of formal operational thinking.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4015.

6817. Yamaguchi, Katsumi. [Effect of personificative cues on the development of children's causal cognition.] (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 188-192.—Studied the effect of personificative cues (i.e., words and pictures, words only, and absence of such cues), in 3 experiments

using 785 Japanese 2nd to 6th graders. Given words and pictures combined, personificative explanations increased, but physical explanations decreased for Ss above the 4th grade, and phenomenistic explanations decreased for Ss in the 3rd grade and below. Given words only, personificative explanations increased and physical explanations decreased slightly for 4th graders only. In the absence of personificative cues, phenomenistic explanations increased. Results indicate that the child's conception of physical causality is influenced by experiences.—S. Choe.

Psychosocial & Personality Development

6818. Bearison, David J. & Isaacs, Leora. (Graduate School & University Ctr, City U New York) **Production deficiency in children's moral judgments.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 732-737.—Attempted to determine why children at the transitional stage of operational development base their moral judgments on the objective consequences of another's act rather than on the other's intentions. 45 middle-class children (mean age, 6 yrs 9 mo) were tested on 4 pairs of moral judgment stories. 2 story pairs were of the standard Piaget type, while the other 2 varied relative to 3 treatment conditions. In the 1st condition the intentions of the story characters were made explicit, in the 2nd, Ss were questioned about the characters' intentions, and in the 3rd (a control condition) intentions had to be spontaneously inferred from the narrative descriptions. Results confirm the existence of a production deficiency as opposed to a mediational deficiency. Although Ss did not spontaneously infer another's intentions in constructing moral judgments, they were capable of making such an inference when prompted to do so, and their knowledge of another's intentions mediated their judgment of moral responsibility. (23 ref)—*Journal abstract*.

6819. Bigelow, Brian J. & la Gaipa, John J. (Lakehead Board of Education, Thunder Bay, Canada) **Children's written descriptions of friendship: A multidimensional analysis.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 857-858.—Examined different conceptual variables that influence friendship as a function of developmental age. A content analysis of essays from 480 1st 8th graders indicated that age-related friendship expectation (FE) changes reflect a transition from egocentric to sociocentric and sociocentric to empathic FEs. Sex differences appeared to be relatively minor.

6825. Eberts, E. H. & Lepper, Mark R. (Stanford U) **Individual consistency in the proxemic behavior of preschool children.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 841-849.—2 experiments examined the development of personal space in preschool children. Exp I investigated the effects of eye contact and success-failure on the interaction distance 24 preschool children established between themselves and an adult E. Eye contact significantly increased interaction distance; task outcome did not affect distance; and female adults were more closely approached than males. Across conditions, Ss also displayed considerable individual consistency in their spatial behavior. In Exp II, the same Ss' spatial behavior and interaction patterns were assessed 1 mo later, through time-sampled field observations during "free play" periods in the Ss' preschool classrooms. Findings indicate substantial stability and cross-situational consistency in Ss' spatial behavior across experiments for both adult and child interaction targets. It is suggested that personal space represents a reasonably stable individual characteristic, acquired quite early in development. (16 ref)—*Journal abstract*.

6826. Fein, Greta G. (Yale U) **Children's sensitivity to social contexts at 18 months of age.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 853-854.—Investigated whether, in an unfamiliar, semipublic place, children as young as 18 mo of age would be sensitive to variations in the nature of social encounters between their mothers and an unfamiliar adult (E). Measures of the child's distance from the mother at the beginning of each 10-sec interval of the encounter, the percentage of 10-sec intervals spent by the child on the stranger's side of the room, frequency of child vocalizations to the mother, times child made physical contact with the mother, and frequency of smiling show that 18-mo-old children are already sensitive to background contexts.

6833. Johnson, David W. (U Minnesota) **Affective perspective taking and cooperative predisposition.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 869-870.—Interviewed White working-class, middle-class, and upper-class 5th graders to test the hypothesis that cooperativeness and affective perspective taking are positively correlated. Results indicate that a relationship does exist between predisposition to cooperate and the ability to take the affective perspective of others, but do not suggest the direction of the relationship.

6834. Katz, Phyllis A.; Katz, Irwin & Cohen, Shirley. (Graduate School & University Ctr, City U New York) **White children's attitudes toward Blacks and the physically handicapped: A developmental study.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 20-24.—Children's behavior toward adults who differed from them along 2 dimensions was examined from a developmental perspective. A total of 80 White kindergartners and 4th graders were tested individually by either a Black or a White female adult who either was or was not seated in a wheelchair. Three kinds of behavior toward the adult were measured: physical distancing, imitation, and helping. On the basis of previous findings, it was predicted that children at both age levels would show more physical avoidance, less imitation, and less helping in the presence of other-race and handicap cues, as compared with own-race and nonhandicap cues. On all 3 types of behavior, the White E was favored over the Black E in both the wheelchair and nonwheelchair conditions. In addition, there were interaction effects involving race, handicap, age, and sex that suggest the operation of complex developmental processes in the formation of attitudes toward different types of stigmatized individuals. (15 ref)—*Journal abstract*.

6836. Lattin, MaryAnn S. & Ackerman, Robert E. (Cornell U) **Sex typing: A factor in adolescent attitude stability?** *Child Study Journal*, 1975, Vol 5(3), 143-150.—Examined behavioral continuity between early and late adolescents, specifically the role, if any, of sex-typing in adolescent attitude stability. Ss were 70 7th graders and 70 college freshmen. Using the questionnaire method, selected values and attitudes concerning the desirability of certain traits in their future mate were compared. Comparison of attitudes by sex and age found significant inconsistencies on the part of females. It appears that continuity with sex-role standards plays an important role in attitude stability. It is concluded that society should consider how adequately sex-typed child-rearing practices are preparing the adolescent female for the role expectations in the college environment.—*Journal abstract*.

6837. Lerner, Richard M.; Venning, John & Knapp, John R. (Eastern Michigan U) **Age and sex effects on personal space schemata toward body build in late childhood.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 855-856.—A comparison of data from 38 4th-, 36 5th-, and 33 6th-grade children with data from a previous

study with kindergartners and 1st, 2nd, and 3rd graders shows that the relative relations between the sex and body type of a target and the interpersonal distance used toward the target remains stable from kindergarten through 6th grade, although there are discrepancies in the absolute distances used toward the targets.

6839. Lytton, Hugh & Zwirner, Walter. (U Calgary, Canada) **Compliance and its controlling stimuli observed in a natural setting.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 769-779.—Investigated the parental antecedents of overt child compliance by home observations of 136 2½-yr-old male twins and singletons. Sequential analysis showed that the probability of compliance was highest after parental suggestion and decreased progressively with parental command and reasoning. Among parent actions preceding the verbal control, physical control, negative action, positive action, and neutral action, in this order, facilitated both compliance and noncompliance. Physical control and negative action facilitated noncompliance more than compliance; the reverse held for positive and neutral actions. Findings stress the impact of "power assertion" but apply only to the immediate situation. By contrast, a correlation analysis of long-term effects supported a cognitive view of child rearing. (15 ref)—*Journal abstract*.

6841. Matheny, Adam P. & Dolan, Anne B. (U Louisville, Health Sciences Ctr) **Persons, situations, and time: A genetic view of behavioral change in children.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1106-1110.—Twin children in a longitudinal study were observed at 9, 12, 18, 24, and 30 mo of age in 2 settings: unstructured free play and relatively structured test taking. Behaviors relating to adaptability to the 2 settings were rated. Age-to-age correlations for the adaptability scores for each setting yielded a simplex pattern of low-moderate order, as did correlations of scores across settings. Identical twins were more similar than same-sex fraternal twins in both settings, but correlations were consistently stronger in the playroom setting. Identical pairs remained significantly more similar in adaptability from one setting to another even when change in adaptability occurred. Results suggest that situation variables contribute to the low stabilities frequently reported for personality dimensions but that the direction and degree of behavioral change are genetically conditioned. (17 ref)—*Journal abstract*.

6842. McElroy, Ann. (State U New York, Buffalo) **Canadian Arctic modernization and change in female Inuit role identification.** *American Ethnologist*, 1975(Nov), Vol 2(4), 662-686.—Studied the extent to which commercial development and modernizing practices in 2 Eastern Arctic settlements of Canada have influenced the socialization of Inuit children. Decreased emphasis placed on the traditional role of females in subsistence techniques is reflected in the patterns of

acculturation and vocational aspirations of female children and adolescents. Responses of male and female school children to a modified Instrumental Activities Inventory and data on education, employment, sex offenses, and marriage choices support the conclusion that Inuit females identify more strongly with EuroCanadian values and roles than do Inuit males. (15 ref) —*Journal abstract.*

6843. Perry, David G.; Bussey, Kay & Perry, Louise C. (U. Queensland Brisbane, Australia) Factors influencing the imitation of resistance to deviation. *Developmental Psychology*, 1975(Nov), Vol 11(6), 124-131. 125 male 3rd-6th graders in a lower class school were assigned to 16 cells in a $2 \times 2 \times 2 \times 2$ design involving (a) modeling of resistance to deviation, (b) modeling of an alternative activity incompatible with deviation, (c) availability of the alternative activity during test, and (d) attractiveness of the alternative activity. Ss exposed to a peer model who resisted deviation exhibited greater response inhibition than those exposed to a model who neither conformed to nor deviated from a prohibition, but who otherwise behaved similarly to the resisting model. The hypothesis that children exposed to alternative response modeling would show greater resistance to deviation, particularly when the alternative activity was available to them during test, was confirmed, but only for the 5th and 6th graders. There was evidence for a positive association between the attractiveness of the alternative response and resistance to deviation. It is concluded that the modeling of behavioral inhibition and the modeling of incompatible responses make independent contributions to children's resistance to deviation. (15 ref)—*Journal abstract.*

6844. Quilty, Robert F. (U. Joensuu, Finland) Imitation as a dyadic interchange pattern. *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 235-239. Tested the hypothesis that children pattern their behavior so that they ordinarily observe and then copy if either behavioral component is signaled. 48 1st graders were paired with Es, who first gave instructions for imitation, attention, or for joint or isolate play and later behaved identically toward all the Ss. Ss who received instructions either to copy or to simply pay attention watched and then copied the adults. The other Ss played with the adults, or played alone and ignored the adults, as expected. Later in a standard phase, Ss continued to attend and copy if they had initially received explicit instructions to copy, but not if they had gotten instructions shifted on some measures, but followed many initial patterns. Implications for interactional patterning in imitation and other recurrent situations are discussed. (18 ref) —*Journal abstract.*

6845. Rest, James R. (U. Minnesota) Longitudinal study of the Defining Issues Test of moral judgment: A strategy for analyzing developmental change. *Developmental Psychology*, 1975(Nov), Vol 11(6), 738-748. —Affirmative 2 yrs, 88 adolescents (16-20 yrs) were retested on the Defining Issues Test of moral judgment, the Comprehension of Social Moral Concepts Test, and the Law and Order Attitude Test. Significant developmental change was found on all 3 measures. Both younger and older Ss showed significant increases in principled moral thinking, but the younger group also showed preconventional to conventional shifts. There was no evidence for step-by-step movement, and sex differences were negligible. Among high school graduates, those going away to college scored twice as high as those staying. Sex stability on the Defining Issues Test was $r(49) = .68$ for the younger group and $r(37) = .54$ for those graduating from high school. (15 ref)—*Journal abstract.*

6846. Romer, Nancy. (Brooklyn Coll., City U New York) The motive to avoid success and its effect on performance in school-age males and females. *Developmental Psychology*, 1975(Nov), Vol 11(6), 689-699. 169 male and 168 female 8th-11th graders completed a TAT-like measure of motive to avoid success. In a developmental replication of M. S. Horner's (1968) study of the motive to avoid success, Sa also performed a series of tasks in competitive and noncompetitive conditions. No sex differences or clear age trends in motive-to-avoid-success imagery were found; however, there were sex and grade differences in the reasons given for avoiding success. In general, Sa, regardless of motive-to-avoid-success status, performed better in noncompetitive than competitive conditions. Developmental data show a tendency for 9th- and 11th-grade females with motive to avoid success to perform better in noncompetitive conditions, while older females without motive to avoid success perform better in competitive conditions. Males in the 8th, 9th and 11th grades with motive to avoid success performed better in a competitive condition, while their peers without motive to avoid success performed better in a noncompetitive condition. Results question that the motive to avoid success is aroused in the same experimental situations, that is, affects performance similarly, for males and young females as for older females.—*Journal abstract.*

6847. Ross, Hildy S. (U. Waterloo) The effects of increasing familiarity on infants' reactions to adult strangers. *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 226-239. 36 12-mo-old infants were placed near their mothers in a room containing a new toy and either the same, a different, or no adult stranger for 8 4-min trials. Results indicate that the same-adult group spent more time near the adult, less time near and touching their mothers, and more time near and touching the toys than the different-adult group. These trends emerged as the trials progressed and evidenced the same-adult group's growing familiarity with the adult. The no-adult group spent less time near or touching their mothers and more time near or touching the toys than the different-adult group but did not differ from the same-adult group on these responses. Findings suggest that fearful or cautious reactions to adult strangers disappear rapidly as the adult becomes familiar. (23 ref)—*Journal abstract.*

6848. Rushton, J. Philippe & Owen, Diane. (York U., Toronto, Canada) Immediate and delayed effects of TV modelling and preaching on children's generosity. *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 309-310. —Shows that exposing children to a TV model's generous or selfish behavior affects the children's subsequent generosity. The TV model had a less durable and overall weaker effect than a live model. Preaching produced no effect on generosity.

6849. Rybash, John M.; Sewall, Michael B.; Roodin, Paul A. & Sullivan, Laraine. (Mohawk Valley Community Coll) **Effects of transgressor, damage, and type of presentation on kindergarten children's moral judgments.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 874.—Assessed the role of cognitive conflict (damage vs respect for adults) in 64 kindergartners' moral judgments, using both verbal and videotape presentation techniques. In contrast to a previous study by C. Peterson et al (1974), the present Ss' moral judgments were not affected by the age of the transgressor. Ss in the videotape condition based their judgments on intention, while Ss in the verbal condition based their judgments on damage.
6850. Sams, Janice. (Yale U, Divinity School) **The ghetto child and moral development.** *Religious Education*, 1975(Nov-Dec), Vol 70(6), 636-648.—Contends that theories of moral development, represented by Piaget and L. Kohlberg, are elitist and inadequately represent moral development among minority ghetto children. Behavior that may be delinquent from a middle-class perspective may represent survival value in the economically depressed ghetto environment. From this perspective moral education implications for schools, churches, and the economic and governmental systems are discussed.—R. D. Kahoe.
6851. Shibata, Kaoru. [An examination of the developmental sequence of children's moral judgement.] (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 175-179.—Studied the response of 372 4-11 yr old Japanese children to different moral episodes using comparative judgment and projective methods. The effect of intent and consequence on children's moral judgment as related to their relationships with significant others (mothers, teachers, and peers) was examined. Results indicate that perception of cause-effect relationships between intent and consequence is extremely difficult until children reach 8 yrs of age, and that social relationships do not affect the moral judgment of children 4-11 yrs old. (23 ref)—S. Choe.
6852. Sigston, Allan & White, David G. (U Birmingham, England) **Conformity in children as a function of age level.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 313-314.—Suggests that children are made particularly aware that their worth is being evaluated at certain times in their school careers. An increase in conformity behavior might be expected to occur at these ages.

SOCIAL PROCESSES AND SOCIAL ISSUES

6859. Adamek, Raymond J. & Lewis, Jerry M. (Kent State U) **Social control violence and radicalization: Behavioral data.** *Social Problems*, 1975(Jun), Vol 22(5), 663-674.—Utilizing self-reports of 208 Kent State University students' protest and sociopolitical activity before and after May 4, 1970, this study evaluated the plausibility of 2 hypotheses. The radicalization hypothesis suggests that exposure to extreme social control violence, such as that employed by National Guardsmen on Kent's campus, would lead to greater protest activity. The pacification hypothesis suggests that protest activity would decrease after exposure to social control violence, to be replaced by inactivity, or by more acceptable sociopolitical activity. The data support the radicalization hypothesis. (30 ref)—*Journal Abstract*.

6863. Burns, Robert B. (U Bradford Postgraduate School of Studies in Research in Education, England) **Attitudes to self and to three categories of others in a**

student group. *Educational Studies*, 1975(Oct), Vol 1(3), 181-189.—Administered E. M. Berger's Acceptance of Self and Others Scale, the British Ethnocentrism Scale, and a semantic differential to 200 college students to investigate the relationship between attitudes toward self and attitudes toward 3 different kinds of other (i.e., the generalized other, the group other, and the specific other). Substantial and positive statistically significant correlations consistently emerged between self attitudes and attitudes toward these 3 types of others. These results from a nonclinical group confirm not only psychoanalytic intuitions but also the results of some small scale empirical work on therapy cases conducted by client-centered therapists. The relationship was strongest when it involved specific non-white others and was weakest when it involved the generalized other. Self-acceptance level would appear to be an index of attitudes to a wide range of others. It is concluded that this relationship provides a principle of the utmost importance and utility for social science and human relations since the application of psychological processes to enhance self-acceptance should as a corollary facilitate the decrease of interpersonal hostility and intergroup conflict. Child-rearing practices are suggested as the major causal factor behind the relationship. (25 ref)

6869. Jones, Stanley H. & Cook, Stuart W. (U Colorado) **The influence of attitude on judgments of the effectiveness of alternative social policies.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 767-773. Asked 146 White undergraduates to judge a

series of paired policies in terms of their effectiveness in promoting racial equality. One policy always advocated providing Blacks with opportunities for improving their own socioeconomic situation (opportunity for self-improvement policy), while the other always advocated some enforced change in the social structure as a means toward such improvement (societal-change policy). It was postulated that differences in racial attitude (assessed by the Multifactor Racial Attitude Inventory and a known-groups method) would lead Ss to embrace different explanations as to the cause of Black-White socioeconomic disparity. Based on the assumption that these differences in causal attribution would mediate between racial attitude and perceived effectiveness of remedial social policies, it was hypothesized that equalitarian participants would judge societal-change policies to be relatively more effective than would nonequalitarian participants. Results support the hypothesis. (19 ref)

6870. Kwiatkowska, Teresa. [The motive role of socialist ideology.] (Poln) *Studia Socjologiczne*, 1975, No 1(56), 151-163.—Analyzes the influence of socialist ideology on politics, morality, institutions, personality, and motivation. It is suggested that individuals accept the socialist ideology because it best satisfies human needs. Once the individual accepts the goals and norms implicit in the ideology, his behavior and personality are shaped by it.—*H. Kaczkowski.*

6871. Lynn, R. & Hampson, S. L. (New U Ulster, Coleraine, Northern Ireland) **National differences in extraversion and neuroticism.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 223-240.—Proposes a method for measuring national differences in extraversion and neuroticism from demographic and epidemiological data. The method uses national prevalence rates of a number of variables and treats them as indices of the levels of extraversion and neuroticism in national populations. The variables taken are the national rates of divorce, illegitimacy, accidents, crime, murder, suicide, alcoholism, chronic psychosis, and coronary heart disease; and the per capita consumption of calories, cigarettes, and caffeine. Data for these indices are presented for 18 advanced Western nations. The relationship of these variables to extraversion and neuroticism among individuals is used to set up a model for their relationship among nations. The variables were factored by principal components analysis, and this yielded 2 major factors identified as extraversion and neuroticism. The factor scores of each nation were then computed. These indicate that the most extraverted nation is the US, and the most introverted is Japan. The most neurotic nation is Austria, and the least neurotic is Ireland. (68 ref)—*Journal abstract.*

6878. Simonton, Dean K. (U Arkansas) **Sociocultural context of individual creativity: A transhistorical time-series analysis.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1119-1133.—Tested hypotheses which specify individual creativity as a function of developmental and productive period variables. It was argued that these hypotheses could be tested by examining generational fluctuations in creativity. Information from cultural and political archival sources was aggregated to form time series spanning 127 generations of European history. Data quality checks, control variables, data transformation, time-lagged comparisons, and trend analyses were used to improve the validity of the causal inferences. While the results varied according to the type of creativity (discursive or presentational) and the degree of achieved eminence, creative development was found to be affected by (a) role model availability, (b) political fragmentation, (c)

imperial instability, and (d) political instability. (70 ref) —*Journal abstract.*

6879. Singer, Henry A. (Human Resources Inst, Westport, CT) **Police action—Community action.** *Journal of Social Issues*, 1975, Vol 31(1), 99-106.—Results of a 6-wk police-community relations improvement program, in which 300 police officers and 150 civilians participated, indicate that there was dramatic favorable change in the policeman's attitudes toward himself, youth, and Puerto Ricans. However, attitudes toward Blacks did not improve and in some cases regressed.

6880. Turner, Geraldine A. (Ball State U) **The attitudes of White and Black fifth-grade low and middle class children toward selected individual rights in the United States.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4585-4586.

6881. Woudenberg, Roger A. (Michigan State U) **The relationship of sexual attitudes, sexual stereotypes, racial-sexual stereotypes, and racial attitudes.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2958.

6882. Zohar, Moshe; Floro, Suzy & Modan, Baruch. (Yehuda Abarbanel Hosp, Bat-Yam, Israel) **Community attitudes to home treatment of mental patients.** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 117-123.—The readiness to accept home treatment for mental patients was studied in a stratified random sample of 463 Tel Aviv area residents. Although 81% of all interviewees appeared willing, when the question was asked directly, to accept a hypothetical mentally ill family member into their homes, a considerable reluctance was displayed when a decision was asked indirectly. The readiness to accept home care for mental patients was directly related to the respondent's educational level.—*Journal abstract.*

Social Structure & Social Roles

6883. Black, Harvey & Angelis, Virginia B. (Boston U) **Sex role differences in the patterning of love among college students.** *Psychology*, 1975(Aug), Vol 12(3), 50-53.—373 undergraduates were given 19 items from Z. Rubin's loving and liking scales. Results indicate significant differences between males and females on ratings of romantic and platonic love, suggesting that cultural conditions influence internalization of social attraction norms. Male Ss placed greater emphasis on the stability of their friends and saw their friends as very similar to themselves. Females placed greater emphasis on affective concerns when considering platonic friends.—*R. Tomasko.*

6884. Doyle, Marie & Brown, Audrey A. (U Alaska, Anchorage) **Community transaction analysis as a community-oriented research tool.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 358-364.—Obtained information on viability (V), economic exchange (E), and cohesiveness (C) from residents of rural and urban Alaskan communities. Ss translated their interpersonal transactions of the last 72 hrs into the 18 community transaction analysis (CTA) categories specified on individualized data collection sheets. Consistently different patterns of interaction were found for city dwellers and villagers. Villagers were higher in V than city dwellers, lower in E, and similar in C. In comparison,

senior citizens in an urban area rate significantly lower than the general population on all 3 dimensions. Chemically dependent individuals rated significantly lower than the general population on V, indicating that drug dependency militates against having many interests. Nonworking women scored near average V and C scores but rated lower on C, as opposed to working women who scored average on E and C, but significantly lower on V. Results indicate that nonworking women were less involved than the general population in community-linking activities, whereas working women had few opportunities for self-serving activities. It is concluded that CTA data provides normative data with which to compare atypical groups; such information can be used to initiate behavior change.—*Journal abstract.*

6885. Ember, Carol R. (Hunter Coll, City U New York) **Residential variation among hunter-gatherers.** *Behavior Science Research*, 1975, Vol 10(3), 199-227.—Investigated the conditions that affect residential variation among 50 hunter-gatherer societies. These societies were selected from G. C. Murdock's (1967) *Ethnographic Atlas: A Summary* on the basis of selected variables. Findings indicate that some subsistence, demographic, and social environmental factors, suggested by previous theory and research, predicted the tendency toward patrilocality vs matrilocality and the tendency toward unilocality vs bilocality. Implications of the findings for the reconstruction of hunter-gatherer life in the Paleolithic era are discussed. (21 ref)—*Journal abstract.*

6887. Hollander, Edwin P. (State U New York, Buffalo) **Independence, conformity, and civil liberties: Some implications from social psychological research.** *Journal of Social Issues*, 1975, Vol 31(2), 55-67.—Considers that a free society needs independent initiatives as well as regularities of conduct to avoid stagnation. Authentic independence reflects critical judgment in responding to social demands rather than merely rejecting them. Although social psychology has tended to emphasize processes of conformity, attention is needed to factors facilitating independence. Six impediments to independence are risks of disapproval, lack of perceived alternatives, fear of disrupting the proceeding, absence of shared communication, inability to feel responsibility, and sense of impotence. To overcome these impediments socialization oriented to the critical evaluation of alternatives is necessary, including practice in making judgments and greater rewards of independent initiatives. (41 ref)—*Journal abstract.*

6888. Hunt, Janet G. (Indiana U) **Race and identity: A study of Black and White urban school boys.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4452.

6889. Lester, David. (Richard Stockton State Coll) **The fear of death in primitive societies.** *Behavior Science Research*, 1975, Vol 10(3), 229-232.—Tested the following hypotheses: (a) societies in which love-oriented techniques of punishment are predominant should have a greater fear of death than societies in which physical

techniques of punishment are predominant and (b) societies with a high need to achieve should fear death more than societies with a low need to achieve. Ratings of the use of love-oriented techniques of punishment were taken from a study by J. W. Whiting and I. L. Child (1953), and ratings of the need to achieve in nonliterate societies were made by D. C. McClelland (1961). Analysis of the findings of these studies provided support for both hypotheses.—*M. E. Pounsel.*

6890. Lincoln, Alan J. (U Massachusetts) **Justification and condemnations of violence: Variation as a function of the degree of involvement and selected victim, attacker, and situational factors.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4435.

6891. Massey, Garth. (U Wyoming) **Studying social class: The case of *embourgeoisement* and the culture of poverty.** *Social Problems*, 1975(Jun), Vol 22(5), 595-608.—The question of changing social classes, and in particular of classes in close proximity, has been explored since the early 1960s through various perspectives. The present paper examines 2 perspectives on changing social classes, the cultural and the situational, in the context of the culture of poverty debate and the thesis of *embourgeoisement*. Both exemplify serious weaknesses in social class research that are traced to the failure of each to deal adequately with the relationship of culture to class structure. The adaptational perspective is proposed to provide a more viable framework for the analysis of changing social classes by seriously considering the features and processes of class culture. (3 p ref)—*Journal Abstract.*

6892. Muttagi, P. K. (Tata Inst of Social Sciences, Bombay, India) **Social distance among religious and linguistic communities.** *Indian Journal of Social Work*, 1975(Jul), Vol 36(2), 159-171.—Administered social distance scales to 659 students at the University of Bombay, who represented 5 religious and 5 linguistic communities. It was found that members of both community types preferred their own groups. Among religious minorities the preferred out-group was the majority religious community, but among the linguistic minorities preferences varied. Social distance scores of religious and linguistic groups revealed similar behavioral tendencies towards certain minority groups. The in-group feelings of religious groups were stronger than those of linguistic groups. Various other specific relationships between in-groups and out-groups are also reported.—*I. W. Kidorf.*

6893. Owens, David J. & Straus, Murray A. (University Coll, Cardiff, England) **The social structure of violence in childhood and approval of violence as an adult.** *Aggressive Behavior*, 1975, Vol 1(3), 193-211.—Data from a national sample survey conducted for the Commission on the Causes and Prevention of Violence were used to investigate the relationship of three aspects of exposure to violence in childhood (observing violence, being a victim of violence, and committing violence) with approval of violence as an adult. Those who experienced violence as a child tended to favor the use of violence to achieve personal and political ends. However, there was no correlation between childhood violence experience and approval of the use of violence to settle conflicts between nations. It is concluded that the amount of

violence experienced in childhood by members of a society is one of the factors contributing to the development and maintenance of cultural norms supporting the use of violence in face-to-face situations. (15 ref)—*Journal abstract*.

6894. **Paramesh, C. R.** (U Madras, Presidency Coll, India) **Value differences among extraverts-introverts and neurotics-normals.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 66-68.—Values play an important role in shaping individual behavior in a social context. Attempts are made in the present investigation to study the value differences, if any, among high and low extraverts and high and low neurotics and the interaction between extraversion and neuroticism in this context. 216 high school adolescents were divided into 4 personality groups on the basis of the median scores on the Eysenck Personality Inventory. The groups were high extraverted and high neurotic, high extraverted and low neurotic, low extraverted and high neurotic, and low extraverted-low neurotic. A Scale of Values based on G. W. Allport (1960), developed by C. R. Paramesh (see PA, Vol 51:11152), and consisting of items for aesthetic and theoretical values was used. A 2×2 analysis of variance was applied on the data. Results show that low extraverts were higher in theoretical value.—*Journal abstract*.

6895. **Paul, Lois & Paul, Benjamin D.** (Stanford U) **The Maya midwife as sacred specialist: A Guatemalan case.** *American Ethnologist*, 1975(Nov), Vol 2(4), 707-726.—Describes the prognostic and ritual performance of midwives in San Pedro la Laguna (Guatemala), the means by which her sacred mandate is communicated, the professional nature of her role, and the complex of sociocultural features that explain the position of high esteem that she holds. Despite the subordinate position of women as a class, midwives in San Pedro, like shamans, are ritual specialists and enjoy a high status. To account for this phenomenon, a 5-point explanation is proposed: (a) the role is highly professionalized; (b) it requires that incumbents be drawn from the pool of married women in their prime; (c) these women must overcome their own and their husbands' resistance; (d) this barrier is surmounted only by manifold evidence of divine election, which (e) in turn accords prestige and respect to the midwives. (2 p ref)—*Journal abstract*.

6896. **Smith, A. Emerson; Maness, Dal & Sharp, John M.** (U South Carolina) **Acts, contingencies and responses to behavior.** *Sociology & Social Research*, 1975(Oct), Vol 60(1), 22-32.—Responses to behaviors dealing with sex, drugs, alcohol, and theft were measured in interviews with a stratified random area sample of 791 respondents; the characteristics of the actor were held constant, but one characteristic of the act was varied. This revealed differences in audience response that seemed to be determined mainly by whether the act was private or public, with the latter viewed most unfavorably. Also, negative labeling varied with age of the respondent. (24 ref)—*Journal abstract*.

6897. **Solomon, Henry & Yager, Howard.** (Herbert H. Lehmann Coll, City U New York) **Authoritarianism and graffiti.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 149-150.—Examined the relationship of the authoritarianism to graffiti on an urban college campus.

Results of a content analysis of graffiti samples and a survey of 82 undergraduates classified as frequent or infrequent graffiti writers suggest that graffiti can be categorized as a release of repressed impulses originally tied to authoritarianism and that for females, socially discouraged aggressive impulses can be expressed in graffiti.

6898. **Spitzer, Steven.** (U^a Pennsylvania) **Toward a Marxian theory of deviance.** *Social Problems*, 1975(Jun), Vol 22(5), 638-651.—Considers the prospects for the development of a Marxian interpretation of deviance and control. The weaknesses of conventional perspectives are identified, and an approach is suggested which applies Marxian theory to an investigation of deviance production in modern society. This process is explored with special attention to the capitalist mode of production, the system of class control in capitalist societies, the genesis and maintenance of "problem populations," the channeling of these populations into deviant statuses, and the distinctive character of deviant groups. The emergence of monopoly and state capitalism is examined to understand the dynamics of structural change, deviance production, and social control. The overproduction of deviance in advanced capitalist societies and attempts at the solution of this problem are also discussed. (34 ref)—*Journal Abstract*.

6899. **Sulcov, Mark B.** (Indiana U) **Transexualism: Its social reality.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4445.

6900. **Teahan, John E.** (Wayne State U) **A longitudinal study of attitude shifts among Black and White police officers.** *Journal of Social Issues*, 1975, Vol 31(1), 47-56.—Examined the attitudes of 24 Black and 97 White police officers from the time of their entrance into the police academy until 18 mo later. Radical increases in racial animosity between officers were found. All officers seemed to become more hedonistic, impersonal, and detached, and to develop feelings of hostility toward authority figures. As Black officers progressed through the academy and on into regular police work, they became increasingly negative toward Whites and disillusioned with the department; they began to shift in the direction of a greater sense of Black unity and polarity against Whites. While Blacks saw greater preference being given to Whites, White officers perceived the converse with the result that they became also more ethnocentric and polarized. Little evidence was found to indicate that a police experience molds men to feel a greater sense of social concern, or that it motivates them to improve relationships between races.—*Journal abstract*.

6901. **Zalkind, Sheldon S.; Gaugler, Edward A. & Schwartz, Ronald M.** (Bernard M. Baruch Coll, City U New York) **Civil liberties attitudes and personality measures: Some exploratory research.** *Journal of Social Issues*, 1975, Vol 31(2), 77-91.—Administered questionnaires containing civil liberties and personality measures in 2 different years to 733 adults in the metropolitan New York City area. Attitudes toward civil liberties issues consistently correlated positively with flexibility, self-reliance, and independence measures, even when age, education, and socioeconomic status were simultaneously held constant. Anomie and fate control meas-

ures had low negative relationships to some but not all civil liberties attitude measures. Anxiety scores did not relate to attitudes. (24 ref)—*Journal abstract*.

Culture & Ethnology & Religion

6902. Bateson, Gregory. (U California, Kresge Coll, Santa Cruz) **Some components of socialization for trance.** *Ethos*, 1975(Sum), Vol 3(2), 143-155.—Argues that a large part of Balinese behavior is based on paradigms of experience which, for the Balinese, are unquestionable. These are the paradigms of balance and of the interaction between the moving human body and the gravitational field in which it must act.—*Journal summary*.

6903. Bengtson, Vern L.; Dowd, James J.; Smith, David H. & Inkeles, Alex A. (U Southern California) **Modernization, modernity, and perceptions of aging: A cross-cultural study.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 688-695.—Data from a comparative study of 5,450 18-32 yr old males in 6 developing nations (Argentina, Chile, India, Israel, Nigeria, and Bangladesh) were used to investigate the association between modernization or modernity and negative attitudes toward aging. Findings question the frequent assertion that "modernity" (the exposure of individuals in developing nations to industrial technology and urban social experience) results in negative perceptions of aging and diminished value attributed to the aged. Data do provide support for the hypothesis that "modernization" (societal development) is related to negative perceptions of aging. Results suggest the necessity of differentiating between "modernization" and "modernity" as levels of analysis and of avoiding value-laden assumptions concerning advantages of either traditional or industrial settings with respect to the position of elders. (26 ref)—*Journal abstract*.

6906. Cobb, Joseph J. (Miami U. OH) **Leadership and decision-making in a Black community: An inter-disciplinary analysis and study.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4451.

6907. Cole, Michael & Scribner, Sylvia. (Rockefeller U, Lab of Comparative Human Cognition, New York, NY) **Theorizing about socialization of cognition.** *Ethos*, 1975(Sum), Vol 3(2), 249-268.—Reviews anthropological and psychological studies of cognition and concludes that naturalistic observations and experimental observations are part of the same single enterprise: the analysis of how cognitive activity is shaped and organized by the features of the situation in which it occurs. For the psychologist this enterprise poses the problem of developing new techniques for studying cognitive activities as they unfold in daily life. It also challenges the anthropologist. There is little in the anthropological literature to guide a psychologist who is convinced of the importance of studying cognition in "real-life" situations. However,

it is suggested that if the ethnographer took as his task the analysis of cognition as a specific set of activities engaged in on specifiable occasions for reasons deducible from his social theory, a real collaboration between the 2 disciplines would be possible.—*Journal summary*.

6908. Connor, John W. (California State U, Sacramento) **Value changes in third generation Japanese Americans.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 597-600.—Compared the acculturation of 3rd generation Japanese Americans with contemporary Caucasian college students. 275 Japanese Americans and 346 Caucasian Americans were administered the EPPS. Results indicate that while acculturation has taken place among the Japanese Americans, they expressed a significantly higher need for order, succorance, and abasement, and a significantly lower need for change and heterosexuality.—*Journal abstract*.

6909. Digenan, Mary A. & Murray, John B. (Marillac Coll) **Religious beliefs, religious commitment, and prejudice.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 147-148.—Experimental results show that the Religious Orientation Scale did not differentiate between student members of religious orders, Catholic, and non-Catholic students on commitment to the Catholic religion. Sex differences appeared most clearly in 2 tests of prejudice, with females in all 3 groups more tolerant than males. Sex differences were also more clearly revealed on the Rokeach Dogmatism Scale than were religious commitment differences.

6910. Draper, Patricia. (U New Mexico) **Cultural pressure on sex differences.** *American Ethnologist*, 1975(Nov), Vol 2(4), 602-616.—Suggests that sex differences in the behavior of children exist but are not necessarily intensified under certain cultural conditions. Under conditions of culture change to a sedentary economy, certain elements of male and female differentiated behavior are exploited in the process of increasing sex differentiation. Data are presented from anthropological observations of the Kalahari Kung tribes in South West Africa. (2/4 p ref)—*Journal abstract*.

6911. Fischer, Donald G. (U Saskatchewan, Saskatoon, Canada) **Anti-Semitism, stress, and interpersonal evaluations.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 247-251.—Investigated the effect of insult and dislike on evaluations given to neutral strangers by prejudiced and nonprejudiced persons. Ss were 96 male undergraduates scoring in the upper, middle, and lower fifths of the Anti-Semitism Scale, and the upper, middle, and lower thirds of the California F Scale. Results indicate (a) no differences among prejudiced groups in the low insult, like condition, or the low insult, dislike condition; but (b) significant differences between moderately and highly prejudiced Ss in the high insult, like condition, and between low- and high-prejudiced Ss in the high insult, dislike condition, with highs being more hostile in each case; (c) significant increases in negativity for moderately prejudiced Ss in the low insult, dislike condition compared to the low insult, like condition; and (d) significant increases for all prejudiced groups in the high insult, dislike condition compared to the high insult, like condition. Results suggest that a strong frustration manipulation is necessary to elicit differences among persons of differing degrees of prejudice where there is

opportunity to express verbal aggression directly toward the frustrating agent.—*Journal abstract.*

6912. Fluehr-Lobban, Carolyn. (Northwestern U) **An anthropological analysis of homicide in an Afro-Arab state, the Sudan.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2426.

6913. Gaertner, Samuel L. (U Delaware) **The role of racial attitudes in helping behavior.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 95-101.—Although a number of studies have demonstrated that the victim's race affects the probability that a bystander will intervene and help during an emergency, the process by which attitudes affect helping behavior is unclear. The present study demonstrated that attitudes toward the victim may affect helping behavior by influencing the bystander's interpretation of the degree to which help is needed. Data from 40 White female undergraduates indicate that when a bystander was the only witness, Black victims were helped as frequently as White victims. However, bystanders together with other passive witnesses were more likely to help the White than the Black victim.—*Journal abstract.*

6914. Gentner, Robert; Shuntich, Richard & Bunting, Kenneth. (Eastern Kentucky U) **Racial prejudice, belief similarity, and human aggression.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 229-234.—Out of 66 undergraduates administered a scale designed to measure racial prejudice, 16 male Caucasians scoring above the median and 16 scoring below the median later interacted in a competition situation with an attitudinally similar or an attitudinally dissimilar Black stimulus person. The competition situation was such that the Ss had the opportunity to aggress against their opponent using electric shock. Results indicate that highly prejudiced attitudes were related to high aggression scores. It was also observed that the attitudinal similarity variable interacted with the prejudice variable during the initial stages of the aggressive interaction.—*Journal abstract.*

6915. Glazer, Mark. (Northwestern U) **Psychological intimacy among the Jews of North Metropolitan Chicago and the Sephardic Jews of Istanbul, Turkey.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2427.

6916. Goldberg, Joel; Yinon, Yoel & Cohen, Arie. (Bar-Ilan U, Ramat Gan, Israel) **A cross-cultural comparison between the Israeli and American fear survey inventory.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 131-132.—Reports results of a comparison using an Israeli fear survey inventory based mainly on J. Wolpe and P. J. Lang's Fear Survey Schedule. Scores indicated greater overall fear in both Israeli male and female college students than in a comparable group of American Ss.

6917. Goldschmidt, Walter. (U California, Los Angeles) **Absent eyes and idle hands: Socialization for low affect among the Sebei.** *Ethos*, 1975(Sum), Vol 3(2), 157-163.—Various aspects of institutionalized behavior among the Sebei of Uganda suggest a generally low level of affect in their interpersonal relationships. Ecological circumstances may make a low level of affect functionally meaningful for these originally pastoral people, at least for the men.—*Journal summary.*

6918. Gruenfeld, Leopold W. & MacEachron, Ann E. (Cornell U) **A cross-national study of cognitive style among managers and technicians.** *International Journal of Psychology*, 1975, Vol 10(1), 27-55.—Conducted a study of 329 male managers and technicians in 22 nonwestern developing countries. Differences found among Ss are explained in terms of the field articulation cognitive style. A review of the behavioral referents of the field articulate cognitive style suggested that this variable is appropriately related to occupational interests and tasks and adaptability to industrial technique. Previous studies also suggested the hypothesis that socioeconomic status variables are related to both cognitive style and national or cultural differences. This hypothesis was confirmed using both the Embedded Figures Test and the rod-and-frame test as measures of field articulation. Several explanations of these findings are discussed in terms of functional requirements for adult roles in a society and in terms of the relative affluence or level of poverty. (French summary) (5 p ref)—*Journal abstract.*

6919. Gupta, Santosh P. (Cheyney State Coll) **Changes in the food habits of Asian Indians in the United States: A case study.** *Sociology & Social Research*, 1975(Oct), Vol 60(1), 87-99.—Acculturation in the food habits of 50 1st generation Asian Indian immigrants to the US, in a state university community, was found to have 3 distinct phases: (a) "eggetarian", (b) seminonvegetarian, and (c) full nonvegetarian. The concepts of "ahimsa" (i.e., avoidance of killing any living being for food or other purposes), purity pollution, and commensal rules dissolved rapidly as the amount of interaction with the host society increased. Also, marital status, age, sex, length of stay in the US, caste, and rural-urban background, listed in the order of their importance, affected the dynamics of acculturation in food habits. Food habits influenced the patterns of interaction among Indians and with members of the host society, and consequently affected the processes of assimilation and integration with the alien culture.—*Journal abstract.*

6920. Hall, Eleanor R. (Pennsylvania State U, Behrend Coll) **Motivation and achievement in Black and White junior college students.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 107-113.—Correlated a number of motivational variables (need for achievement, educational aspiration, social science interest, for self-concept of ability, test anxiety, and internal-external control) with grades obtained by males in an introductory social science course. Ss totaled 93 Whites and 66 Blacks. Measures included the French Test of Insight, Rotter's Internal-External Control Scale, and the Alpert-Haber Achievement Anxiety Test. There were no race or social class differences in level of motivation. The motivational variables highly correlated with achievement were as follows: for lower-class Ss, both Black and White, social science interest; for middle-class Black Ss, educational aspiration; and middle-class White Ss, test anxiety. Middle-class Blacks tended to be overachievers; middle-class Whites underachievers. Findings indicate that generalizations about racial differences may not hold true for particular subgroups and suggest interest in the subject as important in motivating lower-class

students for academic achievement. (15 ref)—*Journal abstract*.

6933. Paddock, John. (U of the Americas, Inst of Oaxaca Studies, Mexico) **Studies on antiviolen and "normal" communities.** *Aggressive Behavior*, 1975, Vol 1(3), 217-233.—Identifies several communities in the Valley of Oaxaca, Mexico that successfully control major interpersonal violence without formal police and judicial apparatus of the sort customary in industrial societies, even though these antiviolen towns are surrounded by others showing a "normal" level of violence. Because the antiviolen places share biological inheritance, culture, language (Zapotec and Spanish), climate, ecology, poverty, boundary disputes, and abundant use of alcohol with their neighbors, such factors may be discarded as determining either violence or antiviolen. The antiviolen communities do differ from their neighbors, however, in showing a near absence of "machismo," contrasting practices in child rearing, very few close friendships linking adults of the same sex, and a much stronger social role for women. First results from psychiatric interviews, projective tests, and an adaptation of the Loevenger Sentence Completion Test administered to 14-yr-olds are highly congruent with ethnographic observations.—*Journal abstract*.

Marriage & Family

6945. Adams, Gerald R. & LaVole, Joseph C. (U Nebraska, Omaha) *Parental expectations of educational and personal-social performance and childrearing patterns as a function of attractiveness, sex, and conduct of the child*. *Child Study Journal*, 1975, Vol 5(3), 125-142.—Assessed the influence of a child's sex, physical attractiveness, and conduct on parental expectancies of academic and social performance as well as socialization practices of the child's parents. 106 mothers and 91 fathers of middle-class elementary school children were asked to read a student progress report for a child whose conduct ratings were good or poor. Attached to the report was a color photograph of a child who had been previously judged to be of high or low physical attractiveness. After reading the report, parents rated the child on a number of academic, social, and child-rearing measures. Conduct of the child significantly influenced parental expectancies on most measures. Physical attractiveness was a factor in ratings on certain social factors, and sex of the child seemed to bias ratings on vocational attainment.—*Journal abstract*

6954. Durrett, Mary E.; O'Bryant, Shirley & Pennebaker, James W. (U Texas, Austin) *Child-rearing reports of White, Black, and Mexican-American families*. *Developmental Psychology*, 1975(Nov), Vol 11(6), 871.—Compared child-rearing practices of 29 White, 30 Black, and 31 Mexican-American families with a 5-year-old Head Start child. Results indicate that the techniques used to socialize children among the 3 cultural groups were similar; only their desired ends differed. Mexican-American parents were most consistent in their use of reward and punishment methods.

6955. Eisenberg, Jeanne G.; Langner, Thomas S. & Gersten, Joanne C. (Columbia U, School of Public Health) *Differences in the behavior of welfare and non-welfare children in relation to parental characteristics*. *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 311-340.—Reports differences in the prevalence of various behaviors of children and parents in 2 large but markedly different socioeconomic samples from the same urban area. A sample of Welfare recipients consisted of 1,000 children and a cross-section of major ethnic and income groups of 1,034 6-12 yr olds. The relationships of parental variables to child behaviors were examined using multiple regression techniques. Various parental dimensions (particularly coldness and excitability) showed strong and comparable relationships to child behavior in the 2 samples. While parental coldness was central to delinquency in both samples, it was particularly important in the Welfare sample. The excitable-rejecting quality of the mother was critically associated with children's anxiety and family conflict, which were more common behaviors for the cross-

sectional children. Other child and parental behaviors are also discussed. (38 ref)—*Journal abstract*.

6957. Goshen-Gottstein, Esther R. **Potentially harmful child-rearing practices.** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 85-104.—5 mothers from Oriental countries, with relatively little education, were observed (during home visits and during their children's 1st 3 yrs of life) to interact with their children in a way different from 9 mothers with differing sociocultural backgrounds. The women in the former group stressed clean and tidy homes and the children's physical health and food intake, while at the same time they suppressed the children's independence, motility, and exploration and did not provide stimulation such as toys. Basically, they concentrated on their children's physical development, almost to the exclusion of their mental development. Their methods of discipline included the use of threats, screams, and abusive languages as well as the making of false promises, the sending of double messages, and knowingly telling lies to their children. The reason for the mothers' behavior and the likely effects of such child-rearing practices are discussed. Recommendations are offered with a view to preventing or remedying these noxious influences. (36 ref)—*Journal abstract*.

6961. Hayes, Rose O. (State U New York, Buffalo) **Female genital mutilation, fertility control, women's roles, and the patrilineage in modern Sudan: A functional analysis.** *American Ethnologist*, 1975(Nov), Vol 2(4), 617-633. Describes the process of infibulation, or Pharaonic circumcision, a widespread practice in Sudan. It involves cutting away most external female genitalia and almost completely closing off the vaginal opening. The custom is analyzed in context and is found to be functionally interrelated with marriage practices, norms of female modesty, women's roles, family honor, and the patrilineage. The custom furnishes critical support to the patrilineage and has a controlling effect on Sudanese fertility and the population growth rate. (2 p ref) *Journal abstract*.

6962. Kanaana, Sharif. (U Wisconsin, Oshkosh) **Modernization and the extended family: The Arab minority in Israel.** *Wisconsin Sociologist*, 1975(Win), Vol 12(1), 3-19. Studied effects of modernization on the extended family of the Arab minority in Israel. Findings indicate that modernization, as a set of new forces, has

strengthened the extended family network among all social classes, albeit for different reasons.—S. Moriwaki.

6963. Karr, Stephen D. (California School of Professional Psychology, San Francisco) **Second-generation effects of the Nazi holocaust.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2935-2936.

6964. Mason, John P. (American U, Cairo, Egypt) **Sex and symbol in the treatment of women: The wedding rite in a Libyan oasis community.** *American Ethnologist*, 1975(Nov), Vol 2(4), 649-661.—Examines the position of women in a Libyan oasis community in relation to 1,300 yrs of Muslim Arab influence. The focus is on the treatment of women in the ritual context of the wedding and wedding dance, where ambivalence, contradiction, and accommodation between the 2 sexual worlds are highlighted in action and symbol. (17 ref)

6965. Peery, J. Craig & Stern, Daniel N. (Utah State U) **Mother-infant gazing during play, bottle feeding, and spoon feeding.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 207-213.—Analyzed the gazing behavior of 10 3-mo-old twin infants and their mothers during play, bottle feeding, and spoon feeding activities. Videotape equipment was used in the home; data were gathered as naturalistically as possible. Mothers looked at infants for a greater percentage of the total time and for longer durations than infants looked at mothers. A consistency-activation personality theory in which mothers are highly motivated to gaze at infants, but infants seek visual interest by looking away from mother, is suggested to interpret the findings. Both looking and not-looking gazes and mean and median measures of central tendency were helpful and necessary for the gazing analysis.—*Journal abstract*.

6967. Pluck, Charlotte L. **Child-rearing patterns of poverty.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 485-502.—Argues that child-rearing patterns among the chronically poor create socially disabled individuals. A review of the literature indicates that emotional and intellectual stunting results from the conviction that parental authority be maintained through harsh punishment and suppression of self-expression. Rage builds in the children but fear and family loyalty prevent its discharge towards its source, leading to acting out. Inner controls do not develop, and external controls are required and expected. Poor verbal development is correlated with poor superego development. The role of the therapist in reversing this trend is discussed. (34 ref) —*Journal abstract*.

6968. Rosenblatt, Paul C. & Budd, Linda G. (U Minnesota, St Paul) **Territoriality and privacy in married and unmarried cohabiting couples.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 67-76. Studied territoriality and having a place within the residence for being alone among 70 co-residing married and 20 unmarried 19-40yr-old couples. It was assumed that commitment to a long-term relationship is necessary before a co-residing couple develops territoriality. Hence, married couples were predicted to have greater territoriality than unmarried couples. It was also as-

sumed that cohabiting individuals would need backstage regions and symbols of separateness and that American marriage norms oppose physical separateness for married persons. Hence, it was predicted that unmarried persons would be more likely to have places within the residence for being alone. Questionnaire data support both predictions. A comparison of married persons with and without a history of premarital cohabitation indicated that couples who cohabited premaritally retained a low level of territoriality after marriage.—*Journal abstract.*

6969. Seymour, Susan. (Pitzer Coll) **Some determinants of sex roles in a changing Indian town.** *American Ethnologist*, 1975(Nov), Vol 2(4), 757-769.—During an investigation of family organization and child-rearing practices in a changing Indian town some variations in sex role behavior were observed. These are described for a more traditional and a more modern sector of the town, and social network theory is used to explain some of the differences found. In addition, certain variations in the organization of sex roles among lower socioeconomic households are attributed to economic factors.—*Journal abstract.*

6970. Shaktawat, G. S.; Kulhari, V. S. & Jha, P. N. (U Adaypur, India) **Adoption behavior towards family planning: A diagnostic analysis.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 34-37.—Conducted a study with a total of 200 Ss representing 3 types of Indian settings (village, town, and college campus) to determine (a) the relationship between the use of birth control and variables such as social setting, education, age, sex, caste, family size, and income; (b) the motivating factors that led to the use of birth control; and (c) the reasons for not using birth control and discontinuing its use once it had been adopted. Results show that family planning was still confined to the higher socioeconomic strata of the society, and it had not been adopted by individuals in the lower strata who are in the majority. Condoms and vasectomy were the only methods which were popular and had been adopted by most of the users of some form of birth control. Contrary to the general belief, a large number of individuals had not yet recognized the need for family planning in their own contexts. Reverters were generally individuals who considered contraceptives an inconvenience. The implications of these findings on the development and success of a family planning program are discussed.—*M. E. Pounsel.*

6971. White, Geoffrey D. (U Oregon) **The effects of observer presence on mother and child behavior.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2957.

6972. Whiting, John W. & Whiting, Beatrice B. (Harvard U) **Alloofness and intimacy of husband and wives: A cross-cultural study.** *Ethos*, 1975(Sum), Vol 3(2), 183-207.—Reports on study of information gathered from the Murdock-White standard cross-cultural sample. Findings are that it is seldom customary for husbands and wives to room apart. They do so only under special circumstances: when the climate is benign and, as a consequence, building extra bedrooms is not very costly; when they live a settled life and thus do not have to move camp frequently; and when they have a

substantial capital investment to protect and help from the state is inadequate.—*Journal summary.*

6973. Yorburg, Betty. (City Coll, City U New York) **The nuclear and the extended family: An area of conceptual confusion.** *Journal of Comparative Family Studies*, (Spr), Vol 6(1), 5-14.—Establishes a typology of families that would encompass all family units in major types of societies—nonliterate hunting and gathering and horticultural societies, industrializing societies, and highly industrialized societies. The problem of definition of family types is viewed as arising from a failure to define the concepts "nuclear" and "extended" according to essential rather than accidental criteria. The degree of economic interdependence is viewed as the major factor promoting the clustering of the other variables. 4 modal types of families are then defined: extended, modified extended, modified nuclear, and nuclear. This model offers a possible solution to some of the difficulties now prevalent in classifying family types, in determining their relative frequency in major kinds of societies and in clarifying the relationship between technological development and family forms. (38 ref)—*Journal abstract.*

Political & Legal Processes

6974. Anderson, James M. (California School of Professional Psychology, Los Angeles) **Identifying the mentally disordered sex offender.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2917-2918.

6975. Candee, Dan. (Harvard U) **The moral psychology of Watergate.** *Journal of Social Issues*, 1975, Vol 31(2), 183-192.—As evidenced in their Senate testimony and other public statements, nearly all members of the Nixon team seem to have reasoned at Stages 3 and 4 as measured by L. Kohlberg's (1969) sequence of moral development. It is concluded that Watergate resulted, in part, because the situational pressures to "win at all costs" were particularly appealing to the Stage 3 and 4 persons who comprised the leadership of the Nixon administration.

6977. Ebbesen, Ebbe B. & Konečni, Vladimir J. (U California, San Diego) **Decision making and information integration in the courts: The setting of bail.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 805-821.—Conducted 2 studies with a total of 18 municipal and superior court judges to determine how real felony court judges decide the amount of bail to set. In Exp I, the judges were presented with fictitious case histories containing the relevant information in a factorial design. In Exp II, multiple regression techniques were used to examine the impact of different kinds of information on decisions made by judges in actual bail hearings. In the simulated cases, the judges seemed to be influenced most by the degree to which the accused was tied to the area and whether he or she had a prior criminal record. However, the judges' actual bail decisions were not at all affected by these variables. Instead, their decisions were almost exclusively deter-

mined by the district attorneys' recommendations. Both the district attorneys' and the defense attorneys' actual recommendations were primarily based upon the severity of the crime.—*Journal abstract.*

6978. **Filipek, Jindřich.** (Československá Akademie Věd, Ústav pro filozofii a sociologii, Prague) [**Comparison and cognition.**] (Czec) *Sociologický Časopis*, 1974, Vol 11(1), 58-68.—Discusses Marxist-Leninist noetic principles in comparative research on international sociological phenomena, such as capitalism-socialism. Topics emphasized are contextual meaning, historical genesis, multidimensionality of relations, and the correct definition of the hierarchy of determinants. (Russian & English summaries)—*V. S. Fischmann.*

6979. **Gaugler, Edward A. & Zalkind, Sheldon S.** (Claremont Graduate School, CA) **Dimensions of civil liberties and personality: Relationships for measures of tolerance and complexity.** *Journal of Social Issues*, 1975, Vol 31(2), 93-110.—Groups of "constricted" ($n = 59$) and "nonconstricted" ($n = 49$) individuals were selected from a New York City survey sample on the basis of 3 personality scores: anger expression-retention, independence-yielding, and anomie. Civil liberties attitude dimensions were then obtained for each group. Contrary to hypothesis the 2 groups did not differ on measures of cognitive complexity derived from the factor structures for their civil liberties attitudes, but the nonconstricted group was more tolerant on several dimensions. When controlled for demographic variables, the differences in tolerance held only for a dimension dealing with admitted Communists. Thus, even though the constricted may be less tolerant, for the multidimensional domain of civil liberties attitudes constricted individuals do not have simpler cognitive structures than nonconstricted individuals. (2 p ref)—*Journal abstract.*

6980. **Hagan, John.** (U Toronto, Canada) **The social and legal construction of criminal justice: A study of the pre-sentencing process.** *Social Problems*, 1975(Jun), Vol 22(5), 620-637.—Examines issues associated with conflict, interactionist, and organizational perspectives on criminal justice. These perspectives are applied in a study of the presentencing process. Data indicate a division in the judicial wisdom regarding the use of probation officers as advisors in the presentencing process. (2 p ref)

6981. **Harris, Richard J.; Teske, R. Ross & Ginns, Martha J.** (Kansas State U) **Memory for pragmatic implications from courtroom testimony.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 494-496.—96 undergraduates heard an excerpt of mock courtroom testimony and were later asked to rate statements about material in the testimony as "true," "false," or "of indeterminate truth value." 48 Ss heard a given piece of information (Mr. X rang the burglar alarm) directly asserted (I rang the burglar alarm), while the others heard it only pragmatically implied or suggested (I ran up to the burglar alarm). Some Ss initially heard specific instructions about the pitfalls of interpreting pragmatically implied information as if it were asserted fact, while the others had no such instructions. Ss either performed the response task immediately after hearing the testimony or did so 2 days later. Ss generally remembered both implications and assertions as definite fact, even when specifically warned not to do so.—*Journal abstract.*

6982. **Hendrick, Clyde & Shaffer, David R.** (U Georgia) **Murder: Effects of number of killers and victim mutilation on simulated jurors' judgments.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 313-316.—192 undergraduates served as jurors and read a brief transcript of a jury trial involving a victim who had been beaten to death by either 1 or 5 killers. For half of the Ss in each condition, further information was given that the victim's body was mutilated after death. Ss assigned prison sentences and rated the crime and defendants on several scales. Results show that murder followed by mutilation increased the severity of prison sentences by about 50 yrs. Attributions of insanity, evil nature of the crime, and attitude toward the death penalty also varied in an orderly manner as a result of the mutilation manipulation. It is concluded that simulated jury trials provide an excellent method for studying personal causation and attribution processes in general.—*Journal abstract.*

6983. **Hendrick, Clyde & Shaffer, David R.** (Kent State U) **Effect of pleading the fifth amendment on perceptions of guilt and morality.** *Bulletin of the Psychonomic Society*, 1975(Nov), Vol 6(5), 449-452.—Used a simulated jury situation to study the effects of pleading the 5th amendment on inferences about an accused person's guilt and ratings of his or her morality. 214 undergraduates read a fabricated transcript of a grand jury proceeding for an embezzlement case in which an accused person either denied his own guilt or took the 5th amendment and either denied guilt for another person or took the 5th amendment when questioned about the other person. Results show that negative moral evaluation was in direct proportion to the frequency with which the 5th amendment was taken. Inferences of guilt showed a similar trend except that consistency of pleading for self and other also moderated inferences of guilt.—*Journal abstract.*

6984. **Hopkins, Andrew.** (Australian National U, Research School of Social Science, Canberra) **On the sociology of criminal law.** *Social Problems*, 1975(Jun), Vol 22(5), 608-619.—Relates the revival of interest in the sociology of criminal law to recent changes of perspective in the field of criminology. The debate between conflict and consensus theorists over the nature of the criminal law is considered, and efforts to settle the dispute in favor of one model or the other are seen as misdirected. An attempt is made to reconcile the 2 viewpoints and to suggest how remaining points of disagreement can be used to stimulate more productive research. (32 ref)—*Journal Abstract.*

6985. **Marshall, Harvey & Meyer, Deborah.** (Purdue U) **Assimilation and the election of minority candidates: The case of Black mayors.** *Sociology & Social Research*, 1975(Oct), Vol 60(1), 1-21.—Examined some factors which affect the probability that large US cities have a Black mayor, vice mayor, or mayor pro tem. Specifically, attempts were made to determine whether socioeconomic assimilation of Blacks is positively or negatively related to the probability that cities have Black mayors. Data were obtained from a sample of 149 cities with 1960 populations of 50,000 or more, nonwhite populations of at least 2,500 households, and at least 95% of the nonwhite population being Black. Data are consistent

with the argument that socioeconomic differentiation is inversely related to the dependent variable, calling into question the "assimilationist" hypothesis, an important perspective in the analysis of minority political participation. The percentage of Blacks was also found to have a major effect, although residential segregation of the area was not. (45 ref)—*Journal abstract*.

6986. Nemecek, Anna M. (Emory U) **The effect of attitude similarity and locus of control on simulated jury decisions.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4407-4408.

6987. Weiner, Michael J. (U North Carolina, Greensboro) **A nonreactive predictor of a "liquor by the drink" referendum.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 103-106.—Used the lost letter technique as a predictor of the outcome of a local "liquor by the drink" referendum. 300 letters with a note, "Found by your car—thought it might be yours," were placed under the windshield wipers of automobiles selected at random. 100 were addressed to a committee favoring passage on the referendum, 100 to a committee opposed to its passage, and 100 to a neutral party. The return rate accurately predicted the outcome of the election. It is recommended that the lost letter technique be used as a nonreactive predictor of the outcome of an election when 2 conditions are met: when voters are reluctant to state publicly their position on an issue and when the issue has aroused strong feelings in the population.—*Journal abstract*.

6988. Zalkind, Sheldon S. (Bernard M. Baruch Coll, City U New York) **Civil liberties: An overview of some contributions from the behavioral sciences.** *Journal of Social Issues*, 1975, Vol 31(2), 1-12.—Highlights 5 themes: (a) the absence of a solid consensus in the US to support specific applications of the Bill of Rights despite increased willingness to support the liberties of some dissenters, (b) the relation of education to civil liberties attitudes, (c) the interrelationships of personality and political attitudes, (d) child and adult (work) socialization influences, and (e) the influence of face-to-face social interactions. 6992. Boxen, Laurel. (State U New York, Albany) **Women in modernizing societies.** *American Ethnologist*, 1975(Nov), Vol 2(4), 587-601.—Although it is commonly assumed that modernization generally brings an increase in sexual equality, the alternative possibility, that modernization favors an inferior status for women, is discussed using economic variables as a basis for comparison. Findings on modern changes in various

societies in which women's traditional position has been relatively strong indicate a deterioration in women's position relative to men. An illustration of this is presented using the case of women in a highland Guatemalan town. (24 ref)—*Journal abstract*.

6993. de Vos, George A. (U California, Berkeley) **Affective dissonance and primary socialization: Implications for a theory of incest avoidance.** *Ethos*, 1975(Sum), Vol 3(2), 165-182.—Contends that, in developing a psychocultural theory, based on the concept of affective dissonance, both psychological and social structural forces must be considered to determine why a society inhibits or periodically allows the appearance of unsanctioned incest behavior. Current generalizations in psychology about cognitive dissonance have missed the point. Evidence for cultures that do not become emotionally concerned about cognitive consistency forces a more systematic reappraisal of affective dissonance in cross-cultural comparative terms.—*Journal summary*.

6994. Fahey, Brian W. (Ohio State U) **Woman and sports: An existential analysis.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4834-4835.

6995. Freund, Kurt; Langevin, Ron; Wescom, Tahoma & Zajac, Yaroslav Z. (U Toronto, Canada) **Heterosexual interest in homosexual males.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 509-518.—Compared heterosexual interest (measured by Ss' retrospective reports) and arousal potential (measured by penile responses to female pictures) in 54 androphilic (mean age, 24.4 yrs), 22 ephebophilic (mean age, 31.8 yrs), and 23 homosexual pedophilic (mean age, 25.8 yrs) males, all but 8 of whom were recruited from prison hospitals. The penile responses of the ephebophilic (EP) and homosexual pedophilic (HP) groups to pictures of physically mature females were not different from those of androphilic (AP) Ss. The EP males responded significantly more to physically mature males than to physically mature females. There were only 2 differences among the groups in the retrospective reports: as opposed to AP Ss, a relatively greater number of EP and HP Ss indicated that up to age 15 or later they had felt attracted exclusively to females and that they had been seduced in childhood or early adolescence by a male. There was a weak but significant correlation of degree of "feminine gender identity" with age at onset of homosexual interest and with heterosexual interest or experience. A higher degree of feminine gender identity went together with less heterosexual interest and experience and with an earlier onset of homosexual interest and experience.—*Journal abstract*.

6996. Griffitt, William. (Kansas State U) **Sexual experience and sexual responsiveness: Sex differences.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 529-540.—30 male and 30 female undergraduates were shown 5 photographic slides depicting different heterosexual behaviors and 1 slide depicting solitary masturbation by a person of the same sex as the Ss. Ss rated the extent to which they found each of the slides sexually arousing and pleasant or unpleasant and indicated how many times they had personally engaged in each of the depicted activities. Following exposure to the slides, sexual arousal and emotional reactions were assessed.

Contrary to the propositions of A. C. Kinsey et al (1953), female heterosexual experience was equal to or superior to masturbation experience as an indicant of female sexual reactivity to the erotic materials. Among males, masturbation experience was superior to heterosexual experience as an indicant of sexual reactivity. The role of affective reactions to sexual experiences as determinants of sexual responsiveness is discussed.—*Journal abstract.*

6997. Gurwitz, Sharon B. & Dodge, Kenneth A. (Northwestern U) **Adults' evaluations of a child as a function of sex of adult and sex of child.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 822-828.—26 male and 26 female undergraduates watched a videotape of a 3-yr-old child who was identified as either a girl or a boy; they then rated the child on a number of personality and ability measures. Males' ratings on many of the measures were more favorable for the "girl" than for the "boy," whereas females' ratings were more favorable for the "boy" than for the "girl." There was also a main effect for sex of S, with females rating the child more favorably than males.—*Journal abstract.*

6998. Johnson, Orna R. & Johnson, Allen. (Columbia U) **Male/female relations and the organization of work in a Machiguenga community.** *American Ethnologist*, 1975(Nov), Vol 2(4), 634-648.—Argues that the organization of work is a major determinant of male-female relations. Using data from the Machiguenga group in southeastern Peru, the degree of solidarity or separation experienced by each sex in the work process and their relative authority over the social disposal of the products of work are examined. Comparisons are made with other Lowland South American groups. (31 ref)—*Journal abstract.*

6999. Kimelman, Joan. (California School of Professional Psychology, San Francisco) **Woman's search for identity.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2936-2937.

7000. Morris, Naomi M. (U North Carolina, School of Public Health, Chapel Hill) **The frequency of sexual intercourse during pregnancy.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 501-507. Obtained reports of day-by-day sexual activity for the previous week from a total community sample of over 900 pregnant and nonpregnant Thai women of childbearing age during a fertility survey in 1967-1968. About 13% of the women were pregnant. Examination of the women's intercourse frequencies at various stages of pregnancy revealed a downward trend as pregnancy progressed. However, a difference between the mean frequency for age-matched, nonmenstruating, nonpregnant women and that during any stage of pregnancy was not significant ($p < .05$) until the 7th mo. Complete abstinence from intercourse during the previous week reached a peak of 72.7% in the 9th mo. The increase in abstinence with the progression of pregnancy appeared linear. Although these Ss are from a different culture, lay and professional advice concerning intercourse during pregnancy is similar to that in the U.S. and because intercourse may be discouraged, particularly in the 3rd trimester, it is difficult to attribute the observation of the gradual decline in frequency to a "physiological" reason.—*Journal abstract.*

7001. Needle, Richard H. (U Maryland) **The relationship between sexual behavior and ways of handling contraception among college students.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2728-2729.

7002. Nyberg, Kenneth L. (U Utah) **Homosexual and homoerotic behavior differences in men and women.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4438.

7003. Parker, Seymour; Smith, Janet & Ginat, Joseph. (U Utah) **Father absence and cross-sex identity: The puberty rites controversy revisited.** *American Ethnologist*, 1975(Nov), Vol 2(4), 687-706.—Re-evaluates the puberty rites controversy associated with the work of J. Whiting et al (1958). Whiting explained the cross-cultural association between severe male puberty rites and low salience of father in the early socialization process by means of the intervening variables of ambivalence in sex (gender) identity in the growing male. This paper investigated this intervening variable directly in a polygynous community in the US: Weston, a southwestern Mormon community with a population of about 1,500. 2 groups of young males from either father-absent or father-present homes were given tests including TAT-like projective stories, a set of actual and ideal sex-linked self-descriptions, and a scalogram of perceived male-female differences. Findings do not support the Whiting hypothesis. Furthermore, a review of the recent literature also did not support this hypothesis. A discussion of cognitive theory as it applies to the problem of male identity suggested alternative ways of viewing this issue. (43 ref)—*Journal abstract.*

7004. Prerost, Frank J. (De Paul U) **The indication of sexual and aggressive similarities through humor appreciation.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 283-288.—Freudian theory and subsequent research indicate a connection between sexual and aggressive motivation. The present study investigated this proposed connection by examining humor preferences during an induced aggressive mood. Appreciation of neutral, sexual, and aggressive humor was examined under conditions of aggression arousal. A total of 90 male and 90 female university students participated in 1 of 2 2×3 factorial designs that crossed arousal with humor type. Ss in arousal conditions rated all humor as funnier than Ss in neutral conditions, and sexual humor was rated as being funniest. Males and females showed complex significant differences in humor preferences.—*Journal abstract.*

7005. Rogers, Susan C. (Northwestern U) **Female forms of power and the myth of male dominance: A model of female male interaction in peasant society.** *American Ethnologist*, 1975(Nov), Vol 2(4), 727-756.—Argues that the assumption of universal male dominance, which stems from epistemological biases in anthropology, is belied by evidence that women wield considerable power within the context of the peasant household and community. Observational data from a small peasant village in northeastern France are presented. It is suggested that the apparent contradictions between public stances of male dominance and the realities of female power can be resolved by a model which is potentially extensible to other types of pre-

industrial societies. The model views male dominance as a myth, while a balance is actually maintained between the informal power of women and the overt power wielded by men. The power of both depends on the persistence of the myth, which is itself maintained by a degree of ignorance on the part of both groups as to how the system actually operates. The transformation of male dominance from myth to reality during the process of industrialization is briefly explored. (2 p ref)—*Journal abstract*.

7006. Rose, Clare. **Women's sex-role attitudes: A historical perspective.** *New Directions for Higher Education*, 1975(Aut), No 11, 1-31.—Surveyed 5,000 freshmen and 3,500 upperclass females from 88 colleges regarding their personal and educational backgrounds, educational experiences, academic and occupational aspirations, personality traits, values, and attitudes. Results indicate clearly defined differences between Ss holding contemporary attitudes regarding their role in society and those holding more traditional attitudes. A psychological explanation of women's social status is presented, and the values and attitudes which underlie discrimination against women are seen as having been accepted into their self-concept and consequent behavior. No significant increase in the numbers of women who contribute to intellectual life is seen possible until women change their attitudes toward their role in society. (4 p ref)—*R. Tomasko*.

7007. Steele, Daniel G. (Baylor U) **Female responsiveness to erotic films and its relation to attitudes, sexual knowledge and selected demographic variables.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2319.

7008. Weeks, Ruth B.; Derdeyn, Andre P. & Langman, Margaretha. (U Virginia, Medical Ctr) **Two cases of children of homosexuals.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 26-32.—Reviews the literature with reference to parental attitudes related to homosexuality, sex-role typing, and object choice. 2 cases of children of opposite-sexed homosexual parents are presented with projective testing indicating difficulties with gender role identity. It is suggested that the manifestation of sexual conflict in these homosexual parents expressed in attitudes and behavior toward the child is not unique and does not differ significantly from that of the heterosexual parent who has sexual conflicts. Gathering of more long-term data is recommended.—*Journal abstract*.

7009. West, Norman D. (Nebraska Psychiatric Inst, Omaha) **Sex in geriatrics: Myth or miracle?** *Journal of the American Geriatrics Society*, 1975(Dec), Vol 23(12), 551-552.—Notes that many younger people regard "sex" as a monopoly within their group. They believe that sexual activity diminishes after age 50 and ceases after age 60. Older people become the butt of cruel jokes about the status of their sexual prowess. A physician's 12-yr experience in working with geriatric residents of a nursing home is briefly reviewed, revealing the sexual needs, activity, and modifications of the elderly.—*Journal abstract*.

Drug & Alcohol Usage

7010. Adkins, Sidney C. (U Virginia) **An assessment of attitudes toward drug abuse and preventative programs held by Marine officers and non-commissioned officers.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3859.

7011. Babor, Thomas F.; Mendelson, Jack H.; Greenberg, Isaac & Kuehnle, John C. (McLean Hosp, Alcohol & Drug Abuse Research Ctr, Belmont, MA) **Marijuana consumption and tolerance to physiological and subjective effects.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1548-1552.—Investigated the relation between marihuana consumption and the development of tolerance during a 31-day study. 18 male 21-26 yr olds with a history of moderate or heavy marihuana use were given access to 1-gram (2.1% delta-9-tetrahydrocannabinol, THC) marihuana cigarettes during a 21-day smoking period. Both groups increased consumption during this time. Heavy users averaged 5.7 cigarettes per day and indicated a progressive decline in ratings of intoxication and duration of pulse rate effect. Moderate users averaged 3.2 cigarettes per day but showed no changes in either of these reactions during this time. Results suggest that tolerance does not develop to the 2 most reliable indexes of marihuana intoxication unless heavy doses of THC are self-administered repeatedly. Also, the tendency to increase consumption during this time is not necessarily associated with the development of tolerance. (17 ref)—*Journal abstract*.

7012. Brady, Samuel. (New School for Social Research, New York, NY) **Drinking patterns of upwardly mobile suburban residents.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4422.

7013. Copemann, Chester D. & Shaw, Paula L. (State U New York, Stony Brook) **Selected demographic characteristics and patterns of drug abuse among treated addicts from a suburban community.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 205-212.—Investigated the age, sex, marital status, ethnicity, education, criminality, and patterns of drug use in 2 groups of drug addicts who had been treated at a suburban halfway house. The aftercare group (AC) of 14 residents had completed enough treatment to demonstrate positive behavior changes and warrant continuation as outpatients. The inactive group (IA) of 23 residents did not exhibit enough change to be included in Group AC. Data show (a) the female to male ratio (16 to 21) was fairly high, but sex was a significant variable only for males—Group AC contained 8 females and 6 males; (b) single individuals were worse risks in treatment than were married; (c) school dropouts did better in treatment; (d) the IA group had used twice as much heroin as the AC over a mean of 3 yrs; and (e) age, race, and criminal history were not significant factors in successful outcome. Results show that, not only were there demographic and drug use differences between AC and IA groups, but also that characteristics in the groups were essentially dissimilar from those in an urban population. (29 ref)—*B. McLean*.

7014. Duncan, David F. (U Texas, Health Sciences Ctr, Public Health School, Houston) **Marijuana and heroin: A study of initiation of drug use by heroin addicts.** *British Journal of Addiction*, 1975(Jun), Vol

70(2), 192-197.—Many studies have explored the question of whether or not marihuana use leads to heroin use. An unstated assumption in most of these studies seems to be the presupposition that marihuana use was the drug user's initiation into use of drugs. In 2 samples of ex-heroin addicts (60 prison inmates serving sentences for drug or drug-related offenses and 19 patients in a methadone maintenance program), it was found that a majority of the Ss had not begun their drug use with marihuana. (16 ref)—*Journal abstract*.

7015. Earles, James A.; Mullins, Cecil J.; Abellera, James W. & Michelson, Alan E. **Drug use data base. US AFHRL Technical Report**, 1975(Jul), No 75(15), 12 p.—Describes the development of a data base of various drug use variables on 13,452 US Air Force officers and enlisted men. Preliminary findings suggest that (a) alcohol is consumed by most personnel, but current use of illicit drugs is confined to a small percentage; (b) users of illicit drugs are mostly in the 1st term enlisted ranks; and (c) more than 1/2 of the users of illicit drugs claim they usually buy their drugs on Air Force bases.

7016. Einstein, Rosemarie; Hughes, I. E. & Hindmarch, I. (U Leeds, England) **Patterns of use of alcohol, cannabis and tobacco in a student population. British Journal of Addiction**, 1975(Jun), Vol 70(2), 145-150.—Investigated patterns of use of alcohol, cannabis, and tobacco in 300 undergraduate respondents to an anonymous questionnaire. The likelihood of Ss' trying cannabis was highest if they smoked tobacco, intermediate if they had given up smoking tobacco, and lowest if they had never smoked. Also there was a positive correlation between the number of drinks consumed per week and the tendency to try cannabis. The observed correlations indicate that Ss who consumed socially acceptable drugs were more likely to try other, less acceptable drugs.—*Journal abstract*.

7017. Flumen, Audrey L. (Rutgers State U) **School alienation, attitudes toward drugs, and drug involvement among students in a middle to upper-middle class suburban high school. Dissertation Abstracts International**, 1974(Jan), Vol 34(7-A), 3987-3988.

7018. Flumen, Louis B. (Rutgers State U) **School alienation, attitudes toward drugs, and drug involvement among students in a lower to middle class inner-city high school. Dissertation Abstracts International**, 1974(Jan), Vol 34(7-A), 3988.

7019. Griffith, Marylee. (Indiana U) **Knowledge and usage of drugs: A study of students' attitudes in grades two through twelve. Dissertation Abstracts International**, 1974(Feb), Vol 34(8-A, Pt 1), 4697-4698.

7020. Kinder, Bill N. (U Texas, Medical Branch, Galveston) **Attitudes toward alcohol and drug abuse. II: Experimental data, mass media research, and methodological considerations. International Journal of the Addictions**, 1975, Vol 10(6), 1035-1054.—Reviews research on knowledge of drug and alcohol abuse and attitudes toward it, and finds that knowledge and attitudes are not consistently correlated. Evaluation of various drug education programs indicates that they have done little to induce attitudinal changes. Conflicting results are reported about the use of the mass media to disseminate information and create changes of attitude, and possible reasons for media ineffectiveness

are discussed. Most of the studies reviewed have suffered from some type of methodological and/or statistical problems. Suggestions are made for more appropriate techniques in future research on this topic. (3 p ref)

Journal summary.

7021. LaDriere, M. LaVerne; Odell, Ralph E. & Pesys, Edmund. (U Detroit) **Marijuana: Its meaning to a high school population. Journal of Psychology**, 1975(Nov), Vol 91(2), 297-307.—Investigated the meaning of the concept of marihuana as measured by both a semantic differential rating scale and a questionnaire. The responses of 100 male and female high school students (50 users, 50 nonusers) indicate that marihuana usage was primarily related to the pleasure of the high, while abstinence was associated with potential harmfulness of the drug to health and practical situational factors. The general response profile corresponds closely to that of a parallel college sample reported in an earlier study by M. L. LaDriere and T. Szczepkowski (see PA, Vol 48:9138), suggesting that neither age and educational level nor sex constituted meaningful variables in drug use motivation. The hypothesis that motivational factors specifically associated with adolescent dynamics—including needs for independence, social acceptance, and adventure—might influence the data of the high school sample was not confirmed. (21 ref)—*Journal abstract*.

7022. Mäkelä, Klaus. (U Helsinki, Finland) **Consumption level and cultural drinking patterns as determinants of alcohol problems. Journal of Drug Issues**, 1975(Fal), Vol 5(4), 344-357.—Sociocultural studies of religious and ethnic differences in drinking behavior suggest that the liberalization of alcohol policies would favor the growth of moderate drinking patterns at the expense of excessive drinking. When policy controls on alcohol are relaxed, increases in moderate consumption occur in addition to and not at the expense of relatively stable patterns of heavy drinking. (37 ref)

7023. McAuliffe, William E. (Harvard U) **A second look at first effects: The subjective effects of opiates on nonaddicts. Journal of Drug Issues**, 1975(Fal), Vol 5(4), 369-399.—Interviewed 59 urban drug addicts (30 White, 29 Black) and 7 university students trying heroin for the 1st time. Reactions of novices to opiates ranged from extremely positive to completely negative, and the role these effects play in forming a drug habit is considered. Subsequent opiate use where effects were unpleasant could be traced to a continued interest in euphoria. Negative reactions caused some neophytes to discontinue use, but addicts-to-be were more motivated and learned from experienced users that undesirable side effects could be discounted as temporary; virtually all the addicts-to-be did achieve euphoria in a few tries. Thus, predependence heroin use is explained by pleasurable drug effects, but when exposure to euphoria occurs in a medical context, the risk of addiction is minimal. (4 p ref)—*Journal abstract*.

7024. McCracken, N. Patrick. (St Louis U) **Differences in response patterns of drug users while stoned and while straight. Dissertation Abstracts International**, 1974(Feb), Vol 34(8-A, Pt 1), 4753.

7025. McLaughlin, James F. (U Montana) **Selected personality characteristics of the moderate marijuana, heavy marijuana, and poly-drug-using marijuana**

smoker. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3881.

7026. Primavera, Louis H.; Simon, William E. & Camisa, John M. An investigation of personality and caffeine use. *British Journal of Addiction*, 1975(Jun), Vol 70(2), 213-215.—Investigated possible personality differences between caffeine users and nonusers. 74 caffeine using and 31 caffeine nonusing female undergraduates were compared on (a) psychological needs, as measured by the Edwards Personal Preference Schedule, (b) self-description, and (c) academic achievement in high school and college because these measures have been shown to discriminate between users and nonusers of tobacco. Results indicate that the caffeine users and nonusers in this study did not differ on the personality measures used.—*Journal abstract*.

7027. Rock, Nicholas L. & Silsby, Harry D. The attitudes of American physicians stationed with the United States Army, Europe, in regard to alcohol and drug abuse. *Military Medicine*, 1975(Nov), Vol 140(11), 781-783.—Assessed the attitudes of 166 military physicians toward drug and alcohol abuse problems and their prescription practices concerning psychoactive drugs and their personal drug and alcohol use patterns. Results show that (a) Ss tended to be concerned about drug abuse, but felt these were more social than medical problems; (b) the vast majority scored low on the Srole Anomie Scale; and (c) 37% had experimented with some illicit drug.

7028. Room, Robin. (U California, School of Public Health, Berkeley) Normative perspectives on alcohol use and problems. *Journal of Drug Issues*, 1975(Fal), Vol 5(4), 358-368.—Social drinking problems are viewed as deviations from behavior norms which are "noticed" and defined as alcohol-related. Drinking norms can enforce heavy drinking as well as restrain it. Many drinking norms are directed at behavior during or after drinking rather than at the amount of drinking. US drinking norms are highly differentiated by social situation and social category of the drinker. Besides individual deviant acts, drinking problems can result from transitional problems between drinking and nondrinking situations, from boundary problems where the enclaving breaks down, and from conflicts over norms. A normative analysis points to the role of social reaction as well as individual behavior in defining social problem drinking. (37 ref)—*Journal abstract*.

7029. Sandler, Irwin; Palmer, Sydney; Holmen, Martin & Wynkoop, Robert. (Phoenix-South Community Mental Health Ctr, AZ) Drinking characteristics of DWIs screened as problem drinkers. *Alcohol Health & Research World*, 1975(Fal), Exp Issue, 19-23.—Interviewed 281 high-risk problem drinkers arrested for driving while intoxicated (DWI). 30 problem-drinking symptoms were assessed and combined to form summary scores on adjustment problems due to drinking, drinking pattern problems, and self-recognition of drinking problems, as well as an overall problem-drinking score. Approximately 80% of the Ss scored above the summary score set as an indicator of problem drinking. It is concluded that a large percentage of drunk drivers are valid clients for alcoholism rehabilitation and that greater cooperation is needed between the judicial-

corrections system and the alcoholism rehabilitation system in order to deal effectively with the problem.—*Journal abstract*.

7030. Schaefer, James M. (State U New York Buffalo) A hologeistic study of family structure and sentiment, supernatural beliefs, and drunkenness. *Dissertation Abstracts International*, 1973(Dec), Vol 34(B), 2434.

7031. Schoenfeldt, Lyle F. & Strimbu, Jerry L. (Georgia) College student drug usage in a state system as a function of type of institution. *Research in Higher Education*, 1975, Vol 3(3), 275-284.—Compared over 4,500 students from 28 universities, colleges, and junior colleges constituting a state system of higher education on extent of drug use. At least 2 of the 3 pairs of groups differed on reported usage of 6 of the substances, with the largest differences being between universities and junior colleges on alcohol and marihuana. A discriminant analysis showed that 9 items formed 2 differentiating dimensions—alcohol usage and hallucinogen-LSD usage—in separating the groups. Despite the statistical significance, the differences in terms of actual numbers of users were small.—*Journal abstract*.

7032. Sharma, B. P. (Bir Hosp, Katmandu, Nepal) Cannabis and its users in Nepal. *British Journal of Psychiatry*, 1975(Dec), Vol 127, 550-552.—Studied the effects of regular and long-term cannabis use on an individual's initiative, efficiency, personal relations, marital harmony, and attitude toward religion. Data were obtained on 227 male Ss; controls were matched for educational level and age. Results show that compared with controls, cannabis users had poor work records, poor social and family relationships, a lack of interest in sex, and a general loss of initiative and efficiency. There was no difference in crime rate between the groups.—*Journal abstract*.

7033. Single, Eric; Kandel, Denise & Johnson, Bruce D. The reliability and validity of drug use responses in a large scale longitudinal survey. *Journal of Drug Issues*, 1975(Fal), Vol 5(4), 426-443.—Results of a survey based on a representative sample of 8,206 public secondary school students, indicate that self-reported illicit drug use is consistent at one point in time, but less so over time. Self-reported illicit drug use was strongly related to Ss' attributes, as well as to data independently obtained from best schoolfriends. Only a very small proportion of Ss reported the use of a fictitious drug. However, inconsistencies over time were related to sporadic patterns of drug use, suggesting that the failure to report certain types of drug use is more the result of poor recall than of willful concealment of use. Underreporting is potentially a greater problem in drug research than overreporting. (32 ref)—*Journal abstract*.

7034. Weber, Robert J.; Mallue, Marilyn & Conner, Joe. (Oklahoma State U) Smoking, social traps, and futuristics. *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 251-253.—In 3 scaling studies with undergraduates as Ss, smoking was used as an example of a social trap. A social trap consists of 2 factors, costs and benefits, with different time courses. A potential trap exists when initially benefits are greater than costs, but over time or over exposures costs overtake benefits. A modified Delphi forecasting method was used to exam-

Time perceived smoking abstinence rates over periods from 1 min to 30 yrs as a function of various incentive conditions (ranging from death to \$1.00) and varying probabilities of obtaining the incentives. Results show that Ss made consistent judgments: They trade off probable consequences and time. For example, if death was sufficiently improbable or removed in time, it was judged to have less effect on stopping present smoking behavior than if it was either highly probable or closer in time to the smoking behavior. It is concluded that smoking is a Faustian act in that future costs are traded for present benefits.—*Journal abstract.*

7035. Weeks, Joseph L. & Mullins, Cecil J. Prediction of drug abuse by the Social Factors Questionnaire. *US AFHRL Technical Report*, 1975(Jul), No 75-16, 15 p.—Investigated the lawlessness and permissiveness scores yielded by a locally developed experimental psychological test to determine if they added significantly to the prediction of 7 drug abuse criteria when combined with available demographic and aptitude variables. Data from 1,474 trainees show that both scores add significant predictive variance to the background variables and appear to have considerable success in discriminating between drug abusers and nonabusers.

EXPERIMENTAL SOCIAL PSYCHOLOGY

7036. Collins, W. Andrew & Zimmermann, Stephen A. (U Minnesota, Inst of Child Development) Convergent and divergent social cues: Effects of televised aggression on children. *Communication Research*, 1975(Oct), Vol 2(4), 331-346.—Assessed the impact of consistently negative cues vs mixed negative and positive cues about a televised aggressor's motives and the consequences to him on children's subsequent behavior. 2nd and 6th graders viewed 1 of 2 edited versions of an aggressive TV program: convergent, in which scenes relevant to motives and consequences were clearly negative; and divergent, in which the aggressor sometimes seemed negative and sometimes positive. There were also nonaggressive control programs at each age (a total of 156 Ss in experimental and control groups). Some random subgroups were tested on an indication of willingness to hurt or help a (fictitious) other child, while other random subgroups responded to a paper-and-pencil instrument employing both aggressive and nonaggressive response alternatives to hypothetical situations. The divergent-condition Ss were significantly more aggressive than convergent-condition Ss. Results are discussed in terms of differences in viewers' cognitive representations of the observed aggression. (34 ref)—*Journal abstract.*

7037. King, George W. (U Illinois) An analysis of attitudinal and normative variables as predictors of intentions and behavior. *Speech Monographs*, 1975(Aug), Vol 42(3), 237-244. Developed and administered a questionnaire to test the hypothesis that an individual's intention to perform a given behavior is a function of (a) his attitude toward performing that behavior and/or (b) his normative beliefs about what others think he should do, weighted by his motivation to comply with those others. It was also hypothesized that an individual's

beliefs about the consequences of performing the behavior, weighted by his evaluation of those consequences, should be highly related to his attitude toward performing that behavior. Ss were 94 undergraduates. Both hypotheses were supported. In addition, it was found that specificity of the attitude measure was a crucial mediator of the attitude-intention relationship.—*Journal abstract.*

7038. Langer, Ellen J. & Roth, Jane. (Graduate & University Ctr, City U New York) Heads I win, tails it's chance: The illusion of control as a function of the sequence of outcomes in a purely chance task. *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 951-955.—Studied attributions in a purely chance task (predicting coin tosses) as a function of either a descending, ascending, or random sequence of outcomes and as a function of whether the S performed the task himself or observed another S performing the task. A primary effect was predicted; early successes would induce a skill orientation towards the task. Data from 90 male undergraduates support the prediction. Ss in the descending condition rated themselves as significantly better at predicting the outcomes of coin tosses than Ss in either of the other 2 groups. This group also overremembered past successes and expected more future successes than the other 2 groups. Involvement had the effect of increasing Ss' expectations of future successes and tended to increase their evaluation of their past performance.—*Journal abstract.*

7040. Rychlak, Joseph F. (Purdue U) Affective assessment, intelligence, social class, and racial learning style. *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 989-995.—Investigated the role of social class, race, and intelligence on the affective learning styles of 160 7th-grade children drawn from a lower and middle socioeconomic community. After pretesting words for reinforcement value, unmixed lists were constructed and Ss put through an individual free-recall learning procedure. The lower-class Ss were retested in a mixed-lists, free-recall format approximately 3 mo later. Blacks as a group, and as a subgroup within the lower socioeconomic level, clearly reflected the positive reinforcement-value effect to a greater extent than Whites. The influence of affective assessment was also more apparent at the lower than at the middle socioeconomic level. Intelligence did not affect these findings, and there were no sex differences. It is argued that classical methods of the laboratory may be an improvement over some of the experimental manipulations now used in personality and socio-psychological researches. 7042. Sevon, Guje. (Swedish School of Economics, Research Inst, Helsinki, Finland) Probability estimates of social events as related to values. *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 229-232.—Differ-

ences in estimates of probabilities that certain social events would happen after given alternatives of (political) actions were analyzed for 158 students with different untrained values about those events. Ss with extremely positive or extremely negative values, as measured by a Likert-type value scale, had 0.5-0.20 higher probability estimates than Ss with no opinion. Ss who earlier in the experiment had attached neutral or extreme values to the events showed a tendency to estimate the probabilities higher than those Ss who had had no such activity preceding the estimation. Awareness of probability estimates did not seem to affect values.—*Journal abstract*.

7046. Takala, Martti. (U Jyväskylä, Finland) **Consistencies of psychomotor styles in interpersonal tasks.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 193-202.—Interpersonal behavior of 125 individuals in 5 tasks (individual performance, 2 dyadic tasks, 2 small group tasks) was videotaped and coded on 11 psychomotor categories concerning (a) movements regulating interaction, (b) indications of tension, and (c) temperamental acts. The individual consistencies were examined on the basis of correlational analyses and task similarities. The consistency of individual psychomotor behavioral across all the tasks was highest in the number of self-initiated acts (psychomotor activeness). Consistency was also found in the total tension score and the utilization of large-narrow space, while the effect of the particular tasks was clearly demonstrated in the other categories of psychomotor style. Both communication and disposition interpretations of psychomotor styles are considered in the explanation of the results, and some methodological factors reflected in the interpretations are presented. 7049. Allen, Vernon L. & Wilder, David A. (U Wisconsin, Madison) **Categorization, belief similarity, and intergroup discrimination.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 971-977.—100 undergraduates were arbitrarily categorized into 2 groups and informed that ingroup and outgroup members were either similar or dissimilar to themselves on attitudes and beliefs. Then Ss divided rewards between a member of the ingroup and a member of the outgroup. The ingroup was favored in the assignment of rewards across all conditions, indicating that mere categorization is sufficient to produce intergroup discrimination. Ingroup favoritism was further enhanced when the ingroup held similar beliefs to those of the S, but similarity or dissimilarity of outgroup members did not differentially affect discriminative behavior. Thus, intergroup characteristics may be more important than outgroup characteristics as a contributor to intergroup behavior. Ss did not report ingroup favoritism as the preferred strategy for distributing rewards, as might be expected according to the social norm explanation.—*Journal abstract*.

7058. Davis, Deborah; Rainey, Hal G. & Brock, Timothy C. (Ohio State U) **Interpersonal physical pleasuring: Effects of sex combinations, recipient attributes, and anticipated future interaction.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol 33(1), 89-106.—In an investigation of interpersonal pleasuring, defined as the administration of positive physical stimulation to one person by another, a total of 439 undergraduates used the Brock Pleasure Machine to give 30 intensity-graded waves of pleasure to a confederate recipient's buttocks. Exp I showed that pleasuring increased across trials and more pleasuring was given to an opposite- than to a same-sex partner. Exp II replicated these results and revealed interactions involving sex combination and the manipulated attractiveness and responsiveness of the recipient. Responsive and attractive recipients elicited higher pleasuring in same-sex pairs. Responsiveness led to lower pleasuring in opposite-sex pairs, except for a male pleasuring an unattractive female. Exp III showed that anticipation of future interaction increased pleasuring. Exp IV showed that pleasuring was reduced following acquaintanceship with a dissimilar hostile recipient. Limits to a theory of interpersonal gratification are discussed. (34 ref)

7060. Eaton, Warren O. & Clore, Gerald L. (U Illinois, Champaign) **Interracial imitation at a summer camp.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1099-1105. —Collected imitation data at week-long summer camp sessions involving prolonged and intimate contact between Black children and White children of equal status. As part of an initiation ceremony, 57 Black and 55 White 8-12 yr olds observed the behavior of unfamiliar Black adult and White adult models responding to the commands of an Indian chief. In 3 separate camp sessions, the proportions of responses imitative of racially different models were 0.40, 0.42, and 0.37 for campers observed on the 1st day and 0.52, 0.49, and 0.53 for those observed on the 5th day. The overall difference between low and high contact groups was significant ($p \leq .05$). A separate-sample pretest-posttest design ruled out threats to the internal validity of the study, and the observation of behavior in a naturalistic context enhanced the ecological validity. It is concluded that interracial contact effects were not limited to changes in behavior among the children themselves but generalized to unfamiliar adults encountered in the same setting. (17 ref)—*Journal abstract.*

7061. Ellsworth, Phoebe C. & Langer, Ellen J. (Yale U) **Staring and approach: An interpretation of the stare as a nonspecific activator.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol 33(1), 117-122. Tested the hypothesis that the stare may function as a stimulus either to approach or to avoidance, depending on the context. In a 2×2 bystander intervention paradigm, the nature of the victim's plight and the appropriate remedy were either clear or ambiguous, and

the victim either stared at the S or did not. Data from 60 20-65 yr old unaccompanied female shoppers support the hypothesis: there was no main effect for staring. More help was elicited in the clear conditions than in the ambiguous conditions, but the differences between these 2 conditions only reached significance when the victim stared.—*Journal abstract.*

7062. Epley, Stephen W. (Wartburg Coll) **The presence of others may reduce anxiety: The evidence is not conclusive.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 886.—States that L. S. Wrightsman's 1975 article provides a needed clarification of the procedures in his 1960 study (see PA. Vol 35:5012) but fails to consider all aspects of the present author's methodological critique. Other evidence cited by Wrightsman as supporting the notion of a group-produced decrease in self-reported anxiety is not directly relevant to the question of whether Ss who are with others report less anxiety than those who are alone. Regarding this question, the evidence is still inconclusive.—*Journal abstract.*

7063. Feild, Hubert S.; Lissitz, Robert W. & Schoenfeldt, Lyle F. (Auburn U) **The utility of homogeneous subgroups and individual information in prediction.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 449-461.—Notes that, in using subgroups for predictive purposes, a key assumption is often overlooked (i.e., at least one of the grouping or predictor dimensions affects the relationships between the other grouping dimensions and the criteria). The present study emphasized this commonly overlooked assumption and examined empirically the utility of subgroup vs individual information in prediction. Data collected on 509 university seniors in 32 life history subgroups (19 male and 13 female) were used to evaluate the utility of subgroup information in prediction. Of 24 criteria (college experience data) predicted by subgroup information, predictive efficiency of 4 criterion measures was enhanced when subgroup information was added to individual information. However, for the vast majority of the criterion measures, predictive efficiency would have been lost had only subgroup information been used in prediction. It is recommended that researchers carefully evaluate the effects on predictive efficiency when using subgroups rather than individual information in prediction. (25 ref)—*Journal abstract.*

7066. Golding, Stephen L. & Knudson, Roger M. (U Illinois, Psychological Clinic, Champaign) **Multivariable-multimethod convergence in the domain of interpersonal behavior.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 425-448.—While empirical studies of the domain of interpersonal behavior indicate a great deal of conceptual convergence, there are few data bearing on the convergent validity of indices of interpersonal

behavior across modes of measurement within the same population of Ss. As part of a larger study of the assessment of interpersonal behavior, 64 paid high school seniors participated in a multivariable-multimethod investigation, and completed a variety of self-report assessment devices, direct self-ratings, and peer ratings. Substantial convergence for 3 dimensions of interpersonal behavior—aggressive dominance, affiliation-sociability, and autonomy—was obtained across all modes of measurement. Results have implications for the assessment of interpersonal behavior, the individual differences vs situational variance controversy, and associated theoretical and methodological problems in multivariable-multimethod-multisituational designs. 7070. **Haccoun, Dorothy M.; Allen, Jon G. & Fader, Stuart.** (Concordia U, Sir George Williams Faculty of Arts, Montreal, Canada) **The effect of sex and emotion on selection of helping responses by peers.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 17-21.—52 male and 52 female undergraduates indicated the extent to which they would be likely to use different helping categories in response to tape recordings of male or female stimulus persons expressing problems in angry, sad, or neutral manners. Females indicated that they would use more nurturing responses to individuals expressing problems. Emotion expressed proved to be a very powerful determinant of indicated responses. Targets expressing their problems in a sad manner were more likely to be helped than those presenting their problems with anger or little emotion. Angry targets would receive the least amount of help and were most negatively evaluated. Target sex had little effect on helping responses or evaluations of targets.—*Journal abstract*.

7071. **Hall, Jay.** **Interpersonal style and the communication dilemma: II. Utility of the Johari Awareness model for genotypic diagnosis.** *Human*

Relations, 1975(Oct), Vol 28(8), 715-736.—Examined self-report data from male managers for the presence of 3 underlying unmanifested genotypic influences on communication in organizations: a security genotype, a reciprocity genotype, and a form-function genotype. Results confirm their presence and confirm the utility of the Johari Awareness model as a paradigm for genotypic diagnosis and research.

7072. **Harper, Lawrence V. & Sanders, Karen M.** (U California, Davis) **The effects of adults' eating on young children's acceptance of unfamiliar foods.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 206-214.—In 2 experiments, adults presented unfamiliar foods to 14-20 and 42-48 mo old children individually in their homes. More children put the food in their mouths when the adults also were eating than when the adults simply were offering the food. More children put food in their mouths when their mothers were the source (Exp I) than when the source was a friendly adult male "visitor" (Exp II). However, even when alone with a child, the visitor's eating elicited reliably more tasting. Analysis of requesting behavior indicated that the adults' eating aroused a desire to eat in the children. There were no consistent sex differences or Sex of Visitor \times Sex of Child interactions in children's food acceptance. There was a suggestion that younger children were more affected by repeated offerings than were older children. It is concluded that a relatively "low-level" form of observational learning, social facilitation, can account for the data. (16 ref)—*Journal abstract*.

7078. Laughlin, Patrick R. & Jaccard, James J. (U Illinois, Urbana-Champaign) **Social facilitation and observational learning of individuals and cooperative pairs.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 873-879.—In a study with 270 female undergraduates, individuals and cooperative pairs were observed by an audience of 0, 1, or 2 persons as they solved 3 successive concept attainment problems. The observers subsequently solved 3 problems as individuals or cooperative pairs in an incidental learning paradigm. An audience of either 1 or 2 persons hindered the performance of individuals relative to unobserved controls, but had no effect upon the performance of the cooperative pairs. Subsequently, the observers of individuals performed worse than controls who had not observed anybody, but the observers of pairs performed better than controls who had not observed anybody. Thus, there was a "vicious circle" effect for the observers of individuals, but a beneficial effect for the observers of interacting groups, indicating that the audience may not only have different effects upon the performance of individuals and interacting groups, but may subsequently perform differently itself. (18 ref) *Journal abstract.*

7079. Laughlin, Patrick R.; Kerr, Norbert L.; Munch, Margaret M. & Haggarty, Carol A. (U Illinois, Champaign) **Social decision schemes of the same four-person groups on two different intellectual tasks.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol 33(1), 80-88.—501 female high school students took the Remote Associates Test (RAT) and the Otis Quick-Scoring Mental Ability Test first as individuals and then were assigned to cooperative groups or control individual conditions for a 2nd test administration. 10 social decision scheme models were tested at each of 3 ability levels for each task as theories of the underlying group process. As predicted, the best-fitting social decision scheme on the RAT represented a truth-wins process, while the best-fitting social decision scheme on the Otis test represented a complex combination of a truth-supported-wins process when 3 or 4 members knew the correct answer, an increment from grouping when 2 members knew the answer or no members knew the answer, and strong conformity pressures against a single correct member. Results extend previous research in which the group task and group members have been confounded to a demonstration of different social decision schemes for the same groups on different group tasks. 7080. Mears, Peter M. (Mississippi State U) **The performance of small groups in communication networks.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4499.

7081. Michellini, Ronald L.; Wilson, John P. & Messé, Lawrence A. (State University Coll New York, Brockport) **The influence of psychological needs on helping behavior.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 253-258.—Investigated the influence of safety and esteem needs on helping behavior. From approximately 300 male students, 60 Ss who expressed a high need for safety (relative to esteem), a high need for esteem, or an equal and moderate need for both safety and esteem on a sentence completion test were selected. Ss were placed in an experimental situation in which other bystanders refrained from coming to the aid of a female who accidentally dropped the materials she was carrying. As expected, the results indicate that help was related to level of esteem. Thus, the research demonstrates the influence of personality on helping behavior, which in the past has been examined primarily in terms of situational factors. (20 ref)—*Journal abstract.*

7082. Murphy, John H. & Witt, Robert E. (U Texas, Austin) **Group conformity influence: A proposed measure.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 115-121.—Notes that measurement problems in evaluating group conformity influence center around the need for a measure which takes into account (a) the relevant range of behavior or attitude alternatives in a given situation, (b) variation in group size, and (c) the probability of occurrence of any particular behavior or attitude pattern in a group. 2 measures of group conformity influence were compared which take these measurement problems into account: a multinomial-based measure and a hypergeometric-based measure. Data were obtained from 25 groups of housewives in a study of group influence on brand choice. Findings suggest that the hypergeometric measure appears to be more conceptually valid, while the multinomial measure may possess more strength statistically. It is noted however, that findings are far from conclusive.—*Journal abstract.*

7083. Myers, David G. (Hope Coll) **Discussion-induced attitude polarization.** *Human Relations*, 1975(Oct), Vol 28(8), 699-714.—Examined the group polarization hypothesis in 2 experiments with a total of 193 undergraduates. In Exp I group discussion polarized the evaluations of 6 hypothetical faculty members, 3 described positively and 3 negatively. "Good" faculty were rated and paid even more favorably after group interaction and contrariwise for "bad" faculty. Exp II separated Ss into groups which were conservative or liberal in attitudes regarding women. Subsequent discussion of statements regarding the role of women yielded an increase in the attitude gap between the conservative and liberal communities. (18 ref)—*Journal abstract.*

7084. Natale, Michael. (Ohio U) **Convergence of mean vocal intensity in dyadic communication as a function of social desirability.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 790-804.—Demonstrated convergence of mean vocal intensity under 2 conditions simulating the natural dialogue. In Exp I with 21 male undergraduates, the vocal intensity of the interviewer (E) as heard by the Ss over 2 speakers placed at a 10-ft distance, was restricted to 3 different intensity levels: 80-83, 86-89, and 92-95 db SPL. Exp II, with 25 male and 25 female same-sex dyads of under-

graduates, used unstructured conversation, with each pair of Ss conversing for 3 1-hr sessions. Prior to the 1st session, Ss filled out the Marlowe-Crowne Social Desirability Scale. Results indicate that the lowering or raising of the interviewer's vocal level produced a corresponding change in the vocal level of the S. Also, the degree to which an S will match another S's vocal level was predicted by the social desirability of the individual. (68 ref)—*Journal abstract*.

7085. Nordholm, Lena A. (Cumberland Coll of Health Sciences, Haymarket, Australia) **Effects of group size and stimulus ambiguity on conformity.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 123-130.—Previous studies suggest that group size effects on conformity are obtained in unambiguous but not in ambiguous stimulus situations. The present experiment examined this suggested interaction between stimulus ambiguity and group size. These 2 independent variables were varied in a 2×4 factorial design. Under the guise of a learning experiment 140 female undergraduates were exposed to social pressure by use of apparatus like that by R. S. Crutchfield. Analysis of variance on the conformity scores indicated a strong linear group size effect ($p < .001$) but no significant interaction. It is concluded that the group size effect can be obtained in ambiguous stimulus situations and suggested that methodological differences might account for previous failures to find this effect.—*Journal abstract*.

7088. Schlesinger, I. M. (Hebrew U, Jerusalem, Israel) **Towards a structural analysis of discussions.** *Semiotica*, 1974, Vol 11(2), 109-122.—Presents a quantitative method for analyzing the structure of discussions. A matrix is set up, with all "moves" (utterances) enumerated along both the horizontal and vertical axes. Each cell shows "one" or "zero" to indicate reference by a discussant to any previous move. This permits the quantitative definition of the properties "density," "load," "segment," and "focus," which correspond respectively to the subjective notions of complexity of discussion, complexity of comment, continuity, and recurring issues, in relation to a discussion. Another quantitatively defined property, "cut point," corresponds to both complexity and connectedness, and in general the quantitative definitions may both encompass and refine several subjective notions, since matrices can also be set up, for instance, within 1 discussant, or between segments.—C. A. Sherrard.

(U Rhode Island, Coll of Home Economics) **Group values shown in preadolescents' drawings in five English-speaking countries.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 23-37.—Studied children's expression of cooperation and other values and attitudes. It was assumed that a comparison of national groups of similar ethnic derivation would show genetic differences to be minimal and differences in results attributable largely to environmental influences. Ss totaled 1,000—100 boys and 100 girls, aged 11-12, from Australia, Canada, England, New Zealand, and the US. W. Dennis's Draw-A-Man task was administered, and then the child drew himself and someone else doing something. Scores for smiling and hostility were consistent with Dennis's findings. Dyad scores showed US Ss to be high in smiling and low in competition, cooperation, games and sports, and work. New Zealand and Canadian scores showed many similarities, being high in cooperation and work. English Ss ranked highest in competition and Australians in humor.—*Journal abstract*.

7093. Snyder, Patricia A. (U Southern California) **Small group facilitators: Analysis of attitudes, interests, and values among three types of successful group leaders.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4008.

7094. Sobel, Robert S. & Lillith, Nancy. (Hunter Coll, City U New York) **Determinants of nonstationary personal space invasion.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 39-45.—A male or female E violated the personal space of 116 pedestrians in midtown Manhattan. The S population were predominantly middle-class adults of all ages; 53% were male and 27% were Black. The E walked toward a target S in an unwavering straight line. Ss and Es approached and passed each other in a section of the street where a measurement grid had been drawn on the sidewalk. Observers measured the point at which Ss initially deflected from the collision line and the distance between S and E at the point at which they passed each other. Results indicate that males were given less frontal space than females. About 40% of the trials resulted in mild brushes even though the line of vision between the

Reviving the risky shift phenomenon: Applications of group dynamics research to educational practice. *Improving Human Performance Quarterly*, 1978(Spr), Vol. 4(1), 1-10. The nature of the risky shift phenomenon, which is the observation that, on the average, individuals who have participated in a group discussion were more risk-taking and venturesome than individuals who had not. Teachers were studied in 3 treatment groups and a control group. Each treatment group discussed a different testing instrument. Results showed that there were 2 effects: (a) a "main-effect risky shift," a shift in the direction of greater risk-taking on the instrument discussed by a treatment group; and (b) a "transfer-effect risky shift," a shift detected by instruments not discussed by treatment groups. The latter effect demonstrated that it was not necessary for there to be discussion of specific items for the risky shift phenomenon to occur. (40 ref)—*M. E. Poursel*.

7096. Stephenson, G. M. & Brotherton, C. J. (U Nottingham, England) **Social progression and polarization: A study of discussion and negotiation in groups of mining supervisors.** *British Journal of Social & Clinical Psychology*, 1978(Sep), Vol. 14(3), 241-252. 96 male mining supervisors completed a role perception questionnaire. Based on their replies 2-person and 4-person groups were formed in which members of the group were either Agreed (were on the same side) on 3 items for discussion, or Divided (half and half on opposite sides). Agreed groups became significantly more extreme than Divided groups at post-discussion, and 4-person groups produced greater polarization than 2-person groups. Divided Ss, on the other hand, progressed negatively (contrary to their initial polarization) and Agreed Ss progressed positively (in line with their initial polarization). This difference was significantly greater in the 2-person than in the 4-person condition. Greater attitude change overall occurred in the Divided than in the Agreed conditions. 7097. Stewart, John E. & Rosen, Sidney. (Merchhurst Coll) **Adequacy of compensation, worthiness of recipient, and their effects on transgressor compliance to render aid.** *Journal of Social Psychology*, 1975(Oct), Vol. 97(1), 77-82. Investigated the effects of adequacy of compensation and worthiness of recipient (as to compensation) on the willingness of transgressing Ss to make restitution. Ss were 60 female undergraduates. As expected, the victim received more adequate compensation than 2 other less worthy recipients. However, there were no differences across recipient conditions when compensation was inadequate. The prediction that the victim would receive more compensation when compensation was adequate than when inadequate was not supported, nor was the hypothesis that the nonvictim recipient would receive more inadequate compensation than the victim surrogate recipient. Some questions are raised concerning the conceptual validity of the "inadequate compensation" manipulation.—*Journal abstract*.

7098. Wall, James A. (Indiana U, Bloomington) **The effects of constituent trust and representative bargaining visibility on intergroup bargaining.**

Behavior & Human Performance, 1978(Mar), Vol. 14(2), 244-256. Studied the effects of a constituent's trust in his representative and the visibility of the representative's bargaining on (a) the representative's bargaining behavior, (b) the opposing representative's (outsider's) bargaining behavior, and (c) the number of agreements reached by the representative and outsider. 240 male undergraduates formed 2-man labor and management teams and bargained over 4 separate wages. In the negotiations, 2 Ss serving as their respective team's representative bargained face to face with each other, each representative's constituent directed his bargaining. Initial constituent distrust (vs trust) fostered competitive representative and outsider bargaining and fewer agreements. Bargaining visibility engendered similar though weaker results. In addition, as the negotiations proceeded, the initial constituent distrust of his representative diminished as the representative's competitiveness increased. Findings suggest a modification of current intergroup bargaining models. (17 ref) —*Journal abstract*.

7099. Wall, James A. (Indiana U, Graduate School of Business, Bloomington) **Effects of sex and opposing representative's bargaining orientation on intergroup bargaining.** *Journal of Personality & Social Psychology*, 1976(Jan), Vol. 33(1), 55-61.—Studied the effects of sex and the opposing representative's (outsider's) bargaining orientation on (a) a constituent's bargaining directives to a representative, (b) the representative's bargaining behavior, (c) the outsider's bargaining behavior, (d) the number of agreements reached, and (e) the amount of time spent bargaining. 132 undergraduates formed 2-person labor and management teams and bargained over 4 separate wages. The 2 Ss serving as the representative and the outsider bargained face to face with each other. The other 2, the constituents, directed and monitored the representative's and outsider's bargaining. Female (vs male) constituents issued more cooperative directives to their representatives, and these representatives bargained more cooperatively than did male representatives. Over the 4 negotiations, female representative-outsider dyads reached approximately the same number of agreements as did the males but took less time to do so. The outsider's bargaining orientation produced no significant effects. (29 ref) —*Journal abstract*.

7101. White, David G. & Le Huray, Gary J. (U Birmingham, England) **The effect of intersubject communication as a contaminating factor in research involving young children.** *European Journal of Social Psychology*, 1975, Vol. 5(2), 269-273.—Compared 2 groups of Ss on their ability to identify an ambiguous figure; one group had been exposed to peers with knowledge of the figure's identity, the other to peers without this knowledge. The 74 5-7 yr olds were drawn from infant schools in lower socioeconomic areas. Results indicate that inter-S communication can have a contaminating effect. Pledges of secrecy from young

children cannot be assumed to have been kept.—*R. Tomasko.*

7102. Wilson, Lorene & Rogers, Ronald W. (U South Columbia) **The fire this time: Effects of race of target, insult, and potential retaliation on Black aggression.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 857-864.—Predicted that Blacks would aggress more toward Whites than Blacks regardless of the target's potential for retaliation, and more toward insulters than noninsulters regardless of the race of the insulter. Ss were 64 female Black undergraduates. These expectations were confirmed on a measure of direct attack (shock intensity), demonstrating that passive accommodation toward Whites has been replaced by a readiness to display overt aggression. However, on a measure of impulsive and imperceptible aggression (shock duration), Blacks received stronger attacks than did Whites. Triple-order interaction effects on the measures of shock intensity and duration revealed a complex pattern of Black aggression that was interpreted in terms of the relationship between the 2 forms of aggression and the conflict between new militant norms and the residue of oppression. 7112. Bock, Douglas G. & Saine, Thomas J. (U Florida) **The impact of source credibility, attitude valence, and task sensitization on trait errors in speech evaluation.** *Speech Monographs*, 1975(Aug), Vol 42(3), 229-236.—Presents a general paradigm of a rating error theory, together with a study testing relationships from the theory. The study aimed to discover the effects of source credibility, attitude valence, and task sensitization on trait errors in the evaluation of speeches. The main hypothesis of the study was an interaction effect on trait errors in the speech ratings. Ss were 193 undergraduates. The presence of a significant 3-way interaction confirmed the research hypothesis. Results suggest that when speech raters are sensitized to the task and are in favor of the view of the speaker, their trait errors on "ideas" will favor a low credibility speaker. Results are explained in terms of attraction and similarity.—*Journal abstract.*

7113. Bond, Michael H. & Dutton, Donald G. (Chinese U Hong Kong, Shatin) **The effect of interaction anticipation and experience as a victim on aggressive behavior.** *Journal of Personality*, 1975(Sep), Vol 43(3), 515-527.—Examined 4 different kinds of expectation for future interaction, arguing that the critical variable inhibiting aggression was whether the potential for counteraggression was present. A learning paradigm was used where 160 undergraduates shocked others for making incorrect responses. Counterbalanced against various conditions of interaction anticipation was whether Ss had been shocked prior to acting as trainers. Shock experience and potential for counterattack were each significantly effective in reducing the intensity of shocks delivered. High correlations between trial number and intensity were also found in high-intensity groups. (17 ref)—*Journal summary.*

7114. Boski, Pawel. (U Warsaw, Inst of Psychology, Poland) **Motivational determinants of the diagnostic process.** *Polish Psychological Bulletin*, 1975, Vol 6(3), 157-165.—Conducted a study with 120 medical students in which the hypotheses predicted relationships between achievement motivation and levels of incentive value, subjective probability of success, and performance. Diagnostic experimental tasks were constructed as medical cases. The results contradict some basic notions

of J. W. Atkinson's (1966) theory. Ss with a positive motivation pattern were found to seek a maximalization of incentive value and subjective probability of success, while Ss with a negative motivation pattern sought a minimalization of anticipated value and subjective probability of failure. Moreover, the former type of S reached a higher performance level than the latter. (30 ref)—*Journal abstract*.

7115. Brickman, Philip; Ryan, Kathleen & Wortman, Camille B. (Northwestern U) **Causal chains: Attribution of responsibility as a function of immediate and prior causes.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1060-1067.—72 male and 72 female undergraduates each read an insurance company accident report in which the immediate cause of the accident (internal or external to the driver), the prior cause of the cause (internal, external, or none specified), and the particular accident (4 versions) were experimentally manipulated. A prior cause opposite to the immediate cause reversed the effects of the immediate cause. Internal causes were more diagnostic of the likelihood of an accident than external causes. In internal chains, immediate causes were rated as more important, while in external chains prior causes were rated as more important. Since the effects of internal and external immediate causes can be canceled by specifying opposite prior causes, it is suggested that the question of internal-external attribution has an ambiguity whose resolution depends in part on how far back in time the chain is traced. (23 ref)—*Journal abstract*.

7116. Cann, Arnie; Sherman, Steven J. & Elkes, Roy. (Indiana U, Bloomington) **Effects of initial request size and timing of a second request on compliance: The foot in the door and the door in the face.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 774-782. Tested 4 separate procedures for influencing compliance to the 2nd of 2 requests in a field study. 2 factors, size of initial request and timing of the 2nd request, were included in a 2×2 factorial design. The 88 adult Ss were induced either to comply with a small initial request or to refuse a large initial request. They then received a moderate request either immediately (no delay) or 7-10 days later (delay). Compliance to the 2nd request was the dependent measure. A 2nd study was conducted with 60 new Ss to replicate the no-delay and control conditions of the main study. Results in the 2 delay conditions and the small-request no-delay condition support a self-perception position in that the induction of one kind of behavior (compliance or noncompliance) carried over to affect subsequent behavior similarly. The large-request no-delay condition supported a bargaining explanation, as initial refusal to comply led to an increase in subsequent compliance. (16 ref)—*Journal abstract*.

7122. Curran, James P. & Lippold, Stephen. (Purdue U) **The effects of physical attraction and attitude similarity on attraction in dating dyads.** *Journal of Personality*, 1975(Sep), Vol 43(3), 528-539.—In 2 studies, a total of 392 undergraduate couples were matched for a computer date on the basis of height, age, and similarity in physical attractiveness. The effect of attitude similarity on attraction was minimal. An objective measure of attraction was significantly related to a male's attraction toward his date in both studies and to a female's attraction toward her date in one study. The strongest correlations were between a date's rating of his or her partner's physical attractiveness and the date's liking of the partner, but these may have been confounded by a "halo" effect. Significant relationships were also found between a S's degree of physical attractiveness and a S's degree of sexual experience, dating popularity, and dating anxiety. (16 ref)—*Journal summary*.

7123. Deaux, Kay & Farris, Elizabeth. (Purdue U) **Complexity, extremity, and affect in male and female judgments.** *Journal of Personality*, 1975(Sep), Vol 43(3), 379-389.—Conducted 2 studies with a total of 99 male and 66 female undergraduates to elucidate aspects of the interpersonal judgment process as it is applied to and by males and females. Measurement of judgments using the Role Construct Repertory Test allowed consideration of cognitive complexity scores, extreme ratings, and a total affective rating. Findings from both studies suggest that males and females differ in their use of extreme scores and total affective ratings, but not in complexity. Characteristics of the stimulus person affected each of the 3 dependent measures. Interrelationships among the 3 judgmental measures provided information about the methodological and conceptual interplay of various factors in interpersonal judgment. (18 ref)—*Journal summary*.

7130. Fracchia, J. et al. (Long Island Research Inst, Central Islip Psychiatric Ctr, NY) **The effect of increased information upon community perception of ex-mental patients.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 271-275.—30 suburban homeowners were assigned 1 of 3 concepts (mildly, moderately, or severely ill ex-mental patient), were required to read a short description of Brief Psychiatric Rating Scale symptoms, and were asked to complete a semantic differential rating the assigned concept. Data show Ss responded differentially to the levels of severity. This finding contrasts with those from a previous study of similar suburbanites which indicated nonindividuation among severity of illness levels under minimal information conditions. A more favorable perception of mildly ill ex-mental patients resulted from the exposure to more information.—*Journal abstract*.

7131. Gardner, Joseph A. (U Wyoming) **The effects of body motion, sex of counselor and sex of subject on counselor attractiveness and subject's self-disclosure.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2337.

7132. Gintner, Gary & Lindsold, Svenn. (Ohio U) **Rate of participation and expertise as factors influencing leader choice.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1085-1089.—72 female undergraduates were placed in 4-person problem-solving groups. A confederate in each group was identified as either expert or inexperienced, made expert or inexperienced contributions, and either talked a lot or relatively little. The problem was made high or low in ambiguity. It was hypothesized that a high rate of participation would influence choice of the confederate as leader in the

inexpert condition but that talkativeness would not be influential in the expert condition. Results support the hypothesis. The characteristics of the confederate were somewhat less influential when the problem was low in ambiguity. Results are discussed in terms of what talkativeness may signify to other group members. When talkativeness is not resisted by the group it is tentative evidence that the talker is perceived as an appropriate, qualified, and legitimate leader.—*Journal abstract*.

7133. Gitter, A. George; Black, Harvey & Fishman, Janet E. (Boston U) **Effect of race, sex, nonverbal communication and verbal communication on perception of leadership.** *Sociology & Social Research*, 1975(Oct), Vol 60(1), 46-57.—In a study with 151 university students, the effect of (a) nonverbal communication (NVC), (b) verbal communication (VC), (c) race of communicator, and (d) sex of perceiver on the perception of leadership was investigated. Results indicate that when NVC was compared with VC, NVC proved to be more potent in the perception of leadership. Findings suggest that nonverbal cues are an essential element in the person perception process. (18 ref)—*Journal abstract*.

7134. Goldstein, Jeffrey H. et al. (Temple U) **Punitiveness in response to films varying in content: A cross-national field study of aggression.** *European Journal of Social Psychology*, 1975, Vol 5(2), 149-165.—Punitiveness in 866 male movie-goers in London, Philadelphia, Rome, and Toronto was measured before or after they attended films varying in content (aggressive, sexual, neutral) and arousal potential (low, high). Altruism was also assessed for some Ss. Hypotheses stemming from social learning theory and arousal theory were tested by comparing changes in punitiveness at aggressive, nonaggressive arousing, and nonaggressive nonarousing films. At aggressive films there was an increase in punitiveness, whereas a reduction in punitiveness was found at neutral films. Sexual films led to a smaller increase in punitiveness than aggressive films. Findings imply that arousal was a necessary, but not sufficient, condition for increasing punitiveness. There were no significant cross-national differences in response to the films. Two additional findings in the US sample were that urban Ss were more punitive than rural Ss and that the length of urban residency correlated negatively with altruism. (French & German summaries) (37 ref)—*Journal abstract*.

7136. Grush, Joseph E.; Clore, Gerald L. & Costin, Frank. (Northern Illinois U) **Dissimilarity and attraction: When difference makes a difference.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 783-789.—1,378 undergraduates described themselves and their 57 instructors on the Gordon Personal Profile or the Gordon Personal Inventory which measure traits relevant (ascendancy and personal relations) and irrelevant (sociability and cautiousness) to teaching skill. Dissimilarity (instructor being higher than student) on relevant trait dimensions was hypothesized to be instrumental for

student satisfaction with an instructor's role performance. When students were classified as similar or dissimilar to their instructors on the personality dimensions, those most attracted to their instructors were those dissimilar on relevant (but not irrelevant) traits. The dissimilarity finding was not an artifact of differences in skill of instructor nor of differences in students' perceptions of their instructors' traits. A 3-dimensional system is outlined to specify when similarity and dissimilarity should promote attraction. (23 ref)—*Journal abstract*.

7137. Hurwitz, Don; Wiggins, Nancy H. & Jones, Lawrence E. (U Illinois, Champaign) **A semantic differential for facial attribution: The face differential.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 370-372.—Four groups of 10 college students each (Black males, Black females, White males, and White females) associated a total of 2,400 personality descriptive adjectives to slides of 20 Black and White male faces. Adjectives were grouped into synonym classes, and important adjective groups and their antonyms were selected on the basis of (a) frequency of association, (b) judged relevance of adjective to faces, (c) judged commonness of opposite, and (d) judged commonness of adjective. This procedure was conducted for the whole group of 40 Ss by 1 investigator and for each of the 4 subgroups by another investigator. The 2 adjective lists were compared, and a final set of 27 bipolar adjective scales was selected as appropriate for the study of personality attributions to faces. Race and sex differences in the use of these adjectives were explored.—*Journal abstract*.

7140. Katz, Irwin; Cohen, Sheldon & Glass, David. (Graduate School & University Ctr, City U New York) **Some determinants of cross-racial helping behavior.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 964-970. Tested the hypothesis that White Americans will favor Black over White help-seekers when both display socially valued characteristics. Male confederates posing as college students telephoned 2,340 White adult males and asked them to answer several questions about a consumer product. Confederates identified themselves as Negro or Black or used no racial label. In addition, callers used either high, medium, or low levels of assertiveness. Ss' racial attitudes were assessed 1 mo later in another telephone survey. Amount of compliance was greater for Negro callers than for Black or nonminority (i.e., no label) callers. Compliance rates declined with increasing assertiveness, especially for minority callers. In the Negro condition helpers had less favorable racial attitudes than nonhelpers. In a 2nd experiment confederates asked males of both races on subway platforms to participate in a brief consumer survey interview. All Ss favored Black confederates, and the effect was enhanced when confederates described

themselves as college students. In another subway study male confederates asked for change for a quarter. Compliance was greater for White confederates. Results are consistent with the perceived social desirability hypothesis. An ambivalence interpretation of cross-racial altruism is suggested by the obtained attitude-behavior relationship.—*Journal abstract*.

7141. Kidd, Robert F. (U Wisconsin) **Pupil size, eye contact, and instrumental aggression.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 538.—Experimental results show that victims with enlarged pupils received fewer shocks, shockers looked less into the line of regard of victims with dilated pupils, and staring victims elicited less aggression than visually avoiding victims. Data suggest that subtle changes in a victim's nonverbal behavior may have pronounced influence on the actions of a nonangered aggressor.

7142. Kiesler, Charles A. & Pallak, Michael S. (American Psychological Assn, Washington, DC) **Minority influence: The effect of majority reactionaries and defectors, and minority and majority compromisers, upon majority opinion and attraction.** *European Journal of Social Psychology*, 1975, Vol 5(2), 237-256.—Studied the effects of shifting opinions within a group upon majority opinion, communication between members, and perceived attractiveness of other members, using 150 undergraduate volunteers. Six conditions of change were established: control, majority reactionary, majority compromise, majority defection, minority compromise, and minority compromise plus majority reactionary. Only majority compromise or defection affected majority opinion. Majority members were disliked when they deviated from majority opinion, but particularly so when they shifted toward minority opinion. Minority members were liked most when they induced a majority member to compromise (but not defect). Majority communication to minority occurred most when the minority was compromising, but most disagreement with minority opinion was expressed when a majority member had either compromised or defected. 7145. Knestrick, James L. (Pennsylvania State U) **Effect of sex in accuracy of predictive judgment.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 355-360.—Accuracy of predictive judgment was examined in university students under 3 conditions: sex of the predictor, sex of the person whose behavior was being predicted, and sex of the stimulus person who presented behavioral alternatives to the observer. 4 stimulus persons presented 20 2-choice behavioral situations to 4 observers, who were actually to carry out their choices; the 30 judges watched the presentations and predicted which alternatives the observers would choose. A statistically significant Sex of Observer \times Sex of Stimulus Person interaction was found. Female judges were significantly more accurate than the males in their

predictions. Predictions were also significantly more accurate when stimulus persons were female.—*Journal abstract*.

7146. Koenig, Frederick. (Tulane U) **Group affective stimulus value and cognitive complexity.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 143-144.—Reports on a study using identifiable groups of people as stimuli for gauging cognitive complexity, the hypothesis being that persons score higher on cognitive complexity when judging groups with negative affect than groups with positive affect. Data from 50 undergraduates who were asked to compare their own sorority with others support the hypothesis.

7147. Kopel, Steven & Arkowitz, Hal. (U Arizona) **The role of attribution and self-perception in behavior change: Implications for behavior therapy.** *Genetic Psychology Monographs*, 1975(Nov), Vol 92(2), 175-212.—Makes extrapolations to behavior therapy from 2 related lines of social-psychological research: attribution and self-perception. A review of the relevant research literature on attribution suggests that (a) the perception and causal attribution of physiological arousal is an important determinant of emotional behavior and (b) self-attribution of behavior change increases the likelihood of maintenance of that change. A review of research on D. J. Bem's (1972) theory indicates that inferences arising from self-observation of one's own overt behaviors may affect subsequent behavior, attitudes, and beliefs. Both areas of research suggest that an individual's perception of himself (in terms of overt behavior, situational circumstances, and physiological states) may have a marked influence on behavior change and the maintenance of that change. The implications of the research are discussed in terms of present and future procedures in behavior therapy. (109 ref)—*Journal abstract*.

7148. Krebs, Dennis. (Simon Fraser U, Burnaby, Canada) **Empathy and altruism.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1134-1146.—Measured the psychophysiological responses (heart rate, skin conductance, and vasoconstriction) of 60 males (average age, 20 yrs) as they observed a performer play a roulette game. 30 Ss were led to believe that they were similar to the performer in personality and values, and 30 were led to believe that they were dissimilar. 15 Ss in each condition believed that the performer won money and experienced pain as he played the game, and 15 believed that he performed a cognitive and motor skill task. Ss who observed a performer who ostensibly experienced pleasure and pain exhibited greater psychophysiological reactions than Ss who did not. Ss who believed they were similar to the performer tended to react more strongly than Ss who believed they were different from him. Similar Ss also reported identifying most with the performer and feeling the worst while he waited to receive shocks. It is concluded that the similar Ss empathized most with the performer who appeared to experience pleasure and pain. When required to make a choice between helping themselves at a cost to the performer or helping the performer at a cost to themselves, the Ss who reacted most empathically behaved most altruistically. Results cast some light on

century-old questions about the human capacity for altruism. (28 ref)—*Journal abstract*.

7153. Mugny, Gabriel. (U Geneva, Switzerland) **Negotiations, image of the other and the process of minority influence.** *European Journal of Social Psychology*, 1975, Vol 5(2), 209-228.—Conducted 2 studies to distinguish between behavioral style (in the face of the majority norm) and the style of negotiation (in the face of the population the minority wants to influence). Exp 1, using 40 apprentices, showed that, when 2 minorities were seen as equally consistent, the minority with a flexible style of negotiation had more influence than the more rigid minority. A 2nd experiment dealt with 40 psychology students' perceptions of the source of influence and clarified the effects of minority negotiations; the links between opinions, opinion change, and perception of others were also clarified. (French & German summaries) (16 ref)—*Journal abstract*.

7154. Mynatt, Clifford & Sherman, Steven J. (Bowling Green State U) **Responsibility attribution in groups and individuals: A direct test of the diffusion of responsibility hypothesis.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1111-1118. Tested the major assumption of the diffusion of responsibility hypothesis (i.e., that group members involved in acts with negative consequences should attribute less responsibility to themselves than either individuals who experience negative consequences or groups or individuals who experience positive consequences). Using 80 male undergraduates, this assumption was tested in a 2 × 2 design in which individuals or groups gave advice that led to success or failure. Group failure Ss assumed less responsibility than Ss in the other 3 conditions. Furthermore, individual failure Ss rated the outcomes as less bad and saw themselves as having less influence over the advisee. Other areas of social psychological research in which the combination of responsibility and negative

consequences seems to be a critical factor are discussed. (26 ref)—*Journal abstract*

7155. Nemeth, Charlan. (U British Columbia, Vancouver, Canada) **Understanding minority influence: A reply and a digression.** *European Journal of Social Psychology*, 1975, Vol 5(2), 265-267.—Presents behavioral characteristics of effective activist minorities. The methodology of searching for key variables is contrasted with the challenges posed by actual social phenomena

7156. Neziek, John & Brehm, Jack W. (U Rochester) **Hostility as a function of the opportunity to counteraggress.** *Journal of Personality*, 1975(Sep), Vol 43(3), 421-433.—28 female undergraduates were insulted by the E while 28 were not. Within each of these conditions, 14 Ss were led to believe they would have an opportunity to administer electric shock to the E, while the other 14 were not. A measure of hostility toward the E was taken before there was any actual opportunity to shock him. As predicted from reactance theory, the mere opportunity to shock the E reduced hostility that was produced by his insulting behavior.—*Journal summary*.

7158. Paron, David A. & Priefert, Maria J. (U Iowa) **The value of being imitated.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 286-295.—Theories and research on attraction, conformity, and imitation support the view that the relational stimulus arising from being imitated serves a reinforcing function. To examine this possibility, 48 preschool children performed a task in which some neutral stimuli were repeatedly associated with an adult's either mismatching or matching the behavior of the S. Preference for the stimuli associated with being matched was greater at the end of training than earlier, and the overall preference for the matched stimuli exceeded chance. Results are considered in terms of the thesis that response strategies were adopted by the children. (20 ref) *Journal abstract*

7159. Press, Allan N.; Crockett, Walter H. & Delia, Jesse G. (U Kansas, Social Welfare School) **Effects of cognitive complexity and of perceiver's set upon the organization of impressions.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 865-872.—In 2 separate studies, 255 undergraduates differing in cognitive complexity (Role Category Questionnaire) and orientation toward the other (orientation to evaluate the other, to understand the other, or no orientation) were given ambivalent behavioral information about another person. As expected, the orientation to evaluate the other minimized differences between complex and noncomplex perceivers in the structural qualities of their written impressions; the orientation to understand the other greatly facilitated complex perceivers' use of motivational inferences as links reconciling the ambivalent information. These effects were found not only in Exp I, where motivational information was included. No differences were found as a function of complexity or set in the perceiver's degree of liking of the other.—*Journal abstract*.

7160. Regan, Dennis T. & Totten, Judith. (Cornell U) **Empathy and attribution: Turning observers into actors.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 850-856.—Tested E. E. Jones and R. E. Nisbett's (1971) information-processing explanation of the often-observed tendency for individuals (actors) to provide relatively more situational and less dispositional causal attributions for their behavior than those provided by observers of the same behavior. According to this explanation, aspects of the situation are phenomenologically more salient for actors, whereas characteristics of the actor and his behavior are more salient for observers. To test this explanation, the phenomenological perspective of observers was altered without making available any additional information. 40 female undergraduates watched a videotape of a get-acquainted conversation after instructions either to observe a target conversant or to empathize with her. As predicted, taking the perspective of the target through empathy resulted in attributions that were relatively more situational and less dispositional than attributions provided by standard observers. Results support Jones and Nisbett and shed additional light on the process of empathy.—*Journal abstract*.

7161. Rodin, Miriam J. (San Diego State U) **The effect of behavioral context on information selection and differential accuracy in a person perception task.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 83-94.—The failure of earlier studies to find much evidence for differential accuracy in interpersonal perception may have been due to the methodology. 2 modifications of the standard methodology were introduced in 2 experiments employing 100 male undergraduates in each: Ss self-selected the information on which their judgments were based and the objective value of the information was specified. In Exp I groups of Ss selected information with and without a behavioral context and received it with and without a behavioral context. All groups achieved significantly greater differential accuracy than the control group given no information. Although Ss varied widely in their information preferences, the more accurate Ss did not choose objectively better information. Behavioral context significantly increased accuracy only when provided during the information selection process. Exp II replicated the major findings and clarified the function of behavioral context. Results underline the necessity of distinguishing between objective and subjective information value. Judges are capable of differential accuracy when allowed to choose information of value to them. Behavioral context for the information significantly improves their choice.—*Journal abstract*.

7162. Rodin, Miriam J. (San Diego State U) **The trait coding of behavior.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 638-640.—Notes that trait names are known to convey social desirability information. This study addressed the question of whether they convey denotative behavioral information as well. 16 undergraduates served as encoders and 32 as decoders. Encoders assigned trait codings to a variety of possible behavioral responses to well-defined stimulus situations. Decoders then matched the trait codings with the original behaviors. The social desirability of the behaviors was

kept relatively constant. It was found that, despite the presence of factors intended to maximize their informativeness, the trait codings transmitted, on the average, only about 1/4 of the input information. The finding that trait codings discriminate poorly among behaviors that do not vary widely in social desirability, in conjunction with the fact that most behavior is socially desirable, raises intriguing questions about the function of trait words in ordinary language.—*Journal abstract.*

7163. Ross, Lee; Lepper, Mark R. & Hubbard, Michael. (Stanford U) **Perseverance in self-perception and social perception: Biased attributional processes in the debriefing paradigm.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 880-892.—Two experiments with a total of 60 female high school students and 144 female undergraduates demonstrated that self-perceptions and social perceptions may persevere after the initial basis for such perceptions has been completely discredited. In both studies Ss first received false feedback, indicating that they had either succeeded or failed on a novel discrimination task and then were thoroughly debriefed concerning the predetermined and random nature of this outcome manipulation. In Exp II, both the initial outcome manipulation and subsequent debriefing were watched and overheard by observers. Both actors and observers showed substantial perseverance of initial impressions concerning the actors' performance and abilities following a standard "outcome" debriefing. "Process" debriefing, in which explicit discussion of the perseverance process was provided, generally proved sufficient to eliminate erroneous self-perceptions. Biased attribution processes that might underlie perseverance phenomena and the implications for the ethical conduct of deception research are discussed. (28 ref)—*Journal abstract.*

7166. Salancik, Gerald R. & Conway, Mary. (U Illinois, Urbana-Champaign) **Attitude inferences from salient and relevant cognitive content about behavior.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 829-840.—To test the assumption that Ss formulate attitude responses from information available to them when responding to an attitude question, 2 experiments were conducted in which the availability of information was manipulated with a linguistic device. In Exp I, 70 undergraduates were asked to indicate whether statements of religious behavior applied to them or not. The endorsement of pro- and antireligious behaviors was manipulated, and it was found that Ss for whom proreligious behaviors were made salient expressed more favorable attitudes toward being religious than did Ss for whom antireligious behaviors were made salient. In Exp II, a similar manipulation was used to study Ss' behavior in a university course. However, the saliency of pro- and anticourse behaviors affected only Ss for whom the

course was part of their major. For majors, the endorsement of procourse behaviors resulted in a more procourse attitude and the endorsement of anticourse behaviors resulted in a less favorable attitude toward the course. The attitudes of nonmajors were primarily a function of the grade received in the course. Results suggest that Ss use behavioral information to derive their attitude judgments when the information is both salient and relevant to their judgments. (15 ref)—*Journal abstract.*

7169. Shaffer, Juliet P. (U Kansas) **Personality impression formation and sex: The polarization effect.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 661-664.—In a previous experiment reported by W. Combet et al (see PA, Vol 50:6695), in which Ss rated likability of stimulus persons of both sexes to whom different personality-trait adjectives were ascribed, it was found that ratings were more polarized when stimulus persons were of the opposite sex than when they were of the same sex as the rater (e.g., ascribing positive adjectives resulted in higher likability ratings, while ascribing negative adjectives resulted in lower likability ratings, for opposite-sexed than for like-sexed stimulus persons). The present paper reports 2 further experiments designed to investigate systematically, within an information integration framework, the relationship between the magnitude of this phenomenon and the number and values of the ascribed adjectives. A total of 196 undergraduates were used. It is concluded that a simple averaging model of information integration does not appear to be adequate to account for the results.—*Journal abstract.*

7170. Simpson, David D. & Ostrom, Thomas M. (U Bergen, Norway) **Effect of snap and thoughtful judgments on person impressions.** *European Journal of Social Psychology*, 1975, Vol 5(2), 197-208.—Judgment type and valence of stimulus person (from likable to unlikable) were varied as within-Ss factors in 4 studies with a total of 132 university students to test whether situational and motivational variables would interfere with integrative activity in forming 1st impressions. None of the indices of integrative activity detected a difference between the snap and thoughtful response conditions for early and late judgments in a series, for moderate or extreme traits, or for between- or within-Ss designs. Findings suggest that certain boundary conditions need to be placed on the assumptions underlying the averaging and meaning shift formulations. (French & German summaries)—*Journal abstract.*

7171. Singh, Ramadhar & Jack, Ronald M. (Indian Inst of Technology, Kanpur) **Personal evaluations, laughter, and affective judgments.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 53-59.—56 undergraduates read positive or negative evaluations of their personality made by a bogus same-sex peer and then

rated their immediate feelings. A 2nd group of 22 undergraduates rated their feelings after reading the evaluations of a 3rd person. Personal evaluations evoked significantly more spontaneous laughter than did the evaluation of a 3rd person ($p < .001$). Inclusion of the factor of laughter in the experimental design disclosed that Ss who laughed felt more pleasant than those who did not laugh and that laughter was associated with affective state only in the negative evaluation condition. Also, positive evaluations made Ss feel good, and negative ones made them feel bad. Results suggest that extreme affective arousal engenders laughter which, in turn, alters the judgments of one's affective state. (17 ref) —*Journal abstract.*

7172. Smith, Bruce L.; Brown, Bruce L.; Strong, William J. & Rencher, Alvin C. (Brigham Young U) **Effects of speech rate on personality perception.** *Language & Speech*, 1975(Apr-Jun), Vol 18(2), 145-152. —Using the voices of 6 male Ss representing various social and educational backgrounds, 54 synthetic voices were generated by computer. Each normal voice was both increased and decreased in speech rate by 12%, 25, 37%, and 50%. 28 judges evaluated the 54 voices using a series of adjectives representing 2 major personality factors of "competence" and "benevolence." It was found that the competence factor was much more sensitive to rate manipulations than the benevolence factor. Ratings of competence increased and decreased linearly with rate. Benevolence had an inverted U-relationship with speech rate; the highest benevolence ratings occurred with normal speech rate. (20 ref) —*Journal abstract.*

7173. Taylor, Donald M. & Simard, Lise M. (McGill U, Montreal, Canada) **Social interaction in a bilingual setting.** *Canadian Psychological Review*, 1975(Oct), Vol 16(4), 240-254. —Examined the potential for interaction between members of different ethnolinguistic groups who share the same social environment. The fact that there is often a paucity of cross-cultural interaction suggests 2 hypotheses: (a) members of different groups are not sufficiently proficient in the other's language to allow for effective interaction, and (b) members of the different groups are capable of communicating but choose not to. An examination of these 2 hypotheses suggests that the lack of interaction between ethnolinguistic groups is more a function of motivation than language capability. The importance of preserving ethnic identity, a difficulty with social language norms, and negative attitudes seem to be particular barriers to interaction. Based on these conclusions some tentative recommendations are made for promoting cross-cultural interaction. (French abstract) (73 ref) —*Journal abstract.*

7174. Teger, Allan I. & Kogan, Nathan. (U Pennsylvania) **Decision-making for others under reciprocal and non-reciprocal conditions.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 215-222. —125 paid female undergraduates made decisions on a gambling task where the outcome would affect their own payoff or the pay-off of another person. For the latter, decisions were made reciprocally or nonreciprocally, and for a friend or a stranger. Decisions for others were significantly more cautious when the S believed that the other person was making reciprocal choices which would

affect the S's pay-off than where no reciprocity was involved. The enhanced caution in the reciprocal relative to nonreciprocal condition is attributed to a desire to ensure at least a modest pay-off for another who might benefit the self. It is conjectured that caution in such circumstances serves the function of guilt avoidance.

7177. Wolosin, Robert J.; Sherman, Steven J. & Cann, Arnie. (Quince Consulting Ctr, Columbus, IN) **Predictions of own and other's conformity.** *Journal of Personality*, 1975(Sep), Vol 43(3), 357-378. —In a study with 98 male undergraduates, observers predicted the degree to which participant Ss in a conformity situation would conform to bogus estimates of the numerosity of auditory stimuli and the degree to which they themselves would conform if they were the S. Participants made numerosity judgments after hearing a tone burst as well as bogus judgments; observers heard identical stimuli and predicted the participant's response and their own response if they were the participant. The knowledge available to observers regarding the situation was varied. Also, participants were either deceived as to the nature of the estimates they heard, informed and asked to be accurate, or informed and asked to role play a naive participant. Observers' predictions about participants were closest to the bogus estimates, followed by observers' self-predictions, followed by observers' own judgments. Role-playing participants displayed less conformity than naive participants. (21 ref) —*Journal summary.*

7180. Zuckerman, Miron; Lipets, Marsha S.; Koivumaki, Judith H. & Rosenthal, Robert. (U Rochester)

Encoding and decoding nonverbal cues of emotion. *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1068-1076.—In a study with 64 male and 37 female undergraduates, Ss ("senders") encoded 6 emotions twice, 1st via facial expressions and 2nd via tone of voice. These expressions were recorded and presented for decoding to the senders and an additional group of judges. Results show that (a) the ability to encode and the ability to decode both visual and auditory cues were significantly related; (b) the relationship between encoding and decoding cues of the same emotion was low; (c) the ability to decode visual cues was significantly related to the ability to decode auditory cues, but the correlations among encoding (and decoding) scores on different emotions were low; (d) females were slightly better encoders, and significantly better decoders, than males; (e) acquaintance between sender and judge improved decoding scores among males but not among females; (f) auditory decoding scores were higher than visual decoding scores, particularly among males; (g) auditory decoding scores were relatively high if sender and judge were of the same sex, while visual decoding scores were relatively high if sender and judge were of opposite sexes; and (h) decoding scores varied according to channel of communication and type of emotion transmitted. (20 ref)—*Journal abstract*.

PERSONALITY

7181. Ames, Carole; Ames, Russell & Felker, Donald W. (Purdue U) **Informational and dispositional determinants of children's achievement attributions.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 63-69.—Investigated how informational cues and dispositional biases influence children's attributions in an achievement setting. A $2 \times 2 \times 2$ (Consistency of Performance Over Trials \times Immediate Outcome \times Level of Achievement Motivation) factorial design was used. 64 6th-grade males classified as high or low in achievement need from a subscore of the Intellectual Achievement Responsibility Scale developed by V. C. Crandall et al (1965) solved achievement-related puzzles in an individual setting. Results show that consistency of performance was related to the stability dimension of attributional behavior and attributions for immediate outcome varied along the locus of control dimension. The Consistency \times Outcome interaction findings and the relative absence of significant effects on the achievement motive variable suggest the dominance of an informationally oriented influence on attributional behavior.—*Journal abstract*.

7182. Arbuthnot, Jack. (Ohio U) **Sex, sex-role identity, and cognitive style.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 435-440.—2 studies were conducted to test competing theoretical predictions concerning the relationships among sex, sex-role identity, and field independence: (a) H. A. Witkin's and G. Vaught's positions that maleness and masculinity (regardless of biological sex) are associated with field dependence and (b) the present author's contention that sex-reversed sex-role identity, irrespective of sex, would be predictive of field dependence. The rod-and-frame test, the Guilford-

Zimmerman Temperament Survey Masculinity-Femininity scale, and the Embedded Figures Test were used. Data collected from 110 high school males and 78 college females support the later prediction but only for males. (34 ref)—*Journal abstract*.

7183. Bamber, Roy T.; Jose, Paul E. & Boice, Robert. (Lewis & Clark Coll, Godfrey, IL) **Creativity as affected by differential reinforcements and test instructions.** *Bulletin of the Psychonomic Society*, 1975(Oct), Vol 6(4A), 361-363.—Administered to 108 undergraduates the Torrance Test of Creative Thinking, the Uses Test, and the Rotter Internal-External (I-E) Control Scale in a study of effects of reward and test conditions upon creativity. Generally, differential instructions (as a test, as a game, or without instructions) and differential reinforcement (verbal praise, money, or no reinforcement) did not affect creativity as they had in prior research with children. Correlations of various measures of creativity with the I-E Scale suggest that Ss with an internally perceived locus of control were more fluent and flexible, whereas those with an external locus were more elaborate.—*Journal abstract*.

7184. Barnes, Gordon E. (York U, Downsview, Canada) **Extraversion and pain.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 303-308.—Reviews the evidence for the view that extraverts have higher pain thresholds and greater pain tolerance than introverts. Findings appear inconclusive in both cases. Probability pooling was performed, grouping the comparable studies and carrying out overall tests of significance. Results support the hypothesized relationships between extraversion and pain threshold and between extraversion and pain tolerance. Possible reasons why certain studies failed to find these results are discussed. (23 ref)—*Journal abstract*.

7190. Cangemi, Joseph P. & Martray, Carl R. (Western Kentucky U) **Awareness: A psychological requisite for the actualizing personality.** *Psychology*, 1975(Aug), Vol 12(3), 44-49.—Presents a model illustrating the process leading to self-actualizing behavior. Awareness of self, others, and the outside world are considered keys to psychological survival. High self-regard results from accepting responsibility for one's behavior and taking charge of one's life. Low self-awareness is related to the inferiority and inner turmoil that prevents one from functioning effectively. Self-awareness can be measured by observing the ways an individual responds to others; individuals holding themselves in high regard are other-directed. (22 ref)—R. Tomasko.

7193. Cowger, Ernest L. (U Georgia) **The effects of meditation (zazen) upon selected dimensions of personal development.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4734.

7194. Cravens, Richard W. (Virginia Polytechnic Inst & State U) **The need for approval and the private versus public disclosure of self.** *Journal of Personality*, 1975(Sep), Vol 43(3), 503-514.—60 female undergraduates with high and low scores on the Marlowe-Crowne Social Desirability Scale discussed their preferences for a steady date with a confederate in confidence or after having given permission for their comments to be cited in lectures or a book. Results show that high-need-for-approval Ss revealed themselves more intimately in public than in private conditions whereas low- and moderate-need Ss disclosed more intimately in private than in public. Results not only demonstrate the strength of the effect of social evaluation on the behavior of high-need Ss, but also suggest that personality must be accounted for in self-disclosure research before factors influencing self-disclosure may be understood completely.—*Journal summary*.

7195. Cunningham, Claude H.; Wakefield, James A. & Ward, G. Robert. (Houston Independent School District, TX) **An empirical comparison of Maslow's and Murray's needs systems.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 594-596. The Work Motivation Inventory (WMI), a measure of A. H. Maslow's (1962) hierarchy of needs, and the EPPS, a measure of H. A. Murray's (1938) manifest needs, were administered to 372 undergraduates. The 2 instruments were compared using canonical analysis. The analysis revealed 3 significant relationships between components of the 2 instruments. The 1st relationship supported Maslow's need hierarchy in general and its measurement by the

WMI. The 2nd suggested a fluctuating relationship between giving and receiving help and the levels of Maslow's hierarchy. The 3rd relationship suggested that need for achievement is associated with the intermediate levels of Maslow's hierarchy.—*Journal abstract*.

7198. Dweck, Carol S. & Gilliard, Diane. (U Illinois) **Expectancy statements as determinants of reactions to failure: Sex differences in persistence and expectancy change.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1077-1084.—Assessed the effects of expectancy statements on children's persistence and expectancy change during failure. 30 male and 30 female 5th graders stated expectancies either before every trial, before the first and last trials, or before only the last trial. Patterns of both persistence and expectancies varied strikingly with the schedule of statements, and, more important, major effects were in opposite directions for the 2 sexes; initial statements heightened boys' persistence but tended to decrease girls' persistence. Findings are discussed in terms of sex differences in anxiety levels and attributional tendencies. Implications for research involving the monitoring of cognitions in achievement situations are noted. (17 ref)—*Journal abstract*.

7199. Eysenck, Michael W. (U London, Birkbeck Coll, England) **Arousal and speed of recall.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 269-277.—52 subjects were divided into 4 groups based upon the possible combinations of high or low extraversion and high or low general activation, based on results from the Eysenck Personality Inventory and the Activation-Deactivation Adjective Check List. Ss learned 2 lists of paired associates, with a record being kept of the number of errors and the latency of correct responses. The groups differed considerably more in terms of response latency than in terms of the probability of responding correctly. A number of the analyses indicated an interactive effect of extraversion and general activation on retrieval performance, in which high general activation led to reduced response latencies for extraverts, but to slower latencies for introverts. This finding is interpreted with reference to arousal theory. Additional findings suggest that the poor performance of high arousal Ss is partially due to their tendency to take in information from dominant sources. (26 ref)—*Journal abstract*.

7202. Gal, Reuven & Lazarus, Richard S. **The role of activity in anticipating and confronting stressful situations.** *Journal of Human Stress*, 1975(Dec), Vol 1(4),

4-20.—Reviews studies comparing stress reactions in threatening situations during which the person can or cannot take action. The studies were conducted mainly in real-life situations and involved diverse forms of coping activities under various conditions of danger and distress. To achieve a better understanding of the effect of activity on stress reactions, distinctions are made between various types of stress reactions; between various indices and measurements of stress reactions; between activity which is directly related to the source of threat and activity which is not; and between various personality dimensions. The adaptive potential of activity in stressful situations is discussed in terms of the sense of mastery and control provided by activity; activity as a means of attention diversion; and activity as a means of discharging energy generated by mobilization. It is suggested that taking action under stressful conditions, as opposed to remaining passive, is a powerful coping tool. (66 ref)—*Journal abstract*.

7203. Gatchel, Robert J.; Paulus, Paul B. & Maples, C. Wayne. (U Texas, Arlington) **Learned helplessness and self-reported affect.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 732-734. Reports results of a study designed to assess the mood correlates of learned helplessness in human Ss. Results provide support for M. E. Seligman's (1975) proposition that the learned helplessness concept may serve as a model for reactive depression in man.

7204. Golden, Charles J.; Marsella, Anthony J. & Golden, Ellen E. (U South Dakota) **Personality correlates of the Stroop Color and Word Test: More negative results.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 599-602.—Numerous studies have investigated personality correlates of performance on the Stroop Color-Word Test. With 1 exception, these studies have failed to identify any significant correlates between the 2 variables. The present study examined this relationship by administering the Stroop Color-Word Test, the 16 PF, and the Maudsley Personality Inventory to 210 undergraduates. Results indicate no significant correlates exist between 5 different measures of Stroop Color-Word Test performance and the personality scales. It is concluded that the Stroop Color-Word Test has little relationship to measures of personality and may best be understood in terms of specific cognitive processes.—*Journal abstract*.

7205. Good, Lawrence R. & Good, Katherine C. (Middle Tennessee State U) **An objective measure of the motive to avoid failure.** *Psychology*, 1975(Aug), Vol 12(3), 11-14.—Presents a 28-item personality inventory that assesses fear of failure. A distinction is made between worry and emotionality as separate components of anxiety. The scale was tested on 191 undergraduates, and a tendency for females to score higher was noted. A relationship between fear of failure and perceived difficulty of academic subjects was also confirmed for both sexes, indicating the construct validity of the scale.—*R. Tomasko*

7206. Gruenfeld, Leopold W. & MacEachron, Ann E. (Cornell U, New York State School of Industrial & Labor Relations) **Relationship between age, socioeconomic status, and field dependence.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 449-450.—Administered the rod-and-frame test to 54 20-60 yr old female nurses and

obtained self-reported data on Ss' education and salaries, their parents' education, and their fathers' occupations. Analyses supported the hypothesis that socioeconomic variables confound the relationship between age and field independence measured on the rod-and-frame test.—*Journal Abstract*.

7208. Harrington, David M. (U California, Berkeley) **Effects of explicit instructions to "be creative" on the psychological meaning of divergent thinking test scores.** *Journal of Personality*, 1975(Sep), Vol 43(3), 434-454.—Administered a biographical data questionnaire, a form of the Adjective Check List in which the adjective "creative" had been inserted, the Berkeley Self-Report Personality Inventory containing items from the Dominance and Self-Control scales of the California Psychological Inventory, a 3-part, 6-min version of the Similarities Test, Form A of the Alternate Uses Test, the 1st part of the Consequences Test, and the Brick Uses Test to 105 undergraduates. The Alternate Uses Test was administered to Ss under instructions either to produce creative uses or to produce as many uses as possible (standard instructions). All uses were rated for creativity. An index of self-assessed creative thinking ability was found to correlate to a significantly greater extent with the number of creative uses produced under creative instructions than with the number of creative or total uses produced in the standard condition. The correlation between self-rated creative ability and creative uses production in the creative-instruction condition remained significant after indices of achievement motivation and general verbal aptitude (Scholastic Aptitude Test) were partialled out. Results demonstrate the value of coordinating informative divergent thinking test instructions with qualitative scoring criteria. (34 ref)—*Journal summary*.

7212. Kahana, Ben & Kahana, Eva. (Oakland U) **The relationship of impulse control to cognition and adjustment among institutionalized aged women.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 679-687.—In a study with 91 institutionalized females (aged 55-97 yrs), several dimensions of impulse control (i.e., delay of gratification, reflectivity, and motor control) were related to intelligence, mental status, and adjustment. 4 different types of impulse control measures were used: Self reports of impulse control, staff ratings, interviewer's ratings, and

tests of impulse control. Impulse control measures yielded statistically significant multiple correlations with all outcome measures except life satisfaction. Findings suggest that impulse control in its various forms has a consistent and significant relationship with indices of adaptation. Utilizing stepwise regression analyses, the best predictors of outcome among impulse control measures are presented. (26 ref)—*Journal abstract*.

7221. Mäkinen, Raimo. (U Jyväskylä, Finland) **Generalization of mental health across life sectors.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 225-228.—Questionnaire data on mental health in 3 life areas (work, family, and leisure) were analyzed by analysis of variance together with estimation of the magnitudes of different effects. Ss were 20 married, 20 unmarried, and 20 divorced or widowed employed females. About 55% of mental health variation was explained by the generalization model and 4% by the person \times life-area interaction. It is suggested that analysis of variance is useful in comparing corresponding effects in different groups of Ss. Some limitations of cross-sectional research strategy are discussed, stressing the need for other strategies in research on mental health relationships in different life areas. (17 ref)—*Journal abstract*.

7222. McArthur, Leslie Z. & Burstein, Bonnie. (Brandeis U) **Field dependent eating and perception as a function of weight and sex.** *Journal of Personality*, 1975(Sep), Vol 43(3), 402-420.—Hypothesized that the greater influence of external cues on obese than on normal individuals' eating behavior is a manifestation of a generalized sensitivity to external cues. Responsivity of nut consumption to the external cue of shells on the nuts and responsivity of judgment of verticality to the external cue of a tilted visual field on a rod-and-frame apparatus were assessed for 15 male and 14 female obese and 13 male and 16 female normal-weight undergraduates. As predicted, both obese Ss' nut consumption and their judgments of verticality were more influenced by external cues than were those of normals. Females' judgments of verticality were more influenced by external cues than males' were, but the sex differences in eating behavior were not significant. A significant correlation between the field dependence of Ss' eating behavior and their judgments of verticality suggested that a single cause may generate sensitivity to external cues in these 2 diverse situations. 7229. Nasu, Kosyo. [Study of a social affiliation motive as it is affected by the presence of another person in an anxiety situation.] (Japn) *Japanese Journal of Educational Psychology*, 1975(Sep), Vol 23(3), 143-153. —Administered the TAT to 104 Japanese high school Ss, who were divided into 5 types of groups: Paired-Anxiety (2 Ss together anticipating electric shock), Single-Anxiety (one S anticipating electric shock), Paired-Neutral (no shock), Single-Neutral, and control groups (4-5 persons each). Anxiety was measured by the Taylor Manifest Anxiety Scale and self-image was measured by K. Saito's Self-Rating Questionnaire (1959). The relationships among affiliation, anxiety, and self-image were examined. Results show that a high affiliation motive is positively related to high anxiety, inaccurate self-image, and low self-esteem, and that females tend to have a higher need for affiliation. (English summary) (21 ref) —S. Choe.

7230. Nesselroade, John R. & Baltes, Paul B. (Pennsylvania State U, Coll of Human Development, Div of Individual & Family Studies) **Higher order factor convergence and divergence of two distinct personality systems: Cattell's HSPQ and Jackson's PRF.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 387-407. —Administered the 14 scales of the High School Personality Questionnaire (HSPQ) and the 20 scales of the Personality Research Form (PRF), Form E, to 1,862 7th-12th graders. Scales were intercorrelated, factored, and the factors rotated to simple structure solutions separately for each instrument. Cross-instrument relationships were subsequently examined by (a) Dwyer extension analysis procedure and (b) estimating correlations of "true" factor scores between the 2 sets of factors. Results indicate both cross-instrument commonalities and specificities. Higher stratum dimensions of exivascendence, superego strength-impulse control, cortertiaesthetic intellectual orientation, and dependence-social contact were closely related in the 2 instruments. Dimensions such as aggression (PRF), achievement (PRF), and anxiety (HSPQ) were instrument-specific. It is concluded that neither instrument provides for a comprehensive mapping of the personality domain, broadly defined. Implications of the levels of factor convergence and divergence obtained in relation to theory building and prediction are discussed. (20 ref) —Journal abstract.

7233. Rauste, Maijallisa. (U Turku, Finland) **The image of man among Finnish girls and boys on the basis of material from Helsinki and North Karelia.** *Reports from the Department of Psychology, University of Turku*, 1975, No 41, 58 p.—Conducted a longitudinal study of the images of man held by 204 11- and 15-yr-olds in relation to their sex and geographic area. Topics surveyed (through the Self-Image Test) include self-image, ideal self-image, normative self-image, self-esteem and social success, values, occupational plans, beliefs about peers, beliefs about the individual's ability to influence existing conditions, and beliefs about the contributions made by one's sex to one's life. Results indicate many similar areas of belief, possibly due to the homogenizing effect of mass media and schools. Urban Ss had a higher self-esteem and sense of social success than rural Ss. Males tended to emphasize the effect of a person's socioeconomic situation on happiness, while females stressed the importance of an individual's personal qualities. (27 ref)—R. Tomasko.

7234. Robbins, Rosemary B. (Temple U) **Achievement performance and fantasy arousal in college women as a function of the motive to avoid success, problem format, and relationship to experimenter.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2950.

7235. Rosenfeld, Lawrence B. & Plax, Timothy G. (U New Mexico) **Personality determinants of autocratic and democratic leadership.** *Speech Monographs*, 1975(Aug), Vol 42(3), 203-208.—Conducted an investigation with 177 undergraduates to isolate personality correlates of leadership by determining the unique personality profiles associated with autocratic and democratic leadership styles. Based on a multiple discriminant analysis which separated the autocratic from democratic groups on the basis of 7 personality variables (of 53 considered), Ss were classified as autocratic or democratic with 75% accuracy. Also, a personality profile emerged from the pattern of scores on the variables from the discriminant analysis which allowed for a useful personality-based characterization of autocratic and democratic leaders.—Journal abstract.

7237. Serpell, Robert. **Estimates of intelligence in a rural community of eastern Zambia.** *II D R U. Reports*, 1974, No 25, 34 p.—Identified groups of 4-7 and 6-14 yr olds ($N = 56$) of the same sex and within a narrow age-range in each of 6 Chewa villages. For each group 5 adults familiar with the Ss but not closely related to any of them were interviewed separately, asking which S they would choose to take responsibility in various hypothetical situations. The same informants were also asked to rank the children in intelligence. These assessments were compared with Ss' scores on 3 newly devised tests designed to tap skills and abilities promoted by the home experience. Ss were interviewed about the games they play and asked to rank themselves in level of perform-

ance on them. The adult ratings showed a positive correlation with age within the groups, whereas neither variable was related to scores on the tests or the game ranks. Interrelations among the test scores suggest that they were measuring common factors, but their failure to correlate with the adult ratings casts doubt on whether they are relevant to intelligence as conceived in the Chewa community. Results are discussed in relation to current methods of psychological testing in Zambia and their validity for clinical assessment and educational selection. (32 ref)—*Journal abstract*.

7238. **Seunath, O. M.** (U Saskatchewan, Saskatoon, Canada) **Personality, reinforcement and learning.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 459-463.—Conflict in predictions resulting from H. J. Eysenck's (1957) and J. A. Gray's (1970) theoretical formulations on personality and conditioning were tested at the behavioral level. Given conditions which do not produce overarousal, it would be predicted from Eysenck's position that introverts would condition better than extraverts. From Gray's formulation it would follow that introverts condition better if negative reinforcement is used and extraverts condition better if positive reinforcement is used. The 2 opposing predictions were tested in pursuit rotor learning by either positively or negatively reinforcing the hit-miss dimension of performance by 166 14-15 yr old males. Ss also were administered the Junior Personality Questionnaire. Results give support to Gray's position, but if overarousal is assumed, Eysenck's position is tenable.—*Journal abstract*.

7239. **Shainwald, Richard G.** (U Georgia) **The effect of self-esteem on opinion leadership.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3635.

7240. **Shweder, Richard A.** (U Chicago, Committee on Human Development) **How relevant is an individual difference theory of personality?** *Journal of Personality*, 1975(Sep), Vol 43(3), 455-484.—Questions the extent of applicability of the conceptualization that "personality" consists "of more or less stable internal factors that make one person's behavior consistent from one time to another and different from the behavior other people would manifest in comparable situations." This is done by demonstrating the questionable validity of much of the empirical support for the "personality" concept. Data from 4 experiments show that respondents on interpersonal checklists, personality inventories, and questionnaire interviews (e.g., MMPI and 16 PF) unwittingly substitute a theory of conceptual likenesses for a description of behavioral co-occurrences. Considerations about similarity are confounded with judgments about probability to such an extent that items alike in concept are inferred to be behaviorally characteristic of the same person even when, as is typically the case, conceptual relationships among items do not correspond to the actual behavioral relationships among items. Personality theories having to do with children's social behavior, adult behavior in small groups, maternal socialization practices, and psychopathology are discussed. These theories are shown to be no more than statements about how respondents (and psychologists) classify things as alike in meaning. (2 p ref)—*Journal summary*.

7248. **Yonge, George D.** (U California, Davis) **Time experiences, self-actualizing values, and creativity.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 601-606.—Administered the Personal Orientation Inventory (POI), the Inventory of Temporal Experiences (ITE), and the Adjective Check List (ACL) to 80 undergraduates to examine the correlations between the 3 measures. 16 scores were derived from the POI, 4 from the ITE, and a Creativity score for the ACL. The resulting intercorrelations were interpreted in the light of the theories of A. Maslow (1954) and P. T. Hugenholtz

(1959) which postulate a convergence of self-actualization, creativity, and certain experiences of time. The present study presents some evidence for this expressed convergence and contributes to the construct validity of several of the variables studied. (21 ref)—*Journal abstract*.

7249. Zaborowski, Zbigniew. [Interpersonal valorization: The basic mechanism of equilibrium in social relations.] (Polh) *Studia Sociologiczne*, 1975, No 1(56), 187-212.—Compares different theoretical concepts of self-evaluation, evaluation of others, and self-image. The analysis includes such elements as social determinants, structural factors, and adequacy and level of self-evaluation. The controversy between self-consistency theorists and self-esteem theorists might be resolved if they would consider the values inherent in all interpersonal relations.—H. Kaczkowski.

7250. Zuckerman, Miron & Wheeler, Ladd. (U Rochester) To dispel fantasies about the fantasy-based measure of fear of success. *Psychological Bulletin*, 1975(Nov), Vol 82(6), 932-946.—A review of M. Horner's (1968) study and subsequent research using the fantasy-based measure of fear of success suggested the following conclusions: Horner's results do not support the hypothesis that high-fear-of-success females perform poorly under competitive conditions; there are no reliable age or sex differences in motivation to avoid success; fear of success and sex role orientation appear to be unrelated; it is not clear whether the fear-of-success measure taps a motive or taps cultural stereotypes; there are no consistent relationships between fear of success and achievement-related variables; the reliability of the fear-of-success measure is low (probably in the .30-.40 range); and there are no consistent relationships between fear of success and any behavioral measures. It is suggested that future research will have to use new measures of fear of success. 3 such measures and preliminary findings are presented. (43 ref)—*Journal abstract*.

PHYSICAL AND PSYCHOLOGICAL DISORDERS

7251. Block, Walter M. (Child Evaluation Clinic, Cedar Rapids, IA) Cerebral dysfunctions: An attempt at clarification. *Behavioral Neuropsychiatry*, 1974-1975(Jan-Mar), Vol 6(1-12), 3-5.—Describes 4 behavior groups (organic brain damage, hyperkinetic behavior syndrome, specific learning disability, and vague cerebral dysfunction) which are viewed as 1 remedy for using the all-inclusive category of minimal brain dysfunction for classifying children's behavior problems.

7252. Blumberg, Marvin L. (Jamaica Hosp, NY) Psychodynamics of the young handicapped person. *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 466-476.—Argues that the psychodynamics of personality and ego development are related to motor development. The body image concept, important for normal psychological performance, is often impaired by somatic or cerebral deficits. Adolescents are particularly depressed by loss of self-esteem and thwarting of future career

goals. The importance of sexuality for the handicapped is discussed.—*Journal abstract*.

7253. de Souza, D. A. & de Souza, Alan. Encopresis. *Child Psychiatry Quarterly*, 1975(Oct), Vol 8(4), 1-8.—Encopresis, the inability to attain bowel control after the age of 3 yrs, is divided into 2 classifications: (a) primary, where the child has never achieved control; (b) secondary, where the child has had control earlier but loses it later. 4 categories are described: (a) persistent, (b) regressed, (c) ego-disturbed, (d) organic-based. Etiology is varied and may be related to toilet training habits, parent and family orientation and experience, low intelligence of child, age, poverty and large families, psychologically related conflict, stress, insecurity and overprotection, regression, anal fixation, and an expression of aggression or resentment. Forms of treatment include psychotherapy and environmental interventions. The management of encopresis is often global, for many factors may contribute, in greater or less degree, to the problem.—J. S. Garnett.

7254. Erwin, Bette J. (Wayne State U) Body image and proprioceptive dysfunction in schizophrenic and brain damaged subjects: Weight discrimination, size estimation and tactile recognition. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2927.

7255. Kahn, Robert L.; Zarit, Steven H.; Hilbert, Nancy M. & Niederehe, George. (U Chicago) Memory complaint and impairment in the aged: The effect of depression and altered brain function. *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1569-1573.—To clarify the role of memory impairment in the aged as a normal or psychopathological phenomenon, 153 persons 50 yrs old and over with varying degrees of depression and altered brain function were compared for their complaints about memory and actual performance on a series of memory tests. It was found that while performance varied with altered brain function, complaint was related to level of depression, regardless of performance. Exaggerated memory complaint was considered one manifestation of a general pattern of discrepant reporting of symptoms by depressed persons and apparently related to an underlying personality factor. The complaint of superiority of remote over recent memory was not substantiated empirically but is considered part of the pattern of stereotyped language and attitudes characteristic of depressed persons. (35 ref)—*Journal abstract*.

7256. Mecke, Viola. (California State U, Hayward) Centration-distortion error: A criterion of perceptual dysfunction. *Behavioral Neuropsychiatry*, 1974-1975(Jan-Mar), Vol 6(1-12), 31-35.—Tested whether centration, as a perceptual process, could be a criterion for differentiating between neurologically impaired and emotionally disturbed children. It was hypothesized that centration would affect motor behavior producing effects on drawing tasks characterized by separation of designs or their parts, coincident with distortions of the figures drawn. 5s were 44 7-12 yr olds. EEG records, a battery of psychological tests including the Bender-Gestalt, and psychiatric interviews were used as differential criteria for the groups. 11 5s were diagnosed as having minimal brain damage, 3 as emotionally disturbed. 3 psychologists blind-scored the

Bender Gestalt tests for indicators of brain injury and emotional disturbance as defined by E. M. Koppitz's (1964) criteria, and for the centration-distortion error. The hypothesis was supported ($p < .001$), validating an earlier pilot study. (40 ref)—*Journal abstract*.

7257. Perino, Joseph. (Hofstra U) **The relation of subclinical lead levels to cognitive and sensorimotor ability in preschool Black children.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2315-2316.

7258. Pesznecker, Betty L. & McNeil, Jo. (St Luke's Hosp, School of Nursing, Spokane, WA) **Relationship among health habits, social assets, psychologic well-being, life change, and alterations in health status.** *Nursing Research*, 1975(Nov-Dec), Vol 24(6), 442-447. —To examine variables which may temper life change and enable individuals to withstand high degrees of life change without developing illness, questionnaires returned by 548 city residents 18 yrs old and older were examined. The major statistical analysis was linear correlation and multiple regression. When relationships between the major variables—health habits, social assets, psychologic well-being, and life change—and the dependent variable—alterations in health status—were examined, the best predictor of alterations in health status was found to be the magnitude of the life change. As life changes increased, the risk of becoming ill also increased. The notion tested was not supported. (19 ref)—*Journal abstract*.

7259. Petersen, David M. & Chambers, Carl D. (Georgia State U) **Demographic characteristics of emergency room admissions for acute drug reactions.** *International Journal of the Addictions*, 1975, Vol 10(6), 963-975.—Examined data on 506 individuals admitted for drug overdose treatment to a Miami hospital emergency room January-June 1972. The typical admission profile showed a White female, 18-24 yrs old, who had overdosed on a single legally manufactured and distributed substance, usually a sedative.

7260. Raboch, Jan; Mellan, J. & Stárka, L. (Charles U, Research Inst of Endocrinology, Prague, Czechoslovakia) **Plasma testosterone in male patients with sexual dysfunction.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 541-545.—Determined plasma testosterone values by the protein-binding method in 45 married patients who at the age of 36-55 were examined for sexual disinterest and/or disturbances of penile erection. The control group consisted of 108 men whose ejaculate was normospermic and who reported adequate coital activity. The average values of male sex hormone in all age subgroups of Ss with functional sexual disorders were lower than those of the control group. However, in Ss with a pathological somatosexual finding (chromatin-positive men or patients with a varicocele), where the plasma testosterone level was approximately the same as in Ss with functional sexual disorders, similar coital activity was found as in the control group.—*Journal abstract*.

7262. Srole, Leo. (Columbia U) **Measurement and classification in socio-psychiatric epidemiology: Midtown Manhattan Study (1954) and Midtown Manhattan**

Restudy II (1974). *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 347-364.—Discusses 7 kinds of related shifts that have occurred in socio-psychiatric epidemiology, especially in the 3 decades since World War II. It is suggested that these research advances were especially noteworthy since psychiatry was beset with 2 types of intense pressures during this period: (a) to improve the reliability of its diagnostic classification system and (b) to enlarge and decentralize its service system (i.e., from huge state mental hospitals to small neighborhood outpatient facilities). The 7 advances (a shift from inpatient aggregates to general community populations; from census-type counts of case records to multi-hour, face-to-face interviews; from reliance on diagnostic categories to a degree-of-severity classification; from a focus on "mental illness" toward the entire range of mental health differences; from incidence to prevalence measures of frequencies of mental health states; from cross-sectional to longitudinal type investigations; and a shift to cover content areas of patient strengths as well as symptomatic deficits) are discussed in relation to the author's Midtown Manhattan studies and the nature of diachronic investigations. (45 ref)—*Journal summary*.

7263. Walters, Elizabeth; Markley, Robert P. & Tiffany, Donald W. (High Plains Comprehensive Community Mental Health Ctr, Hays, KS) **Lunacy: A Type I error?** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 715-717.—Reports that 2 recent empirical studies, in contrast to earlier ones, indicated a positive relation between lunar phases and deviant human behavior. Explanations involve Type I errors and sampling variability.

7264. Wetzel, Rainer. (Zentralinstitut für Seelische Gesundheit, Mannheim, W Germany) **[Problems of using collective and individual data in psychiatric-epidemiological investigation.]** (Germ) *Social Psychiatry*, 1975(Oct), Vol 10(4), 189-198.—Argues that conclusions derived from associations observed at a collective level about qualitatively-similar associations at an individual level, must be viewed with great caution. In the case of variables that are not mutually exclusive, no inferences may be drawn about correlations among individuals, purely on the basis of correlations among groups. Row- and column totals express connections among various subgroups, whereas the cell totals express connections among individuals: the 2 represent different sets of distributions. Statistical procedures for estimating individual correlations from corresponding collective data are subject to restrictive conditions which can be fulfilled only with difficulty. To assess the validity of such estimates, the corresponding individual data must be examined. In the sphere of psychiatric epidemiology, multilevel analysis represents a suitable procedure for demonstrating the influence of social-background characteristics on individual-illness expectancy or on the utilization of psychiatric facilities. (28 ref)—*English abstract*.

7265. White, Cynthia A. (U Miami, FL) **The effects of viewing films of different arousal content on the eating behavior of obese and normal weight subjects.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2324.

7266. Wilbert, Donald E.; Jorstad, Val; Loren, John D. & Wirrer, Bobbi. (Orange County Medical Ctr, South Orange, CA) **Determination of grave disability.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 35-39.—Examined the implications of California's Lanterman-Petris-Short Act which provides a mechanism for putting the patient under the care of a conservator if the patient is unable to provide for his own personal needs of food, clothing, and shelter. 51 patients for whom the clinical staff desired to initiate conservatorship proceedings were given a test consisting of behavioral tasks specifically designed to be appropriate to the legal definition of grave disability. The natural groupings were chronic organic brain syndrome, chronic schizophrenia, and other. It was found that the grave disability of the organic brain syndrome patients was fairly predictable from their mental status examination, while the grave disability of the chronic schizophrenic patients was not and required the application of the behavioral test for an appropriate determination of their ability to perform the functions specified in the law. When the method or the proceedings were applied to patients of other diagnostic categories, they were inappropriate. The usefulness of this empirical approach to a legal definition of competence is discussed.—*Journal abstract.*

7267. Zehrbach, R. Reid. (U Illinois, Inst for Research on Exceptional Children, Champaign) **Determining a preschool handicapped population.** *Exceptional Children*, 1975(Oct), Vol 42(2), 76-83.—Describes the development and evaluation of a comprehensive identification process for locating, screening, and evaluating 3-5 yr old handicapped children. Problems in implementing the model are discussed.

Mental Disorders

7268. Andorfer, Joseph C.; Shimkunas, Algimantas M. & Sciarini, John W. (U Missouri, Columbia) **Neutralization of affective concepts in schizophrenia.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 722-725.—Reports experimental data from schizophrenic and nonpsychotic Ss which provide reasonably strong support for the hypothesis that invalidation of affective judgments of schizophrenics leads them to neutralize their judgments. Data suggest that neutralization may be an important phenomenon in schizophrenic conceptual processes.

7269. Aniskiewicz, Albert S. (Purdue U) **Autonomic components of vicarious conditioning and psychopathy.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2295.

7270. Astrup, Christian. (Tromsø U, Norway) **Studies of higher nervous activity in functional psychoses.** *Pavlovian Journal of Biological Science*, 1975(Oct-Dec), Vol 10(4), 194-215.—Argues that psychiatric illnesses can be conceived of as experiments of nature, providing a variety of psychopathological mechanisms that may elucidate normal psychological processes. A review of the literature indicates that clinically, the reactive psychoses are primarily psychogenic reactions which exhibit disturbances of higher nervous activity similar to those of neuroses. In these cases, unconditioned reflex activity is similar to that in normal controls. The finding of complex psychodynamic structures which appear to

be parallel to the clinical manifestations of mental trauma is discussed. In the manic-depressive psychoses, the most characteristic feature is a marked disturbance of unconditioned reflex activity, suggesting that there is an important physiological mechanism underlying these reactions which may explain changes of mood and physical disturbances associated with this disorder. Schizophrenic psychoses also involve changes in unconditioned reflex activity, predominantly in the direction of inhibition of response. 3 levels of reflexes and 2 signaling systems which are important in functional psychoses are examined, and implications for prognostic models and prophylactic psychiatry are noted. (2 p ref)—*Journal abstract.*

7271. Baltaxe, Christiane A. & Simmons, James Q. (U California, Neuropsychiatric Inst, Los Angeles) **Language in childhood psychosis: A review.** *Acta Symbolica*, 1975(Nov), Vol 49(4), 439-458.—Reviews the literature on language in childhood psychosis covering the general characteristics of the linguistic deficits, the importance of language in diagnosis and prognosis, mother-child linguistic interaction, and intervention programs. Recent psycholinguistic studies in normal development point up the present inadequacies or lack of structural linguistic studies in childhood psychosis. Some assumptions about innate linguistic capacities prerequisite to normal development are discussed, and a hypothesis relating to a dysfunction in these capacities in childhood psychosis as well as directions for further research are proposed. (3½ p ref)—*Journal abstract.*

7272. Binitie, Ayo. (U Benin, Nigeria) **A factor-analytical study of depression across cultures (African and European).** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 559-563.—Attempted to determine whether (a) depressives in African cultures show typical signs of sin and guilt, and (b) these depressives show suicidal tendencies. Ss were all patients who had a diagnosis of affective disorder in an African clinic for nervous diseases and a total of 250 consecutive admissions to London and US hospitals. Results show that depression in African cultures presented principally as depressed mood, somatic symptoms, and motor retardation. In European cultures, depression presented with depressed mood, guilt, suicidal ideas, motor retardation or anxiety. Both groups lost interest in work and the environment. Guilt and suicidal ideas and acts were uncommon in African Ss and thus appear to be culturally determined. (32 ref)—*Journal abstract.*

7273. Boudewyns, Patrick A. & Levis, Donald J. (VA Hosp, Durham, NC) **Autonomic reactivity of high and low ego-strength subjects to repeated anxiety eliciting scenes.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 682-692.—Conducted an experiment to answer the question of whether patients labeled high or low in ego-strength differentially responded to scenes designed either to elicit anxiety or produce little (neutral) affect. Ss were 48 18-62 yr old male psychiatric inpatients. High ego-strength Ss initially responded to anxiety scenes with reliably more affect than to neutral scenes as indexed by their skin conductance level, heart rate measures, and by responses to the Fear Thermometer test and Affect Adjective Check List. Repeated presentations of anxiety scenes across 4 sessions led to a rapid decrease in affect

for the autonomic measures recorded. The same comparisons over these indices for low ego-strength Ss failed to produce any reliable differences. This latter result occurred despite the finding that low ego-strength Ss reported reliably more psychopathology on the pretest MMPI and Fear Survey Schedule when compared with high ego-strength Ss. Differences in baseline autonomic reactivity and responding to a standard stressor test were not obtained between ego-strength conditions. Data from nontreated Ss suggest that the presentation of anxiety scenes produced no ill effects for either ego-strength population. A tentative learning theory interpretation of the data is advanced. (21 ref)—*Journal abstract.*

7274. Brekke, Beverly & Williams, John D. (U North Dakota) **Conservation of weight with the emotionally disturbed.** *Journal of Educational Research*, 1975(Nov), Vol 69(3), 117-119.—Results in 10-19 yr old emotionally disturbed inpatients indicate that emotional disturbance, insofar as this disturbance is manifested in a hospitalized population, does not contribute to a cognitive deficit in Piagetian conservation.

7275. Brenner, Berthold. (NIMH, Ctr for Epidemiologic Studies, Rockville, MD) **Enjoyment as a preventive of depressive affect.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 346-357.—Previous work suggests 2 mechanisms whereby finding enjoyment in life decreases the likelihood of depressive affect: (a) Enjoyment counteracts depressive affect; and (b) failure to find enjoyment is itself a stimulus for depressive affect. The present study, based on interviews with 2,168 adults in 2 communities, yields findings consistent with the proposition that satisfaction with major life areas is a factor in finding enjoyment in life, thereby a factor in avoiding depressive affect and thereby a factor in avoiding psychophysiological problems. Thus results support the proposition that finding enjoyment in life reduces the likelihood of depressive affect.—*Journal abstract.*

7276. Carpenter, James C. (U North Carolina, Chapel Hill) **Change in a schizophrenic adolescent as a result of a series of rage-reduction treatments.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 58-64.—Describes the use of 6 rage-reduction sessions to increase eye contact, speech quality, peer interactions, expression of feelings, and interactions with adults in a 15-yr-old schizophrenic girl with many autistic features. The use of recreation therapy and methodological weaknesses in the rage-reduction technique are discussed.

7277. Carpenter, William T.; Fink, Edward B.; Narasimhachari, Nedathur & Himwich, Harold E. (Albert Einstein Coll of Medicine, Schizophrenia Research, Yeshiva U) **A test of the transmethylation hypothesis in acute schizophrenic patients.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1067-1071.—An investigation of 3 aspects of the transmethylation hypothesis found that 26 acutely schizophrenic patients were no more likely to have bufotenine or N,N-dimethyltryptamine present in urine or elevated serum indolethylamine N-methyltransferase activity than 10 normal controls. It is concluded that these are naturally occurring substances. (37 ref)

7278. Chapman, Loren J. & Chapman, Jean P. (U Wisconsin, Madison) **Schizophrenic reasoning about**

affect-laden material. *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1233-1236.—Administered to 74 drug-free schizophrenic patients and 206 nonpsychotic Ss a test of affect-laden and affectively neutral multiple choice analogy items. Chronic patients ($n = 44$) had a mean age of 40.4 yrs; newly admitted patients ($n = 33$), a mean of 29.6 yrs. The 2 subtests were matched on several psychometric characteristics that determine the power of the test to distinguish the more able from the less able normal Ss. Neither newly admitted nor chronic Ss performed differently on the affective subtest than on the neutral subtest. It is concluded that the many published findings of a cognitive deficit in schizophrenia in response to affect-laden stimuli can probably be attributed to the inappropriate use of unmatched tests.—*Journal abstract.*

7279. Chirico, S. M.; Kendall, Philip C. & Finch, A. J. (Virginia Commonwealth U) **Effects of task difficulty on factor specific helplessness in locus of control for children.** *Psychology*, 1975(Aug), 12(3), Vol 30-31.—Administered the Nowicki-Strickland Locus of Control Scale for Children to 36 hospitalized emotionally disturbed children. Ss were split into high- and low-helplessness groups on the basis of their scores and were then given a memory task. Results indicate no significant changes occurred as a result of task difficulty or between groups.—*R. Tomasko.*

7280. Coleman, Ronald E. (Acadia U, Wolfville, Canada) **Manipulation of self-esteem as a determinant of mood of elated and depressed women.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 693-700.—Tested the theory that self-esteem is a determinant of elation-depression. Changes in self-esteem were induced by having Ss read positive or negative self-evaluative statements. 140 female college students were selected on the basis of extreme scores of characteristic elation and depression and on the basis of suggestibility and were assigned to 1 of 5 treatment or control groups. The induction of positive vs negative cognitions produced significant differences in elation-depression on multiple measures. Characteristically elated and depressed Ss were able to take on opposite mood states. This study suggests that a determinant of depression is evaluative self-statements, supports the utility of cognitive therapy for depressives, and demonstrates a potentially useful technique for inducing more appropriate self-evaluations. (19 ref)—*Journal abstract.*

7281. Derks, Peter L.; Leightman, Harry M. & Carroll, Patrick J. (Coll of William & Mary) **Production and judgment of "humor" by schizophrenics and college students.** *Bulletin of the Psychonomic Society*, 1975(Sep), Vol 6(3), 300-302.—Captions for stills from old movies were produced by 16 schizophrenics (mean age, 23 yrs) and 16 undergraduates under instructions to be funny. Subsets of these captions were selected as schizophrenic, collegiate, or ambiguous as well as relatively funny or not funny. Another group of schizophrenics and 20 undergraduates judged these captions for their schizophrenia and humor. Schizophrenics did not make up funnier captions, did not do better in diagnosing schizophrenic captions, and all Ss judged that schizophrenia and humor did not go together.—*Journal abstract.*

7282. **Franco, Vincent J.** (Long Island U, Brooklyn Ctr) **The distortion of self-image as a function of role consistency using normal and schizophrenic groups.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2302-2303.

7283. **Giacobbe, George A.** (U Georgia) **The responses of aggressive emotionally disturbed and normal boys to selected musical stimuli.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4036-4037.

7284. **Gnepp, Eric H.** **Principles of learning and depressive neurosis.** *Psychology*, 1975(Aug), Vol 12(3), 33-38.—Discusses depression from the perspective of behavioral functionalism. A theoretical model in which the learning of depressive neurosis results from stimulus generalization, anticipatory response, and positive feedback is presented. The precipitatory event leads to all stimuli eliciting a depressive response. This learning process is the same for psychotic as well as neurotic depression. The depressive response becomes extinct when the feedback cycle is broken by stimuli of sufficient intensity to force themselves to the person's attention. A clinical example is presented.—*R. Tomasko.*

7285. **Goldman, Norman.** (State U New York, Albany) **Some implications of a psychiatric history for the mental patient and his male relatives.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2304-2305.

7286. **Grand, Stanley; Steingart, Irving; Freedman, Norbert & Buchwald, Charles.** (State U New York, Downstate Medical Ctr, Brooklyn) **Organization of language behavior and cognitive performance in chronic schizophrenia.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 621-628.—Reports data from 10 31-51 yr old chronic schizophrenic patients which relate formal categories of language behavior to performance on the Stroop Color-Word Interference Test—a task of verbal encoding under distracting and nondistracting conditions. The data show that the most simple type of language behavior is related to difficulty in verbal articulation and verbal encoding on the Stroop task. More complex language behavior, utilizing a conditional framework to express ideas, is related to increased interference from the distracting verbal text. Data are discussed in terms of attention regulation in chronic schizophrenia, and a speculation is offered regarding the role of attention in language development. (18 ref) —*Journal abstract.*

7287. **Hakansson-Zaunders, Margareta & Uddenberg, Nils.** (U Lund, Sweden) **Conflicts regarding pregnancy and the maternal role as reflected in a serial projective test instruments.** *Psychological Research Bulletin, Lund U*, 1975, No 15(3), 15 p. A picture of a pregnant woman was tachistoscopically presented to 101 18-33 yr old randomly selected nulliparous pregnant women. Ss were in the beginning of the 2nd trimester of the pregnancy. Defense reactions in the test (no C-phase, meaning absence of the pregnancy theme) were compared to information collected in semistructured interviews carried out during pregnancy, at the obstetrical ward, and 4 mo postpartum. Absence of C-phase was related to poor emotional relations in the parental home, higher perceived similarity to the father than to the mother, preference for a professional role, and poor

adaptation to motherhood postpartum. Further, absence of C-phase was associated with late perception of fetal movements. Results confirm previous findings regarding background factors of importance for mental disturbance postpartum. They also demonstrate that by means of projective techniques it is possible to study early-founded, largely un verbalized conflicts. (31 ref)—*Journal abstract.*

7288. **Hammen, Constance L. & Glass, David R.** (U California, Los Angeles) **Expression, activity, and evaluation of reinforcement.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 718-721.—Reports results of 2 experiments which show that, contrary to an operant hypothesis of depression, mildly or moderately depressed college students who increased their participation in events they had rated as pleasurable did not become less depressed.

7289. **Heffner, Peggy A.; Strauss, Milton E. & Grisell, James.** (Wayne State U) **Rehospitalization of schizophrenics as a function of intelligence.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 735-736.—Reports that brighter schizophrenic Ss were less often rehospitalized 3 and 5 yrs after discharge than Ss of less than median IQ. It is concluded that the prognostic significance of IQ contributes to differences in intelligence between acute and chronic hospitalized schizophrenics and poses serious difficulties for the study of differential deficits in cognitive abilities in these groups.

7290. **Hendrie, Hugh C.; Lachar, D. & Lennox, K.** (Lafayette Clinic, Detroit, MI) **Personality trait and symptom correlates of life change in a psychiatric population.** *Journal of Psychosomatic Research*, 1975, Vol 19(3), 203-208.—Measured the occurrence of life change events (as defined by the Holmes and Rahe Social Readjustment Rating Scale) in a mixed psychiatric inpatient population of 295 patients (mean age range 28.54-30.45 yrs) who had also completed the MMPI. In males, there was a significant relationship between life change and diagnosis, a greater proportion of schizophrenics being placed in the low-stress category. There was no significant relationship between the amount of life change and the MMPI. In females, there was no relationship between life change and diagnosis, but there was a significant association between life change and aspects of the MMPI, which suggested that certain symptom complexes (e.g., anxiety and depression) are differentially related to life changes in females. It is also suggested that certain personality types (e.g., impulsive or reckless) are instrumental in generating higher levels of life change.—*Journal summary.*

7291. **Heninger, George R.; Mueller, Peter S. & David, Linda S.** (Yale U) **Depressive symptoms and the glucose tolerance test and insulin tolerance test.** *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 421-432.—40 depressed inpatients were rated by nursing staff on a short clinical rating scale and by a psychiatrist on the Brief Psychiatric Rating Scale when the metabolic measurements were made. Fasting serum-free fatty acid levels (FFA) had a significant positive correlation to ratings of anxiety. Fasting levels of glucose, insulin, and human growth hormone (HGH) did not significantly correlate to any of the ratings. The responsiveness of FFA and HGH during the insulin

tolerance test was significantly less in Ss with more severe symptomatology; responsiveness improved when those Ss improved. Neither insulin values nor glucose levels significantly correlated to the ratings. Results suggest that within the syndrome of depression, increased FFA is related to anxiety; decreased glucose utilization is related to motor retardation, emotional withdrawal, and blunt affect; and decreased FFA and HGH responsiveness to insulin is a nonspecific correlate of the general depressive syndrome. (41 ref)—*Journal abstract*.

7292. Hollender, Marc H. & Callahan, Alfred S. (Vanderbilt U, Medical School) **Erotomania or de Clérambault syndrome.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1574-1576.—Comments on the relationship of erotomania to love, briefly refers to the literature on de Clérambault syndrome, describes 4 additional cases, and discusses the nature of the syndrome diagnostically and psychodynamically. De Clérambault focused attention on a syndrome in which a woman has the delusional belief that a man, usually of higher social status and considerably older, is in love with her. The situation becomes critical when the fantasies are dramatized in real life with an unsuspecting and unwilling man. It is concluded that such delusional thinking, resulting from an ego defect and producing bizarre actions, may be shaped largely by feelings of being unloved or even unlovable; a narcissistic blow is overcome by a grandiose fantasy. Cases in which erotomania is prominent are usually diagnosed as paranoid state or paranoid schizophrenia.—*Journal abstract*.

7294. Jirmerson, David C.; Gordon, Edna K.; Post, Robert M. & Goodwin, Frederick K. (NIMH, Adult Psychiatry Branch, Bethesda, MD) **Central noradrenergic function in man: Vanillylmandelic acid and CSF.** *Brain Research*, 1975, Vol 99(2), 434-439.—Presents the 1st study of vanillylmandelic acid (VMA) levels in the cerebrospinal fluid (CSF) of different diagnostic groups of psychiatric patients, including the 1st demonstration of reduced VMA in the CSF of depressed patients. Findings indicate the utility of the CSF technique using probenecid to measure central norepinephrine (NE) turnover and the presence of central NE metabolites in affectively ill patients. (31 ref)

7295. Kaplan, Howard B. & Warheit, George J. (Baylor Coll of Medicine) **Introduction to recent developments in the sociology of mental illness.** *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 343-346.—Presents an overview of the articles appearing in this special issue of the journal which focuses on the incidence and prevalence of mental illness in various sociocultural groups, social psychological factors in the etiology of mental illness, and patterns of response to their disorders by mentally ill persons and other significant groups.

7296. Kayton, Lawrence & Koh, Soon D. (Psychosomatic & Psychiatric Inst, Michael Reese Medical Ctr, Chicago, IL) **Hypohedonia in schizophrenia.** *Journal of*

Nervous & Mental Disease, 1975(Dec), Vol 161(6), 412-420.—A free-recall task employing 24 affectively laden words presented in random order over 9 trials was given to a group of 12 nonpsychotic hospitalized schizophrenics, 17 hospitalized nonschizophrenics, and 12 normals. The results demonstrate that normals remembered pleasant words to a significantly greater extent than unpleasant words. The schizophrenics showed a significantly lower recall of pleasant words when compared with normals, although they remembered unpleasant words to a degree comparable to normals. Findings provide experimental support for the hypohedonia hypothesis in schizophrenia. The nonschizophrenic Ss recalled pleasant and unpleasant words to a significantly greater degree than neutral words. They were thus affectively governed in the free-recall task and seemed equally sensitized to both pleasant and unpleasant affect in their mnemonic processing. (16 ref)—*Journal abstract*.

7297. Kest, Edward A. **Possible organic factors in the prevention of emotional problems of the aged.** *Journal of the American Geriatrics Society*, 1975(Dec), Vol 23(12), 541-544.—Attempts an approach to the understanding of both normal and abnormal behavior in older persons who are ready for retirement, using the concept of an organic cerebral basis for the neurophysiologic disturbances which result in emotional problems. A unified concept of human behavior allows for early establishment of mature brain patterns and the disruption of these patterns by disuse atrophy in later life. This provides a clue to the development of better measures for the prevention and treatment of emotional problems in the aged, problems which now come under the classification of chronic brain syndrome or senile brain disease.—*Journal abstract*.

7298. Kirkegaard, Carsten; Norlem, Nanna; Lauridsen, Ulrik B. & Bjorun, Niels. (Frederiksberg Hosp, Copenhagen, Denmark) **Prognostic value of thyrotropin-releasing hormone stimulation test in endogenous depression.** *Acta Psychiatrica Scandinavica*, 1975(Sep), Vol 52(3), 170-177.—Performed thyrotropin-releasing hormone (TRH) stimulation tests in 19 25-81 yr old patients with endogenous depression before treatment and when they had apparently recovered following antidepressive treatment. An increase in the maximal serum thyrotropin (TSH) response to TRH of more than 2.0 μ U/ml was found in all 10 Ss who did not relapse, while such an increase was found in only 1 of 9 Ss who did relapse within 6 mo. (17 ref)—*Journal abstract*.

7299. Kuster, Gordon; Harrow, Martin & Tucker, Gary. (Yale U) **Kinesthetic figural aftereffects in acute schizophrenia: A study of processing stimuli?** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 451-458.—Administered the Kinesthetic Figural Aftereffect test to 106 psychiatric inpatients to assess style of stimulus processing in schizophrenia. 3 conditions were used: (a) standard stimulus conditions at the acute phase; (b) standard conditions, 7 wk later, to evaluate stability over time; and (c) reversed stimulus conditions to assess kinesthetic figural aftereffect generality under different stimulus conditions. Results indicate that (a) schizophrenics reduced stimuli, but differences between patient groups were not significant; (b) kinesthetic figural

aftereffect stability over time was shown by nonschizophrenics but not by schizophrenic and borderline patients; (c) all diagnostic groups reversed kinesthetic figural aftereffect responses under reversed stimulus conditions; and (d) acute schizophrenics showed a stimulus-governed style. Results raise questions about kinesthetic figural aftereffects as a measure of response style.—*Journal Abstracts*.

7300. Landau, Stephen G. et al. (U Michigan) **Schizophrenia and stimulus intensity control.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1239-1245. —Studied 19 acute, medication-free, 18-54 yr old schizophrenic patients, using average-evoked responses (AERs) to 4 intensities of light. Comparison with age- and sex-matched normal controls and patients with bipolar affective disorders showed that schizophrenics had similar AER amplitudes and either no increase or an actual decrease in amplitude with increasing stimulus intensity. Normal Ss and schizophrenics were discriminated with 71% accuracy using AER variables; normals, patients with bipolar disorders, and schizophrenics with 64% accuracy. Patients who evidenced this AER "reducing" pattern to a noticeable extent early in hospitalization showed greater improvement and tended to have relatively good premorbid histories. (51 ref)—*Journal abstract*.

7301. Lewisohn, Peter M. (U Oregon) **Engagement in pleasant activities and depression level.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 729-731. —Notes that C. L. Hammen and D. R. Glass (see PA, Vol 55:Issue 4) found that Ss who increased their pleasant activities did not lessen their depression. It is argued that these results should not be considered conclusive because neither an initial low pleasant-activities level nor a significant association between mood and pleasant-activity level was demonstrated for the Ss prior to the experiment.

7302. Lion, John R. & Penna, Manoel W. (U Maryland, Medical School, Baltimore) **Concepts of impulsivity: A clinical note.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 630-631. —Discusses the characteristics, diagnosis, and treatment of impulsivity in mental illnesses. The relative advantages of psychopharmacological vs psychotherapeutic treatment are examined in terms of both the psychological and organic parameters of the impulsivity trait. (15 ref)

7304. Maricq, H. R. (Medical U, Charleston, SC) **A two-gene model for schizophrenia with the possibility to detect carriers of the modifier gene.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 264-282. —Presents a 2-gene model for the hereditary transmission of schizophrenia involving 2 pairs of autosomal alleles, Ss and Pp. It is hypothesized that the recessive gene can produce schizophrenia in homozygous state with a penetrance of 0.40. In the presence of the gene P schizophrenia can occur in the heterozygote Ss, resulting in a more serious form of the disease and having a manifestation rate of 0.70. The population frequencies best fitting the availa-

ble data are estimated to be approximately 0.03 for P and 0.07 or 0.08 for s. It is also hypothesized that the reproductive fitness is 0.80 in manifest schizophrenics with genotype ss pp and 0.50 in overt schizophrenics carrying the modifier gene P. The model is proposed to cover only the process or nuclear type of schizophrenia. (60 ref)—*Journal abstract*.

7305. McDowell, David; Reynolds, Brian & Magaro, Peter. (U Maine, Orono) **The integration defect in paranoid and nonparanoid schizophrenia.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 629-636. —Tested a theory of schizophrenia which views the central defect as an inadequate integration of perceptual and cognitive processes. Instead of combining these processes as normals do, paranoids emphasize cognitive processes, whereas nonparanoids emphasize perceptual processes. 10 nonparanoid and 10 paranoid patients and 10 control Ss (hospital aides), all 18-60 yrs old, listened to sentences ending in high-, or low-probability words masked by 1 of 5 levels of white noise. As predicted, paranoids identified the masked word significantly more accurately than nonparanoids when task performance was facilitated by cognitive processes (expectation of the probable ending). When expectations operated to decrease performance (improbable endings), subgroup performance tended to reverse, although differences were not significant. The prediction that normals' performance would be intermediate in both conditions was confirmed. Controls performed more like paranoids on probable end words but more like nonparanoids on improbable end words. Moreover, signal detection analysis showed that paranoids were biased toward high-probability responses, whereas nonparanoids were biased toward low-probability responses, thus deviating from normals in opposite directions. (34 ref)—*Journal abstract*.

7306. McGlashan, Thomas H.; Levy, Steven T. & Carpenter, William T. (NIMH, Adult Psychiatry Branch, Bethesda, MD) **Integration and sealing over.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1269-1272. —Notes that concepts of integration and sealing over are common clinical psychiatric parlance. The authors posit that their experience studying and treating acute schizophrenic patients, primarily with psychosocial techniques, has emphasized the meaningfulness of these concepts. By studying the attitudes of 14 18-60 yr old recovered patients toward their psychotic experiences, they have obtained material from which to formulate definitions of these concepts. It was found that integrators tend to be curious about their symptoms, regard them as part of their life's pattern, and gain information from them, resulting in a more flexible and variable attitude toward illness than patients who seal over. The latter have rather fixed, usually negative, views of their illness and tend not to strive to understand their psychotic symptoms nor to place their psychotic experiences in perspective with their lives before and after psychosis. (21 ref)—*Journal abstract*.

7307. McQuaid, Paul F. (Mater Misericordiae, Dublin, Ireland) **Infantile autism in twins.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 530-534. —Describes a pair of monozygotic male twins concordant for early infantile autism (EIA). A distinction is

drawn between EIA and infantile psychosis (IP) with associated mental retardation as a guide to prognosis and the necessity to provide suitable social training and education. The relevance of etiology is discussed, and the importance of abnormal ante-natal history and delivery status, even in cases with strong genetic predisposition, is noted. (19 ref)—*Journal abstract*.

7308. **Mechanic, David.** (U Wisconsin) **Sociocultural and social-psychological factors affecting personal responses to psychological disorder.** *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 393-404.—Reviews the historical, methodological, theoretical, and analytical factors in the patient's responses to indications of mental illness. Social selection theories of the development of illness are examined, along with 4 methodological approaches to understanding how people respond to symptoms and choose pathways to care (study of care-seeking as a dispositional variable, study of the interaction independent variables explaining utilization, study of the effects of the structure of the health delivery system on utilization, and studies of the processes of illness). It is noted that most of the literature deals with systematic differences in the sociocultural characteristics of users of particular helping facilities, rather than with the theoretical aspects of illness and help-seeking behaviors. The politics of mental health care and attribution frameworks of illness responses are also examined. (47 ref)—*L. Gorsey*.

7309. **Merbaum, Michael & Hefez, Albert.** (U Haifa, Israel) **Emotional adjustment of psychiatric patients following their unexpected discharge due to war: Short- and long-term effects.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 709-714.—Reports that at 1-mo follow-up none of the ex-patients had been rehospitalized; at 10-mo follow-up 4 had been rehospitalized, and 28% of the 30 Ss were receiving chemotherapy. Ratings at both follow-ups suggested mild to moderate emotional stress.

7310. **Mohan, K. J.; Salo, M. W. & Nagaswami, S.** (VA Hosp, Topeka, KS) **A case of limbic system dysfunction with hypersexuality and fugue state.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 621-624.—Describes a case of limbic dysfunction in a 28-yr-old female who presented with psychosis and sexual promiscuity. EEG abnormalities were present also. Dramatic improvements in the presenting symptoms were observed with anticonvulsant medication. It is noted that limbic system dysfunction may be diagnosed as "functional psychosis." (17 ref)—*Journal abstract*.

7311. **Myers, Jerome K.; Lindenthal, Jacob J. & Pepper, Max P.** (Yale U) **Life events, social integration and psychiatric symptomatology.** *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 421-429. Examined the relationship between life events, social integration, and psychopathology in 720 adults over 18 yrs of age first in 1967 and again in 1969. For most Ss, there was a direct relationship between the number of life events experienced and the degree of symptomatology; however, some Ss did not fit this pattern. Among these individuals, those who displayed significant symptoms but reported few life events were less well integrated than those who reported few symptoms but many events. Possible reasons for these differences are discussed in

terms of integration in the larger social stratification system, the micro-system level of the family, and the instrumental role system. (23 ref)—*Journal abstract*.

7312. **Prior, Margot R. & Chen, C. S.** (Monash U, Clayton, Australia) **Learning set acquisition in autistic children.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 701-708.—Compared the performance of 19 autistic 5-13 yr olds (mean MA: 4 yrs, 3 mo) on an object discrimination learning set task with that of MA and IQ matched control groups of normal and retarded Ss. All but 2 of the autistic Ss acquired a learning set. About 1/3 of the Ss in each control group also acquired a learning set. However, the mean number of problems to criterion was similar for both the autistic and control groups of Ss who acquired a learning set. It is suggested that the superior performance of autistic Ss on a task which is believed to be related to MA indicates that the MA of these children may be higher than that which is usually obtained with standard measuring techniques. Results provided somewhat equivocal evidence for a relation between MA, IQ, and learning set formation in the normal and retarded Ss. (24 ref)—*Journal abstract*.

7313. **Prior, Margot; Boulton, David; Gajago, Christine & Perry, Dennis.** (Monash U, Clayton, Australia) **The classification of childhood psychoses by numerical taxonomy.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 321-330.—Used a form of numerical taxonomy to classify a group of 162 psychotic children on the basis of case history data supplied by the parents on E. Rimland's (see PA, Vol 47:5100) diagnostic checklist. Ss were grouped into 2 classes. Class 1 included Ss with early onset of the psychosis who showed numerous withdrawal and aloneness symptoms and impaired communication; Class 2 included Ss with later onset whose symptoms were more heterogeneous and scattered than those in Class 1. The 2 classes differed significantly on 29 of the 67 attributes on which they were measured. Findings are interpreted as supporting a system of classification in childhood psychosis in terms of age of onset. (45 ref)—*Journal summary*.

7314. **Reich, Walter.** (NIMH, Bethesda, MD) **The schizophrenia spectrum: A genetic concept.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 3-12.—Describes a spectrum concept of schizophrenia which hypothesizes that (a) classical schizophrenia results at least in part from a genetic diathesis; (b) certain other, usually milder, psychopathological states, which do not satisfy the classical criteria for the diagnosis of schizophrenia, represent varying clinical expressions of the same diathesis; and (c) all of these states constitute a genetically based spectrum of schizophrenic disorders. A program of research which has attempted to test the concept, and to identify, describe, and classify the components of the genetic spectrum, is reviewed. Its methodology makes possible an approach to schizophrenia which simultaneously takes into account its 2 most vexing problems—nosology and etiology. (57 ref)—*Journal abstract*.

7315. **Richer, John & Richards, Barry.** (Reading U, England) **Reacting to autistic children: The danger of trying too hard.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 526-529.—Recent work has revealed that

autistic children's predominating tendency to avoid social interactions is actually enhanced by the "friendly" approaches of others. To investigate this finding, the reactions of 8 autistic children to 4 styles of adult behavior were videotaped. The adult reacted to the child's looks at her by (a) smiling, (b) gaze averting, (c) gaze averting plus other "timid" behaviors and (d) doing nothing except continuing to look back. For condition "d", it was found that autistic children showed less avoidance behavior after eye contact and spent more time within 1 meter of the adult. The implications for treatment are contrary to much modern practice and to what seems to be adults' "natural" response. Reactivity by others appeared to enhance the child's avoidance, and it is suggested that adults should be circumspect in the degree of sociability with which they respond to autistic children. (16 ref)—*Journal abstract*.

7316. Schuckit, Marc A.; Miller, Patricia L. & Hahlbohm, Dewey. (U Washington, Alcoholism & Drug Abuse Inst, Seattle) **Unrecognized psychiatric illness in elderly medical-surgical patients.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 655-660.—Used research diagnostic criteria in a structured interview to evaluate the presence of unrecognized psychiatric illness in 50 acute medical and surgical patients over age 65 at a veterans hospital; 24% of the Ss had unrecognized major mental disorders, predominantly depression or alcoholism. The geriatric patients most likely to have unrecognized illness were older, widowed or divorced, had past jail and/or psychiatric hospital experiences, and gave histories of vascular disorders. Results are consistent with past literature on the elderly. (29 ref)—*Journal abstract*.

7317. Schwartz, Carol C.; Myers, Jerome K. & Astrachan, Boris M. (Columbia U, Coll of Physicians & Surgeons) **Concordance of multiple assessments of the outcome of schizophrenia.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1221-1227.—Examined concordance of multiple assessments of the outcome of schizophrenia from (a) concordance of 3 different assessments of mental status, and (b) concordance of 4 different dimensions of outcome. 132 schizophrenics, 85% of whom were 20-39 yrs old, were interviewed 2-3 yrs after discharge. When the assessment instruments were compared, discordance in overall assessment happened because each instrument tapped varying aspects of symptomatology, suggesting that outcome is somewhat instrument-related. Although adjustment in mental status was correlated with social adjustment and role performance, a patient's status at follow-up bore little relationship to rate of rehospitalization or to consumer satisfaction with treatment. A differential impact of the same predictor variables on 4 dimensions of outcome underscored the discordance in multiple assessments. It is concluded that since treatment outcome is multifaceted and multidetermined, multiple assessments must continue as vital procedures. (38 ref)—*Journal abstract*.

tive expectancy on the short term memory of emotionally disturbed and normal children. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4045-4046.

7320. Strauss, John S.; Carpenter, William T. & Bartko, John J. (U Hosp, School of Medicine & Dentistry) **Speculations on the processes that underlie schizophrenic symptoms and signs: III.** *Schizophrenia Bulletin*, 1975(Win), No 11, 61-69.—Discusses the underlying processes of schizophrenic symptoms and their relationship to the continuum characteristics, possible multiplicity, antecedents, and outcome of schizophrenia. Findings about the antecedents of the kinds of schizophrenic manifestations and the processes they reflect suggest that (a) positive symptoms may reflect a nonspecific process that can be a reaction to a variety of causes, including organic, psychological, or family environment conditions; (b) negative symptoms may be interpreted as reflecting a process that arises from the chronicity of some primary disorder or as a response to society's reaction to other symptoms of the patient; and (c) disorders of personal relationships appear to have their own longitudinal history and consistency as a psychological process. These 3 suggestions are integrated into a multi-process conception of schizophrenia. The need to consider the etiology, outcome, and treatment requirements of each process and also the relationships among processes is emphasized.

7322. Tooley, Kay. (U Michigan, Children's Psychiatric Hosp) **The choice of a surviving sibling as "scapegoat" in some cases of maternal bereavement: A case report.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 331-339.—Presents a description of a pathological variation of the mourning process in mothers who have suffered a narcissistically damaging psychological or actual loss of a child. A surviving sibling is chosen as a displacement object for the mother's sense of guilt and self-hatred. The parent-child estrangement continues for years after the trauma with an extremity and severity that often necessitates court intervention. A case illustration is presented, and it is suggested that counseling by available professionals at the time of the bereavement would be both economical and effective in forestalling this variety of pathological family scapegoating.—*Journal summary*.

7323. Tsuang, Ming T. & Winokur, G. (U Iowa, Medical Coll) **The Iowa 500: The work in a 35 year follow-up of depression, mania, and schizophrenia.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 359-365.—Selected 525 depressive, manic, and schizophrenic patients, admitted to Iowa Psychopathic Hospital 1934-1944 and a control group of 160 surgical patients admitted to a general hospital (matched with the psychiatric patients for sex, age, and admission status) for follow-up 35 yrs later. For this follow-up, structured interviews with the patients were done by persons who did not know which group the patient came from. Ratings of employment status, physical health, and of

mental health (based on the interview data) were combined into an overall rating of psychiatric disability. On this rating the surgical patients had the healthiest scores (none had "severe" pathology), the manic and depressed group had intermediate scores (27% had severe pathology), and the schizophrenics fared worst (48% had severe pathology). (French summary)—*F. Auld*.

7324. **Uddenberg, Nils & Nilsson, L.** (U Lund, Psychiatric Inst I, Sweden) **The longitudinal course of para-natal emotional disturbance.** *Acta Psychiatrica Scandinavica*, 1975(Sep), Vol 52(3), 160-169.—Interviewed 95 18-33 yr old nulliparous women during pregnancy and 4 mo postpartum. The possibility of predicting mental disturbance postpartum from that during pregnancy was studied. When the woman was mentally disturbed during pregnancy, the prognosis was better in the case of a poor social situation at the time of the pregnancy than in the case of a good social situation. Negative attitude towards further pregnancies and repudiation of her own mother, however, implied unfavorable prognosis. In the case of a woman without mental symptoms during pregnancy, denial of the pregnancy and sensations connected with it suggested poor adaptation postpartum. (23 ref)—*Journal abstract*.

7325. **Videbech, Thomas.** (Inst of Psychiatric Demography, Risskov, Denmark) **A study of genetic factors, childhood bereavement, and premorbid personality traits in patients with anancastic endogenous depression.** *Acta Psychiatrica Scandinavica*, 1975(Sep), Vol 52(3), 178-222.—From a sample of 1,005 patients admitted to a State Hospital in Aarhus for the 1st time during 1950-1959 and who had been diagnosed as suffering from manic-depressive psychosis or endogenous depression (affective psychoses), 104 manic-depressive patients with anancastic symptoms were selected. Ss were individually matched with nonanancastic controls with affective psychoses. Anancastic Ss and controls who were still living were seen at the follow-up. Information concerning the psychiatric history of 945 1st-degree relatives of anancastic Ss and 1,000 1st-degree relatives of controls were obtained. A positive correlation was found between the presence of anancasms and premorbid obsessive personality traits, traumatic environmental factors in childhood, a tendency to monopolarity, a preponderance of monopolar depressions in the family, and the presence of secondary cases of anancastic endogenous depression. Findings are compatible with a theory which attributes a pathoplastic effect to the obsessive personality giving rise to anancastic symptomatology in the form of affective psychoses which tend to a unipolar course. (4% p ref)—*Journal abstract*.

7326. **Walsh, Michael L.** (U Kentucky) **Impression management on cognitive tests in good and poor premorbid schizophrenic patients.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2956.

7327. **Weiss, A. A.; Robinson, Sh. & Winnik, H. Z.** **Obsessive psychosis: A cross-validation study.** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 137-141. Conducted a cross-validation investigation of a study performed by A. A. Weiss et al (see PA, Vol 45 6599). A fresh sample of 12 patients diagnosed by clinical criteria as suffering from "obsessive psychosis" rather than compulsion neurosis was evaluated by the

same battery of 5 psychological tests (e.g., the Wechsler-Bellevue Intelligence Test Form II and the Weigl-Goldstein-Scheerer Color-Form Sorting Test). None of the Ss showed the basic compulsive personality characterized by orderliness, accuracy, ambivalence, displacement to irrelevancies, hesitancy, or doubting. While each S showed evidence of deviation from classical neurosis, none produced indications necessitating the diagnosis of schizophrenia. The methodology of cross-validation yielded convincing validation of the conclusions drawn in the original study.—*Journal abstract*.

7328. **Winter, David A.** (Claybury Hosp, Woodford Bridge, England) **Some characteristics of schizophrenics and their parents.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 279-290.—Tested 4 hypotheses: (a) Parents of schizophrenics constitute a discrete group among the parents of psychiatric patients with regard to aspects of their construing. (b) Schizophrenics can be differentiated from other psychiatric patients by aspects of their construing. (c) The construing of parents of psychiatric patients is related to that of their disturbed children. (d) Parents of schizophrenics differ from parents of other psychiatric patients in their personality and attitudes. An experimental group of 20 parents of acute schizophrenics and a control group of 20 parents of acute nonschizophrenic psychiatric patients were given a battery of psychological tests including the Mill Hill Vocabulary Scale, the Barrister-Fransella Grid Test of Schizophrenic Thought Disorder, the Eysenck Psychoticism-Extraversion-Neuroticism inventory, and the Hostility and Direction of Hostility Questionnaire. Their hospitalized children completed a shortened battery. There was some confirmation of each hypothesis. The parents' structuring of supplied constructs was related to that of their children. There were also some differences in personality between the groups of parents. (28 ref)—*Journal abstract*.

7329. **Yabuki, Shoji.** (Kokugakuin U, Tokyo, Japan) **[Cognition and defense (V): Reciprocal or parallel relations between the self-cognition and the cognition of outer world.]** (Japn) *Japanese Journal of Psychology*, 1975(Oct), Vol 46(4), 207-215.—Developed a series of photographs, based on each of the Blacky Pictures and arranged in 14 stages from vaguest to clearest, to measure the perceptual sensitivity and the cognitive styles (i.e., emotional vs neutral styles) of 60 male and 42 female neurotics. Ss' self-images were examined from the viewpoint of their relations to the cognitive styles of the outer world. It is shown that females tended to show a reciprocal relation of self-cognition and cognition of the outer world, but that males tended to show a parallel relation. On the basis of these findings and findings from other studies, results are interpreted as an indication of the tendency toward sex difference in social norms which bring about the intrapsychic conflicts which are accompanied by emotional expressions. (English summary)—*English abstract*.

7330. **Zarroug, El-Tayeb A.** (Psychiatric Hosp, Taif, Saudi Arabia) **The frequency of visual hallucinations in schizophrenic patients in Saudi Arabia.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 553-555.—69 schizophrenic patients were investigated for the phenomenology and frequency of visual hallucinations. Of these

patients 43 were visually hallucinated. It is concluded that visual hallucinations in schizophrenia are of common occurrence in Saudi Arabia. The need for further investigation as to the part played by cultural and other factors is emphasized.—*Journal abstract.*

7331. Zimmermann, Robert L.; Vestre, Norris D. & Hunter, Sara H. (U Minnesota) **Validity of family informants' ratings of psychiatric patients: General validity.** *Psychological Reports*, 1975(Oct), Vol 37(2), 619-630.—149 16-64 yr old psychiatric inpatients were rated by members of their families, using the Katz Adjustment Scale and the Interpersonal Check List, family form. The validity of these ratings was assessed against entrance diagnosis and patients' MMPI and Interpersonal Check List scores; global ratings of pathology by patient, nurse, and psychiatric resident; and standard ward- and self-ratings. The family ratings had validity levels comparable to ward- and self-ratings. (20 ref)—*Journal abstract.*

Behavior Disorders & Antisocial Behavior

7332. Bagley, Christopher. (U Surrey, England) **Suicidal behaviour and suicidal ideation in adolescents: A problem for counsellors in education.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 190-208.—A review of research on the prevalence, causes, and prevention of suicidal behavior and ideation in adolescents suggests that both completed and attempted suicide is increasing. A number of factors appear to be associated with suicidal behavior: cultural factors (e.g., those arising from the stresses of discrimination); disorganized and unstable family life, especially that which involves the child in early separation from a parent; sexual imbalances in educational institutions; and an increase in anomie which is associated in the young with a variety of self-indulgent behavior. Data on suicidal ideation in 240 English 14-yr-olds are reported. Results indicate that 4.5% of the boys and 9.4% of the girls expressed serious suicidal ideation. Suggestion are made for using such questionnaire data for identifying teenagers in need of counseling. (63 ref)—*Journal abstract.*

7333. Baker, Howard J. (U California, Ctr for the Health Sciences, Los Angeles) **Male transsexualism: Confirmation of a hypothesis?** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1587-1588.—Posits that persistent confusion and the grouping together of similar disorders of differing origins confuse the question of genetic influences of male transsexualism. A 27-yr-old adopted biological male transsexual was seen for psychiatric referral. At the time of the initial interview, events of her early development were unknown to her and were elucidated by her adoptive mother. It is suggested that her history seems to sever the genetic link between parent and child while maintaining the psycho-environmental continuity seen in patients who have been diagnosed as having transsexualism. (29 ref)—*Journal abstract.*

7334. Bullough, Vern L. (California State U, Northridge) **Transsexualism in history.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 561-571.—Summarizes references to possible transsexuals in Europe and America over the past 200 yrs. Most of the references

come not from the medical and psychiatric literature but from more ephemeral and nonindexed materials such as newspapers and magazines. (76 ref)

7335. Carvalho Ribas, J. et al. (U Sao Paulo, Faculdade de Medicina, Serviço de Psiquiatria Infantil, Brazil) **[Behavior disorders with predominance of aggressiveness, irritability, impulsiveness, and instability: Clinical electroencephalographic study of 100 cases.]** (Port) *Arquivos de Neuro-Psiquiatria*, 1974(Sep), Vol 32(3), 187-194.—Studied frequency of irritability, aggressiveness, impulsiveness, and psychomotor instability in 100 patients, 5-16 yrs old to determine etiological relationships, using measures that included EEG and testing inventories. Evidence of cerebral dysrhythmia (69 cases), unfavorable environmental conditions (37 cases), oligophrenia (35 cases) and cerebral damage (3 cases) were involved in the etiology, that could be determined for 85 patients. While the importance of environmental factors and oligophrenia in the genesis of behavioral disturbances has been indicated in the literature, the frequency of cerebral dysrhythmia was somewhat surprising, suggesting the value of anti-epileptic treatment of such symptoms. (15 ref)—*Journal summary.*

7336. Celiński, Andrzej. (U Warsaw, Poland) **[Critical analysis of Merton's theory of deviant behavior.]** (Polh) *Studia Sociologiczne*, 1974, No 3(54), 117-140.—Discusses anomie and deviant behavior in terms of Merton's theory. It is suggested that delinquency is a function of development rather than social structure. Reference group theory is used to explain the nature of delinquency.—*H. Kaczowski.*

7337. Cochran, Raymond & Robertson, Alex. (U Birmingham, England) **Stress in the lives of parasuicides.** *Social Psychiatry*, 1975(Oct), Vol 10(4), 161-171.—Studied the relationship between life stress and attempted suicide (parasuicide) in 100 male attempted suicides (mean age, 36.7 yrs) and 100 matched controls. Data were gathered on recent life events (Life Events Inventory), hostility, depression and dissatisfaction, and demographic variables. Results indicate that parasuicides had experienced far more life stresses in the year preceding their act than had the controls and this held true for both young and old, manual and nonmanual occupation groups. Unpleasant life changing events occurred with greater frequency among the parasuicides than the controls, whereas pleasant events occurred with similar frequency in both groups. The groups were also compared on the frequency of occurrence of events within and beyond their control. Both types of event were more common in the parasuicide than the control group, thus giving support to the hypothesis that a high rate of life stress predisposes a person towards parasuicide. Only in the manual occupation group was life stress related to hostility and depression; it is suggested that this may account for some of the differential parasuicide rates between social classes. Young people had higher parasuicide rates. (26 ref)—*Journal abstract.*

7338. Corneli, Helen M. (U Wisconsin) **A comparison of the reading interests of prisoners and college students.** *Dissertation Abstracts International*, 1974(Jan). Vol 34(7-A), 3684

7339. Davidoff, Elliott & Towne, Jonathan B. (Federal Corrections Inst, Tampa, CA) **Ingested foreign bod-**

ies. *New York State Journal of Medicine*, 1975(Jun), Vol 75(7), 1003-1007.—Discusses 7 case histories of White male federal prisoners, ages 20-25, representing 18 instances of intentional ingestion of foreign bodies. 4 types of ingesters are indicated: psychotics, children, accidental swallowers, and manipulative swallowers. A high mortality rate has been reported among psychotic patients due to the number and bizarreness of the objects and the difficulty of making a firm diagnosis of such patients. The nonpsychotic patient who has swallowed a foreign body as a manipulative gesture is a type seen among prison populations. Diagnosis is facilitated by the intention of obtaining secondary gain. There is a marked tendency to repeat the action. Prison population manipulative swallowers are often uncooperative, demanding or refusing surgery at times. Their behavior makes patient management deviate from the ideal of expectant treatment. (18 ref)—*P. R. Sweet*.

7340. **Donovan, Dennis M. & O'Leary, Michael E.** (VA Hosp, Seattle, WA) **Comparison of perceived and experienced control among alcoholics and nonalcoholics.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 726-728.—Reports that alcoholics and nonalcoholics, matched on age and education, did not differ on perceived locus of control. Alcoholics experienced having proportionately less control over both internal and external pressures than nonalcoholics. The implication of results in relation to alcoholics' drinking behavior is discussed within a social learning framework.

7341. **Goldberg, Leonard.** (City U New York) **Aggression in boys in a clinic population.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2929.

7342. **Green, Richard.** (State U New York, Stony Brook) **The significance of feminine behaviour in boys.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 341-344.

7343. **Grisso, J. Thomas.** (St Louis U) **Conflict about release: Environmental and personal correlates among institutionalized delinquents.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 396-399.—Among institutionalized delinquent White male 13-17 yr olds, low scores on a questionnaire index of desire for release were related significantly to less stable family relationships (parent absent from home, parental abuse-rejection), more pessimistic evaluations of home by Ss, and a greater likelihood of previous institutionalization and of truancy runaway offenses. Results suggest the importance of extrainstitutional variables for understanding the delinquent's degree of motivation for release. They also provide some direction for further studies of institutional dependency among delinquents. *Journal abstract*.

7344. **Hagan, John.** (U Toronto, Canada) **Setting the record straight: Toward the reformulation of an interactionist perspective in deviance.** *Criminology: An Interdisciplinary Journal*, 1975(Nov), Vol 13(3), 421-424. Refutes R. L. Schmitt and S. E. Grupp's (see PA, Vol 55 Issue 4) criticisms of the author's article of the use of a symbolic interactionist perspective in deviance. The arguments of Schmitt and Grupp that the article was preoccupied with historical figures, inaccurate and misconceived, and flawed by omissions are rebutted, and

the need for a reexamination and redefinition of interactionist concepts is emphasized. (15 ref)

7345. **Heiman, Michael F.** **The police suicide.** *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 267-273.—Considers various theories of suicide that might be especially applicable to police suicides. Among the major concepts discussed are (a) the "inverted murder" of Wilhelm Stekel and Freud, (b) the "trinity of death wishes" of C. Menninger, and (c) the sociological analyses of Durkheim.—*R. J. Albers*.

7347. **Kennedy, Dennis L.** (Michael Reese Medical Ctr, Inst for Psychosomatic & Psychiatric Research & Training, Chicago, IL) **Behavior of alcoholics and spouses in a simulation game situation.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 23-34.—Observed and compared the interaction of alcoholics and their spouses in a simulation game with the behavior of nonalcoholic couples. Overall, 28 couples played a mixed-motive bargaining game, the "tax game," a modification of Kelly's "game of nines." Alcoholic couples as a group did not manifest a distinct game "style." They were less uniform in this respect than "normal" couples and a mixed group of "psychiatrically disturbed" couples. Subgroup trends without the alcoholic sample are discussed. Extreme behavior, rigidity, and lack of communication were common features in the game behavior of alcoholic couples that did not appear to relate to a particular game style, but did distinguish the game play of alcoholic couples from that of nonalcoholic couples. (36 ref)—*Journal abstract*.

7348. **Kosewski, Marek.** [Theoretical problems of crime and aggression.] (Poln) *Przegląd Penitencjarny i Kryminologiczny*, 1973, Vol 11(3), 49-64.—Considers whether crime is a form of aggression and whether criminals are more aggressive than noncriminals. The study of individual differences has so far been a failure. It is necessary to consider criminals as a nonhomogeneous and highly differentiated group. (French summary) (54 ref)—*A. Z. Arthur*.

7349. **Kraus, J.** (Dept of Child Welfare & Social Welfare of New South Wales, Sydney, Australia) **Ecology of juvenile delinquency in metropolitan Sydney.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 384-395.—Principal components analysis of ecological correlations of 25 demographic variables, sampled in 39 local government areas, showed 2 major factors; these accounted for 39 and 23% of the total variance and for 51 and 32% of the variance of juvenile delinquency, respectively. Factor I was designated individual-social-economic alienation (broken marriages, psychiatric illness, alcoholism, drug abuse, infant mortality, immigrant minorities, unemployment, females in the work force, low house and car ownership, living in apartments). Factor II was designated low socio-educational status (low education, crowding in dwellings, high birth rate, high proportion of children, mental retardation, perinatal mortality, females not working, living in

houses, unemployment). It was postulated that in areas scoring high on Factor I social psychiatry could provide a suitable form of approach not only to the problem of delinquency but also to some of the other problems of individual and social pathology. For areas scoring high on Factor II, where delinquency seems to be a product of culture rather than expression of social pathology, it was postulated that the approach should be based on social controls, youth leadership, education, and the provision of suitable outlets for the frustrations of juveniles. (33 ref)—*Journal abstract*.

7350. Lerner, Kenneth. (Purdue U) **Study of some basic assumptions of "I" level classification system of delinquency.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2939-2940.

7351. Lester, David. (Richard Stockton State Coll) **Firesetting. Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy**, 1975, Vol 21(2), 22-26.—Examines various aspects of firesetting, including clinical studies on the subject, general characteristics of firesetters, theories of firesetting, and the relationship between firesetting and sexual behavior. It was found that firesetters do not differ in diagnosis from other kinds of criminals and do not appear to have more problems in their heterosexual behavior. There is some evidence of a greater history of enuresis and urethral disorder. Firesetters who are criminally insane are more likely to have experienced institutional care as children and to have had more difficulty with interpersonal relationships than fellow patients. Firesetters tend to have committed offenses against property rather than against persons, and firesetters who are sexually excited by fires form a very small proportion of the total firesetter population. Interesting speculations are provided about the psychodynamics of firesetting (e.g., handling of aggression, displacement of anger felt toward significant others).—*J. Sorokac*.

7352. Marfatia, J. C. **Suicide in childhood and adolescence.** *Child Psychiatry Quarterly*, 1975(Oct), Vol 8(4), 13-16.—Presents a summary of the rising incidence of childhood and adolescent suicide, a phenomenon in most Western societies. The causes appear to be of 2 kinds: (a) those stemming from the environment, which include lack of parental love, parental authoritarian attitudes, family quarrels, low socioeconomic status, loneliness, and parental alcoholism; and (b) those which represent the child against itself, which include truancy, temper tantrums, adolescent boredom, fantasies of parental rejection, and disappointment in adolescent love affairs. 3 illustrative case histories are presented.—*J. S. Garnett*.

7353. McCreary, Charles P. (U California, Medical School, Los Angeles) **Personality differences among child molesters.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 591-593.—Compared the MMPI profiles of 2 groups of child molesters, those with no previous offenses ($n = 18$) vs those with one or more prior sex offenses ($n = 15$), in order to assess certain clinically derived inferences about these offenders. The group with prior offenses showed more psychopathology than the group with no previous offenses.—*Journal abstract*

7354. McIntire, Matilda S. & Angle, Carol R. **Evaluation of suicide risk in adolescents.** *Journal of Family Practice*, 1975(Oct), Vol 2(5), 339-341.—Outlines a "psychological biopsy" for evaluation of the severity and type of perturbation in adolescents engaging in self-destructive behavior. 9 areas of inquiry are covered: the circumstantial lethality of the event, prior self-destructive behavior, depression, hostility, stress, reaction of the parent or parent surrogate, loss of communication, lack of resources, and extremes of parental expectations and control. Adolescents under severe familial and socioeconomic stress, and with a history of acting-out behavior, often respond well to transfer to a more favorable home situation. It is suggested that where there is no apparent familial perturbation, the physician should be alert to the possibility of severe psychiatric disorder. In either case, definition of the problem opens the way to a plan for management and support.—*Journal abstract*.

7357. Niskanen, Pekka; Koskinen, Teuvo; Lepola, Ulla & Venäläinen, Eino. (Helsinki University Central Hosp. Psychiatric Clinic, Finland) **A study of attempted suicides in urban versus rural areas, with a follow-up.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 283-291.—Compared 44 patients admitted to hospital in Northern Savo during a 3-mo period because of attempted suicide and 44 nonattempters admitted for other reasons. There were equal numbers of men and women and equal numbers of Ss from urban and rural areas. Psychiatric interviews were made at admission and 3 mo afterwards. Results show that schizophrenia was significantly more frequent in the rural than in the urban attempter group. By contrast, alcoholism and alcohol abuse were more frequent in the urban than in the rural attempter group. Compared with urban Ss, rural Ss tended to be physically more seriously disordered. Poisoning by drugs was a significantly more frequent means of attempted suicide in the urban than in the rural group. Ss in the latter group, again, resorted more often to the "active" methods of attempted suicide. Of the attempters, 25% attempted suicide again during the 3-mo period; the corresponding figure for the nonattempters being only 6%. During the follow-up period, a greater number of attempts was made by rural than by urban Ss, and these attempts were more serious. (15 ref) *Journal Abstract*

7358. O'Keefe, Edward J. (Marist Coll) **Porteus maze Q score as a measure of impulsivity.** *Personality & Motor Skills*, 1975(Oct), Vol 41(2), 675-678.—Investigated the validity of the Q score (derived from the qualitative scoring of the Porteus Maze Test) as a measure of impulsivity by comparing the performance of high- and low-impulsive groups. 55 delinquent and non-delinquent boys, matched for age, race, and IQ, were employed. The Q score failed to differentiate between the two groups.

institutionalized Ss, delinquent from nondelinquent Ss, and extreme groups based on ratings. Findings are at variance with the claim that the *Q* score measures impulsivity.—*Journal abstract*.

7360. **Pretzel, Paul W.** (School of Theology, Claremont) **Suicide and religion: A preliminary study.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2948-2949.

7361. **Price, J. & Karim, I.** (U Queensland, Royal Brisbane Hosp, Herston, Australia) **Suicide in Fiji: A two-year survey.** *Acta Psychiatrica Scandinavica*, 1975(Sep), Vol 52(3), 153-159.—Reviews data on certified suicide in Fiji during 1971-1972. Data show the much higher incidence of suicide in Fiji Indians than in other races, the incidence in females being particularly high. The findings on a more detailed sample survey of 50% of the 90 certified cases are presented. In the Fiji Indian population, a positive correlation between suicide and rural residence and a negative correlation between suicide and Moslem religion were found. In the 2 areas there were 40,393 people classified as living in urban surroundings; of these, 7 committed suicide during the survey. Of 86,864 living in rural surroundings, 38 committed suicide. Of the 45 studied, 41 were Hindus and only 1 was Moslem.—*Journal abstract*.

7362. **Pugliese, Anthony C.** **A study of methadone maintenance patients with the Minnesota Multiphasic Personality Inventory.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 198-204.—Administered the MMPI to 65 outpatients in a methadone maintenance program to investigate the personality characteristics of the Ss and what effect they might have on Ss' employability. Data indicate that the emotional adjustment of the patients may not have had a bearing on their present employment, which was predominately in the unskilled area, but it may have become a factor when they began to seek advancement toward higher level positions. The majority of patients scored in the abnormal range on the Psychopathic deviate (*Pd*) scale of the MMPI (the *Pd* scale was based on patients who exhibited a disregard for social values, an inability to profit from experience, and a difficulty in maintaining satisfactory personal relationships). High *Pd* scale scores suggest an individual who is impulsive, resentful, and lacking in deep emotional responses. These personality characteristics may have been a factor when the patient attempted to seek employment in sales, service, or other fields where personal relationships are important. It was not a factor in their present employment.—*Journal abstract*.

7363. **Rainey, John M. & Crowder, Miles K.** (Wayne State U, Medical School) **Prolonged psychosis attributed to phencyclidine: Report of three cases.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1076-1078.

Reports that after ingesting street drugs, 3 young men developed schizophreniform psychoses, analgesia, anesthesia, and amnesia for the psychotic state. Except for their unusually long duration of 2-4 wks, these reactions resembled phencyclidine psychoses. The authors could

find no information on phencyclidine in handbooks on drug abuse.

7364. **Richman, N.; Stevenson, J. E. & Graham, P. J.** (Hosp for Sick Children, London, England) **Prevalence of behaviour problems in 3-year-old children: An epidemiological study in a London Borough.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 277-287.—In an epidemiological study of the behavior of 3-yr-olds in 705 families, it was found that 7% had a behavior problem which was moderate or severe. A further 15% had mild behavior problems. There were no significant social class differences. Males were significantly more likely to be overactive, to be wetting at night and during the day, to be soiling, and to have relapsed in sphincter control after a period of being clean or dry. Females were more likely to be fearful. There were no other sex differences in the frequency of problem behavior.—*Journal summary*.

7365. **Rosenheim, Harold D.** (U Kentucky) **Empathy, identification, altruism, and role similarity in the hospitalized opiate addict and hospital staff.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2950-2951.

7366. **Sathyavathi, K.** (All India Inst of Mental Health, Bangalore) **Usual and unusual suicide pacts in Bangalore: A report.** *Indian Journal of Social Work*, 1975(Jul), Vol 36(2), 173-180.—Analyzed 23 suicide pact cases and classified them into usual and unusual types. The unusual cases were considered so because (a) both members of the pact were of the same sex, and (b) the causes were sociocultural, centering around the institution of marriage in Hindu society in an urban area undergoing rapid social change.—*I. W. Kidorf*.

7367. **Schmitt, Raymond L. & Grupp, Stanley E.** (Illinois State U) **The interactionist perspective: Some things Hagan didn't tell us.** *Criminology: An Interdisciplinary Journal*, 1975(Nov), Vol 13(3), 416-420.—Critiques J. L. Hagan's (see PA, Vol 52:3304) negative assessment of the contributions of symbolic interactionism to the study of deviance. The logic of evaluating selected seminal works without reference to recent contributions of the symbolic interactionists in deviance and other areas is challenged. (23 ref)

7368. **Singh, Devendra; Letz, Richard & Sikes, Sydnor.** (U Texas, Austin) **The nature of thinking behavior in obese humans.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 641-644.—Investigated the thinking behavior of obese Ss, using a divergent thinking task. 15 obese and 15 nonobese college students participated. Results show that obese Ss spent less time and gave fewer responses than nonobese Ss. Furthermore, qualitative differences in responses were observed between obese and nonobese Ss. Findings suggest that obese Ss have a more limited cognitive repertoire than nonobese Ss.—*Journal abstract*.

7369. **Smith, Selwyn M. & Hanson, Ruth.** (Royal Ottawa Hosp, Canada) **Interpersonal relationships and childrearing practices in 214 parents of battered children.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 513-525.—Examined the role of child-rearing methods, background factors, personality characteristics, and social class in child battering among 214 parents of battered children. The self-reported child-rearing prac-

tices of these parents were characterized in a few but not all respects by demanding behavior which exceeded that to be expected in relation to their social class and age. Inconsistency in child management was noted in the comparison between lack of demonstrativeness and emotional over-involvement, and between physical punishment and a tendency to be lax in the supervision of the child, and was reminiscent of parents of delinquents. Unhappiness and hostility in relationships with members of their families of origin, with unsupporting partners, and with people in general were other important features. Generally, identified perpetrators were characterized by features significant for the sample as a whole. (41 ref)—*Journal abstract*.

7370. Smukler, Arthur J. & Schiebel, Douglas. (Hahnemann Medical Coll) **Personality characteristics of exhibitionists.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 600-603.—Presents clinical history, MMPI, and Comrey Personality Scale data on 41 17-54 yr old exhibitionists and voyeurs in a general hospital treatment program. Data do not indicate any definitive character type or evidence of severe pathology in these Ss. (15 ref)

7371. Storm, Thomas & Cutler, Ronald. (U British Columbia, Vancouver, Canada) **Notes toward the analysis of loss of control in normal and pathological drinkers.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 151-155.—The general distribution of alcohol consumption and its responsiveness to price variations relative to disposable income suggest that there is no qualitative distinction between alcoholics and other heavy drinkers. The disease concept of alcoholism and the notion of loss of control, on the other hand, imply such a distinction. A reinterpretation of loss of control is offered which assumes that loss of control exists but does not distinguish between pathological and nonpathological drinkers. The notion of control and some speculations about factors affecting the frequency and success of controls are discussed.—*Journal abstract*.

7372. Sukoneck, Barry. (Ball State U) **The relationship between hypnotic suggestibility and personality in delinquent and non-delinquent adolescent females.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4763.

7374. Trites, Ronald. (U Ottawa, Canada) **Neuropsychological deficits in primary and secondary non medical drug users.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 351-357.—Compared the neuropsychological test performance of 33 patients referred to hospital because they used psychoactive drugs, with that of 17 drug-using patients referred for neurological problems, and with that of a normal group. Both groups of patients did more poorly than the normals (with whom they had been matched for age and sex) on motor tests, fine-manipulative tasks, and W. Halstead's Impairment Index. Those patients referred because of drug usage had a lower mean IQ score than the other patients, performed more poorly on some measures of cognitive, motor, and sensory functions, and

had fewer adaptive resources. (French summary) (17 ref)—*F. Auld*.

7375. von Brauchitsch, Hans. (U Oklahoma, Health Science Ctr, Oklahoma City) **The physicians's suicide revisited.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 40-45.—Reviews evidence dealing with suicide among physicians, emphasizing the statistical treatment of the data, the presence or absence of adequate standardization, and the significance of the sample size. No conclusive evidence was found that suicide rates among physicians, or among any medical specialty, were higher than those in the general population.—*Journal abstract*.

7376. Whitwell, F. D. (Warneford Hosp, Oxford, England) **A study into the aetiology of delirium tremens.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 156-161.—60 male members of Alcoholics Anonymous were examined by an individually administered questionnaire to investigate factors positively correlated with the occurrence of delirium tremens (DTs). The main factors positively correlated with DTs were (a) more serious social consequences of alcoholism and (b) lower social class. There was no relationship to duration of drinking and type of drink consumed. The possible significance of these findings with reference to etiology is discussed.—*Journal abstract*.

7377. Zahn, Margaret A. (Temple U) **The female homicide victim.** *Criminology: An Interdisciplinary Journal*, 1975(Nov), Vol 13(3), 400-415.—Studied the ways that females meet violent death and the role that illegal drug use plays in precipitating such deaths. The sex-role hypothesis and the transactional risk thesis were used to account for homicide victimization of women. Data were drawn from the records of the Medical Examiner's Office in Philadelphia. Records of all illegal drug using homicide victims ($n = 332$ males and 41 females) were compared with a random sample of 235 male and 72 female non-drug-using victims. Data included interviews with relatives of the deceased, autopsy reports, police and other records. Both hypotheses received support. The importance of these findings can only be assessed, however, when more is known about how sex role constellations work in drug-using groups. (20 ref)—*Journal abstract*.

7387. Cohen, Mark E. & Heller, Tamar. (U Wisconsin, Waisman Ctr, Madison) **Information producing responses in normal and retarded children.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 296-306.—Gave a total of 30 11-12 yr old normal and retarded children (matched for either MA or CA) trials on several discriminations which varied in difficulty. On standard discrimination trials the retarded Ss did not differ from the MA-control Ss in the number of errors made but both groups made more errors than the CA-control group. On other trials if Ss were not sure which stimulus was correct they were allowed to press an information key which made the discrimination easier. The retarded Ss made significantly more informational key responses than either of the control groups. Results confirm the findings of prior investigations dealing with outerdirect-

edness in an experimental situation which did not allow distractibility to be a significant factor.—*Journal abstract.*

7388. Davis, M. Susanne & Bray, Norman W. (Cincinnati Ctr for Developmental Disorders, OH) **Bisensory memory in normal and reading disability children.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 572-574.—Tested 24 normal and 24 reading disability 7-10 yr olds for memory of item and order information in a sequential memory task with auditory and visual stimuli. There were 3 auditory-visual digit pairs on each trial, with a 1-sec delay between successive pairs. Either 1 auditory-visual pair (pair condition) or 2 digits from 1 modality (modality condition) were tested. More errors were made in the pair than in the modality condition on a measure of item information but not on a measure of order information. Reading disability Ss made more errors than normal Ss, but there were no Reading Group \times Condition interactions. Results suggest that the reading groups differed on general information-processing capabilities, but both reading groups have the same degree of difficulty with organization of temporal-modality information.—*Journal abstract.*

7389. DeGenaro, Jennie J. (NIMH, Lab of Neurophysiology, Bethesda, MD) **Informal diagnostic procedures: "What can I do before the psychometrist arrives?"** *Journal of Learning Disabilities*, 1975(Nov), Vol 8(9), 557-563.—Describes informal methods for assessing children suspected of having a learning disability. Diagnostic techniques are described, and a simple record-keeping matrix is presented.

7393. Hasazi, Joseph E. & Allen, Robert M. (U Vermont) **Differential reinforcement of reaction times in developmental retardates.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 631-634.—Investigated the reaction times (RTs) to 2 intensities of reaction signal in 36 developmental retardates (mean CA, 149.2 mo; mean MA, 70.4 mo). One group was reinforced for RTs to the higher intensity signal; a 2nd group was reinforced for RTs to the lower intensity signal; a 3rd group received no reinforcement. RT decreased as signal intensity increased and decreased over sessions as a function of reinforcement. Likewise, reinforcement either exaggerated or reversed differences in RTs to each signal depending on the particular reinforcement contingency. Results are discussed in terms of attentional and motivational explanations of effects of signal intensity on RTs of retardates.—*Journal abstract.*

7398. Lyle, J. G. & Goyen, Judith D. (U Sydney, Australia) **Effect of speed of exposure and difficulty of discrimination on visual recognition of retarded readers.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 673-676.—Administered a tachistoscopic recognition task to 36 retarded and 36 normal 6-7 yr old readers to determine whether retarded Ss' visual-perceptual deficit was a function of speed of exposure and/or difficulty of discriminating alternatives on response cards. 3 time exposures were employed, and there were 2 sets of response cards. All cells in the factorial design were independent, and the same stimuli were presented tachistoscopically to all Ss. It was found that speed of exposure, not difficulty of response cards, differentiated between retarded and normal Ss. At the faster exposures of 10 msec and 1 sec, retarded Ss performed significantly less well than normals, but they equaled the performance of normals at the slower exposure of 5 sec.—*Journal abstract.*

7410. Wambold, Clark L. & Hayden, Cathy. (U Wisconsin, Waismann Ctr on Mental Retardation & Human Development) **Modern Training cognitive strategies in the mildly retarded. An applied approach. Education & Training of the Mentally Retarded.** 1975(Oct), Vol 10(3), 132-137.—Compared the effects of verbal and imaginal mediation strategies on the paired-

associate learning of educable mentally retarded pre-adolescent and adolescent Ss, who were divided into 3 matched experimental groups and a control group. Results indicate that the strategy-supplied Ss performed significantly better than the controls. There was little indication of carry-over of training by the experimental groups on a subsequent paired-associate task. Results and possible solutions for shortcomings are discussed. (17 ref)—*Journal abstract*.

7411. White, Carol S.; Dwyer, William O. & Lintz, Elizabeth. (Memphis State U) **Dyslexia: Is the term of value?** *Acta Symbolica*, 1973(Fal), Vol 4(2), 6-28.—Reviews the present status of the term "dyslexia" in an attempt to assess its value as a diagnostic category for individuals with specific types of reading disabilities. Dyslexia must be evaluated at 2 levels. (a) For purposes of remediation, the label "dyslexia" serves little purpose. To develop a beneficial remediation strategy the reading teacher is more interested in the child's specific behaviors than in their possible causes. (b) The diagnosis of dyslexia is valuable, however, in assisting research efforts aimed at improving the prognosis of the syndrome or possibly even its elimination. The various theoretical orientations toward the etiology of dyslexia are evaluated, and implications for future research are discussed. (7 p ref)—*Journal abstract*.

7412. Wiig, Elisabeth H. & Semel, Eleanor M. (Boston U) **Productive language abilities in learning disabled adolescents.** *Journal of Learning Disabilities*, 1975(Nov), Vol 8(9), 578-586.—Assessed and compared the accuracy and speed with which 32 learning disabled (LD) and 32 academically achieving 12-16 yr olds (a) named verbal opposites, pictorial presentations, and members of the classes Foods, Animals, and Toys; (b) produced sentences when given stimulus words; and (c) defined words. Ratings of speech characteristics were also compared. LD Ss were significantly less quick and accurate in naming verbal opposites and pictorial presentations. To a significant degree they also named fewer foods, produced more agrammatical sentences and grammatical sentences of shorter length, had longer response lags in producing sentences, and gave more incorrect word definitions than academic achievers. Ratings of speech characteristics indicated greatest reductions for phrase length and grammatical form. Findings suggest productive language deficits in learning disabilities are related to (a) delays in specific aspects of cognition and convergent and divergent production of semantic units and (b) reductions in the retrieval of verbal labels and syntactic structures. (28 ref)—*Journal abstract*.

Speech & Language Disorders

7413. Boller, François; Albert, Martin & Denes, Franco. (VA Hosp, Neurobehavior Unit, Cleveland, OH) **Palilalia.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 92-97. Reports 2 cases of palilalia, a disorder of speech characterized by compulsive repetition of a phrase or word, in a mother and son. Both patients had bilateral lesions affecting the basal ganglia and the grey matter of the hemispheres. In these cases palilalia is felt to be due to bilateral lesions and to

represent the speech counterpart of other motor phenomena such as festination or chorea. (22 ref)

7414. Cohen, Melvin S. & Hanson, Marvin L. (Loma Linda U, Medical Ctr, Communication Disorders Service, CA) **Intersensory processing efficiency of fluent speakers and stutterers.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 111-122.—Assessed the proficiency of fluent speakers and stutterers at matching auditory-temporal (tapping) patterns with visual-spatial (dot) displays. A modification of the Birch and Belmont test of auditory-visual integration was administered to 20 8-16 yr old pairs of matched stutterers and fluent speakers. Results indicate that the stutterers' performance was significantly lower than that of their fluent peers. Results support the theory that the cortical organization of stutterers might somehow be different from and less efficient than that of fluent speakers. Stutterers seem to possess some type of specific neurological dysfunction which prevents or interferes with their ability to perform efficiently in receptive functions such as intersensory integration as well as in the expressive skill of fluent speech production. (39 ref)—*Journal abstract*.

7415. Davies, Carol L. & Grunwell, Pamela. (City of Birmingham Polytechnic, School of Speech Therapy, England) **A new approach to the treatment of severe dysphasia: A case study.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 142-148.—Describes the application of linguistic principles in the treatment of a male patient with long-standing severe dysphasia who had previously failed to make any progress with expressive speech ability despite intensive therapy. While there seems to have been some delayed spontaneous recovery in vocabulary and morphology, sentence structure always followed the patterns taught. (22 ref)

7417. Leith, William R. & Mims, Howard A. (Wayne State U) **Cultural influences in the development and treatment of stuttering: A preliminary report on the Black stutterer.** *Journal of Speech & Hearing Disorders*, 1975(Nov), Vol 40(4), 459-466.—A behavioral analysis of 25 stutterers revealed speech behavioral differences that appeared to be culturally determined. 2 general types of stuttering behavioral patterns were differentiated: (a) overt repetitions and prolongations with a moderate number of secondary characteristics that were also overt and of the same relative degree of severity as the prolongations and repetitions, and (b) prolongations and repetitions that were more covert and a larger number of secondary characteristics that were considerably more severe than the repetitions and prolongations. While 85% of Group (a) were White stutterers, 79% of Group (b) were Black stutterers. These results are explained by important Black cultural elements such as the importance of oral skills, the importance of manifesting emotional "coolness," and the cultural rejection of disfluent speech patterns. It is suggested that the forces within the Black culture tend to be in opposition to

currently practiced stuttering treatment procedures. —*Journal abstract.*

7418. Lonegan, Dorothy S. (U Maryland) **A comparison of oral stereognosis and vibrotactile threshold measurements on normal-speaking and sibilant articulation-defective children.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2995.

7419. McCormick, Barry. **Therapeutic and diagnostic applications of delayed auditory feedback.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 98-110.—Describes a procedure for investigating the effects of delayed auditory feedback (DAF) on the time taken to read a passage and on the loudness level of the voice. 25 normal 18-48 yr olds were tested and compared with 2 patients with suspected nonorganic hearing problems. DAF signals were presented at progressively louder levels (40-100 db) during each of 5 readings of a 48-word passage; Ss also read the passage 5 times without DAF. 10 Ss were tested at DAF times of $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{4}$ of a second, and the remaining 15 Ss were tested only at $\frac{1}{2}$ of a second. When a relatively long delay was used ($\frac{1}{2}$ sec) at feedback levels over 60 db, a very marked effect on S's voice level was observed, and the voice level increased progressively with the intensity of the DAF signal. Diagnostic implications of the effects of DAF on voice level, studies of the effects of DAF on stutterers, and the Lombard Voice Reflex are examined. (40 ref)—*L. Gorsey.*

7420. McNutt, James C. (Kent State U) **Perceptual and motor performances of articulatory defective and normal speakers.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2355-2356.

7421. Petrie, Ian. (U Liverpool, School of Education, England) **Characteristics and progress of a group of language disordered children with severe receptive difficulties.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 123-133.—Presents data on the characteristics and progress of 11 4-6 yr old children with severe receptive language difficulties. Observations and standardized test results were obtained relating to hearing and listening behavior, social adjustment, motor coordination, visual-spatial and sequencing skills, non-verbal intelligence, and language behavior. All Ss were impaired in listening skills and had difficulties in language acquisition, but in other respects they showed a wide range of individual problems. Improvement was measured by means of test-retest analyses. Ss with higher initial ratings in listening behavior, language ability, and social adjustment made more progress in language development. However, in spite of favorable teaching conditions the progress made by these Ss in spoken language acquisition was generally very small. (25 ref)—*Journal abstract.*

7422. Sherrard, Carol A. (Edinburgh U, Scotland) **Stuttering as "false alarm" responding.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 83-91.—Hypothesized that a stutter is a false alarm, or superfluous correction response to speech feedback signals, such that the overt behavioral response is the repetition of a speech unit. The present study attempted to elicit stuttering in 12 normal undergraduates by setting up 2 conditions, anxiety and divided attention, in which false alarms in any perceptual-motor task would

be predicted. The divided attention condition increased stutters. The anxiety condition did not increase stutters but did increase the probability of a speech error being corrected, indicating that anxiety directs attention to speech feedback. Auditory masking reduced stutters in all conditions, demonstrating the crucial role of auditory feedback in normal as well as in pathological speech disfluencies. The distribution of elicited stutters was analogous to the distribution of false alarms in orthodox signal detection experiments. (34 ref)—*Journal abstract.*

7423. Vantreen, Judith. **Current approaches to the linguistic assessment of aphasic speech.** *British Journal of Disorders of Communication*, 1975(Oct), Vol 10(2), 134-141.—Reviews recent work on theories of aphasic speech, the importance of a competence vs performance distinction in linguistic assessments, and current testing procedures (e.g., the token test, phonetic discrimination tasks, and semantic comprehension evaluations). A functional linguistic approach to aphasia, in which communicatory competence in language use is regarded as essential, is outlined.

Physical & Psychosomatic Disorders

7424. Abadi, Richard V. & Sandikcioglu, M. (U Manchester, Inst of Science & Technology, England) **Visual resolution in congenital pendular nystagmus.** *American Journal of Optometry & Physiological Optics*, 1975(Sep), Vol 52(9), 573-581.—For all cases of idiopathic congenital nystagmus visual acuity is reduced. The analysis of such a system is described, using psychophysical methods of evaluation. Both the pattern and movement detecting responses are discussed. Both of their sensitivities are found to be reduced by equivalent amounts. (26 ref)—*Journal abstract.*

(University Hosp, Iowa City, IA) **Ocular bobbing: The myth of its localizing value.** *Neurology*, 1975(Oct), Vol 25(10), 949-953.—Reports the presence of ocular bobbing, a distinctive eye movement disorder seen in patients with pontine dysfunction, in a 46-yr-old female patient with acute cerebellar hemorrhage in whom no intrapontine lesions could be demonstrated. The myth that this sign is specific for intrapontine destruction should be abandoned. (22 ref)

7432. Brennan, Mary. **Can deaf children acquire language? An evaluation of linguistic principles in deaf education.** *American Annals of the Deaf*, 1975(Oct), Vol 120(5), 463-479.—Examines some of the assumptions concerning the nature of language and the process of language acquisition the deaf in view of recent work in developmental linguistics. The more urgent research requirements in this area are outlined, and implications for manual communication systems are noted. (74 ref)

7433. Cohen, Sidney. (U California, Neuropsychiatric Inst, Los Angeles) **Tardive dyskinesia.** *Drug Abuse & Alcoholism Newsletter*, 1975(Sep), Vol 4(8), 1-3.—Discusses the relationship between tardive dyskinesia and the drug-induced extrapyramidal syndrome. Issues dis-

cussed include vulnerable populations, earliest signs, duration, the mode of action of the neuroleptics, treatment, and prevention.

7434. Daly, Richard F. & Forster, Francis M. (U Wisconsin, University Hosp, Madison) **Inheritance of reading epilepsy.** *Neurology*, 1975(Nov), Vol 25(11), 1051-1054.—Primary reading epilepsy was diagnosed by special EEG studies in a 16-yr-old male after his 1st grand mal seizure. Similar studies of members of 3 generations of his family showed the same disorder in his 1st cousin and in 2 of his siblings. Possible implications of the evidence are discussed.

7435. Davis, Richard E. (Eastern Virginia Medical School, Norfolk) **Family of physically disabled child: Family reactions and deductive reasoning.** *New York State Journal of Medicine*, 1975(Jun), Vol 75(7), 1039-10041.—Adaptive and maladaptive psychological reactions in parents and siblings invariably accompany chronic illness and physical disability in a child. Therefore parental attitudes are crucially important in determining how the child himself will cope. Siblings are frequently under considerable stress, directly or indirectly, and they and their parents should always be included in planning a treatment program for a physically disabled child. Maximum benefits for the child come when the entire family is viewed as needing a rational plan of education and treatment. A brief checklist for planning the psychological evaluation and treatment of such a child and his family is given.—P. R. Sweet.

7438. Furth, Gregg M. (Ohio State U) **Impromptu paintings by terminally ill, hospitalized and healthy children: What can we learn from them?** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4739-4740.

7439. Geschwind, Norman. (Harvard U, Medical School, Boston) **The apraxias: Neural mechanisms of disorders of learned movement.** *American Scientist*, 1975(Mar-Apr), Vol 63(2), 188-195.—The apraxias are briefly defined as disorders of learned movement not due to weakness, incoordination, sensory loss, incomprehension, or inattention. First studied and named in 1899 by H. Liepmann, they were neglected until recently. It is now felt that human callosal disconnection syndromes are common. A number of cases are discussed in detail to explain the mechanisms involved, and the relation of the callosum to the pyramidal and nonpyramidal motor systems. Behavior or failure to behave can be predicted and explained by knowledge of the locus of the injury. By varying the method of stimulation it is possible to determine whether the pyramidal or nonpyramidal system will be used. It is suggested that the availability of nonpyramidal motor systems explains the preservation of axial movements by apraxic patients. Many apraxias are incorrectly diagnosed, or overlooked. Recovery from

apraxia is more common than from aphasia. (16 ref)—G. S. Speer.

7440. Gloeckler, Theodore L. (U Michigan) **The relationship of selected variables to changes in IQ scores in a group of visually handicapped adults.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4924.

7441. Heilman, Kenneth M.; Schwartz, Harvey D. & Geschwind, Norman. (U Florida, Medical Coll) **Defective motor learning in ideomotor apraxia.** *Neurology*, 1975(Nov), Vol 25(11), 1018-1020.—Attempted to determine whether apraxics form and retain new motor memories. 9 right-handed, hemiparetic, aphasic apraxics were given 6 trials on a rotary pursuit meter; 8 right-handed, hemiparetic, aphasic, nonapraxic patients served as controls. All Ss were instructed to use their left (nonparetic) hand. The performance of controls on the 6th trial was significantly better than that on the 1st trial, showing a distinct learning effect. In apraxic Ss, however, there was no significant difference between the 1st and 6th trials, suggesting a defect in motor learning, apparently caused by a combined defect of both acquisition and retention.—*Journal abstract*.

7442. Ingvar, David H.; Risberg, Jarl & Schwartz, Martin S. (University Hosp, Lund, Sweden) **Evidence of subnormal function of association cortex in presenile dementia.** *Neurology*, 1975(Oct), Vol 25(10), 964-974.—Measured regional cerebral blood flow in 23 patients (mean age, 61 yrs) with organic dementia (17 patients with Alzheimer's disease and 6 with low-pressure hydrocephalus). The flow of gray matter was significantly reduced, especially in occipito-parieto-temporal regions, as well as frontally in some patients. During activation with psychologic tests (e.g., the Raven Progressive Matrices) or reading, the flow augmentation in the association areas in the demented patients was not as marked as in 25 nondemented controls (mean age, 46 yrs). Instead, in some patients, a flow diminution was recorded in the same regions (intellectual steal). Organic dementia appears to be accompanied by a low activity in the association cortex and a reduced ability to activate these regions during mental effort. (16 ref)—*Journal abstract*.

7443. Jerger, J. & Jerger, S. (Baylor Coll of Medicine, Houston, TX) **Clinical validity of central auditory tests.** *Scandinavian Audiology*, 1975, Vol 4(3), 147-163.—Administered audiometric procedures to 70 8-72 yr old patients divided into 7 groups: normal, 8th nerve, brainstem, temporal lobe, nonauditory CNS, aphasic, and amyotrophic lateral sclerosis (ALS). Pure-tone sensitivity was equated among groups. Performance was found as follows: for the 8th nerve group, consistently poor for all measures; for the brainstem group, consistently depressed for difficult monotic speech tasks; for the temporal lobe group, most severely affected for difficult dichotic speech messages; for the aphasic group, generally poor for both monotic and dichotic speech procedures; and for the nonauditory CNS and ALS groups, normal. Inter- and intra-group variability was substantial. (40 ref)—*Journal abstract*.

7444. Juliano, Daniel B. (State U New York, Buffalo) **Conceptual tempo, activity and concept learning in**

hyperactive and normal children. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4875.

7445. Juurmaa, Jyrki & Suonio, Kyösti. (U Tampere, Finland) **The role of audition and motion in the spatial orientation of the blind and the sighted.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 209-216.—In a study with 5 congenitally blind, 5 accidentally blinded, and 5 sighted Ss, the following hypotheses were tested: (a) Elimination of audition impairs performance. (b) Lack of auditive cues impairs the performance of the blind more than that of the sighted. (c) Employing kinesthetic-proprioceptive cues has a strong facilitating effect of spatial orientation. (d) The use of an aid facilitates the orientation performance of the sighted more than that of the blind. (e) Interference in kinesthetic rhythm and temporal relations impairs performance. Results confirm the 1st 4 hypotheses.—M. E. Pounsel.

7446. Kamalashile, Jayalakshmi. (Postgraduate Inst of Medical Education & Research, Chandigarh, India) **Speech problems in cerebral palsy children.** *Language & Speech*, 1975(Apr-Jun), Vol 18(2), 158-165.—Assessed speech characteristics of 110 children with cerebral palsy over a 1½-yr period. Findings show that (a) the speech of quadriplegics was more affected than the speech of spastic children; (b) delayed speech was the predominant speech deficiency; (c) there was a one-to-one relationship between the articulatory and vegetative speech functions; (d) all children of normal intelligence had normal speech and hearing; (e) males were more affected than females; (f) speech problems were unchanged by stereotaxic surgery; and (g) paraplegic and dystonic children had better prognoses than the other diagnostic groups.—*Journal abstract*.

7447. Ling, Daniel & Clarke, Bryan R. (School of Human Communication Disorders, Montreal, Canada) **Cued speech: An evaluative study.** *American Annals of the Deaf*, 1975(Oct), Vol 120(5), 480-488.—Presented cued and noncued sentences and phrases in a live situation at normal and slow rates to 12 hearing-impaired 7-11 yr olds. Written responses were analyzed in relation to the number of complete sentences, phrases, and words correct, and the type of phoneme errors made. Scores were generally superior when the material was presented with cues, but overall performance was poor, particularly so for sentence material, which yielded only 9% correct responses. The number of correct responses and the advantages of cueing were greater for phrases than for sentences and for words than for phrases. Results suggest that Ss processed the material in units not exceeding word length and they had not developed adequate strategies to meet the demands imposed on perception and memory in processing speech sequences. (38 ref) *Journal abstract*.

7448. Mallenby, Terry W. & Mallenby, Ruth G. (Simon Fraser U, Burnaby, Canada) **The personal space of hard-of-hearing children after extended contact with "normals."** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 253-257.—A group of 10 10-12 yr old hard-of-hearing children integrated into a normal public school for a year were found to exhibit similar personal space to that of 10 normal children. Another group of 10 hard-of-hearing children who attended a

special institutional school for the deaf exhibited greater interaction distances under varying dyadic interactions with a normal person. Practical application of the results is discussed. (18 ref)—*Journal abstract.*

7451. McLennan, Roderick O. & Knox, Albert W. (VA Hosp. Audiology & Speech Pathology Service, Kansas City, MO) **Patient-controlled delivery of monosyllabic words in a test of auditory discrimination.** *Journal of Speech & Hearing Disorders*, 1975(Nov), Vol 40(4), 538-543.—15 normal- and 15 sensorineural-hearing Ss repeated monosyllabic words under a conventional and S-controlled method of presentation at 0, 8, 16, and 44 db SL. Results of the study reveal little difference between discrimination scores obtained with the 2 methods of presentation. The clinical relevance of these results is discussed in terms of (a) saving of time, (b) standardization of the test, and (c) favorable subjective reports of the new procedure.—*Journal abstract.*

7452. Meijer, Alexander. (Hadassah U Hosp, Jerusalem, Israel) **Psychological factors in maternal grandparents of asthmatic children.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 15-25.—Compared the presently perceived past family interactions between mothers and maternal grandparents of asthmatic children and nonasthmatic children. Ss were 60 6-11 yr olds and their mothers. All the children had a common factor in that they suffered from eczema in the 1st yr of life, and in their families there were many cases of asthma, hay fever, and eczema. With the use of 2 different test instruments, it was found that maternal grandmothers of asthmatic boys had a highly positive relationship with the mothers of the boys and that the maternal grandfathers were perceived by the mothers as rejecting figures. There was a striking difference between the mothers of asthmatic boys and the mothers of asthmatic girls in both tests. This fact, together with the established greater vulnerability of boys to asthma, seems to justify studying the sexes separately. It could be assumed that the asthmatic and nonasthmatic Ss had a similar constitutional-familial allergic predisposition and that the differences between them were mainly influenced by environmental factors. The mothers' perception of the family relationship with their parents was considered to be minimally influenced by the asthma of their children. (23 ref)—*Journal abstract.*

7453. Nash, Kenneth R. (Columbia U) **The effects of auditory deprivation on a key-tapping task.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4883.

7455. Nelson, Hazel E. & McKenna, Pat. (National Hosp, London, England) **The use of current reading**

ability in the assessment of dementia. *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 259-267.—Word-reading ability and general intelligence level were shown to be highly correlated in a group of 98 normal adults; from these data a regression equation was obtained. Using this equation, WAIS IQ levels were predicted from Schonell Graded Word Reading Test (Form A) scores in a group of 45 dementing patients. The evidence suggests that these predicted IQ levels provide close approximations to the premorbid IQ levels. Furthermore, the evidence implies that reading ability is potentially a better indicator of premorbid level of functioning than vocabulary level. The advantages and limitations of using the regression equation in the detection and evaluation of dementia in the individual patient are considered.—*Journal abstract.*

7456. Nicholson, John F. (Columbia U, Coll of Physicians & Surgeons) **Metabolic disease: Behavioral aspects.** *New York State Journal of Medicine*, 1975(Jun), Vol 75(7), 1044-1046.—Describes in detail 2 cases of metabolic disease with specific behavioral aspects, one with phenylketonuria (PKU) and one with galactosemia, and briefly discusses 5 others: Lesch-Nyhan, Hartnup, and Wilson's diseases, acute intermittent porphyria, and late onset metachromatic dystrophy. The initial complaint or the most striking clinical manifestations may suggest a behavioral disorder. Failure to recognize the organic nature of the disorder may lead to a delay in therapy or to a serious omission in genetic counseling. In the disorders considered, the pattern of psychic disturbances was either present very consistently or reversible with treatment. The association between psychic disturbance and the biochemical abnormality may be said to be causative. Such associations must be approached with caution.—*P. R. Sweet.*

7457. Nielsen, Helle H. (U Aarhus, Inst of Psychology, Denmark) **A follow-up study of cerebral palsied patients: Some psychological, educational and vocational aspects.** *Scandinavian Journal of Psychology*, 1975, Vol 16(3), 217-224.—Conducted a follow-up of a study performed by H. H. Nielson (1966) in which an analysis was made of cognitive and visuomotor functions and personality characteristics of 39 Danish nonoligophrenic spastic adolescents and young adults. In the current study, it was found that 85% attended normal schools; the rest went to schools for physically or mentally handicapped. If retarded children with learning difficulties were not considered, there were no more than 10% regular problem cases, an incidence which is very close to what is found among ordinary, nonhandicapped Danish school children. With regard to vocational career, nearly 80% were estimated to be able to obtain and remain in open employment. There was an overrepresentation of clients with a mild physical handicap in the problem group, indicating that it may be difficult to occupy such a "marginal" position with its easy access to comparison and competition with the so-called normal standards.—*Journal abstract.*

7461. Reichel, Elizabeth A. (U Illinois, Champaign-Urbana) **Changing attitudes toward the disabled.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 188-192.—Contemporary social attitudes toward the handicapped are compared with attitudes toward minority group members. Attention is given to aspects of employment practices and the nature of the rehabilitative process.

7462. Royer, Fred L. & Holland, Terrill R. (VA Hosp, Psychophysiological Research Lab, Brecksville Div, Cleveland, OH) **Rotational transformation of visual figures as a clinical phenomenon.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 843-868.—Notes that extensive clinical literature shows that brain-damaged persons have a tendency to produce spontaneous rotational transformations of visual designs they are reproducing but have difficulty producing such transformations when required to do so. Organismic variables other than neurological status (e.g., age, psychiatric status, and intelligence) also influence the probability of occurrence of these phenomena, as do stimulus and task variables. A review of related perception literature is made, and support is found for the view that spatial orientational and figural information are processed separately by the organism. Both stimulus and organismic variables are capable of affecting or interfering with the processing of the 2 types of information. (3 p ref)—*Journal abstract*.

7463. Segers, Marie-Jeanne; Mertens, Charles & Vastesaegeer, Marcel. (U Louvain, Belgium) **[Expression of anxiety associated with lipoproteinemia with and without obesity.]** (Fren) *Journal of Psychosomatic Research*, 1975, Vol 19(3), 169-182.—Investigated the relationship between anxiety and lipoproteinemia. Using data on the relative weights of 277 male Ss, anxiety (Cattell Anxiety Scale), depression, and modes of anxiety expression were compared. Type IV individuals were found to be anxious and showed intermediate responses to the anxiety measures. Relative weights and lipid concentrations were higher in these Ss, and psychological self-report scores and relative weight values were negatively related. Anxiety and depression were lowest among extremely overweight Ss. (34 ref)—*English abstract*.

7464. Shulman, Martin D. (U Minnesota) **Visual perceptual abilities of aphasic and right hemisphere damaged adults.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2356-2357.

7465. Siltanen, P. et al. **Psychological characteristics related to coronary heart disease.** *Journal of Psychosomatic Research*, 1975, Vol 19(3), 183-195. Studied the relationship between coronary heart disease (CHD) and personality characteristics in 3 groups of policemen aged 40 yrs or older: 41 healthy Ss (Group A), 40 Ss showing EKG signs of CHD but no

symptoms (Group B), and 40 Ss with both EKG signs and definitive symptoms of CHD (Group C). Personality assessments included the Rorschach test, Sentence Completion Test, and a self-concept measure. Compared with Group A, similar patterns were found in Groups B and C that were related to anxiety, aggressiveness, seclusion, defensiveness, carefulness, and profundity, although on other characteristics, Groups B and C differed more than did Groups A and C. Ss in Group B could be characterized as rational persons with low dependency, low people orientation, low social activity, and having a tendency to abasement, rejection, seclusion, and inhibition. Group C Ss had a greater interest in physical functions than did Ss in Groups A or B. Results of a discriminant analysis are presented, along with findings from a 5-yr follow-up study which revealed a 25% overall mortality rate and a 15% coronary mortality rate in Group C (vs 0% in Groups A and B). (26 ref)—*Journal summary*.

7466. Sisler, G. & Penner, H. (U Manitoba, Winnipeg, Canada) **Amnesia following severe head injury.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 333-336.—Studied 60 patients who had had severe, blunt-force head injuries and had been in a coma for at least 24 hrs, assessing their retrograde and anterograde amnesia and correlating anterograde amnesia with disorientation. (French summary)—*F. Auld*.

7467. Starr, Donald & Achor, Joseph. (U California, Orange County Medical Ctr, Irvine) **Auditory brain stem responses in neurological disease.** *Archives of Neurology*, 1975(Nov), Vol 32(11), 761-768.—Reports that a sequence of 7 low-amplitude potentials that occur in the initial 10 msec following click signals can be recorded from scalp electrodes in human Ss using computer averaging techniques. The potentials, termed auditory brainstem responses, are thought to be the far-field reflection of electrical events originating in the auditory pathway during its course through the brainstem.

7468. Sussman, Allen E. (New York U) **An investigation into the relationship between self concepts of deaf adults and their perceived attitudes toward deafness.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2914-2915.

7469. Teja, Jagdish S. (U Virginia, Medical School) **Periodic psychosis of puberty: A longitudinal case study.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 52-57. Reports the case of a 15-yr old girl with periodic psychotic episodes associated with menses. Data are examined concerning the effectiveness of progesterone therapy, the patient's Rorschach responses, and how the interplay of hormonal factors bringing increased sexual drive and possibly water retention in a predisposed patient can contribute to psychotic episodes at menstrual onset.

7470. Tonning, F.-M. (U Bergen, State Hearing Ctr, Norway) **Ability of the blind to localize noise.** *Scandinavian Audiology*, 1975, Vol 4(3), 183-186.—Examined the directional hearing ability of 30 persons with normal sight and hearing and 21 normal-hearing blind 9-15 yr olds. Their hearing directional ability was examined in the horizontal plane for white noise in an anechoic room. No difference in localization ability between these 2 populations could be demonstrated. It is concluded that

for blind persons, hearing orientation may be facilitated by fixed, appropriate sound sources, the character of the sound being complex and presented as pulses. Normal-hearing persons may also benefit from this arrangement, and it may be of help also for persons with impaired hearing. (19 ref)—*Journal abstract*.

7471. Van Dijk, H. **Myocardial infarction patients and work attitudes: An empirical study.** *Journal of Psychosomatic Research*, 1975, Vol 19(3), 197-202.—Describes the construction of a "rating of statements list." Items on the list were derived from clinical psychosomatic descriptions of traits which are said to be typical of myocardial infarction patients and asthmatics. Factor analysis of 1,336 forms filled in by "healthy" men yielded an 8-factor solution, 2 factors of which appeared to reflect attitudes toward activity and work and job involvement. The hypotheses that myocardial infarction patients show a high positive evaluation attitude when rating statements about "being active" and job responsibility were supported by data from 102 patients (mean age, 55.2 yrs). The use of the rating of statements list to identify coronary-prone men is discussed.—*Journal summary*.

7472. Vickers, Richard L. (U Minnesota) **A correlational study of five measures of self-concept in an orthopedically disabled population.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2955-2956.

7473. Warrington, Elizabeth K. (National Hosp, London, England) **The selective impairment of semantic memory.** *Quarterly Journal of Experimental Psychology*, 1975(Nov), Vol 27(4), 635-657.—Describes the selective impairment of semantic memory in 3 patients with diffuse cerebral lesions. These patients, selected on the basis of a failure to recognize or identify common objects (agnosia for objects), were investigated in detail. In particular, their perceptual, language, and memory functions were assessed, and the limits and properties of their recognition difficulties explored. It was found that knowledge of pictorial representations of objects, and of words, was impaired or impoverished, and in both instances knowledge of subordinate categories was more vulnerable than superordinate categories. Evidence is presented that this impairment of semantic memory cannot be accounted for by intellectual impairment, sensory or perceptual deficits, or expressive language disorder. The implications of damage to the semantic memory system for the operation of other cognitive systems, in particular short- and long-term memory functions, are considered. Some tentative evidence for the structural basis for a hierarchically organized modality-specific semantic memory system is discussed. (34 ref)—*Journal Abstract*.

7474. Waxman, Stephen G. & Geschwind, Norman. (Beth Israel Hosp, Neurological Unit, Boston, MA) **The interictal behavior syndrome of temporal lobe epilepsy.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1580-1586. Presents 3 cases and describes a previously unreported feature of this syndrome—the tendency toward compulsive drawing and writing that appears in some patients. Other interictal changes include alterations in sexual behavior and religiosity. The concomitants of abnormal limbic activity therefore include behavior alterations as well as manifest seizures. The demonstration of interictal spike activity in temporal

structures provides a pathophysiologic basis for this syndrome. The constellation of behavioral changes may be of great diagnostic value. In addition, it provides an example of a human behavioral syndrome associated with dysfunction at specific anatomic loci. It is suggested that the behavior syndrome of temporal lobe epilepsy may prove to be a useful model in studies on the neural substrates for behavior. (40 ref)—*Journal abstract*.

7476. Westmoreland, Barbara F.; Klass, Donald W.; Sharbrough, Frank W. & Reagan, Thomas J. (Mayo Clinic & Mayo Foundation, Rochester, MN) **Alphacoma: Electroencephalographic, clinical, pathologic, and etiologic correlations.** *Archives of Neurology*, 1975(Nov), Vol 32(11), 713-718.—Discusses clinical, EEG, and pathologic data from 13 patients with "alphacoma," denoting the conjunction of clinical coma with an EEG pattern resembling that of normal wakefulness and predominantly consisting of alpha activity. The patients were divided into 2 groups (aged 53-77 and 14-82), based on the pathogenesis of their conditions. The 1st group consisted of 8 patients with brainstem strokes, and the 2nd group consisted of 5 patients with diffuse hypoxic encephalopathy resulting from cardiac or pulmonary arrest. There were some differences between the EEGs of the 2 groups. In the 1st group, the alpha pattern was located more posteriorly, showed more variability and reactivity, and was more persistent in sequential recordings. In the 2nd group, the alpha activity was transient and showed little reactivity. In both groups, this pattern indicated a poor prognosis for survival. (21 ref)—*Journal abstract*.

7477. Wiebe, Michael J. (George Peabody Coll for Teachers) **Implications of autistic symptomatology for congenital rubella children: An investigation of selected variables.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4049-4050.

7478. Young, Francis A.; Singer, Raymond M. & Foster, Dan. (Washington State U, Primate Research Ctr) **The psychological differentiation of male myopes and nonmyopes.** *American Journal of Optometry & Physiological Optics*, 1975(Oct), Vol 52(10), 679-686.—A comparison of 140 male myopes and 118 male nonmyopes of the entering class of a military academy demonstrated that there were various items on the SVIB test items which clearly differentiated myopes from nonmyopes. It was possible to identify 76% of the Ss falling into either class on the basis of a stepwise discriminant analysis based almost entirely on that measure. The items which discriminated in favor of the myopes were generally those which require academic achievement and individual creative performance, whereas the items which were in favor of the nonmyopes were those which require business and selling skills as well as outdoor types of activities. The myopes were significantly more likely to achieve officer status and win more academic awards than the nonmyopes. (20 ref)—*Journal abstract*.

TREATMENT AND PREVENTION

7479. **Abernethy, Virginia et al.** (Vanderbilt U, Medical School, Div of Human Behavior) **Identification of women at risk for unwanted pregnancy.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1027-1031.—Increasing rates of unwanted pregnancy, particularly among adolescents, has led to consideration of steps to develop intervention programs. In order to reach a young woman for counseling and contraceptive assistance before she places herself at risk for unintended pregnancy, it seems necessary to develop the capability for identifying high-risk individuals without reference to sexual history. A preliminary attempt, with 85 15-45 yr old state mental hospital patients, was made to predict contraceptively unprotected coitus from responses to projective test stimuli. In 2 of 3 analyses, there was a statistically significant relationship between the projective test score and the behavioral measure of risk for unwanted pregnancy. It is stated that the problem is so urgent that even early and necessarily incomplete work in this area may have merit in stimulating further research in identification of women at risk for unwanted pregnancy.—*Journal abstract.*

7480. **Abramson, Marty & Wehman, Paul.** (Waisman Ctr on Mental Retardation, Madison, WI) **Promoting intellectual performance in the aged: An ecological approach.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 159-171.—An ecological approach to promoting and maintaining cognitive functions in the aged is advanced. Research is reviewed which examines the 2 world views of intellectual decline in the elderly. Behavior management strategies, including corrective feedback and self-instruction, are discussed as viable methods of enhancing cognitive growth in the aged. The role of the rehabilitation counselor is described as a facilitator of a life-span approach to education, including a suggestion for a geropsychology specialization in rehabilitation counseling. (39 ref)—*Journal abstract.*

7481. **Ban, Thomas A.** (McGill U, Div of Psychopharmacology, Montreal, Canada) **Clinical psychopharmacology and psychiatry.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 612-616.—Discusses the relationship of clinical psychopharmacology to psychiatry, emphasizing similarities and differences in their scope, content, diagnostic techniques, treatment modalities, organizational structures, and treatment and research facilities. It is concluded that with the rapidly growing number of available psychoactive drugs, the increasing sophistication in clinical methodology, and the slowness of traditional psychiatry to integrate new information, clinical psychopharmacology has become an independent experimental medical discipline. It is noted that as an experimental field, clinical psychopharmacology uses a wide range of statistical procedures, but that these should not be used as substitutes for common sense and accurate observation. (21 ref)—*L. Gorsey.*

7483. **Del'Aria, Salvatore & Karliner, William.** (New York U, Medical School) **Anesthesiologic considerations in psychiatric convulsive therapy.** *Behavioral Neuropsychiatry*, 1974-1975(Jan-Mar), Vol 6(1-12), 6-17.—Describes modified techniques of administering anesthesia and muscle relaxing agents for convulsive therapy, the materials and the set-up for this modified electroconvulsive treatment. The signs of amnesia and those of muscular relaxation needed to administer a modified electroconvulsive treatment properly are described. A comparison is made of this modification with various other methods used in different and the less common use of Indoklon (Flurothyl) is examined. Contraindications for the various therapeutic methods are mentioned, and a critical evaluation is provided.—*Journal abstract.*

7484. **Jori, A.; Dolfini, E.; Casati, C. & Argenta, G.** (Istituto di Ricerche Farmacologiche "Mario Negri," Milan, Italy) **Effect of ECT and imipramine treatment on the concentration of 5-hydroxyindoleacetic acid (5HIAA) and homovanillic acid (HVA) in the cerebrospinal fluid of depressed patients.** *Psychopharmacologia*, 1975, Vol 44(1), 87-90.—Studied the influence of probenecid administration (5 1-g doses over a 20-hr period) on 5-hydroxyindoleacetic acid (5-HIAA) and homovanillic acid (HVA) in the cerebrospinal fluid (CSF) of 26 25-63 yr old depressed inpatients before and after treatment with imipramine (100-200 mg/day) or electroconvulsive therapy (ECT; 4-8 sessions). The average increase of the 2 metabolites in the CSF after probenecid was similar in 7 untreated depressed patients and in the same patients after both imipramine and ECT treatment. A significant increase in the CSF concentration of the acid metabolites before the probenecid administration was also found. (20 ref)—*Journal abstract.*

7485. **Kosch-Graham, Sharon J.** (U Florida) **Psychotherapeutic interactions in multiple and individual therapy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2938.

7486. **Lasser, Barbara R.** (Southwest Regional Lab for Educational Research & Development, Los Alamitos, CA) **An outcomes approach to counseling evaluation.** *Measurement & Evaluation in Guidance*, 1975(Oct), Vol 8(3), 169-174.—Argues that a method of evaluating the effectiveness of counseling is inherent in counseling based on the attainment of describable goals for the client. Such a method requires the clear specification of expectations for changes in the client, deciding on how these changes are to be observed, choosing and implementing a treatment which will effect these changes, and assessing actual progress toward the goal. Evaluation becomes a part of the counseling process, leading to it, and integrating the evaluation and reevaluation into the treatment process. Data so obtained for many clients may be summed to provide an index of effectiveness for a counseling service or program.—*Journal abstract.*

7487. **Plerkoot, R. A.; Wellens, W. & Houben, M. F.** (U Leuven, Belgium) **Elements of resistance to a combined medical and psychotherapeutic program in anorexia nervosa. An overview.** *Psychosomatics*, 1975, Vol 26(2), 101-117.—Describes the anorexia nervosa syndrome based on an outcome study

with 32 female patients who could be considered as homogeneous in a number of aspects. The following 5 criteria, on which the delineation of the syndrome is based, were realized in all the patients: considerable weight loss, limited food intake, amenorrhea, juvenile age of onset, and absence of primary organic or specific psychotic disorder. According to medical and psychotherapeutic treatment outcome, Ss could be categorized into 3 groups: the cured, the improved, the unimproved. It is suggested that a better prognostic outcome is offered by the following personality characteristics, determined by psychological testing: lower neuroticism and higher self-defensiveness on Amsterdam's Biographic Questionnaire, a Dutch personality inventory, a lower general profile and especially a lower score on the schizophrenia scale of the MMPI; and less pronounced tendencies to infantile regression, passivity, and sexual repression as these are expressed in the TAT. (24 ref)—*Journal abstract*.

7488. Sanchez-Craig, B. Martha. (U Toronto, Canada) **Cognitive and behavioral coping strategies in the reappraisal of stressful social situations.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 7-12. —Compared cognitive and behavioral coping strategies for eliciting reappraisal of stressful social situations in 22 male and 27 female 7th and 8th graders. In the cognitive coping condition Ss were trained to attend objectively to the aversive cues in the stimulus person and were encouraged to reconsider their aversiveness. In the behavioral coping condition Ss were trained to develop more adequate behaviors for coping with the stressful situation. These 2 strategies were tested alone and in combination against an identification-control condition. The coping strategies were more effective in eliciting positive reappraisal of the stressful situation than was the control condition. The behavioral coping strategy resulted in a greater reduction of cue aversiveness. Findings stress the importance of behavioral coping in the reappraisal of stressful stimuli.—*Journal abstract*.

7489. Schonecke, O. W. & Schüffel, W. (U Ulm, Ctr for Medicine & Pediatrics, E Germany) **Evaluation of combined pharmacological and psychotherapeutic treatment in patients with functional abdominal disorders.** *Psychotherapy and Psychosomatics*, 1975, Vol 26(2), 86-92. 78 patients suffering from various functional abdominal complaints were treated in a 2 × 2 double-blind design: (a) psychotherapy with Ro 5-3350, (b) psychotherapy with placebo, (c) Ro 5-3350 without psychotherapy, (d) placebo without psychotherapy. Results show that a considerable amount of improvement could not be ascribed to the 2 critical factors or the interaction of both, but were due to unspecific influences in the course of treatment. Results suggest that possibly properties of any psychotropic drug have to be related to a doctor-patient relationship within which the personal problems of the patient are dealt with. Special methodological precautions which have to be considered to evaluate such properties are discussed. *Journal abstract*.

7490. Stromgren, I. Sand. (Aarhus Psychiatric Hosp, Denmark) **Therapeutic results of brief-interval unilateral ECT.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 246-255. Conducted a study with 104 19-65 yr old patients with endogenous depression who were given

unilateral ECS therapy. Ss were divided into 2 groups, one receiving 2 and the other 4 treatments/wk. Severity of depression was assessed before the 1st treatment and after the 6th and the last treatment. Memory testing with the Wechsler Memory Scale and EEG recordings were also conducted. In the group with frequent ECS, 1-2 additional treatments were required, the difference being statistically significant. Frequent stimulation was more effective in terms of reduction in the depression score. Effect per treatment was identical in the 2 groups. 4 treatments/wk did not result in a higher frequency of complications. A comparison of the 5 severest depressions in each of the 2 groups did not reveal any difference in the therapeutic effect of the 2 methods. It is concluded that 4 treatments/wk instead of 2 reduces the treatment period by 11-12 days.—*Journal abstract*.

Psychotherapy & Psychotherapeutic Counseling

7491. Adler, Lois E. (Columbia U) **The dimensions of self-disclosure from three vantage points.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2294-2295.

7492. Askevold, Finn. (Oslo University Hosp, Norway) **Measuring body image: Preliminary report on a new method.** *Psychotherapy and Psychosomatics*, 1975, Vol 26(2), 71-77.—Describes a method for measuring body image using as Ss female patients with different somatic complaints. A specific patterning of body image related to the localization of somatic complaints is revealed. Anorexic and obese patients had an overall larger body image while the distortions in other conditions were generally on the elevation in the vertical axis. Different aspects of this way of measuring body image are discussed.—*Journal abstract*.

7493. Austin, David W. (U Wyoming) **Nonverbal cues influencing client and nonclient perception of counselors.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4726-4727.

7494. Benson, Robert. **The forgotten treatment modality in bipolar illness: Psychotherapy.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 634-638.—Describes the treatment of 31 bipolar mentally ill patients by a combined regimen of lithium and psychotherapy for up to 41 mo. Reasons for the success of the combined treatment over that of lithium treatment alone are discussed. It is concluded that psychotherapy is a valuable adjunct to lithium treatment because (a) it keeps the patient motivated to continue the drug despite side effects, (b) it eases the fear of the manic episode, (c) it allows the patient to explore new avenues of creativity, and (d) it allows the therapist to carefully monitor the patient's mood as an early detection of falling serum lithium levels. (44 ref)—*L. Gorsey*.

7495. Binder, Jeffrey L. & Weisskopf, Susan. (U Michigan, Medical School, Neuropsychiatric Inst) **Facilitating ego mastery in brief psychotherapy with medical students.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 575-592.—Describes 4 related techniques for conducting brief psychotherapy with medical students. These techniques capitalize on styles of ego adaptation and defense which are characteristic of this population, and which involve intellectual mastery and intellectualization. 5 case histories illustrate these styles. The

therapeutic use of a frequently occurring form of positive ego-transference is discussed. (30 ref)—*Journal abstract.*

7496. Bleye, Deanna M. (U Northern Colorado) **The relationship of counselor-client measured value similarity to client self-concept change and client perception of empathy, warmth and genuineness after brief counseling.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2277.

7498. Cabush, David W. & Edwards, Keith J. (Rosemead Graduate School of Psychology, CA) **Training clients to help themselves: Outcome effects of training college student clients in facilitative self-responding.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 34-39.—Used training in facilitative self-responding to help clients alter what they say to themselves. The training was compared to empathy-based individual counseling for personal-social problems. 20 undergraduates served as Ss. Treatment consisted of 6 1-hr weekly sessions. Ss were compared on posttests of empathy, regard, genuineness, and concreteness of their self-help responses and self-ratings and observer ratings of interpersonal functioning and improvement on specific counseling goal behaviors. Significant treatment and Treatment \times Measures interaction effects were observed, indicating significant differences in favor of the trained group for 6 of the 8 variables. Group differences on the 2 self-rating measures were not significant. The fact that minimally facilitative levels of self-responding and positive change as rated by observers was attained only by the trained group indicated the usefulness of the technique for self-help training. (26 ref)—*Journal abstract.*

7499. Carrington, Frederick M. (U Georgia) **The effects of music therapy on the attention span of hyperactive mental retardates.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3864.

7500. Chafey, Richard L. (U Virginia) **The effects of counselor self-disclosure on the self-disclosure of clients with high and low precounseled levels of self-disclosure in a counseling analogue.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4731.

7502. Elam, Ralph R. (U Maine) **A test of therapeutic outcome as related to therapist-patient dominance, and therapeutic style.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2301-2302.

7503. Fabrega, Horacio. (Michigan State U) **The position of psychiatry in the understanding of human disease.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1500-1512.—Discusses psychiatry and the concept of disease. Generic attributes of the concept and the ways in which the concept has come to be used in contemporary medicine are examined. Psychiatry's

concern with alterations in social behavior is analyzed in the light of the generic attributes of disease. A holistic and adaptational perspective toward disease is discussed, and psychiatry's stand in relation to such a perspective is examined. Alternative paradigms for ordering behavioral changes that can be implicated in disease are suggested. In adopting such a perspective and exploring the ways in which disease and behavior interrelate, psychiatry becomes one of the disciplines that examine fundamental questions about man and social adaptation. (17 ref)—*Journal abstract.*

7504. Finney, Joseph C. (U Kentucky, Coll of Education) **Therapist and patient after hours.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 593-602.—Describes the case of a patient undergoing brief psychotherapy who stated that her former therapist had made a sexual advance toward her. Computer analysis of her MMPI profile reported her motivation and predicted her behavior accurately. The psychological, ethical, and legal issues raised by this type of case are discussed.—*Journal abstract.*

7505. Flesch, Regina. (Eastern Pennsylvania Psychiatric Inst, Philadelphia) **A guide to interviewing the bereaved.** *Journal of Thanatology*, 1975, Vol 3(2), 93-103.—Describes the rationale of a systematic focused interview schedule designed for interviewing recently bereaved individuals. Grief after a death may be studied through 8 areas which are identified and explored through specific questions. The schedule, which leads the respondent through the "grief work" within an interview period, was developed to study individuals bereaved by suicide or by fatal automobile accident.—*Journal abstract.*

7506. Freebury, D. R. (Mt Sinai Hosp, Toronto, Canada) **A psychiatrist moves his office: Hindrance or help in psychotherapy?** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 567-574.—Describes a therapist's experience in moving his analytically-oriented psychotherapy practice from an exclusive private office to the psychiatric floor of a busy general hospital. The characteristic ways in which different patients reacted to this experience are described and the dynamic implications discussed. Most patients felt that they were losing a special private relationship with the therapist. The implications of this feeling for psychotherapy generally are examined. In the end the experience was incorporated positively into each patient's individual therapy.—*Journal abstract.*

7507. Hageseth, Jon A. & Schmidt, Lyle D. (Ohio State U) **Interviewee intelligence, explicitness of interviewer conclusions, and attitude change in a counseling analogue.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 483-488.—Examined the effect on attitude change of interviewee intelligence and explicitness of interviewer's conclusion in a counseling analogue. Ss were 117 female undergraduates. The repeated measures analysis did not support the hypotheses that attitudes of lower intelligence Ss are changed more by explicit conclusions and that attitudes of higher intelligence Ss are changed more by implicit conclusions. A trend analysis of self-ratings of need for achievement revealed a significant linear decrease for all Ss over time and a significant quadratic Intelligence \times Time interaction.

Interviewers were perceived to differ in expertness. Implications are discussed for counseling and future research. (27 ref)—*Journal abstract.*

7508. Halberstadt-Freud, Iki. Technical variations in the psychoanalytic treatment of a preschool child. *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 162-176.—Describes the analysis of a 4½-yr-old female and the different techniques adopted to pave the way for proper interpretation of her actions. Interpretation in action might, in many cases, prove to be an unavoidable addition to classical analysis. Attempts are made to describe the intermediate steps one can take between action without verbalization and the final aim of verbal interpretation without action. Interpretation through action as discussed here crystallized around 3 main play techniques varying from the most to the least conscious ego participation by the child: taking part in role-playing, playing out different intra- or interpsychic agencies or roles with dolls, and the introduction of a fantasy figure expressing these agencies or roles. (20 ref)—*Journal abstract.*

7509. Janulis, Peter T. (Cornell U, Medical Coll, New York, NY) The need for intervention: A further delineation. *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 477-484.—Uses clinical material from 10 experimental tape sessions and 2 live sessions to delineate a crucial variable on psychotherapy research—the degree to which the therapist meets the patient's need for intervention. Several separate needs for intervention are identified, how they were met by a therapist is observed, and the outcome of each intervention is assessed.—*Journal abstract.*

7510. Kennedy, William M. (East Texas State U) Implications for counseling from Erich Fromm's view of man's ethical responsibility. *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2307-2308.

7511. Knight, Philip H. & Bair, Carolyn K. (Grand Valley State Coll) Degrees of client comfort as a function of dyadic interaction distance. *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 13-16.—27 male undergraduates were interviewed by 9 male counseling students using an intake interview. Each student counselor saw 3 Ss, one in each of 3 counselor-client distance conditions: 18, 30, and 48 in. An analysis of variance revealed significant differences between conditions in the degree of comfort reported by Ss on evaluative scales of a posttest semantic differential. As a further indicator of Ss' degree of comfort, the semantic differential scales were compared to observers' ratings on a behavior checklist and found to have a positive correlation. Ss' degree of comfort scores ranged from highest for 30 in. to lowest for 18 in. with intermediate scores at 48 in. Results suggest that degree of client comfort is optimized at specific interaction distances during an intake interview. *Journal abstract.*

7512. Krauft, Virginia R. (U Arkansas) Transactional analysis group interaction with sixth grade behavioral problem boys. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3874-3875.

7513. Kuckleburg, Ray J. (U Georgia) A comparison of the facilitative skills of high-retention and low-retention psychotherapists. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4747-4748.

7514. Lowe, Gordon R. (Kingston General Hosp, Canada) Phenomenological congruence in the clinical milieu. *Canadian Journal of Psychotherapy*, 1975(Apr), Vol 20(2), 367-372.—Studied the congruence between the ratings by 13 patients of their own feelings and the ratings of these feelings made by 19 psychotherapists (8 male psychiatric residents, 11 nurses); and between the ratings by the 19 therapists of their own characteristics and the ratings of these by the 13 patients. For the feelings, ratings were made on H. M. Hildreth's Test of Feelings and Attitudes; for the characteristics, ratings were made on the author's version of C. E. Osgood's semantic differential. There were negligible and statistically insignificant correlations between patients' ratings and therapists' ratings. Congruence between patients and therapists did not improve during the course of psychotherapy. It is concluded that psychotherapeutic effectiveness would be enhanced if therapists strove to improve the congruence of their views with their patients' views of the qualities of the participants in the therapeutic interaction. 7515. Lucas, Mary F. (Columbia U) Dependency in psychotherapy. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2941.

7516. Madaus, William C. (U Massachusetts) A comparison of two distinct counseling styles, rational analytic and reconstructive, on client verbal behavior. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3878.

7517. Maguire, Una. (U Keele, England) The school counselor as a therapist. *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 160-171.—Notes that school counseling in Britain is now almost a decade old, and it remains preventive rather than remedial in its objectives. The case for a psychotherapeutic counselor in school has never been presented, yet recent epidemiological studies of disturbance among children suggest that at least 5% merit specialist psychomedical attention. Existing psychological and psychiatric services for such children can treat little more than 1%. There is little hope that a significant increase in staffing in these services will occur. It is concluded that there is a *prima facie* case, therefore, for giving carefully selected teachers 2 yrs of full-time training in psychotherapy, followed by an internship under the close supervision of an experienced psychotherapist. They could work in schools as therapeutic counselors in close collaboration with existing psychomedical services. (17 ref)—*Journal abstract.*

7518. Makinde, Olu. (U Ife, Nigeria) New dimension to counseling: Nigerian "babalawo" model. *Journal of Non-White Concerns in Personnel & Guidance*, 1975(Jul), Vol 3(4), 143-152.—Compares the counseling approaches used by Nigerian community counselors and diviners (babalawos) with Rogerian techniques. Areas discussed include the training of traditional babalawos, Yoruba philosophy, and the use of the Ifa system. The babalawo helps clients fulfill needs of relatedness, respect, love, and identity, as well as purely physiological needs. Individual responsibility, client acceptance, and personal faith are stressed by this form of counseling. 2 case examples are briefly analyzed.—*R. Tomasko.*

7519. Meadows, Mark E. (Auburn U) **Assessment of college counseling: A follow-up study.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 463-470.—Conducted a longitudinal study of 100 college students who had sought counseling and 100 who had not, 7 yrs subsequent to an earlier study and 4 yrs after graduation (or the time when graduation would have been expected). Results indicate that several differences between the 2 groups in the original study were largely attenuated with the passage of time. Ss who had sought counseling had significantly improved their former status on several measures. Implications are made concerning both student development research and the impact of counseling. (28 ref)—*Journal abstract*.

7520. Mester, Roberto; Klein, Hilel & Lowental, Uriel. (Eitanim Psychiatric Hosp, Jerusalem, Israel) **Conjoint hospitalisation of mother and baby in post-partum syndromes: Why and how?** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 124-136.—Discusses criteria for the selection of conjoint hospitalization of mother and baby in the treatment of postpartum syndromes, and some of the theoretical bases of this technique. The vast importance of the mother-baby relationship for the formation of the latter's personality and for the fostering of the former's emotional growth has been widely emphasized in psychiatric literature. Conjoint hospitalization is becoming increasingly popular as part of the treatment of choice in postpartum syndromes. Its aim is to avoid the rupture of the mother-baby unit when psychiatric hospitalization of the mother is indicated and to allow the unit to develop stimulating, positive ties in a therapeutic environment. This technique is not meant to be a substitute for other therapeutic procedures, but to be a complementary one which aims for personality development and emotional growth through experiencing. A detailed description of a case is presented, where a variation of this technique ("mirroring") was used in the treatment. (15 ref)—*Journal abstract*.

7521. Montijo, Jorge. (VA Hosp, San Juan, Puerto Rico) **The Puerto Rican client.** *Professional Psychology*, 1975(Nov), Vol 6(4), 475-477.—Discusses problems of Puerto Rican persons seeking psychotherapy arising from different cultural backgrounds and expectations, including feelings of powerlessness, fatalism, mistrust, superstition, externalization of control, and submission to authority figures. Therapeutic implications and suggestions for developing trust and a sense of responsibility in these clients are examined.

7522. Moore, Michael S. (U Kansas, Law School) **Some myths about "mental illness."** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1483-1491.—Radical psychiatrists and others assert that mental illness is a myth. The impact of the argument on law and psychiatry is dealt with, and the 5 following versions of the myth argument prevalent in radical psychiatry are discussed: (a) that there is no such thing as mental illness; (b) that those called "mentally ill" are really as rational as everyone else, only with different aims, and that the only reason anyone ever thought differently was (c) because of unsophisticated category mistakes or (d) because of an adherence to the epistemology of a sick society; and (e) that the phrase "mental illness" is used to mask value

judgments about others' behavior in pseudoscientific respectability. Reasons are given for rejecting each of these versions of the argument that mental illness is a myth. (38 ref)—*Journal abstract*.

7523. Mott, Mary. (Okehampton Comprehensive School, Devon, England) **Counselling the counsellors: Support groups in Devon.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 237-243.—Describes the establishment of support groups for school and college counselors in Devon, England. Reference is made to the pressures which led to their creation, to the way the support system has gradually been developed, to the membership, organization, and purpose of the present groups, and to some initial problems and adjustments.

7528. Orlinsky, David E.; Howard, Kenneth I. & Hill, James A. (U Chicago) **Conjoint psychotherapeutic experience: Some dimensions and determinants.** *Multivariate Behavioral Research*, 1975(Oct), Vol 10(4), 463-477.—Previous reports by the authors (1968, 1970) have specified the empirical structure of patients' and therapists' experiences in psychotherapeutic sessions. The present study explored the structure of experience within the therapeutic dyad—conjoint experience. 7 factors were derived from the reports of 28 patient-therapist pairs. One factor reflected the therapist's approach to his role as a help-giver, and another reflected the patient's approach to her role. Other patterns showed convergent perceptions, while still others showed conjoint experiential processes—interexperience. Determinants of these experiences were sought among the personal and social characteristics of the participants. Several clinically suggestive patterns of determinants emerged.—*Journal abstract*

7529. Pulvino, Charles J. (U Wisconsin, Madison) **Psychic energy: The counselor's undervalued resource.** *Personnel & Guidance Journal*, 1975(Sep), Vol 54(1), 28-32.—Counseling is widely understood as a dynamic process depending on communication between at least 2 people. The present inconclusiveness of understanding of communication suggests that a substantial portion of communication occurs at a level that is neither verbal nor nonverbal. It is suggested that this 3rd channel of communication is physiological and consciously controllable, and is labeled psychic communication. 4 discoveries related to the emission and measurement of

psychic energy are briefly described and discussed: energy emissions can reveal basic psychological emotions, energy can be controlled by individuals, energy can be directed and focused, and interpersonal transfer of energy can occur. It is felt that the understanding and control of psychic energy has potential for being therapeutically beneficial. Certain factors which currently hinder development of the control of psychic energy are listed and briefly discussed. (20 ref)—G. S. Speer.

7534. Sanders, Arthur L. (Ball State U) **The fulfillment of client expectancies: A comparison of counselor trainees, with counselors continuing professional growth, and with practitioners in the field.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4760-4761.

7535. Seeman, Mary V. (U Toronto, Canada) **Psychotherapy of love loss.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 558-566. Proposes a method of treating the psychiatric sequelae of being jilted. While time usually heals after object loss, the therapist must make certain that time does not reinforce self-defeatism, delusional beliefs, or socially alienating attitudes. The therapeutic task is to foster the development of a "meaning" to hurtful events. The case of a 30-yr-old male whose wife had left him is recounted in detail to illustrate the principles and goals involved. (19 ref)—*Journal summary*.

7536. Segal, B. M. (Harvard U, Russian Research Ctr) **The theoretical bases of Soviet psychotherapy.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 503-523. Beginning in the 1930s all Western psychological theories, especially psychoanalysis, were labeled reactionary by Soviet scientists. Pavlov's theory remained as the sole "truly materialistic" basis for Soviet psychotherapy. Only in recent years has theoretical research shown signs of life. Certain concepts from cybernetics, information theory, and social psychology are now used widely. (66 ref)—*Journal abstract*.

7537. Seligman, Linda. (Richmond Coll, Div of Professional Studies) **Skin potential as an indicator of emotion.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 489-493.—Monitored the skin-potential responses of 6 college students while each was seen for 10

counseling sessions. Results indicate that the nature of a S's skin-potential wave was generally a reliable indicator of the way the S was managing or experiencing his feelings, as reported on the Mood Adjective Check List during the sessions. Negative skin-potential responses were accompanied by feelings described as pleasant and released; positive responses were associated with unpleasant and inhibited feelings, and neutral responses were often associated with unpleasant and inhibited feelings but also tended to coincide with thoughtful moods. (17 ref)—*Journal abstract*.

7538. Sheikh, Anees S. & Panagiotou, Nancy C. (Marquette U) **Use of mental imagery in psychotherapy: A critical review.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 555-585.—Presents arguments in favor of the use of mental imagery for therapeutic purposes. Several existing imagery approaches to psychotherapy are critically examined, and suggestions for future inquiry are offered. The intimate relation between imagery and the affective-somatic processes is stressed. (4½ p ref)

7539. Siegman, Anita B. (U Southern California) **Personality characteristics and attitudes of seekers and non-seekers of counseling among college undergraduates.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3888-3889.

7540. Sifneos, Peter E. (Harvard U, Medical School) **Problems of psychotherapy of patients with alexithymic characteristics and physical disease.** *Psychotherapy and Psychosomatics*, 1975, Vol 26(2), 65-70.—The principles which govern the kind of psychotherapy best suited for patients with physical disease who may or may not have alexithymic characteristics are based on the careful psychiatric evaluation of the patient's psychological difficulties, and on the early cooperation between the psychiatrist and his medical colleagues. The nature of the alexithymic phenomenon is discussed and the words "affect", "emotion", and "feeling" are defined. Supportive psychotherapeutic measures are indicated for patients with alexithymic characteristics. These can be offered by the medical personnel in consultation with a psychiatrist. Psychodynamic psychotherapy, on the other hand, offered by a well-qualified psychiatrist is considered the treatment of choice for neurotic problems which complicate the patient's physical illness.—*Journal abstract*.

7541. Sikelianos, M. **The use of symbolic drawing, metaphor and illusion in a therapeutic-creative process.** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 142-161.—Presents the case of a 5-yr-old extremely disturbed schizophrenic female whose synthesis was made possible through the use of symbolic drawing, metaphor, and illusion. Attempts are made to show the necessity of this usage to cover levels of feeling, percepts, and concepts not expressible on the verbal symbolic level of the English language as the patient expressed it.

7542. Silverman, Lloyd H. et al. (VA Hosp, New York, NY) **A clinical application of subliminal psychodynamic activation.** *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 379-392. Investigated whether the subliminal activation of a fantasy of symbiotic gratification would produce an increment in the degree of improvement that schizophrenics manifested as a

result of hospitalization. 40 male inpatients were seen individually for 3 weekly sessions over a 6-wk period for a fantasy expression task. Both at the beginning and at the end of each session and whenever during the session anxiety was in evidence, the patient was exposed to subliminal stimulation. All Ss were blindly assessed for 7 measures of ego impairment before and after the intervention period and for the number of rehospitalizations over a 9-mo follow-up period. Results indicate that the subliminal symbiotic stimulation affected the ego impairment measures. The self-focusing intervention affected the patients on a measure of self-object differentiation. It is concluded that subliminal symbiotic stimulation together with self-focusing may enhance the therapeutic value of hospitalization for schizophrenics. (31 ref)—*Journal abstract*.

7543. **Simonson, Norman R.** (U Massachusetts, Amherst) **The impact of therapist disclosure on patient disclosure.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 3-6. Conducted a psychotherapy analog study with 90 female undergraduates to examine the effects of therapist disclosure on the S's disclosure to the therapist during a 1st interview. 3 levels of therapist disclosure, no disclosure, demographic disclosure, and personal disclosure, and 2 levels of therapist warmth were manipulated. Ss completed a modified version of the Jourard Self-Disclosure Questionnaire. Ss exposed to a warm therapist offering moderate self-disclosure (demographic disclosure) disclosed more to the therapist than Ss exposed to warm nondisclosing or personally disclosing therapists. No differences were found between nondisclosing and personally disclosing warm therapists. Ss exposed to a cold therapist offered uniformly low levels of disclosure regardless of the level of therapist disclosure. (17 ref)—*Journal abstract*.

7544. **Smith, David L.** (Tri-City Youth & Family Ctr, Choctaw, OK) **Goal attainment scaling as an adjunct to counseling.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 22-27. T. J. Kiresuk and R. E. Sherman (see PA, Vol 44:4099) have proposed a method of evaluating programs and counseling that combines theoretical approaches that may be beneficial to the counseling process itself. The present study hypothesized that counseling with these Goal Attainment Scaling evaluation procedures would improve the conduct of counseling. The Personal Orientation Inventory, Nowicki and Strickland Children's Locus of Control Scale, a consumer satisfaction questionnaire, and behavioral measures were used to assess outcome of counseling for 20 13-17 yr olds with adjustment problems (20 ref) *Journal abstract*.

7545. **Solomon, Arthur J.** (California School of Professional Psychology, San Francisco) **The effect of a psychotherapeutic interview on the physical results of thoracic surgery.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2319.

7546. **Staples, Fred R. et al.** (U Southern California) **Differences between behavior therapists and psychotherapists.** *Archives of General Psychiatry*, 1978(Dec), Vol 32(12), 1517-1522. Compared patient-therapist interaction patterns of 3 experienced behavior therapists and 3 matched analytically oriented therapists. Each therapist saw 10 patients in short-term individual therapy.

Data were taken from a larger study (R. B. Sloane et al, to be published). Patients were young, well educated, and were estimated as having either neurosis or pathological personality but not incapacitating problems. The more active behavior therapists dominated the conversation in terms of speech time, more frequently offered explicit advice and instructions, gave more direct information, presented their own value judgments, and exerted greater control over the content of the interaction than did psychotherapists. Although both groups provided a warm and accepting atmosphere, behavior therapists showed higher levels of accurate empathy, interpersonal contact, and therapist self-congruence. Patients viewed behavior therapists as more authoritarian and believed that psychotherapists encourage greater independence. It is concluded that the 2 therapy approaches were consistent with the theoretical models of each.—*Journal abstract*.

7547. **Valcov, M. Eileen.** (Ohio State U) **Defining the therapeutic problem: The effects of type of formulation on the outcome of six-session psychotherapy.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2322.

7548. **Van Noord, Robert W. & Kagan, Norman.** (Pine Rest Christian Hosp, Grand Rapids, MI) **Stimulated recall and affect simulation in counseling: Client growth reexamined.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 28-33.—To study the influence of affect simulation and interpersonal process recall (IPR) techniques on client growth in personal counseling, an integrated affect-simulation IPR treatment for 6 college student clients was compared with a traditional treatment for 6 other students. A random-assignment, posttest-only control group design was used with client growth measured by in-counseling client process scales, a client satisfaction measure, a self-concept discrepancy measure, and peer ratings of client behavior. A multivariate analysis of covariance procedure, with 5 dependent variables and counselor empathic understanding as the covariable, was used. Ss in the IPR affect simulation treatment did not score significantly higher or lower than Ss who received traditional therapy. Results suggest further assessment of the model and the specific effects of its imposition. (16 ref)—*Journal abstract*.

7549. **Virshup, Evelyn.** (Private practice, Los Angeles, CA) **Latency-group art therapy: Teaching socialization skills through art.** *Child Welfare*, 1978(Nov), Vol 54(9), 624-644. Describes a 10-wk art therapy program for 6 emotionally disturbed 10-yr-old boys. The marked improvement in Ss' peer relationships and socialization skills at the end of this period was graphically observed in their artwork. This improvement demonstrates the synergistic effect of combining art therapy with group therapy interaction in a residential treatment center.—*Journal abstract*.

7550. **Volkan, Vamik D.** (U Virginia Medical Ctr) **More on re-grief therapy.** *Journal of Traumatic Stress*, 1978, Vol 3(2), 77-91. Re-grief therapy, a short-term psychotherapy for established post-traumatic stress, is described and 2 case illustrations are provided. Post-traumatic mourning is distinguished from depression, festivism, and schizophrenia. The post-traumatic mourner is in a state of chronic hope and dread of separation with

the dead. Re-grief therapy encourages the examination of fantasies and dreams and focuses on the patient's fixation at the separation-individuation level.—*Journal abstract*.

7551. **Waltzer, Herbert.** (Queens Hosp Ctr, Jamaica, NY) **Brief or crisis-oriented therapy in a city hospital setting.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 550-557.—Outlines the philosophy of brief therapy which requires active involvement in the therapeutic process (in contrast to long-term insight psychotherapy and psychoanalysis). Greater use is made of supportive measures to strengthen ego deficits. The importance of establishing a contractual relationship with the patient, as well as the problem of separation, must be brought out into the open during the initial sessions. Acceptance of limited therapeutic goals, with the focus on the precipitating stresses and the patient's adaptation to them, are prerequisites for effective brief therapy. The role of transference and countertransference is emphasized.—*Journal abstract*.

7552. **Wilson, Jack.** (Bishop Otter Coll, Chichester, England) **Amanda: A case of depression.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 250-255.—Describes the work of a volunteer counselor, and some of the methods used and insights obtained in dealing with the special problems of counseling in noninstitutionalized and unstructured settings. A case study of work with a 21-yr-old drug addict is presented.

7553. **Young, Gregory G.** **Resistance interruption in programmed psychotherapy.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 535-549.—Describes a technique which introduces an interruptive stimulus into personally maladaptive patterns of behavior while supporting constructive alternatives. Observation and follow-up study of 50 patients indicated that patients with neuroses seemed to benefit markedly, and that patients with personality disorders used the technique to move away from their fixed characterologic patterns. Results are reported and discussed in detail; in general, patients felt that the interrupted stimulus was beneficial.—*Journal abstract*.

Group & Family Therapy

7554. **Adams, Ocie T.** (Louisiana State U and A&M Coll) **The effects of the response demand technique on self-directed groups of hospitalized psychiatric patients.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2917.

7555. **Adler, T. S.; Katz, M. & Yehezkiel, A.** (Psychiatric Clinic, Beer-Sheba, Israel) **An interdisciplinary programme for family planning among North African families in the developmental towns of the Negev.** *Israel Annals of Psychiatry & Related Disciplines*, 1975(Jun), Vol 13(2), 105-116.—Presents the results of 3 yrs of clinical research and counseling on birth control and family planning among North African families. Approximately 1,000 North African females from Beer-Sheba and surrounding development towns in the Negev were treated in clinics during the 3-yr period. Disorders included mainly conversion syndromes, puerperal psychoses, and various gynecological problems. Birth control and family planning were advised. In 38 cases, intraute-

rine devices were inserted and marked improvement in family interaction resulted. These results are viewed with optimism primarily because of the cultural barriers which had to be overcome in order to achieve them. 3 illustrative case reports are presented. (15 ref)—*Journal abstract*.

7556. **Baxt, Richard & Chinlund, Stephen J.** (New York City Dept of Probation, Group Dynamics, NY) **Some examples of the helpfulness of group sessions for individual probations.** *Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy*, 1975, Vol 21(4), 11-16.—Presents 5 cases to describe the benefits of group work, as evidenced by the individual case titles: (a) "Angelo: Girls are safe in group"; (b) "Darlene: Challenge without blood—in group"; (c) "Charles: The group as encouraging parent"; (d) "Gregory: The group as a place where humor can heal"; and (e) "James: The group as a permanent home."—*J. A. Sorokac*.

7559. **Boylin, E. Robert.** (Elmcrest Psychiatric Inst, Portland, CT) **Gestalt encounter in the treatment of hospitalized alcoholic patients.** *American Journal of Psychotherapy*, 1975(Oct), Vol 29(4), 524-534.—Discusses the emphasis in Gestalt theory on growth, awareness, and self-support. Several guides used with alcoholic patients are suggested, and examples from group therapy show how they were used and their possible effects. Focus is on the importance of group treatment and the therapist's role, which is not to analyze but to induce the patient to take responsibility for his own behavior.—*Journal abstract*.

7560. **Cantoni, Lucile.** **Family life education: A treatment modality.** *Child Welfare*, 1975(Nov), Vol 54(9), 658-665.—Views family life education as education of the whole person. It involves role modeling, problem solving, understanding and accepting emotions, cognitive information, and participant self-education.

7561. **Cartwright, Michael H.** (Northwest Florida Mental Health Ctr, Panama City) **A preparatory method for group counseling.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 75-77.—Describes a preparatory method for clarifying individual expectations of group counseling and therapy: a 17-min motion picture film entitled *Groups*. Results indicate that the film was effective in reducing the number of unclarified expectations that 85 15-50 yr old Ss had about group counseling and therapy. (15 ref)

7562. **Cutts, Nancy B.** (Georgia State U) **Group therapy leadership style and patient-perceived therapist ideal qualities.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2300.

7563. **Devoge, Susan.** (U Nevada, Reno) **A behavioral analysis of a group hypnosis treatment method.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 127-131.—Describes some common denominators between hypnosis and behavior therapy by means of a

behavioral analysis of a group hypnosis treatment procedure. The treatment method involves interactional group psychotherapy under hypnosis, combined with cognitive and affective restructuring, and self-hypnotic training utilizing visual imagery cues. The techniques use the vividness of the fantasy experience and the ease of changing emotional sets under hypnosis, to allow Ss to learn more adaptive affective responses and to rehearse more effective patterns of social behavior. The same treatment procedures are analyzed in a behavioral framework emphasizing the use of covert learning through imagery and the role of the therapist and the group as social reinforcers. It is proposed that a greater awareness of the use of learning principles by hypnotherapists would generate a more effective and systematic use of hypnosis. (20 ref)—*Journal abstract.*

7565. Fallico, Gary J. (John Jay Coll of Criminal Justice, City U New York) **An after-school school without failure: A new therapy model for juvenile probationers.** *Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy*, 1975, Vol 21(4), 17-20.—Reports that the "After-School School" provides juvenile probationers with structured and theme-centered group interaction that avoids the dangers of some other models (e.g., medical model; school model). The primary advantage of the teaching model (i.e., focusing on the group experience as a learning or educational one) is that it rewards and encourages student/client involvement in a context of guided peer support.—*J. A. Sorokac.*

7566. Grady, Milton. (Walter Reed Army Medical Ctr, Social Work Service, Washington, DC) **An assessment of the behavioral scientist's role with the dying patient and the family.** *Military Medicine*, 1975(Nov), Vol 140(11), 789-792.—Considers that in the near future behavioral scientists will play more important roles as they help families and patients adjust to the crisis in psychosocial functioning occasioned by terminal illness. New evaluations of the behavioral scientist's role will be required because of new developments in detection and technology. Various components of this role are outlined, including teacher, therapist, collaborator, and enabler. Several theoretical concepts (e.g., ego response and ego identity) are suggested as an orientation for working with the dying patient. Crisis intervention is suggested as a model for treating both the patient and the family, and a transactional perspective is considered necessary in arriving at experiential levels which will enhance the treatment of the terminally ill patient and his family.—*Journal summary.*

7567. Harman, Robert L. & Franklin, Richard W. (Kentucky Counseling & Testing Ctr) **Gestalt interactional groups.** *Personnel & Guidance Journal*, 1975(Sep), Vol 24(1), 49-50.—Describes several ways to involve Gestalt groups interactionally.—*G. S. Sper.*

7568. Haskell, R. E. (Harrisburg Area Community Coll, PA) **Presumptions of group work: A value analysis.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 469-486

—Attempts to describe some implicit and explicit value structures which operate during group work. (a) The presumption of lawfulness assumes that regular occurrences exist in groups, such as "resistances" or "revolt against the leader." (b) The presumption of group wisdom implies that group decisions and norms are correct and are not the result of social pressures brought in from previous learning. (c) The presumption of *tabula rasa* is the assumption that the past can be trusted or that it has no effect on the group. (d) The presumption of democracy includes assumptions that members have access to pertinent information and knowledge, have a harmony of interests, reach decisions rationally, and have equal influence. (e) The presumption of functionalism means that a certain order or status quo is desirable and that deviation is not, unless it is useful to the existing order.—*J. Rubin.*

7569. Hill, W. Fawcett. (California State Polytechnic U, Pomona) **Further consideration of therapeutic mechanisms in group therapy.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 421-429.—Attempts to combine 3 theories of the mechanisms by which therapy or change is achieved in group therapy. Therapeutic mechanisms listed by Corsini and Rosenberg (1955), Hill (1957), and Yalom (1970) are defined and reclassified into a single list and ranked by the degree of consensus among the theorists. Mechanisms having clear consensus were ventilation, acceptance, spectator therapy, and intellectualization. Of secondary importance were universalization, reality testing, altruism, and socialization. Instillation of hope and imitative behavior were tentatively included.—*J. Rubin.*

7570. Holzman, Clare G. (Columbia U) **Patterns of verbal interaction in couples seeking marital therapy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2934.

7572. Landes, Herbert R. (Northwestern U) **Treatment of anxiety in the families of children undergoing tonsillectomy.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2938-2939.

7573. Molnar, G. & Cameron, P. (McMaster U, Hamilton, Canada) **Incest syndromes: Observations in a general hospital psychiatric unit.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 373-377.—Reports on 10 families in which adolescent 14-17 yr old females, who had disclosed that their fathers were committing incest with them, had been admitted to a psychiatric ward for treatment. Although these families were disturbed, they proved strongly resistant to family therapy; the most that was accomplished was the prevention of further incest by airing the situation and rescuing the seduced daughters by removing them from the family (French summary)—*F. Auld.*

7574. Palmer, Anthony J. (West Virginia U) **An experimental evaluation of the therapist role peer interactions, and self motivation in the treatment of depressed female psychiatric patients.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3886

7575. **Paradis, A. Paul.** (California School of Professional Psychology, San Francisco) **Brief out-patient group psychotherapy with older patients in the treatment of age-related problems.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2947-2948.

7576. **Philips, Sheryl L. & Fields, Jan.** **An experiment in activity groups for juvenile offenders.** *Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy*, 1975, Vol 21(4), 4-6.—Activity groups were held during the summer and focused in 3 areas: (a) outdoor activities; (b) cultural events; and (c) fine arts projects. As a pre-therapy experience, activity groups should help youngsters learn to be more productive and responsible and should enable the probation officer to become a more humanized role model. There was a positive carry-over in attitude from the summer experience to the counseling groups, as approximately one-third of the total population were amenable to joining on-going counseling groups.—*J. A. Sorokac.*

7577. **Raubolt, Richard R.** (Pelham Guidance Council, NY) **Adolescent peer networks: An alternative to alienation.** *Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy*, 1975, Vol 21(4), 1-3.—Suggests that group therapy offers a vehicle to enable adolescents to overcome alienation and disrelatedness by becoming involved in their daily lives and with their peers. Special group sessions and peer self-selected groups offer a support system which insists on interdependence, sharing, honesty, concern, and involvement.—*J. A. Sorokac.*

7578. **Rohrbaugh, Michael & Bartels, Bryan D.** (Union U, Albany Medical Coll) **Participants' perceptions of curative factors in therapy and growth groups.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 430-456.—Examined the construct validity of the Q-sort of Yalom et al (1970), which attempts to elicit patients' perceptions of the curative mechanisms in therapy and growth groups. Since Yalom's sample of successfully treated outpatients was homogeneous, a 2nd purpose of this study was to account for individual differences in heterogeneous groups. 72 Ss in 13 groups were given the Q-sort at either the middle or end of the groups. Also administered were a participant questionnaire to measure Ss' attraction toward the group, and a leader questionnaire. Intercorrelations and factor analyses of the Q-sorts yielded 14 clustered factors, or revised "therapeutic mechanisms." Scale reliability for these clusters ranged around 0.50. The 13 groups differed significantly on 8 of the clustered items. Results suggest that Ss' perceptions of curative factors are complex and not easily dimensionalized.—*J. Rubin.*

7579. **Strassberg, Donald S.; Roback, Howard B.; Anchor, Kenneth N. & Abramowitz, Stephen I.** (George Peabody Coll for Teachers) **Self-disclosure in group therapy with schizophrenics.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1259-1261.—Investigated self-disclosure as a process variable in group psychotherapy with 18 chronic schizophrenic patients (average age, 36 yrs) consistent with previous data obtained from nonpsychotic populations, greater perceived therapist interpersonal facilitativeness was associated with higher levels of patient self-disclosure. A battery of personality inventories, behavior rating scales, and the WAIS was

used to assess psychotherapeutic outcome. In contrast to earlier findings, however, Ss who were more self-revealing made less therapeutic progress than their counterparts who divulged less. This failure to replicate is tentatively attributed to the limited ability of psychotic persons to integrate social feedback. Results underscore the delicacy of the psychotherapeutic undertaking with schizophrenics. (21 ref)—*Journal abstract.*

Encounter Group & Sensitivity & Human Relations Training

7580. **Adelson, Joseph P.** **Feedback and group development.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 389-401.—Studied the amount and kind of feedback that developed in 2 growth groups, one of 12 members and one of 17. For 8 sessions of each group feedback was coded by 3 raters on its specificity, evaluative or nonevaluative character, cognitive or emotional content, and directness or indirectness. Coder agreement was from 0.70 to 0.94. In general, with group development feedback increased and became more positive. Feedback is seen as an integral part of group functioning.—*J. Rubin.*

7581. **Bernstein, Lawrence C.** (U Pittsburgh) **The design, implementation, and evaluation of a laboratory education program to increase understanding between parents and adolescents.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4727.

7582. **Carrell, Janeen B.** (Kent State U) **Sensitivity training: Effects on perceived-self-ideal-self congruence.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3863-3864.

7583. **Davis, Terry B.; Frye, Roland L. & Joure, Sylvia.** (Old Dominion U) **Perceptions and behaviors of dogmatic subjects in a T-group setting.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 375-381.—53 undergraduates scoring more than 1 SD above or below the mean on the Rokeach Dogmatism Scale, Form E, participated. During 12 hrs of training, Ss' behaviors were recorded by observers, and each S was periodically rated by his peers on his perceived level of contributions to the group process. Significant differences were found between high and low dogmatics in the behaviors exhibited during the T groups. Low dogmatics were more self-revealing, more attentive to the here-and-now aspects of the T group, less apt to give negative feedback, and less likely to reject the group. A significant curvilinear relation was found between ratings and behavior in the T group, with Ss who were rated extremely by their peers being more self-revealing, more attentive to the here-and-now of the group, more apt to give negative feedback, and less likely to reject the group verbally. (16 ref)—*Journal abstract.*

7584. **de Leon, George & Blase, D. Vincent.** (Phoenix Research Unit, New York, NY) **Encounter group: Measurement of systolic blood pressure.** *Psychological Reports*, 1975(Oct), Vol 37(2), 439-445.—Manually obtained 10 systolic blood pressure readings 5 min before and 5 min after both a 3-hr encounter group and a 3-hr general discussion meeting. Ss were 32 male heroin addicts who were drug-free residents in a therapeutic community. Results show significant elevations of

pressure before and significant decreases following the encounter only. However, assertions that the encounter group influences emotions must be tempered by the possibility that anticipation of the event increases pressure (affect), the adaptation of which may appear as a "ventilation" effect.—*Journal abstract.*

7585. Flack, Ruth & Grayer, Elinor D. (Olive View Medical Ctr, Sylmar, CA) **A consciousness-raising group for obese women.** *Social Work*, 1975(Nov), Vol 20(6), 484-487.—Describes group sessions aimed at illuminating what it is like to be fat in American society, with the additional goals of raising self-esteem and lessening self-punishment. Obese women are helped to see that being fat or not is a choice they can make.

7586. Foulds, Melvin L. & Hannigan, Patricia S. (Bowling Green State U) **Effects of Gestalt marathon workshops on measured self-actualization: A replication and follow-up.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 60-65.—Conducted a replication of the author's previous study to study further the immediate and long-term effects of Gestalt marathon workshops on a measure of self-actualization (Personal Orientation Inventory). 36 undergraduates in the experimental groups participated in a 24-hr continuous Gestalt workshop and completed the dependent measure before the workshop, 5 days later, and 6 mo later. Significant positive pre-post changes on an overall measure of self-actualization and on 10 of 12 subscales were found. A comparison of posttest and 6-mo follow-up scores disclosed that the achieved gains persisted over time and that additional positive change occurred on the overall measure of self-actualization and on 2 subscales. The nontreatment control group ($p = 36$) completed only pre- and posttests and demonstrated no significant changes. (20 ref)—*Journal abstract.*

7590. Johnson, Thomas N. (Southern Mississippi) **Effects of group test interpretation upon changes in self concept and self actualization of college students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4745.

7591. Lewin, David. **Social psychology and crime control.** *Journal of Social Issues*, 1975, Vol 31(1), 193-210.—Describes the community relations training

program at the Seattle Police Academy which was incorporated in the academy in the 1960s by social and behavioral scientists. Initially all of the training was of the stand-up-and-lecture type. But in the late 1960s, role playing of difficult interracial and other police situations was conducted. The role-playing procedures and situations were planned and conducted in a collaborative effort between the police and the role-playing experts from the behavioral science community. (37 ref)—*Journal abstract.*

7592. Lundgren, David C. (U Cincinnati) **Interpersonal needs and member attitudes toward trainer and group.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 371-388.—Studied the control needs and affection needs of encounter group members and how these are related to members' attitudes toward trainers and the group as a whole. Schutz's Firo-B scales were administered to each member of 7 weekend-long groups, each group composed of 9-12 Ss and 2 trainers, early and late in the group; all were classified as High or Low Control and as High or Low Affection. The Osgood semantic differential was administered, early and late in the group, to obtain attitudes toward trainer and group. Results suggest that Ss' attitudes towards the group and trainers differed as a consequence of Ss' needs for control and affection and the compatibility of Ss' needs with those of the trainers.—*J. Rubin.*

7593. McClain, Gail R. (U Tennessee) **The individual within: An instrumented case study analysis of a marathon encounter group.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4752.

7594. McGovern, Kevin B.; Arkowitz, Hal & Gilmore, Susan K. (Woodland Park Mental Clinic, Portland, OR) **Evaluation of social skill training programs for college dating inhibitions.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 505-512.—Evaluated 3 behavioral training programs for college men with dating inhibitions and compared them to a waiting list control group. Ss were 34 male undergraduates. All treatment groups received a dating manual, contact with female confederates, and group discussion meetings. The discussion group received only these treatment components, while the other 2 treatment groups also received behavior rehearsal. For 1 group (behavior rehearsal-office group), the scenes were enacted in the office. The 2nd behavior rehearsal group enacted the scenes in various campus settings (behavior rehearsal-natural environment group). All 3 treatment groups showed significant improvements with few differences among them. Results are discussed in terms of the effective components of social skills training programs and strategies for increasing the generalization of treatment effects. (21 ref) *Journal abstract.*

7595. Mitchell, Ric R. (Washington State U) **Nurturing Relationships between personal characteristics and change in sensitivity training groups.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 414-420.—Attempted to identify characteristics which promote or hinder personal change in sensitivity training groups that in natural, distributed, or combined time conditions. A behavior change training event was administered and assessed on pretest, posttest, and follow-up tests. The EPES, Gordon Personal Inventory, Gordon Personal Profile, and

Behavior Check List. Ss who showed the greatest and least behavior change were compared to determine which of 25 personal characteristics were important in promoting and hindering behavior change. Results suggest that Ss showing most change have a high degree of responsibility, achievement, vigor, original thinking, and to some extent dominance and endurance. The characteristics that seem to hinder positive change are nurturance, succorance, and to some extent autonomy and caution.—*J. Rubin.*

7596. **Morris, John E.** (U Southern Mississippi) **The effects of the pre-treatment use of music in the major and minor modes on the initial client-therapist relationship.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3884.

7597. **Pfister, Gordon.** **Outcomes of laboratory training for police officers.** *Journal of Social Issues*, 1975, Vol 31(1), 115-121.—Conducted a study with 48 officers participating in an intensive 6-day communication orientation workshop and 26 other officers who served as controls. The Edwards Personality Inventory was administered to all Ss before and after the workshop, and questionnaire responses were obtained before and after the program from residents who had nonadversive (no arrest, no citation) contact with officers in both groups. The experimental officers were reported by residents after training as significantly more warm and sincere, behaving more as coworkers, and leaving the citizens feeling generally satisfied with the contact. Controls were reported as communicating little understanding, as treating the citizen more like a case than as an individual, and generally leaving the citizen feeling frustrated. The experimental officers described themselves as significantly more self-understanding as well as more critical of others.—*Journal abstract.*

7598. **Reddy, W. Brendan & Lansky, Leonard M.** (U Cincinnati, Community Psychology Inst) **Nothing but the facts—and some observations on norms and values: The history of a consultation with a metropolitan police division.** *Journal of Social Issues*, 1975, Vol 31(1), 123-138.—Describes a case study of an initial intervention in a large municipal police division. A community group-police confrontation led to the development of an 80-hr community relations training program for 39 police recruits. The program, designed and conducted by a biracial staff, followed an experienced-based learning format in sharp contrast to the quasi-military traditional learning format of the police division. The value and norm conflicts between change agent and the power structure of the urban police system are discussed.—*Journal abstract.*

7599. **Sata, Lindbergh S.** (Harborview Medical Ctr, Seattle, WA) **Laboratory training for police officers.** *Journal of Social Issues*, 1975, Vol 31(1), 107-114.—In a retreat-like setting, a voluntary group of police officers (41 patrolmen and 7 sergeants) was given 7 days training in better communication and learning about themselves and others. During the training, the officers were recalled to active duty to help deal with a race riot. After the riot they returned to training. The total program appeared to be successful.—*Journal abstract.*

7600. **Shoemaker, Gary L.** (United States International U) **A study of the relationship of facilitators' styles**

and personal change in the encounter group. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2954.

7601. **Stanton, H. E.** (Flinders U of South Australia, Bedford Park) **Change in self-insight during an intensive group experience.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 487-493.—Measured the effect of an intensive weekend group experience on Ss' self-insight as defined by Gross's Self-Insight Scale (SIS) and collected reliability and validity data on the Scale. Control and experimental groups comprised 14 graduate education students each. The SIS was administered twice during the weekend. Validation was sought by comparing Ss' responses on the SIS with leaders' ratings of members as having high or low self-insight. Results show a reliability coefficient of 0.92. Experimental Ss showed significant differences on the pre- and posttests, whereas control Ss were relatively unchanged. Validity data resulted in a 0.57 point-biserial correlation. It is concluded that the SIS has considerable validity and reliability as a measure of self-insight.—*J. Rubin.*

7602. **Stone, LeRoy A. & Kristjanson, Ronald W.** (U North Dakota) **Computer-assisted group encounter.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 457-468.—Describes a computerized judgment scaling system called the Multidimensional Evaluation Structure Analysis (MESA), based on the Stone-Coles (1972) model. Raw data for input are interpersonal similarity estimates by members of an encounter group. Between-judge correlations may be computed and factor analyzed in order to detect judgment differences associated with group "splits." An example is given in which the computer output is used as interpersonal feedback.—*J. Rubin.*

7603. **Walker, David N.** (Moravian Coll) **A dyadic interaction model for nonverbal touching behavior in encounter groups.** *Small Group Behavior*, 1975(Aug), Vol 6(3), 308-324.—Tested the following hypotheses: (a) People are generally uncomfortable with nonverbal touching. (b) Nonverbal touching interaction affects the subjective affective state. (c) Sex of individual and homogeneity of sex of dyad influence touching behavior. (d) Continued touching increases openness to touching. (e) Personality differences affect openness to touching. 30 dyads of same or opposite sex were given 7 focused activities. During 3 of the activities, raters observed Ss on 21 behaviors. Ss were initially given the Fundamental Interpersonal Relations Orientation (Behavior), Mosher Forced-Choice Sex-Guilt Inventory and (to males only) a Sexual Callousness Scale. The Affect Adjective Checklist was administered before and after the 7 activities. Results substantiated hypotheses (a), (b), and (d). In hypothesis (c), sex of dyad showed significant main and interaction effects with most types of touching behavior. In hypothesis (e), sex guilt, sex callousness, and need for affection scores were significantly related to openness. Suggestions are made for appropriate target populations for nonverbal touching techniques.—*J. Rubin.*

7604. **Welgel, Russell H.; Wiser, Patricia L. & Cook, Stuart W.** (Amherst Coll) **The impact of cooperative learning experiences on cross-ethnic relations and attitudes.** *Journal of Social Issues*, 1975, Vol 31(1), 219-244.—In a field experiment, the effects of coopera-

tive interethnic contact on ethnic relations and attitudes in the setting of newly desegregated junior and senior high schools were examined; Ss were 231 White, 54 Black, and 39 Mexican-American students. Cooperative interethnic contact was induced in the experimental classrooms by means of a teaching method which emphasized the use of small interdependent student work groups composed of Ss from each of the ethnic groups. Results indicate that the interethnic group method received a favorable endorsement from the teachers, produced substantially more cross-ethnic helping behavior, promoted greater relative respect and liking for Mexican-American classmates among White students, and elicited more frequent friendship choices for Mexican-Americans by Whites. (38 ref)—*Journal abstract*.

Behavior Therapy & Behavior Modification

7607. Ayllon, Teodoro; Simon, Steven J. & Wildman, Robert W. (Georgia State U) **Instructions and reinforcement in the elimination of encopresis: A case study.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 235-238. Treated a 7-yr-old boy who was reported by school officials and his mother to exhibit chronic fecal soiling (encopresis). A reinforcer sampling procedure was used to expose the boy to potential reinforcers to be used in a home-based motivational system. The mother provided instructions which served to make explicit a contingency between appropriate toileting and reinforcement. Within 10 days fecal soiling was eliminated, and a token system was added to maintain this positive change. An 11-mo follow-up indicated no evidence of remission or symptom substitution. Pre- and postpsychodiagnostic evaluation were at variance with the child's behavior. *Journal abstract*.

(U Southern California) **Methodological strategies in a field experiment: The effects of message type and locus of control on the subsequent behavior of participants in a behavior modification weight-control program.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7 A), 4456-4457.

7610. Cohn, Cal K.; Kron, Reuben E. & Brady, John P. **A case of blood-illness-injury phobia treated behaviorally.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 65-68. Describes the successful treatment of a 28-yr-old male patient with a 24-yr history of blood-illness-injury phobia associated with bradycardia and syncope. The patient was taught to prevent

bradycardia and resulting syncope occurring in the presence of phobic stimuli by provoking anger in himself using appropriate imagery.

7611. Edgar, Clara L.; Kohler, Hugh F. & Hardman, Scott. **A new method for toilet training developmentally disabled children.** *Perceptual & Motor Skills*, 1975(Aug), Vol 41(1), 63-69.—Trained 20 profoundly retarded 4-12 yr olds, using a variety of relaxation and tension activities designed to help them differentiate and gain control of the toileting musculature. Operant techniques were used to reinforce appropriate urination. Posttraining scores of the experimental and control groups differed significantly for both accidental and appropriate urination.—*Journal Abstract*.

7612. Ehrisman, Wayne J. (U Nebraska, Lincoln) **A comparison of the effects of biofeedback training in alpha enhancement and progressive relaxation training on tension headache symptoms, EEG occipital alpha, forehead and neck EMG, and self-report measures of anxiety.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2301.

7613. Fishman, Claire A. & Fishman, Daniel B. (U Colorado, Medical School, Denver) **A group training program in behavior modification for mothers of children with birth defects: An exploratory study.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 3-14. Conducted a study to explore the impact of a group approach to teaching behavior modification principles and techniques to mothers of physically handicapped children. 17 mothers of 8-16 yr olds participated. 5 sessions involving presentations, discussions and application of operant reinforcement techniques were followed by 5 sessions focusing on the importance of communication about the handicap and applying the previously learned operant techniques to opening communication in this sensitive, secretive area. Statistically significant ($p < .05$) increases were obtained for the mother's Open Communication and Praise, and for the child's Communication with Mother, Self-Esteem, Enthusiasm, and Likability variables. (21 ref)—*Journal abstract*.

7614. Goodman, Earl O. (Northern Illinois U) **Behavior modification as a therapeutic technique for use with parents of emotionally disturbed children in residential treatment.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 38-46. Reports the experience of establishing and directing a program of behavior modification for 28 6-12 yr olds from blue collar or low-income families and their parents at the New Hampshire Hospital. The focus is on the operant conditioning procedures used with the parents to foster improved relationships with their children and between spouses. Attention was given to the promotion of awareness and praise for productive behaviors and extinction of hostility. Modeling, prompting, shaping, quelling, and reinforcement principles were followed in parent activities such as TV viewing, study data, and group counseling, and controlled visits with children. It is concluded that the program was successful both in increasing parent and child relating the treatment of their children. (16 ref)—*Journal abstract*.

7619. Kockott, G.; Dittmar, F. & Nosselt, L. (Max-Planck-Inst für Psychiatrie, Munich, W Germany) **Systematic desensitization of erectile impotence: A controlled study.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 493-500.—Assessed the therapeutic effectiveness of systematic desensitization (SD) as a treatment for erectile impotence in 24 males (mean age, 31 yrs). Ss were assigned to 3 groups which received either SD, conventional medication and general advice, or were put on a waiting list. Therapeutic effects were investigated on the behavioral, subjective, and physiological levels. There were no significant differences among the 3 groups except on the subjective level. On this level, after therapy the SD group rated feelings in sexually arousing situations as associated with significantly less anxiety than the other two groups. SD used alone as a treatment for erectile impotence shows only limited therapeutic effect. The unimproved patients were later treated using a modification of the Masters and Johnson technique. Early results suggest that this technique may be superior to SD alone.—*Journal abstract*.

7622. Lick, John & Bootzin, Richard. (State U New York, Buffalo) **Expectancy factors in the treatment of fear: Methodological and theoretical issues.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 917-931.—Critically reviews the literature assessing the importance of Ss' expectation of therapeutic gain in facilitating fear reduction. Reviewed studies fall into 2 major categories: those that compare the relative efficacy of systematic

desensitization and placebos and those that attempt to manipulate Ss' expectation of therapeutic gain within a particular technique (e.g., systematic desensitization). The methodological problems with this research include the failure of investigators to evaluate the experiential impact of expectancy-inducing instructions, the use of unconvincing placebo manipulations, and the predominant employment of mildly fearful, poorly motivated Ss. In spite of these problems, it is tentatively concluded that expectancy manipulations are important change mediators. Several mechanisms may explain how expectancy mediates change, including increased compliance with real treatment procedures; increased tendency to test reality after having undergone an "effective" therapy, with subsequent fear extinction and self-reinforcement for behavioral improvement; modification of demand characteristics after treatment; and modification of cognitive events controlling fear responding. 7635. Wright, Logan. (U Oklahoma, Children's Hosp, Health Sciences Ctr) **Outcome of a standardized program for treating psychogenic encopresis.** *Professional Psychology*, 1975(Nov), Vol 6(4), 453-456. Describes the treatment of 14 encopretic 3-9 yr old children using L. Wright's standardized program which involves a combination of behavior modification and laxatives. Symptoms were alleviated in all Ss, and only 4 continued soiling after the 14th wk of treatment. Neither the occurrence of encopresis nor the patients' responses to therapy were related to whether bowel control had ever been achieved, a critical incident prior to symptom development, previously coercive training, or sex. It is concluded that the method described is an economical and effective means of treatment for encopretic children.—*Author abstract.*

7636. Zschokke, Jacki; Freeberg, Mary R. & Erickson, Eric. (U Minnesota) **Influencing behavior to improve attendance at occupational therapy in a psychiatric setting.** *American Journal of Occupational Therapy*, 1975(Nov-Dec), Vol 29(10), 625-627. Used 2 reinforcement methods to increase attendance of 67 acute psychiatric patients at occupational therapy. One method used prompting and social reinforcement, and the other, in addition, used a positive reinforcer. The 2 procedures increased both the attendance and the percentage of time used significantly when compared to baseline. There were no differences between the 2 methods.—*Journal abstract.*

Drug Therapy

7637. Aman, M. G. & Werry, J. S. (U Auckland, Medical School, New Zealand) **The effects of methylphenidate and haloperidol on the heart rate and blood pressure of hyperactive children with special reference to time of action.** *Psychopharmacologia*, 1975, Vol 43(2), 163-168.—12 hyperactive-aggressive 73-135 mo olds

were given single acute doses of placebo, methylphenidate (0.3 mg/kg), and haloperidol (0.035 mg/kg) on 3 separate occasions in a double-blind crossover design with drug order randomized across Ss. Resting heart rates and systolic and diastolic blood pressures were obtained at 9 intervals up to 7 hrs and EKGs at 150 min after ingestion. Methylphenidate caused a small trend toward an increment in heart rate and a significant increment in blood pressure, while the changes with haloperidol were minimal. There were no EKG changes. Changes in heart rate were of a minimal nature as compared with those occurring with digestion which tended to obscure drug effects. (23 ref)—*Journal abstract.*

7638. Brambilla, Francesca et al. (Ospedale Psichiatrico Paolo Pini, Milan, Italy) **Neuroendocrine effects of haloperidol therapy in chronic schizophrenia.** *Psychopharmacologia*, 1975, Vol 44(1), 17-22.—Administered 6 mg of haloperidol daily (intramuscularly) for 30 days (up to a total dose of 180 mg) to 62 male chronic schizophrenics aged 16-62 yrs (48 hebephrenics and 14 paranoids). Hormonal variables measured before and at 10, 20 and 30 days of treatment included total urinary gonadotropins, serum follicle-stimulating hormone (FSH) and luteinizing hormone (LH), ACTH reserve, and serum testosterone. The basic hormonal values revealed decreased secretion of total gonadotropins, FSH, LH, ACTH and testosterone, and increased insulin secretion. The haloperidol therapy seemed to stimulate the secretion of FSH, LH, total gonadotropins, ACTH and testosterone, up to normal or low-normal levels. No modifications were observed in the other hormonal variables. (36 ref)—*Journal abstract.*

7639. Brown, P. J.; Forrest, W. H. & Brown, C. R. (Stanford U, Medical School) **Lorazepam compared with pentobarbital for nighttime sedation.** *Journal of Clinical Pharmacology*, 1975(Nov-Dec), Vol 15(11-12), 752-759.

Compared lorazepam with pentobarbital for its effects on sleep in hospital insomnia. Ss were patients in medical and surgical wards of a Veterans Administration hospital. 31 Ss were included in Phase 1 of the study, 25 different Ss were included in Phase 2. Lorazepam was found to be a potent nighttime sedative. 1-4 25 mg of lorazepam is equivalent to 100 mg sodium pentobarbital for measures of sleep quality and duration. At this dose level it is less effective than 100 mg of pentobarbital as a sleep inducer. Studies at higher doses (up to 4 mg) indicate that lorazepam has a wide therapeutic index.—*P. Federman.*

7640. Burnett, Gordon B.; Little, Stephen R.; Graham, Norman & Forrest, Alistair D. (Baylor Medical Coll, Texas Medical Ctr, Houston) **The assessment of thiothixene in chronic schizophrenia: A double blind controlled trial.** *Diseases of the Nervous System*, 1975(Nov), Vol 36(11), 628-629. Compared the efficacy of thiothixene (15-60 mg/day) to that of chlorpromazine (150-600 mg/day) in 24 male chronic schizophrenics (mean age 44.5 yrs). Drug effects were assessed by the Inpatient Multidimensional Psychiatric Scale and the Nurses' Observation Scale for Inpatient Evaluation. Results indicate no clear differences between the effects of thiothixene and chlorpromazine in these patients. The inefficacy of maintenance administration of one or two

quilizers over prolonged periods is also indicated. (20 ref)

7641. Callahan, Edward J. et al. (Camarillo-Neuropsychiatric Inst Research Program, CA) **Behavioral effects of reducing the daily frequency of phenothiazine administration.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1285-1290.—After an 11-day base line of behavioral observations, 24 chronic female schizophrenics aged 23-62 yrs were assigned to 2 groups matched for alertness. In the 1st treatment phase, the administration of phenothiazine medication of 1 group was switched from a multiple-dose schedule (3-4 times/day) to a single daily administration, while the total dosage per day was held constant. The 2nd group continued on a multiple administration schedule for 11 days and then was switched to a single daily dosage. The Behavior Observation Instrument was used as a measure of patient activity. A multivariate analysis of variance showed that there was no overall effect (positive or negative) due to the schedule change; however, pre-planned *t* tests showed transitory decreases in nonfunctional behavior. Results are discussed in terms of implications for the administration of phenothiazines and the experimental analysis of drug effects. (39 ref)
—Journal abstract.

7642. Chouinard, Guy et al. (INRS-SANTÉ, Hôpital St-Jean-de-Dieu, Montréal-Gamelin, Canada) **Amitriptyline-perphenazine interaction in ambulatory schizophrenic patients.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1295-1307.—In a double-blind, placebo, controlled clinical study lasting 12 wks, 48 male and 48 female 20-60 yr old ambulatory schizophrenic patients were randomly assigned to 1 of 4 treatments: placebo; amitriptyline hydrochloride, 125 mg/day; perphenazine, 20 mg/day; or amitriptyline-perphenazine, 20 mg/day. Treatment groups contained an equal number of males and females. Assessments of symptoms included the Inpatient Multidimensional Psychiatric Scale, the Brief Psychiatric Rating Scale, and a clinical global impression of severity of illness. Perphenazine alone or in combination was substantially more effective in reducing psychopathological disorder than was the placebo, but there was no evidence to indicate the superiority of the amitriptyline-perphenazine combination over perphenazine alone. Amitriptyline alone was not substantially better than placebo and could not be considered an efficacious medication for the maintenance treatment of these Ss. Less response to treatment was made by Ss with longer-term records of prior hospitalizations. (48 ref)

7643. Dam, Mogens (Ed). **Controlled trials of antiepileptic drugs.** *Acta Neurologica Scandinavica*, 1975, Suppl 60, 5-95.—Presents studies which were conducted to evaluate clinically the efficacy of antiepileptic drug treatment. Drugs tested include sulthiame, carbamazepine, and dipropylacetate.

7644. Danowski, T. S. et al. (U Pittsburgh) **Prolonged progestin (Quingestanol) therapy of menopausal diabetic women.** *Behavioral Neuropsychiatry*, 1974-1975(Jan-Mar), Vol 6(1-12), 25-30.—The reduction of high serum luteinizing hormone (LH) levels (normal or near normal) in diabetic females, aged 40-66 yrs, recorded during the 1st yr of treatment with

quingestanol acetate was maintained during the 2nd and 3rd yrs of daily ingestion of this steroid. Serum protein-bound iodine and T_4 plasma 11 (OH) corticosteroids, serum growth hormone titers, insulin responses to oral glucose, and urinary excretion of 17-ketosteroids, Porter-Silber chromogens, and 11-desoxycortisol metabolites, estrogens, and creatinine remained relatively unchanged during quingestanol therapy. At the 36th mo of treatment, a small increase in fasting blood glucose levels with greater hypoglycemia after oral carbohydrate was noted. Quingestanol therapy was associated with maintenance of the increase in serum sodium from low-normal to midnormal concentrations noted during the 1st yr of treatment. (29 ref)
—Journal abstract.

7645. Dekaban, Anatole S. & Lehman, Elyse J. (NIH, Developmental & Metabolic Neurology Branch, Bethesda, MD) **Effects of different dosages of anticonvulsant drugs on mental performance in patients with chronic epilepsy.** *Acta Neurologica Scandinavica*, 1975(Oct), Vol 52(4), 319-330.—Before an anticonvulsant drug dose change, 11 adults (mean age = 34.5) and 4 children (mean age = 12.5) were administered 6 especially adapted mental performance tests, which were designed to measure vigilance, reaction time, and certain aspects of memory. Serum drug levels were also monitored. Results indicate the following: (a) Vigilance and reaction time tests were the most useful in evaluation of effects of various doses of the medication. (b) On the tests for vigilance and reaction time, the greatest number of patients performed best on the lowest dose of their medication. (c) Use of well-standardized, yet simplified, mental performance tests in combination with changes in the dosage of medication can help in reaching a compromise between acceptable seizure control and avoidance of excessive slowing of mental activity. (35 ref)

7646. Dugal, Robert; Caille, Gilles; Albert, Jean-Marie & Cooper, Sam F. (National Inst for Scientific Research, St Jean de Dieu Hosp, Montreal, Canada) **Apparent pharmacokinetic interaction of diazepam and amitriptyline in psychiatric patients: A pilot study.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 679-686.—In a pilot study with 5 male 23-69 yr old psychiatric patients, an apparent interaction between amitriptyline and diazepam was observed when the drugs were administered concomitantly. Amitriptyline half-life and equilibrium plasma concentration at the steady-state increased when diazepam was administered. A decrease in amitriptyline plasma clearance and nortriptyline (monodemethylated metabolite of amitriptyline) equilibrium concentration was also observed. The magnitude of this interaction varied greatly between Ss. The mechanism by which this interaction occurred is not clear but may have been due to a change in half-life and/or volume of distribution of amitriptyline when diazepam was simultaneously administered. The clinical relevance of this apparent interaction is discussed. (19 ref)

manic-depressive disorders on an outpatient basis. Utilizing the services of trained paramedicals and a small medical staff, the clinic has efficiently served a large patient population. (28 ref)

7648. Fieve, Ronald R.; Dunner, David L.; Kumbarchi, Turkan & Stallone, Frank. (New York State Psychiatric Inst, NY) Lithium carbonate in affective disorders: IV. A double-blind study of prophylaxis in unipolar recurrent depression. *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1541-1544.—Examined the prophylactic efficacy of lithium carbonate vs placebo in a double-blind study in a carefully delineated group of 28 unipolar recurrent depressed patients (mean age range = 43-64 yrs) followed up from 3 mo to 4 yrs. Indexes of prophylactic efficacy revealed a statistically significant decrease in episode frequency, depth of global depression scores, and increased clinic attendance rate in the lithium carbonate group compared with the placebo group. Results support the previous studies. It is concluded that planned studies are now needed to determine which unipolar patients do best on a maintenance regimen of lithium carbonate alone, lithium carbonate plus tricyclic drugs, or tricyclic drugs alone. (24 ref)—*Journal abstract*.

7649. Gerlach, Jes & Lühndorf, Kurt. (Set Hans Hosp, Roskilde, Denmark) The effect of L-dopa on young patients with simple schizophrenia, treated with neuroleptic drugs: A double-blind cross-over trial with Madopar and placebo. *Psychopharmacologia*, 1975, Vol 44(1), 105-110. 13-25-35 yr old outpatients with simple schizophrenia under neuroleptic treatment completed a double-blind cross-over trial with a combination of levodopa and benserazid, a peripheral decarboxylase inhibitor (Madopar) or placebo. 9 Ss received 900 mg levodopa and 225 mg benserazid daily, 1 S received 600 mg levodopa and 150 mg benserazid, and 3 received 300 mg levodopa and 75 mg benserazid. At these doses, levodopa was effective against emotional withdrawal, blunted affect, and isolation and apathy, without inducing or aggravating accessory symptoms. The activity score, according to a specific activity withdrawal scale, was significantly increased, whereas the Brief Psychiatric Rating Scale score was slightly, but significantly, reduced. In cases where levodopa was limited to 600 and 300 mg daily, a tendency to anxiety, distortion of thinking, and a sense of unreality were observed, depending on the dose. In no cases were gastrointestinal, cardiovascular, or neurological side effects observed. (31 ref)—*Journal abstract*.

7650. Gilbert, Michael M. & Koepke, Hans H. (Private practice, Miami, FL) Oxazepam-protriptyline: A double-blind phase II evaluation of the efficacy and safety of the combination versus placebo in neurotic, depressed and anxious psychiatric outpatients. *Current Therapeutic Research*, 1975(Dec), Vol 18(6), 825-838. 100 depressed outpatients participated in a double-blind placebo-controlled evaluation of a combination of 15 mg oxazepam and 5 mg protriptyline. 47 Ss completed the prescribed 4 wks of study. Significant differences were demonstrated between the responses to the therapeutic combination and to the placebo, as measured by several clinical criteria. It is concluded that the combination of oxazepam and protriptyline was significantly more

effective than placebo in the treatment of neurotic depressed and anxious psychiatric outpatients.—*Journal abstract*.

7651. Gillin, J. Christian; Van Kammen, Daniel P.; Graves, James & Murphy, Dennis. (NIMH, St Elizabeths Hosp, Washington, DC) Differential effects of D- and L-amphetamine on the sleep of depressed patients. *Life Sciences*, 1975(Oct), Vol 17(8), 1233-1240.—Determined (a) the relative effects of acute dextro- and levoamphetamine administration on sleep patterns in 7 hospitalized depressed patients aged 30 to 58 and (b) whether the effects of these 2 isomers would be altered by pretreatment with lithium carbonate. Each patient received either placebo or 1 of the isomers (30 mg) in a double-blind trial every morning for 13 days. 7 Ss received lithium carbonate (0.9-2.1 g/day) as a pretreatment. EEG, EMG, and electro-oculogram data were obtained from all Ss. Both dextro- and levoamphetamine significantly reduced total REM sleep and percentage of REM as compared with baseline values. Only dextroamphetamine, however, significantly suppressed total NREM sleep, sleep efficiency, and total sleep time as compared with baseline values. Dextroamphetamine also significantly increased sleep latency. Both amphetamine isomers significantly delayed REM onset. Treatment with lithium did not alter the effects of either isomer on any sleep measure. No REM rebound was observed on the night following REM suppression. (48 ref)—*L. Gorsey*.

7652. Hamill, William T. & Fontana, Alan F. (VA Hosp, Palo Alto, CA) The immediate effects of chlorpromazine in newly admitted schizophrenic patients. *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1023-1026.—To evaluate the clinical effectiveness of chlorpromazine in comparison with placebo over a brief period of hospitalization, the authors conducted a double-blind study of the drug in 44 18-55 yr old acutely ill schizophrenic patients. Ss had been newly admitted to a brief treatment unit where the average length of stay was 7-10 days. Results indicate that chlorpromazine had no more calming or antipsychotic effect than placebo during the 1st 5 days of treatment. It is suggested that 5 days is too short a time for a clinical trial to gauge patient response to chlorpromazine. *Journal abstract*.

7653. Henkin, Robert L.; Patten, Bernard M.; Re, Peter K. & Bronzert, Diane A. (Georgetown U. Medical Ctr, Ctr for Molecular Nutrition & Sensory Disorders) A syndrome of acute zinc loss: Cerebellar dysfunction, mental changes, anorexia, and taste and smell dysfunction. *Archives of Neurology*, 1975(Nov), Vol 32(11), 745-751.—Oral administration of the amino acid histidine to 6-37-56 yr old patients with progressive systemic sclerosis produced anorexia, taste and smell dysfunction, changes in mentation, and cerebellar dysfunction in each patient. These changes were associated with significant decreases in serum zinc concentration and significant increases in urinary zinc excretion. Administration of zinc ion, even with continued histidine administration, returned each of the signs and symptoms to or toward normal within 8-24 hrs. (45 ref)

7654. Hollister, Leo E. (VA Hosp, Palo Alto, CA) Drugs and sexual behavior in man. *Life Sciences*, 1975(Sept), Vol 17(5), 661-667.—A review of the literature

ture indicates that drugs for treating diminished sexual function in man remain largely unsatisfactory, but new basic knowledge about the roles of dopamine and serotonin may allow the formulation of more effective compounds. Drugs for decreasing sexual activity are more numerous and more effective although far less desired. Drugs used for treatment of nonsexual disorders may have sexual effects, and information should be collected about concurrent drug-taking in anyone with a complaint about sexual function. Sympatholytics, ganglionic blocking drugs, antipsychotics, and lithium may all impair sexual functions. Of the social drugs, alcohol is most clearly deleterious in its effects. Except for their effects as disinhibiting agents, little rationale exists for most of the claims made about the sexual stimulant effects of illicit drugs. Like alcohol, heroin and other opiates decrease sexual activity. Amphetamines are best documented as sexual stimulants, although such effects usually require substantial doses. (28 ref)—*Journal abstract*.

7655. Kellett, J. M.; Metcalfe, M.; Bailey, J. & Coppen, A. J. (St George's Hosp, London, England) **Beta blockade in lithium tremor.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1975(Jul), Vol 38(7), 719-721.—The beta-blocking agents, practolol and propranolol, produced significantly more tremor than placebo in a test on lithium-induced tremor in affectively ill patients. It is argued that lithium-induced tremor is closer to essential than to physiological tremor.

7656. Kellner, Robert. (U New Mexico, Medical School) **Unwanted effects of minor tranquilizers and hypnotics.** *Psychiatric Annals*, 1975(Nov), Vol 5(11), 43-49.—Views the commonly used benzodiazepines as very safe, with their most common side effects being dose-related drowsiness and ataxia. Their ability to relieve depression by reducing anxiety is considered, along with their effects on hostility. Side effects discussed include allergic reactions, addiction, and additive reactions when used with other CNS depressants. Adverse reactions from the phenothiazines and the hypnotics are also noted, and the importance of terminating a patient's use of hypnotics as quickly as possible is stressed. (53 ref)—*R. Tomasko*.

7657. Kellner, Robert; Wilson, Roger M.; Muldrew, Michael D. & Pathak, Dorothy. (VA Hosp, Albuquerque, NM) **Anxiety in schizophrenia.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1246-1254.—6 anxious schizophrenic patients who were maintained with phenothiazines participated in a double-blind intensive design study of chlordiazepoxide and placebo for 12 wks or longer. Ratings included the Brief Psychiatric Rating Scale, Symptom Rating Test, and Hamilton Rating Scale for Anxiety. There were substantial differences between Ss in their responses to chlordiazepoxide (150-300 mg/day): 2 experienced significant and conspicuous relief of distress and reduction of typical schizophrenic symptoms. In another S the differences, although statistically significant, were clinically less striking. In the 3 remaining Ss no differences were observed between responses to the 2 treatments except that 1 was more depressed with chlordiazepoxide than with placebo. Findings suggest that there are at least 2 kinds of anxiety in schizophrenia. A few anxious schizophrenic patients

apparently benefit more from a combination of a phenothiazine with chlordiazepoxide than from a phenothiazine alone. (47 ref)—*Journal abstract*.

7658. Kirman, Brian. (Queen Mary's Hosp for Children, Carshalton, England) **Drug therapy in mental handicap.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 545-549.—Argues that definitions of mental handicap are imprecise in practice, and a wide spectrum of patients are provided for under this heading. There can be no question of specific treatment for a "mental handicap" as such. Many situations arising in institutions for the mentally handicapped derive from the nature of the institution and the regime. Drugs may be used *faute de mieux* when environment manipulation would be more appropriate. There is much overprescribing, and the choice of drugs is not always logical; monitoring of dosage is seldom employed. A major source of behavior disturbance in the mentally handicapped is lack of suitable occupation. It is suggested that apart from a few specific indications, use of sedatives and tranquilizers for the mentally handicapped should be seen as a holding device, to enable a different system of management to be adopted or to disrupt an undesirable behavior pattern. (35 ref)—*Journal abstract*.

7659. Kline, Nathan S. & Angst, Jules. (Rockland Psychiatric Inst, Orangeburg, NY) **Side effects of psychotropic drugs.** *Psychiatric Annals*, 1975(Nov), Vol 5(11), 8-39.—Side effects reviewed include blood pressure changes, cardiac effects, autonomic effects (dryness of the mucosa, hypersalivation, visual accommodation problems, tachycardia, urinary retention, perspiration, and body temperature changes), visual effects, gastrointestinal effects, hematologic effects (from leukopenia to agranulocytosis), dermatologic effects, endocrinologic effects, neurologic effects (parkinsonian reactions and tardive dyskinesia), oversedation, depression, and exacerbation of psychotic symptoms. No evidence is presented to indicate that psychotropic drugs increase mortality, and the difficulty in establishing teratogenic effects is noted. (114 ref)—*R. Tomasko*.

7660. Kramer, Milton et al. (VA Hosp, Cincinnati, OH) **A double-blind evaluation of metiapine in hospitalized acute schizophrenics.** *Current Therapeutic Research*, 1975(Dec), Vol 18(6), 839-848.—90 schizophrenics were randomly assigned to 3 groups and treated with either metiapine, chlorpromazine (CPZ), or a combination of butabarbital and atropine. Metiapine and CPZ in conservative doses were equally effective in achieving clinical improvement and both were more effective than the control drugs. Side effects, both subjective and extrapyramidal, were similar in type and frequency in the 3 groups but tended to be more intense in the metiapine-treated Ss. EKG changes, generally of a mild type, occurred in the same percentage of Ss in both the CPZ- and metiapine-treated groups. Weight gain was greatest in the metiapine-treated group. No systematic effect on pulse was observed. Blood pressure was decreased in the CPZ-treated group. No evidence of clinically significant, drug related hepatic or renal impairment was observed.—*Journal abstract*.

7661. Kusalic, Maria & Fortin, Claire. (Rivière-des-Prairies Hosp & Jewish General Hosp, Montreal, Canada) **Growth hormone treatment in hypopituitary**

dwarfs: Longitudinal psychological effects. *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 325-331.—Describes marked emotional, medical, and family problems observed in a group of 11 hypopituitary dwarfs. Treatment with human growth hormone made them taller, but their long-standing psychological difficulties created other problems as they adapted to this growth. (French summary) (17 ref)—*F. Auld*.

7662. Martensson, Erik; Nyberg, Gösta; Axelsson, Rolf & Serck-Hansen, Klaus. (Lillhagen's Hosp, Hisings Backa, Sweden) **Quantitative determination of thioridazine and nonconjugated thioridazine metabolites in serum and urine of psychiatric patients.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 687-700.—Describes a gas chromatographic method which makes it possible to isolate, separate, and quantitatively determine the main nonconjugated thioridazine metabolites. Results show that the same type of thioridazine metabolites that have been demonstrated in the rat are formed also in humans, namely monosulfoxides, disulfoxide, and sulfones.

7663. Martins, Clóvis et al. [Clinical trial with sulpiride on schizophrenic in-patients.] (Port) *Arquivos de Neuro-Psiquiatria*, 1974(Sep), Vol 32(3), 228-233.—24 diagnosed schizophrenic patients, male and female, received an average daily dose of 1,200 mg sulpiride during 6 wks of treatment. The patients were 17-48 yrs old and the duration of the disease was from 30 days to 18 yrs. Optimal results were obtained with sensorimotor and delusional symptoms, and no important side effects were observed.—*Journal summary*.

7664. Mielke, D. H.; Gallant, D. M.; Kessler, C. & Roniger, J. J. (Tulane U, Medical School) **Lenperone: A controlled evaluation in chronic schizophrenic patients.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 636-640. Lenperone (AHR-2277) is a new butyrophenone. A double-blind comparison study was made with chlorpromazine, using 29 chronic schizophrenic patients averaging 40-43 yrs of age. Results appear to confirm earlier uncontrolled trials in indicating that lenperone is an active antipsychotic for the chronic schizophrenic. The 2 compounds are similar in efficacy. Adverse reactions were similar, with the exception of reversible EKG changes. T-wave changes occurred in 1 of the chlorpromazine and all of the lenperone Ss. U-wave formation was observed only in the lenperone group.—*Journal abstract*.

7665. Mielke, David H. (Tulane U, Medical School) **Adverse reactions associated with mood-altering drugs.** *Psychiatric Annals*, 1975(Nov), Vol 8(11), 71-89.—Considers the thymoleptic drugs generally safe and efficacious in inducing symptomatic relief when administered to appropriate patients. Side effects, toxic reactions, and poisoning are discussed, and their clinical management is briefly outlined. It is anticipated that adverse reactions and poisoning will continue to be a problem as greater amounts of these drugs are being dispensed each year. Proper patient supervision will reduce the risks associated with the use of these drugs. (47 ref)—*Journal summary*.

7666. Monti, Jaime M.; Altier, Humberto; Prandro, Miguel & Gil, Juan L. (Hosp de Clinicas Montevideo, Uruguay) **The actions of flunitrazepam (Rohypnol) on**

heart and respiratory rates and skin potential fluctuations during the sleep cycle in normal volunteers and neurotic patients with insomnia. *Psychopharmacologia*, 1975, Vol 43(2), 187-190.—Used all-night recordings to assess the actions of oral flunitrazepam in 5 healthy adults and 5 neurotic patients with insomnia. The most conspicuous effect of flunitrazepam in the healthy S's sleep cycle was an increase of the latency for the appearance of the 1st REM period. In the insomniacs the compound was effective in inducing and maintaining sleep. Flunitrazepam diminished heart rates during the REM phases and significantly decreased the variability indices, this effect being more prominent in the normal Ss. Skin potential fluctuations during Stages 2 and REM sleep were also decreased, although tolerance developed rapidly in this connection.—*Journal abstract*.

7667. Quattrone, G. & Glametti, L. [National symposium on the long-term effect of fluphenazine: II.] (Ital) *Rivista di Psichiatria*, 1975(Mar-Apr), Vol 10(2), 129-214.—Presents 9 articles by staff members of psychiatric hospitals throughout Italy, reporting research on the long-term activity of fluphenazine decanoate. Male and female patients of all ages, both inpatients and outpatients were study Ss. In general, results were favorable to use of the drug.—*N. De Palma*.

7668. Quitkin, Frederic; Rifkin, Arthur & Klein, Donald F. (Long Island Jewish-Hillside Medical Ctr, Hillside Div, Glen Oaks, NY) **Very high dosage vs standard dosage fluphenazine in schizophrenia.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1276-1281.—Previous work with chronic schizophrenic patients and a pilot study with nonchronic treatment-refractory schizophrenic patients indicated that very high doses of fluphenazine hydrochloride (1,200 mg/day) have a greater antipsychotic effect than do standard doses. Increased side effects were not reported. In a double-blind 6 wk random assignment study, 18 16-37 yr old nonchronic treatment-refractory patients received the very high dose and 13 the standard dose (30 mg/day). Standard-dose treated Ss had greater improvement on a variety of measures. Analysis of Inpatient Multidimensional Psychiatric Scale scores indicated that some Ss taking very high doses had akinesia, an extrapyramidal side effect that in part accounted for their inferior response.—*Journal abstract*.

7669. Rifkin, Arthur; Quitkin, Frederic; Howard, Alfred & Klein, Donald F. (Long Island Jewish-Hillside Medical Ctr, Glen Oaks, NY) **A study of abrupt lithium withdrawal.** *Psychopharmacologia*, 1975, Vol 44(2), 157-158.—Analyzed side-effect data on 12 adolescents and young adults who were given lithium for 6 wks and then abruptly were switched to placebo. Blood lithium levels were kept between 0.6 and 1.2 mEq/l. It is concluded that there is no withdrawal syndrome from abruptly discontinuing therapeutic doses of lithium after 6 wks, in contrast to other drugs effective in mood disorders.—*Journal abstract*.

7670. Rosenbaum, Alan H. & Barry, Maurice J. (Mass Clinic, Rochester, MN) **Positive therapeutic response to lithium in hypomania secondary to organic brain syndrome.** *Annals of Clinical Psychiatry*, 1975(Oct), Vol 13(10), 1072-1073.—Reports that a 57-yr-old man who developed hypomania after a severe head injury

vascular accident and surgical trauma to the brain responded well to lithium carbonate treatment over a 2-yr period. The treatment is suggested in the management of hypomanic behavior following organic brain dysfunction.

7671. Rousos, Anthony P. & Hargrave, Robert. (Austin State Hosp, TX) **A preliminary study with penfluridol in hospitalized chronic schizophrenic patients.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 618-626. —49 23-60 yr old chronic schizophrenic patients participated in a 12-wk open study with single weekly doses of penfluridol. Daily mean doses of various other neuroleptic drugs approximately equivalent to 823 mg of chlorpromazine per day were abruptly changed to weekly doses of penfluridol ranging from 20 to 60 mg and titrated up to 140 mg/wk. Measurements of the therapeutic effect were made at the end of the 2nd, 4th, 8th, and 12th wks on 3 psychometric scales: Brief Psychiatric Rating Scale, Nurses' Observation Scale for Inpatient Evaluation (NOSIE), and Clinical Global Impressions (CGI) for severity of illness and impressions of improvement. A statistically significant decrease in severity occurred in somatic concern, guilt feelings, and suspiciousness, as well as in the depression cluster. On the NOSIE scale, improvement occurred in social interest, social competence, manifest psychosis, and in total patient assets. Ss remained stabilized in all other items on these scales. The CGI showed that 68% of Ss improved, 28% remained the same, and 4% became worse (96% were controlled or improved).—*Journal abstract.*

7672. Sakurai, Yukihiro; Nakahara, Tadahiko & Takahashi, Ryo. (Nagasaki U, Medical School, Japan) **Prediction of response to chlorpromazine treatment in schizophrenics.** *Psychopharmacologia*, 1975, Vol 44(2), 195-203.—Administered 50 mg of chlorpromazine (CPZ) to 6 19-42 yr old untreated schizophrenic patients and 8 20-45 yr old healthy volunteers at 7:00 AM. Blood samples taken 3, 6, 9, and 24 hrs were analyzed by gas chromatographic techniques. Although wide interpatient variations in serum drug levels after a single dose were observed, the CPZ level in the patient group decreased faster than in the normal Ss. Patients showing high levels of the metabolites such as demethylated CPZ and CPZ sulfoxide after a single dose of CPZ tended to achieve poorer clinical improvement, as measured by the Brief Psychiatric Rating Scale. Results indicate that the study of a single dose administration prior to initiating treatment with CPZ can be used to determine how an individual patient would respond to CPZ therapy and be a valuable tool in the pharmacotherapy of schizophrenic patients. (20 ref)—*Journal abstract.*

7673. Simpson, George M. (Rockland Research Inst, Orangeburg, NY) **CNS effects of neuroleptic agents.** *Psychiatric Annals*, 1975(Nov), Vol 5(11), 53-60.—Neuroleptics provide safe and effective treatments, with some abnormal behavioral effects taking place in a small percentage of Ss. Extrapyramidal effects are frequent but, with the exception of tardive dyskinesia, are usually easy to manage. Grand mal and temporal lobe disturbances can occur. Withdrawal effects (particularly if an antiparkinson agent is also being given) can take place.

Journal summary

7674. Singh, Man M. & Kay, Stanley R. (Bronx Psychiatric Ctr, Clinical Psychopharmacology Service, NY) **A comparative study of haloperidol & chlorpromazine in terms of clinical effects & therapeutic reversal with benzotropine in schizophrenia: Theoretical implications for potency differences among neuroleptics.** *Psychopharmacologia*, 1975, Vol 43(2), 103-113.—Conducted a double-blind crossover study of haloperidol and chlorpromazine with 18 schizophrenic inpatients. Periodic measurements were made for 32 dimensions of psychopathology, social participation, span of attention, sleeplessness, pulse rate, and neurological side effects. Results show that haloperidol was generally a more effective drug over the 6-wk period. This was particularly apparent in terms of social and emotional responsiveness, communicativeness, and cognitive processes. Haloperidol also was more rapid in its action. Data fail to support the clinical validity of the distinction often made between "sedative" and "activating" neuroleptics. Consistent with previous reports, benzotropine had the effect of diminishing therapeutic response to both neuroleptics. However, haloperidol proved less susceptible to this effect. The lesser therapeutic efficiency of chlorpromazine is considered to be due to its built-in anticholinergic properties acting in opposition to its antipsychotic activity. It is suggested that one of the factors determining potency differences among neuroleptics may be the degree of built-in anticholinergic activity. (34 ref)—*Journal abstract.*

7675. Singh, Man M. & Kay, Stanley R. (Bronx Psychiatric Ctr, Clinical Psychopharmacology Service, NY) **A longitudinal therapeutic comparison between two prototypic neuroleptics (haloperidol & chlorpromazine) in matched groups of schizophrenics: Nontherapeutic interactions with trihexyphenidyl: Theoretical implications for potency differences.** *Psychopharmacologia*, 1975, Vol 43(2), 115-123.—Conducted a 16-wk study of haloperidol and chlorpromazine in 2 groups of 10 schizophrenic inpatients each. Measurements of psychopathology, social participation, and clinical indices of arousal were made periodically, and objective tests of cognition and attention were given. The 2 groups were highly comparable in epidemiological and clinical terms and differed significantly during the baseline period in only 1 of 39 parameters. Analyses showed that significant therapeutic changes tended to occur more quickly and involved a wider spectrum of schizophrenic phenomena with haloperidol than chlorpromazine. At the completion of the study, haloperidol-treated patients had significant improvement in many more dimensions, and the changes with haloperidol were generally of greater magnitude. At the same time, chlorpromazine treatment seemed to be more susceptible to the antagonistic effects of trihexyphenidyl. Data are in agreement with those from a previous study by the authors (see PA, Vol 55: Issue 4). The clinical and potency differences between the 2 neuroleptics are explained on the basis of the fact that chlorpromazine has much stronger built-in anticholinergic properties, which may be acting in opposition to the antipsychotic activity. The possible role of cholinergic mechanisms in schizophrenia is discussed. (24 ref)

—*Journal abstract.*

7676. Sugarman, A. Arthur. (Carrier Clinic, Belle Meade, NJ) **Non-CNS side effects of neuroleptics.** *Psychiatric Annals*, 1975(Nov), Vol 5(11), 61-70.—Discusses 3 types of side effects: those that appear as an exaggeration of normal pharmacodynamic effects related to dosage and individual sensitivity, the allergic reactions, and those resulting from long-term use. Difficulties considered include autonomic symptoms, urinary difficulties, glaucoma, hypotension, EKG changes, weight gain, and endocrine responses. Skin eruptions and photosensitivity are commonly reported allergic reactions. Side effects manifested outside the CNS are viewed as annoying but not serious. Simple measures can prevent life threatening complications.—*R. Tomasko.*

7677. Takahashi, Ryo et al. (Nagasaki U, Medical School, Japan) **Comparison of efficacy of lithium and chlorpromazine in mania.** *Archives of General Psychiatry*, 1975(Oct), Vol 32(10), 1310-1318.—Conducted a cooperative study comparing lithium carbonate with chlorpromazine, using a controlled double-blind design in a series of 80 cases of endogenous manic psychosis. Dosages employed were consistently at an equipotent ratio of 4:1 (lithium carbonate:chlorpromazine). Ss were 13-65 yrs old. Physicians' overall ratings showed lithium carbonate as significantly superior to chlorpromazine in efficacy for manic psychosis. Improvements of basic mood and of disturbance in speech and voice were prominent with lithium carbonate. Onset of the therapeutic effect of lithium carbonate was within 10 days of medication in 65% of Ss, significantly faster than with chlorpromazine. Side effects encountered with lithium carbonate therapy at dose levels not higher than 1,800 mg/day were milder and less frequent compared with those seen with chlorpromazine. (30 ref)—*Journal abstract.*

7678. van Hemert, J. C. (Dept of Neurology, Haarlem, Netherlands) **Pipamperone (Dipiperon, R3345) in troublesome mental retardates: A double-blind placebo controlled cross-over study with long-term follow-up.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 237-245.—Conducted a 6-wk double-blind cross-over study comparing pipamperone with placebo in 20 22-42 yr old female mental retardates with behavioral disorders. After a 2-wk washout period, Ss were randomly allocated to either pipamperone or placebo treatment. The initial dosage of pipamperone was 40 mg twice daily, which was gradually increased to 80 mg 3 times daily within 5 days. Patients were assessed using a 10-item rating scale before and after each week of treatment. For 6 of the 10 items, Ss showed a better response during the pipamperone than during the placebo period. When pre- and posttrial scores were compared, 7 items had significantly improved with pipamperone. The nursing staff considered Ss more alert and amenable during pipamperone treatment. *Journal abstract.*

7679. Weissman, Myrna M.; Lieb, Julian; Prusoff, Brigitte & Bothwell, Sallye. (Yale U, Medical School, Connecticut Mental Health Ctr) **A double-blind trial of maprotiline (Ludiomil) and amitriptyline in depressed outpatients.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 225-236.—Conducted a double-blind trial of a tetracyclic antidepressant, maprotiline (up to 300 mg/day), and a conventional tricyclic, amitriptyline (up

to 200 mg/day), in 67 21-65 yr old ambulatory depressives. The Hamilton Rating Scale for Depression was the main outcome criterion. No significant differences were found between the drugs in onset of action, efficacy, side effects, or predictors of response. Ss on either drug showed a significant reduction in symptoms after 1 wk of treatment and at the end of the trial. Both drugs were tolerated well. A review of double-blind comparisons of maprotiline and tricyclic antidepressants, spanning 13 countries and including over 900 patients, both ambulatory and inpatient, showed essentially similar results. The main outcome criterion in all the studies was manifest psychopathology assessed on the Hamilton Rating Scale for Depression by the treating physician. The absence of additional types of outcome criteria or assessment techniques, which may have detected differences in motor activity or drive as originally postulated, may have obscured results. (21 ref)—*Journal abstract.*

7680. Werry, John S.; Dowrick, Peter W.; Lampen, Eileen L. & Vamos, Marina J. (U Auckland, New Zealand) **Imipramine in enuresis: Psychological and physiological effects.** *Journal of Child Psychology & Psychiatry*, 1975(Oct), Vol 16(4), 289-299.—Administered 50 mg imipramine in a single nocturnal dose to 24 mostly psychiatrically normal, enuretic males for 3 wks in a double-blind, placebo-controlled, crossover trial to determine what effects the drug was having on systems other than the urinary tract. Behavioral changes, mostly of a positive nature, slight weight loss, tachycardia, raised diastolic pressure, and cognitive changes occurred, suggesting that the effect of the drug in children is analogous to that of stimulants, at least over a 3-wk period. This would also suggest that the effect of antidepressants in normal Ss is no different from that in depressed patients, though the findings of this study require replication. (30 ref)—*Journal summary.*

7681. Wheatley, David. (General Practitioner Research Group, Twickenham, England) **Controlled clinical trial of a new antidepressant (Org. GB 94) of novel chemical formulation.** *Current Therapeutic Research*, 1975(Dec), Vol 18(6), 849-854.—Mianserin was compared to amitriptyline in a double-blind comparative trial conducted over 4 wks in 79 depressed patients. Ss were allocated to treatment by random selection, and on breaking the code it was found that 39 had received mianserin and 40 had received amitriptyline. Antidepressant effects were assessed on the Hamilton Rating Scale for Depression and defined global assessments. On both measures very similar results were recorded for the 2 drugs, with no statistically significant differences at any period of the trial. The incidence of side effects was similar, the commonest with mianserin being drowsiness, and the commonest with amitriptyline being dry mouth. It is noted that there may be advantages in using nontricyclic drug in the treatment of depressed.—*Journal abstract.*

7682. Wyndowe, J.; Solyom, L. & Ananth, J. **Anafra in obsessive compulsive neurosis.** *Current Therapeutic Research*, 1975(Nov), Vol 18(5), 611-617.—In a 4-v. uncontrolled study with 15 obsessive compulsive neurotic patients (average age, 35 yrs), chlorimipramine in doses up to 300 mg orally produced significant improve-

ment in both the severity and the number of symptoms. Improvement in the severity of obsessive symptoms far exceeded improvement in anxiety, depression, and phobia. It is considered that this is an indication of the primary antiobsessive effect. The drug was well tolerated. 13 Ss completed the course of the clinical trial. Side effects were mild and did not need action in most instances.—*Journal abstract.*

Hypnotherapy

7683. Cheek, David B. **Maladjustment patterns apparently related to imprinting at birth.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 75-82.—Discusses the use of ideomotor responses combined with light hypnosis to review birth memory when it is associated with maternal stress. The effect of maternal pain and emotional distress on the baby may cause conditioned problems that are evoked as patterned responses in later life. The quality of these patterned responses is comparable to the imprinting of lower animals, but they may be changed as the initial memory is exposed to conscious reasoning and later perspective during age-regression. 4 case examples are presented.—*Journal abstract.*

7684. Cioppa, Forrest J. & Thal, Alan D. (Kaiser Permanente Medical Ctr, Walnut Creek, CA) **Hypnotherapy in a case of juvenile rheumatoid arthritis.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 105-110.—A 10-yr-old girl with a diagnosis of juvenile rheumatoid arthritis responded minimally to large doses of salicylates and physical therapy over 7 wks. 3 sessions of hypnotherapy were given. Despite resistance to the 1st session, questionable improvement ensued. At the time of the 2nd session, the patient still had to be carried frequently by her mother. 4 hrs after the 2nd session, she rode her bicycle and was without pain for the 1st time in 12 wks. 2 reinforcing hypnotherapy sessions were added. School work and social adjustment improved markedly. The child remained well for the ensuing 31 mo. Hypnotherapy appears to have initiated an attitudinal change at a level sufficiently deep to accelerate remission.—*Journal abstract.*

7685. Kaplan, Jarett M. & Deabler, Herdis L. (Florida State U) **Hypnotherapy with a severe dissociative hysterical disorder.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 83-89.—Describes the successful use of hypnosis, on an outpatient basis, to treat a 25-yr-old male with a dissociative hysterical disorder. His dissociative episodes began 5 yrs prior to the initiation of treatment and were generally characterized by violent behavior usually involving destruction of property. Hypnosis was utilized during 6 of 8 weekly therapy sessions. Regressions were performed to determine the etiology of the disorder and the specific precipitating stimuli for the episodes. "Ego-strengthening" suggestions were also used. The violent reaction ceased to appear. At the time of an 8-mo follow-up, the patient was still free of dissociative episodes.—*Journal abstract.*

7686. Scott, David L. (Whiston Hosp, Prescott, England) **Hypnosis in plastic surgery.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 98-104.—Reports on 3 yrs of experience of the use of hypnosis in a hospital plastic surgical unit. This therapy has primarily

been used as a psychotherapeutic support for 13 patients undergoing pedicle and flap graft surgery, resulting in a greatly improved morale and marked reduction in the total drug requirement. Ego-strengthening has been used in a few carefully selected patients with good effect, and hypnoanalgesia replacing chemical anesthesia has been used once to enable cosmetic surgery to be carried out on a postcoronary patient. The overall results are encouraging, and it is shown that hypnosis, even in bedridden patients, is a practical procedure in a communal ward.—*Journal abstract.*

7687. Stanton, H. E. (U Tasmania, Hobart, Australia) **Weight loss through hypnosis.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 94-97.—A method of effecting weight loss through the use of hypnosis is described, embracing (a) direct suggestions relating to amount and type of food eaten, (b) ego-enhancing suggestions to help patients live their lives more pleasantly, (c) mental imagery to establish a desired goal, (d) auto-hypnosis to reinforce the therapist's suggestions, and (e) use of audiotape to provide additional support after the completion of formal treatment. Emphasis is placed on the importance of the therapist-patient relationship and, in particular, the fostering of positive expectation that the treatment will be successful. Follow-up data for 10 adult patients are presented. (21 ref)—*Journal abstract.*

Speech Therapy

7688. Brainerd, Susan H. (U Alberta, Div of Speech Pathology, Edmonton, Canada) **Are audiologists strict oralists?** *American Annals of the Deaf*, 1975(Oct), Vol 120(5), 489-492.—Reports results of a survey of audiologists which indicate that a majority are not strict oralists, a finding which refutes the traditional classification of audiologists on the deafness communication methodology controversy. The majority of respondents favored manual communication in most speech and hearing programs.

7691. Moleski, Richard L. (Ohio State U) **A comparative study of rational-emotive therapy and systematic desensitization in the treatment of stuttering.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4755.

7692. Velmans, Max. (U London, Goldsmiths' Coll, England) **Effects of frequency "recoding" on the articulation learning of perceptively deaf children.** *Language & Speech*, 1975(Apr-Jun), Vol 18(2), 180-193.—Studied the effect of a speech "recoding" device on the articulation learning (by imitation) of 6 sensori-neural, hearing-impaired 7-11 yr old children. A "frequency shift" of speech components above 4,000 cps down to the residual hearing range of the children, when combined

with selective amplification and amplitude compression, led to significantly better articulation learning of consonants with major spectral components in the "shifted" region, than when selective amplification and amplitude compression only were used, the improvement being manifest within only 7 training sessions of 5-10 min, under each condition of amplification. Further, recoding produced a small but significant improvement in articulation transfer-of-training. However, the superior discrimination and articulation of recoded consonants did not suffice to establish the recoded words (in which the consonants were embedded) as substitute labels for corresponding pictures (or concepts) in preference to already "known" non-recoded word labels. (15 ref) —*Journal abstract.*

Health Care Services

7693. Anderson, K. (Ottawa Civic Hosp, Canada) **The psychological aspects of chronic hemodialysis.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 385-391.—Reviews the available psychological literature on chronic hemodialysis. The 1st adaptational problem that hemodialysis patients experience involves conflict about emotional dependence. Dependent patients handle this phase better, whereas more autonomous patients suffer a more severe disturbance. At the stage in which rehabilitative efforts demand that the patient become more independent, patients who have a more dependent character adapt poorly and the more autonomous patients do well. (French summary) (36 ref) —*F. Auld.*

7694. Bain, S. T. (U Toronto, Canada) **The family physician and the clinical psychologist.** *Ontario Psychologist*, 1975(Aug), Vol 7(3), 16-19. Argues, from a physician's point of view, that as family medicine programs train more residents, there should be an increasing involvement of the family physician and the clinical psychologist in patient care.

7696. Coffman, David A. (U Missouri, Columbia) **Effects of social reinforcement in physical therapy.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2298.

7697. Ezerman, Gerard & Van de Vliert, Evert. **[Directional organizational changes in a therapeutic community.]** (Duth) *Mens en Onderneming*, 1975(Nov-Dec), Vol 29(6), 297-319.—Discusses changes that liberalized the client-patient relationships in the psychiatric branch of the School of Medicine, Free University of Amsterdam. The Ss were 12 psycho- and socio-therapeutic resource persons, 11 maintenance and secretarial employees, and 30 patients. Interviews with the Ss revealed their dissatisfaction with the former autocratic organizational structure. Changes included providing the Ss with more knowledge of organizational structure, more information about sociological and psychological theories of behavior, and more means of obtaining information. Staff and patients were unanimous in accepting the new democratic functioning of the clinic. 72% thought that holding democratic meetings had improved decision-making. Staff members of higher

rank found that the meetings had more therapeutic results for the patients than the patients realized. It is suggested that the project would have been even more beneficial if the social and emotional phases of readjustment had received more emphasis. (32 ref)—*A. J. Ter Keurst.*

7698. Fitzgerald, Robert E. (North York General Hosp, Toronto, Canada) **Psychological aspect of diabetes mellitus.** *Ontario Psychologist*, 1975(Aug), Vol 7(3), 20-23.—Discusses the role of the psychologist in helping the patient adapt to the cognitive, emotional, and behavioral aspects of diabetes. The control of obesity is one aspect of the management of the disease where the psychologist can be of assistance.

7699. Jacobsson, Lars & Solheim, F. (U Umea, Sweden) **Women's experience of the abortion procedure.** *Social Psychiatry*, 1975(Oct), Vol 10(4), 155-160.—Studied the experiences of 132 women who had had a legal abortion in Sweden and their attitudes toward a "shortened" abortion procedure (contact only with a social worker and gynecologist). A majority of the women had very positive attitudes toward the shortened procedure. Approximately 50% felt that some form of contact (e.g., with the social worker) should be compulsory even if the abortion is "free." Most women felt calm and relieved after the operation while only a small proportion (5-8%) were depressed and anxious. Results are discussed in terms of the new Swedish abortion law which states that an evaluation in addition to that made by the gynecologist will be made only if requested by the patient or if the pregnancy is longer than 12 wks. —*Journal abstract.*

7700. Johnson, Jean E.; Kirchhoff, Karin T. & Endress, M. Patricia. (U Kansas, School of Nursing) **Altering children's distress behavior during orthopedic cast removal.** *Nursing Research*, 1975(Nov-Dec), Vol 24(6), 404-410. Tested the hypothesis that discrepancy between expected and experienced physical sensations during a threatening experience will result in distress. 84 6-11 yr olds were tested with orthopedic cast removal. Tape recorded preparatory information was used to vary systematically expectations about physical sensations. Ss were randomly assigned to 1 of 3 groups: sensory information, which described the sensory experience during cast removal, procedure information, which described the steps of the experience, and control group, which heard no information. Nonverbal and verbal signs of distress and the pulse rate were observed. The mean distress score for the sensation group (50) differed significantly from the control group mean (100), $p < .02$. The procedure group distress score mean (71) fell between the sensation and control group means. Findings are similar to those from other tests of the hypothesis (25 ref) —*Journal abstract.*

7701. Mostert, Jacobus W. (U Chicago) **States of awareness during general anesthesia.** *Perspectives in Biology & Medicine*, 1975(Aut), Vol 19(1), 68-76. Defines surgical anesthesia as the establishment of a continuum of change in perceptual reactance with the goal of facilitating surgical operations. Ideally, it also provides freedom from pain and anguish for the patient. (21 ref) —*J. Crabbe.*

7702. Polak, Paul R. & Kirby, Michael W. (Southwest Denver Community Mental Health Services, Inc. CO) **A model to replace psychiatric hospitals.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 13-22. —Describes a comprehensive system of community treatment in Denver which has reduced the need for adult psychiatric inpatient beds to less than 1/100,000 population. Six small, community-based therapeutic environments, crisis intervention, home treatment, social systems intervention, and rapid tranquilization comprise the essential components of this total community care system. The system operates within a framework of citizen participation and community control, the elimination of formal staff offices, and a focus on working in the real-life setting of the client and his family. To evaluate the effectiveness of community care, 85 patients about to be hospitalized were randomly assigned to a psychiatric hospital or to community alternative treatment. Outcome measures (e.g., Jourard's Self-Disclosure Scale) at discharge and at follow-up completed by the client, treatment staff, and family members indicated that community treatment was more effective than psychiatric hospitalization. (29 ref)—*Journal abstract*.

7703. Rappaport, Maurice. (Agnews State Hosp. San Jose, CA) **Medically oriented psychiatry: An approach to improving the quality of mental health care.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 811-815. —Argues for the use of a proper "medical model" when care is delivered to assure the consumer of the highest quality cost-effective mental health care, and maintains that psychiatrists must deal with the whole person—both his psyche and his soma. The role of the medically oriented psychiatrist is discussed, and a case study that demonstrates the interplay between a patient's psyche and soma is presented. A 4-step principle is also provided and is designed to be incorporated into all health insurance plans and to ensure that a patient's physical and psychological problems will be dealt with together and that he will receive quality health care. —*Journal abstract*.

7704. Squire, Larry R. & Chace, Paul W. (VA Hosp. San Diego, CA) **Memory functions six to nine months after electroconvulsive therapy.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1557-1564. Assessed memory functions after ECS therapy in 38 42-45 yr old former patients who had received bilateral treatment, right unilateral treatment, or hospitalization without ECS therapy 9 mo previously. Results of 6 different tests of delayed retention and remote memory provided no evidence for persisting memory impairment. Nevertheless, Ss who had received bilateral ECS therapy rated their memory as impaired significantly ($p < .05$) more often than did Ss in the other follow-up groups. Although considerable effort was made to maximize the sensitivity of the memory tests, it is considered possible that, long after ECS therapy, some impairment of memory remained that was not detected by these tests. Alternatively, it is hypothesized that the impairment of recent and remote memory initially associated with bilateral ECS therapy could cause some persons to become more alert to subsequent memory failures and then to underestimate their memory abilities. (41 ref) —*Journal abstract*.

7705. Taub, Arthur. (Yale U. Medical School, Section for the Study & Treatment of Pain) **Electrical stimulation for the relief of pain: Two lessons in technological zealotry.** *Perspectives in Biology & Medicine*, 1975(Aut), Vol 19(1), 125-135. —Presents the history of the role of electrical stimulation in pain relief. The origin of current practices is traced to the 19th century, and it is argued that more careful clinical observation could have projected this application without experimental implantation of many thousand electrodes in patients. (60 ref) —*J. Crabbe*.

7706. Udell, Bess & Hornstra, Robijn K. (Greater Kansas City Mental Health Foundation, MO) **Good patients and bad.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1533-1537. —Extends an article by the present authors (to be published) that identified 3 utilization styles at an urban mental health center where, apart from a minority of intensive users, casual users and pseudo-users predominate and, combined, characterize the therapeutically passive user. The present article compares center data to added data from the private sector, where the intensive user predominates. Center-private differences are examined, and correlates of differing utilization styles are identified (e.g., sex, diagnosis, marital and living arrangements, referral source, and social engagement factor). The latter is associated with differences not attributable to diagnostic severity of social impairment. The growing division of labor, wherein the private sector is engaged in intensive psychiatric treatment while the center increasingly operates an emergency-crisis-maintenance service, is shown to reflect a gross public-private maldistribution of therapeutic assets and liabilities. (20 ref)—*Journal abstract*.

7711. Biggs, John T.; Chang, Sidney S.; Sherman, William R. & Holland, William H. (Washington U. Medical School, St Louis) **Measurement of tricyclic antidepressant levels in an outpatient clinic.** *Journal of Nervous & Mental Disease*, 1976(Jan), Vol 162(1), 46-51. —Obtained data from 150 outpatients to determine if the

routine measurement of plasma tricyclic antidepressant levels was practical in a large clinic population and if such levels could improve patient care. Plasma analysis revealed both the failure to ingest adequate amounts of medication as prescribed and also the abuse of medications. Although generalizations regarding individual variation in drug metabolism or generalizations concerning drug compliance do little to improve patient care, whenever such problems are met on an individual basis, many clinical management problems can be resolved. Five case examples are included to illustrate issues related to proper drug ingestion, drug metabolism rate, treatment failures despite adequate drug levels, side effects, and medication abuse.—*Journal abstract.*

7712. Braga, Laurie D. & Braga, Joseph L. (U Miami, Medical School, FL) **Child development and community mental health services: An important partnership.** *Child Psychiatry & Human Development*, 1975(Fal), Vol 6(1), 47-54.—Suggests that a focus on child development can help the community mental health effort meet its commitments. Though focusing a community's efforts on its children, the entire community will benefit, and the prospects for the future will be made significantly brighter. Contending that children are the most valuable resource of the community, it is pointed out that they must be fully developed. The kinds of child development services a community needs are discussed: day care, home visits by mental health workers to guide parents in ways to stimulate their children's development, family therapy for families in trouble, an ombudsman-child advocate, and possibly a surrogate parent service to give parents who are tied to the home a breather. Services for the early diagnosis and treatment of the range of developmental disabilities and learning problems are considered crucial.—*P. O'Brien.*

7713. Budman, Simon H. (Roxbury Comprehensive Community Health Ctr. MA) **A strategy for preventive mental health intervention.** *Professional Psychology*, 1975(Nov), Vol 6(4), 394-398.—Describes a model for a socially supportive structure, the "psychoeducational group," to aid families and individuals during predictable life crises. Group processes and dynamics and implications for the mental health movement are examined.

7714. Freeberg, James A. (U Tulsa) **The impact of community mental health programs on personality and social adjustment.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2928.

7715. Gertz, Boris; Meider, Jill & Pluckhan, Margaret L. (Ft Logan Mental Health Ctr. Denver, CO) **A survey of rural community mental health needs and resources.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 816-819.—Results of responses from 92 of 215 rural community health centers indicate the following: (a) For effective programs, staff were felt to need academic preparation in the areas of psychology, psychiatry, nursing, social work, and anthropology; skills in individual and group counseling and psychotherapy and a knowledge of community resources were considered beneficial. (b) In order of frequency, respondents listed lack of adequate resources, distance and population dispersal, and entry of the mental health system into the community as the major problems in delivery of service

to a rural community. (c) A majority of the respondents felt that they needed to find a comprehensive, measurable, and easy evaluation system.—*M. E. Pounsel.*

7716. Glassman, Sidney M. & Closson, Anne F. (State Div of Mental Health, Staff & Organizational Development, Denver, CO) **Organizing a staff development department: The Fort Logan model.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 826-828.—The staff development department at Denver's Fort Logan Mental Health Center was created to increase interdisciplinary coordination and participation in student- and continuing-education programs. A great deal of interdisciplinary competition was evident at the beginning. Eventually, continued interaction and expanding needs for members' skills eliminated most competition, and staff were able to learn from one another. Most of the staff now have multiple capabilities and are effective in both teaching and systems intervention. The department's services include a preservice program, which is responsible for student and professional training programs; inservice and continuing-education programs; and a consultation program.—*Journal abstract.*

7717. Grieves, Robert E. (U Wisconsin) **An analysis of service delay and client variables as they relate to mental health center pre-therapy dropouts.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2126.

7718. Leunes, Arnold. (Texas A&M U) **The delivery of mental health services in small communities: An experiential model.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 374-379.—Presents a model for the delivery of services to communities of less than 10,000 population. Emphasis is placed on community action, political and financial autonomy, economy, intelligent use of paraprofessionals, and the careful hiring of permanent and consultative staff.

7719. Lombardi, Joseph S. (U Notre Dame) **Empirically derived models of college and university counseling centers and their relationship to preventive mental health activities.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3877.

7720. Marmor, Judd. (U Southern California, Medical School) **The relationship between systems theory and community psychiatry.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 807-811.—General systems theory, when applied to human personality and behavior, considers the human system to be an active, open one in which personality develops through interaction with other systems, problems within 1 system can produce ripple effects in others. Community psychiatry sees the roots of most mental disorders as being in disturbances within the network of interacting systems. It is maintained that community mental health centers, with their multifaceted approach to treatment and prevention, reflect the health profession's efforts to deal with the mental health problems of a community in a systems oriented way. Further, although the community mental health center movement has weaknesses, it is not felt that they stem from the basic concepts behind the centers, but from the inadequate implementation of these concepts. 4 major interacting variables that are relevant in determining a center's capacity to survive and to function are discussed.—*Journal abstract.*

7721. McCoy, Tommie; Penick, Elizabeth C.; Powell, Barbara J. & Read, Marsha R. (Malcolm Bliss Mental Health Ctr, St Louis, MO) **Clients' reactions to an outreach program.** *Social Work*, 1975(Nov), Vol 20(6), 442-444.—Interviewed 93 clients for their reactions to a community mental health outreach program. Results indicate that for the majority this typical program met their perceived needs.

7722. Signell, Karen A. (San Mateo County Mental Health Service, Daly City, CA) **Training nonprofessionals as community instructors: A mental health education model of primary prevention.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 365-373.—Describes useful processes and suggests that key principles are (a) respect for the feelings of trainees, (b) acknowledgement of the relevance of their life experiences to the work at hand, and (c) an emphasis on working in pairs to provide mutual support and feedback. The specific focus is on training parents to instruct other parents in parent-child communication courses.

7723. Van Vranken, Edwin W. (U Denver) **Utilization of mental health services by Mexican Americans in a military community.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4419-4420.

7724. Womack, William M. & Sata, Lindbergh S. (Harborview Community Mental Health Ctr, Seattle, WA) **The first year of a child advocacy project.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 819-822.—In a child advocacy project funded through a community mental health center, 5 area residents were trained as advocates and assigned to 2 elementary schools. The advocates spent much of their 1st year in training, and in trying to establish themselves as resource persons for children and families in setting up parent-school councils, and in developing recreational programs. They found it easier to be activists and caregivers than coordinators of services, and they met some resistance from the schools and the community. However, by the end of the 1st year the advocates had made significant progress in helping children and families obtain community services and in increasing contact between parents and the schools.—*Journal abstract.*

Counseling & Social Casework

7725. Barish, Samoan. **Lend me your ear: An exploration of clinical listening.** *Clinical Social Work Journal*, 1975(Sum), Vol 3(2), 75-84.—After briefly reviewing social work literature for material on listening, it is concluded that information on the topic is scarce. A limited survey on listening is presented from behavioral science research, psychoanalysis, and linguistics. Concepts are defined and discussed, and a clinical case is presented to help clarify the significance of listening behavior. 2 general areas for future research and suggested intricacies of clinical listening and analysis of skills and listening techniques.—S. R. Stein.

(U Hong Kong) **Medical psychology: The approach in a general hospital setting.** *Ontario Psychologist*, 1975(Aug), Vol 7(3), 7-10.—Describes the provision of psychological services in such hospital areas as pediatrics, neurology, rehabilitation and psychosomatic medicine. Guidelines for establishing a consultative service in a general hospital are suggested.

7752. Serban, George. (New York U, Bellevue Medical Ctr) **Relationship of mental status, functioning and stress to readmission of schizophrenics.** *British Journal of Social & Clinical Psychology*, 1975(Sep), Vol 14(3), 291-301. Studied the interrelations among the variables of patient functioning, life stress, mental status, and readmission to the hospital after release. The population consisted of 516 chronic and 125 acute schizophrenic inpatients. Stress and functioning were

measured by the Social Stress and Functionability Inventory for Psychotic Disorders. Mental status was assessed through the use of a standard problem appraisal inventory. Results demonstrate that mental status variables correlated at a low level with readmission, accounting for a minimal amount of variance, and that the factor of patient functioning had more predictive value. Its effectiveness was hampered by the long-standing cycle of admission-release-readmission in regard to chronic patients. There is no justification for considering mental status as a factor in prognosis, as some researchers have done in the past, based on the same low correlations. (20 ref)—*Journal abstract*.

(U Texas, Austin) **The need for pre-vocational exploration to include work experience for the physically disabled.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 183-187.—Recommends an equivalent of part-time or summer employment for handicapped adolescents to facilitate exploratory behavior that yields vocational self-knowledge. Increased use of the client's own resources to determine vocational direction is also encouraged.

7762. Gilbert, William W. (Ohio State U) **Ethical risk as a behavioral predictor in a prison population.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2351-2352.

7763. Goldman, Laura E. (VA Hosp, Hines, IL) **Behavioral skills for employment of the intellectually handicapped.** *American Journal of Occupational Therapy*, 1975(Aug), No 29(9), 539-546.—157 parents, teachers, and supervisors in competitive industry and sheltered workshops ranked the same behavioral items under different directions. The items, thought to be basic requirements for successful employment of the intellectually handicapped, were sorted into 4 categories corroborated by 42 university students. Chi-square analysis showed many significant differences in ranking among samples. Parents and teachers emphasized items in the job-task category significantly less than did industry and workshop supervisors. Parents stressed basic reading skills more than other samples. Occupational therapists aware of the handicapped person's potential for employment could take the role of providing experiences stressing behaviors sought by employers. (25 ref)—*Journal abstract*.

7764. Haakmeester, Phil. (East Carolina U) **"Catch 26" or the need to improve our measurement system of rehabilitation gain.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 178-182.—Suggests that a 4-level measurement system be used to describe a

client's achievements in 4 functional capacities: vocational competency, economic ability, social competency, and independent living. This system is designed to reduce use of the "numbers game" in evaluating client rehabilitation.

7765. Jodrell, Ruth D. & Sanson-Fisher, Robert. **Basic concepts of behavior therapy: An experiment involving disturbed adolescent girls.** *American Journal of Occupational Therapy*, 1975(Nov-Dec), Vol 29(10), 620-624.—Summarizes some of the basic principles and approaches of behavior therapy that occupational therapists may find useful for application in many areas of practice. An experimental application of the behavioral modification approach within a treatment unit for disturbed adolescent girls is described. 2 social skills, compliance and social greeting, are discussed as examples. These of the many behaviors labeled "performance survival skills" are shown in recent studies to be necessary for successful community adjustment. —*Journal abstract.*

7766. Kamiński, Jerzy. [The fulfillment of obligations by persons placed on probation.] (Poln) *Przegląd Penitencjarny i Kryminologiczny*, 1973, Vol 11(3), 3-22.—Reports data on 2 surveys conducted in 1971 and 1972 with 3,486 and 1,496 Polish probationers, respectively. Results show the following: (a) 80% fulfilled the obligation to have stable employment, (b) 50% underwent a course of training, (c) 75% provided food for the family, (d) 42% were cured of alcoholism, and (e) 79% did not drink to excess. In 1972 between 7% and 15% of the probationers had their probation revoked. (French summary)—A. Z. Arthur.

7767. Kravec, Stephanie & Bratter, Thomas E. (Group Work Services, Dept of Probation, New York, NY) **A multi-phase group program for criminal offenders.** *Corrective & Social Psychiatry & Journal of Behavior Technology, Methods & Therapy*, 1975, Vol 21(4), 7-10.—Describes a 3-mo deferred sentence group program which has the potential for relative success in motivating previously unmotivated individuals in a probation setting. It is suggested that, by involving the individuals actively and aggressively in shaping their destiny, this program has permitted the probation officer to maintain a low authority profile and function more as a counselor-consultant-friend.—J. A. Sorokac.

7769. Nettelbeck, T. & Kirby, N. H. (U Adelaide, Australia) **Training the mildly mentally handicapped worker.** *Ergonomics*, 1975(Sep), Vol 18(5), 517-522.—Evaluated 2 short training exercises for tasks concerned with sewing and with woodwork within a vocational rehabilitation center using 16 18-37 yr old mildly mentally retarded female workers who had been trained previously by methods found to be unsatisfactory. Training workers to position twill used in sewing emphasized the identification of visual cues critical to the initiation of correct action. Training in wood sanding stressed the importance of experience of correct and

incorrect sanding movements and the use of visual and tactile cues essential to the termination as well as the initiation of action. For both exercises, individual instruction and guidance, which took only a short time to administer, produced satisfactory results within a very short period of time. (French & German summaries) —*Journal abstract.*

7770. Page, Charles M. (U North Dakota) **A study of the decision-making process in judging vocational rehabilitation potential.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4757-4758.

7771. Sink, Jack M. & Culligan, Thomas M. (U Georgia, Coll of Education) **Behavioral disorders as vocational disabilities.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 154-158.—Discusses the implications of the decision to consider cases which had been treated as behavior disorders as mentally ill, mentally retarded, or physically handicapped. The effects of this decision will be services to fewer offenders, the increase of time required for client evaluation, and consequently the delay of services to the client. —*Journal abstract.*

7772. Spear, J. E. **The utilization of non-drug induced altered states of consciousness in borderline recidivists.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 111-126.—Utilizing non-drug-induced altered states of consciousness, various modes of interior reflection, behavior modification, and reprogramming of conscious attitudes and values were utilized with 49 borderline recidivist offenders. No coercion was used to induce such individuals to enter the program, and there was no reprisal for stopping therapy at any time. Over a 2½-yr period the recidivist rate of this group was less than 5%. It is suggested that non-drug-induced altered states of consciousness, combined with indirect as well as symbolic techniques, may prove to be the most effective means of criminal rehabilitation. *Journal abstract.*

7773. Van Benschoten, Roselyn. (Delaware Curative Workshop, Wilmington, DE) **A sensory-integration program for blind campers.** *American Journal of Occupational Therapy*, 1975(Nov-Dec), Vol 29(10), 615-617.—Describes an occupational therapy pilot program with emphasis on sensory integration in a 6-wk day camp for 18 6-21 yr old blind children. The Ss' performance was improved in vestibular integration, in lessening of fear of movement, and, in some, in improved integration of reflexes.

7774. Viano, Emilio C. (American U. Ctr for Administration of Justice) **Growing up in an affluent society: Delinquency and recidivism in suburban America.** *Journal of Criminal Justice*, 1975(Fal), Vol 3(3), 223-235.

Investigated whether there is a correlation between the type of disposition imposed on juveniles who come to the attention of the court on delinquency charges and recidivism rates for these individuals. Data from 100 cases of male juveniles showed no correlation between rates of recidivism and disposition, challenging traditionally held beliefs about the efficacy of different disposition modalities.

7775. Zingraff, Matthew T. (Bowling Green State U) **Prisonization as an inhibitor of effective resocialization.** *Criminology: An Interdisciplinary Journal*, 1975(Nov), Vol

13(3), 366-388.—Used data from 267 incarcerated, male 14-18 yr old delinquents to identify the possible impact of prisonization on the inmate, an impact that may impede the resocialization goals of the formal organization. Prisonization is conceptualized as the degree of assimilation into the inmate contra-culture and the particular type of social role assumed by the inmate. The proposed consequences of this socialization process are conceptualized as opposition to the institution, the degree of priority placed on interpersonal contact with other inmates while incarcerated, and opposition to the legal system. Findings suggest that prisonization is related to self-attitudes that are not conducive to effective resocialization. (38 ref)—*Journal abstract*.

Drug & Alcohol Rehabilitation

7776. Anderson, Gina S. & Nutter, Richard W. (Alberta Alcoholism & Drug Abuse Commission, Edmonton, Canada) **Clients and outcomes of a methadone treatment program.** *International Journal of the Addictions*, 1975, Vol 10(6), 937-948.—Describes the Edmonton Drug Treatment Clinic in terms of its clients, objectives, and results. 17 male and 8 female clients were interviewed. Although the data indicate some decrease in the use of heroin and illegal methadone, outcomes were in general disappointing. Heroin abstinence was lower than that reported in a 1970 Vancouver program; the number of clients arrested after admission to the program was much greater than in other programs; and there was no statistically significant evidence of higher employment or improved living patterns. (25 ref)—*M. E. Pounsel*.

7777. Beverly, Creigs C. (Atlanta U, Alcoholism Counselor Training Program) **Toward a model for counseling Black alcoholics.** *Journal of Non-White Concerns in Personnel & Guidance*, 1975(Jul), Vol 3(4), 169-176.—Argues that the lack of understanding of the specific life conditions of Black alcoholics results in treatment programs based on erroneous assumptions. The applicability of Freud's psychoanalytic theory to Blacks is questioned as an example of the nontransferability of treatment modalities which have been standardized on White populations. The development of behavioral characteristics by Blacks in response to a hostile environment is described, and an understanding of the influence of these characteristics on treatment techniques is encouraged. Issues are considered concerning American human service institutions which reflect the society's racist character.—*R. Tomasko*.

7778. Björkqvist, S. E. (U Turku, Finland) **Clonidine in alcohol withdrawal.** *Acta Psychiatrica Scandinavica*, 1975(Oct), Vol 52(4), 256-263. In a double-blind study with 60 20-60 yr old males, patients receiving a rapidly falling dosage (0.15 mg/dose) of clonidine recovered about 1 day faster from the symptoms of moderately severe alcohol withdrawal than patients receiving placebo. The effects of clonidine were especially noticeable with respect to tremor, sweating, elevated systolic blood pressure, tension, anxiety, depression, and general condition. Clonidine had no effect on sleep disturbances. No significant side effects were seen. It is suggested that clonidine is a useful aid in the treatment of alcohol

withdrawal, especially when it is desirable to minimize the use of tranquilizers.—*Journal abstract*.

7779. Cheek, Frances E. et al. (New Jersey Neuropsychiatric Inst, Princeton) **A behavior modification training program for staff working with drug addicts.** *International Journal of the Addictions*, 1975, Vol 10(6), 1073-1101.—Describes a 10-session program, primarily for training paraprofessionals, which includes instruction in techniques of relaxation, desensitization, self-image improvement, behavior analysis and control, assertive training, rational thinking, and how to establish and run similar programs. Since the program began in 1971, 629 staff members working in New Jersey and 269 from other states have been trained and 2,021 patients have been treated. Evaluation data are promising and participants are enthusiastic.—*Journal abstract*.

7781. Emrick, Chad D. (Columbia U) **Psychological treatment of alcoholism: An analytic review.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2926.

7782. Fox, Vernelle. (Long Beach General Hosp, Alcoholism Service, CA) **The interdisciplinary team: Making it work.** *Alcohol Health & Research World*, 1975(Fal), Exp Issue, 2-6.—Stresses the importance of combining disciplines and treatment approaches to serve a representative sample of the alcoholic population. Problems of cross-profession communication and role blurring are considered, along with the use of outside consultants.

7783. Fry, Lincoln J. & Miller, Jon. (Ventura Region Criminal Justice Planning Board, CA) **Responding to skid row alcoholism: Self-defeating arrangements in an innovative treatment program.** *Social Problems*, 1975(Jun), Vol 22(5), 675-688.—Explores some major sources of ineffectiveness which plagued an innovative alcoholism treatment program located in a skid row mission. The findings identify ambiguous and competing goals, conflicting vested interests, conflicts over organizational resources, and a lack of treatment technology as major sources of ineffectiveness. The sponsoring agencies contributed to these problems by their lack of planning and the imposition of unrealistic success criteria. The study has implications for the problem of massive program failure. A surprising finding is the extent to which large public expenditure actually diverted the treatment program from servicing one segment of its target population and indirectly contributed to the skid row alcoholism problem by introducing men to the area who might not otherwise have found their way there.—*Journal Abstract*.

7784. Gohy, Marshall J. (Illinois Inst of Technology) **Perceived dimensions of therapeutic relationships and recovery from alcoholism.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2304.

7785. Greer, Richard M. & Callis, Robert. (Western Kentucky U) **Use of videotape models in alcoholism rehabilitation.** *Alcohol Health & Research World*, 1975(Fal), Exp Issue, 15-18. Studied the effects of

videotape modeling in an alcoholism treatment program on (a) psychological adjustment as measured by pre- and posttest MMPI changes, (b) self-confidence as rated by others on the self-confidence scale of the Adjective Check List (ACL), and (c) motivation to remain sober as measured by an agreement to take Antabuse and to return for outpatient treatment upon discharge. A comparison of differences between the experimental and control groups of male hospitalized patients ($N = 68$) reveals that the experimental group had a significantly lowered neurotic triad on the MMPI, was more self-confident as rated by others, and was more willing to take Antabuse and outpatient followup. Additional uses of videotape modeling are suggested.—*Journal summary.*

7786. Kelleher, M. J. (U London, Inst of Psychiatry, England) **Reasons for the increase in Irish admission rates for alcoholic disorders.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 175-178.—In a study of 515 admissions to mental hospitals in Ireland, New York City, and London, it was found that the diagnosis of alcoholic disorder was made significantly more frequently on the Irish than on the London admissions and that the Irish admissions, diagnosed alcoholic, had significantly more mental symptoms than alcoholic admissions to New York mental hospitals.

7787. Lentchner, Lawrence H. (New York U) **A study of differences between professional and paraprofessional responses in selected counseling situations.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2939.

7788. Lloyd, Richard W. & Salzberg, Herman C. (Spoon River Community Mental Health Ctr, Galesburg, IL) **Controlled social drinking: An alternative to abstinence as a treatment goal for some alcohol abusers.** *Psychological Bulletin*, 1975(Nov), Vol 82(6), 815-842.—Examines the evidence for the "craving" hypothesis and for the notion that abstinence training is necessary in the treatment of alcohol abuse. The data are found not to be empirically or experimentally substantiated. The viability of an alternative treatment model involving the training of alcohol abusers in controlled social drinking is explored. Several recently developed techniques for teaching controlled social drinking are critically reviewed. Most of these programs are firmly based on behavior modification principles. Preliminary outcome data seems promising. A comprehensive treatment program using a combination of these techniques is suggested for the future along with several suggestions for future research in this area. (4 p ref) *Journal abstract.*

7789. Martorano, Raymond D. (Rutgers State U) **The effects of assertive and nonassertive training on alcohol consumption, mood, and socialization in the chronic alcoholic.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2311.

7790. Miller, Peter M. (U Mississippi, Medical Ctr, Jackson) **An analysis of chronic drunkenness offenders with implications for behavioral intervention.** *International Journal of the Addictions*, 1975, Vol 10(6), 995-1005. Collected data on 34 chronic drunkenness offenders in a medium-sized southern city to provide a basis for a behavior-modification intervention program for such individuals. Family, social, educational, drink-

ing, medical, and legal information was obtained. Generally, the data indicate that social-psychological characteristics of Ss were similar to those of their counterparts in larger metropolitan areas. However, educational levels and employment rates tended to be higher than those reported in other studies. Both the present survey and more controlled laboratory observations indicate that the precipitants of drinking in this group are external (e.g., presence of alcohol or drinking buddies) rather than internal (e.g., anxiety, depression). Methods of incorporating these findings in a treatment program are discussed.—*M. E. Pounsel.*

7791. Miller, Sheldon I. et al. (Case Western Reserve U, Medical School) **An evaluation of alcoholism treatment services for Alaskan natives.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 829-831.—Using chart-review procedures, the management of patients with a recognized alcohol problem was examined in 12 medical facilities and 20 alcoholism programs throughout Alaska. The 1-yr evaluation focused on the service delivery system rather than on treatment outcome, and attempted to determine whether problems of alcohol abuse were being solved. It was found that a treatment plan was developed, followed up, and evaluated for 8% of the problem drinkers treated in medical facilities and for 16.7% of those in alcohol programs.—*Journal abstract.*

7792. Nichols, Nicki J. (Harvard U) **The development of a plan for comprehensive drug treatment in Cambridge, Massachusetts.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4408.

7793. Obitz, Frederick W. (VA Hosp, Phoenix, AZ) **Alcoholics' perceptions of selected counseling techniques.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 187-191. 50 male alcoholics were shown motion picture films of a directive and a nondirective therapist counseling the same client. After viewing the films, Ss rated the therapists on 32 variables using a 3-point rating scale. Ss perceived the nondirective technique as more socially desirable but preferred the directive technique in working on their own problems. It is suggested that a method of preferential selection of therapists by alcoholic clients might contribute to increasing the length of stay in treatment and provide an effective model for matching individual treatment modalities with individual client needs.—*Journal abstract.*

7794. Ogborne, Alan C. & Silsman, Gerry V. (Addiction Research Foundation, Toronto, Canada) **Follow up of a representative sample of heroin addicts.** *International Journal of the Addictions*, 1975, Vol 10(6), 1061-1071. Conducted a follow up study 3 yrs later of 128 heroin addicts who in 1969 had been prescribed the drug at London Treatment Centers. 86% of the addicts were still receiving opiates from clinics with 90% receiving heroin. Outcome was significantly related to age, older Ss were more likely to be prescribed opiates and less likely to be classified as "off drugs." The result is in contrast to American reports and may indicate perpetuation of dependency encouraged by current treatment methods. Ss who were first "stable" in the original study were more likely to have been receiving heroin on prescription at the time of the second study. Ss classed as "loners" and "two wonders" in the original

survey were most likely to be classed as "off" drugs at the time of this study. (19 ref)—*Journal summary*.

7795. Orford, Jim; Hawker, Ann & Nicholls, Peter. (U London, Inst of Psychiatry, Addiction Research Unit, England) **An investigation of an alcoholism rehabilitation halfway house: IV: Attractions of the halfway house for residents.** *British Journal of Addiction*, 1975(Jun), Vol 70(2), 179-186.—Administered a questionnaire to 47 male alcoholic residents of a halfway house to examine areas of importance of various aspects of the halfway house and to examine the possibility there might be underlying dimensions of perceived importance associated with client characteristics or with immediate outcome. Ingredients of the program which were thought a priori to be "therapeutic" were considered relatively unimportant by residents, but having a "no drink rule" was perceived as being the most important ingredient. Analysis suggested 3 interpretable dimensions of perceived importance. The 1st 2 appeared to reflect relative degrees of interest in verbal therapy and in the opportunity for social recovery, respectively. It is argued that these 2 dimensions reflect different conceptions of a halfway house and that halfway house provision in the alcoholism field should allow for both conceptions. The 3rd factor contrasted an interest in "getting by alone" and an interest in exposure to Alcoholics Anonymous and other sources of information on alcoholism. Residents whose alcoholism was relatively chronic tended towards the latter interests.—*Journal abstract*.

7797. Rathbone-McCuan, Eloise & Bland, John. (Levindale Geriatric Research Ctr, Baltimore, MD) **A treatment typology for the elderly alcohol abuser.** *Journal of the American Geriatrics Society*, 1975(Dec), Vol 23(12), 553-557.—Notes that alcohol abuse is a serious, although often unrecognized, problem among the elderly. The Levindale Geriatric Research Center has developed a diagnostic and treatment typology which involves problems with alcohol, health, and the social support system in determining the appropriate environment and treatment resources for these patients. Descriptions are given of how the typology worked in 4 cases. It is concluded that this method has immediate value for clinical practice and has long-range value as a framework for planning integrated and comprehensive treatment services.—*Journal abstract*.

7798. Reading, Anthony. (Johns Hopkins Hosp, Baltimore, MD) **Alcoholism treatment by the family physician.** *Alcohol Health & Research World*, 1975(Fal), Exp Issue, 11-14.—Stresses that the physician's therapeutic efforts should be directed at the condition that prompted the alcoholism and that maintains it, rather than at the drinking behavior itself. Psychological characteristics associated with alcoholism are noted, and the physician is urged to tolerate the alcoholic's dependency needs.

7799. Rice, David P. & Schoenfeld, Lawrence S. (Guidance Clinic of the Middle Florida Keys, Marathon, FL) **Aversive conditioning and cognitive mediators with**

alcoholic respondents. *British Journal of Addiction*, 1975(Jun), Vol 70(2), 165-174.—Tested the hypothesis that anxiety is a cognitive mediator which facilitates behavior suppression in aversive conditioning, examining the affects of 2 aversive conditioning paradigms on 20 male alcoholics' subjective responses to alcohol- and nonalcohol-related stimuli. Data from 4 adjective rating scales and the State-Trait Anxiety Inventory showed that a social desirability response bias obscured measurement on General Evaluation, Dangerousness, and Appetitiveness scales. Both the punishment and mixed (unpredictable CS-UCS contingencies) paradigms appeared capable of increasing aversiveness for alcohol-related stimuli. The mixed paradigm increased state anxiety toward both stimuli. Differential S attrition complicated the application of statistical tests. A 90-day follow-up suggested that the experimental Ss were slightly more successful in avoiding alcohol than were 10 controls. A personality dynamic of alcoholics is discussed which is thought to engender psychological reactance toward treatment interventions which do not allow opportunity for internal control. PROFESSIONAL PERSONNEL AND PROFESSIONAL ISSUES

7802. Allen, Jeanne W. (U Houston) **Effects of personal assessment feedback counseling on beginning counseling students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4725.

7803. Andrews, Amour J. (U Oklahoma) **The right of privacy and the school counselor.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4726.

7804. Antonouris, George. (Nottingham Coll of Education, England) **Client-centredness, sociological awareness and counsellor training.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 209-218.—Reviews the literature on the nature of school counseling courses, with particular reference to the sociological perspectives of the course and their treatment of social knowledge. It is suggested that most curricula lack a comparative perspective, a total picture of society, and a notion of the social construction of reality. Consequently, counselors show (a) an inability to move outside established frames of reference; (b) a concentration upon micro-problems concerning the child, his family, and his neighborhood in isolation from the wider societal context; and (c) an acceptance of common-sense assumptions about education as absolute realities rather than as social constructs. It is suggested that counselors are not well-prepared to examine critically the institutional and societal framework of education and will likely continue to operate as the

servants rather than the critics of their employing institutions. (52 ref)—*Journal abstract.*

7805. Banks, Hugh C. (New York U, School of Education) **The Black person as client and as therapist.** *Professional Psychology*, 1975(Nov), Vol 6(4), 470-474. —Discusses some of the professional demands on the trained Black therapist, the role of a Black person as a patient, and the nature of the interaction between the Black therapist and Black patient. The therapist's need to recognize the individual differences and cultural backgrounds of American Blacks is emphasized, and it is argued that the intricacy with which racial factors intrude into the psychological problems of Blacks is often complex and difficult to analyze.

7806. Barak, Azy & LaCrosse, Michael B. (Ohio State U) **Multidimensional perception of counselor behavior.** *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 471-476. —Investigated S. R. Strong's prediction of the existence of 3 dimensions of perceived counselor behavior: expertness, attractiveness, and trustworthiness. Films of interviews given by C. Rogers, A. Ellis, and F. Perls were watched by 202 Ss, who rated each counselor on 36 bipolar scales. Ratings were then factor-analyzed separately for each counselor. Results support the existence of the hypothesized dimensions for Rogers and Perls but only 2 dimensions for Ellis. Implications of results for counseling and further research are discussed. (26 ref)—*Journal abstract.*

7807. Bartels, Brian D. & Tyler, John D. (U North Dakota) **Paraprofessionals in the community mental health center.** *Professional Psychology*, 1975(Nov), Vol 6(4), 442-452. —Surveyed 336 directors of currently operating, comprehensive community mental health centers regarding their experiences with paraprofessionals with respect to selection criteria, training methods, roles, and problems. 86 usable returns (26%) were received. It was found that paraprofessionals engage in many of the same activities that professional mental health workers perform. Problems encountered in paraprofessional programs appeared to be related to unclear professional paraprofessional role boundaries. Suggestions are made for establishing such boundaries on an empirical basis. Respondents who reported themselves to be highly satisfied with paraprofessional programs differed significantly from less satisfied respondents in several selection, training, and deployment practices. (18 ref)—*Author abstract.*

7808. Byers, Alvah P. (Colorado State Hosp, Alcohol Treatment Ctr, Pueblo) **Training and use of technicians in the treatment of alcoholism with hypnosis.** *American Journal of Clinical Hypnosis*, 1975(Oct), Vol 18(2), 90-93. —Describes a method of training and use of hypnotist technicians in the treatment of alcoholics. The treatment consists of training alcoholics in the techniques of relaxation through self-hypnosis. The training combined classroom- with experience-based learning and was offered to mental health workers, psychiatric technicians, and nurses.—*Journal abstract.*

7812. Dana, Richard H. (U Arkansas, Fayetteville) **Ruminations on teaching projective assessment: An ideology, specific usages, teaching practices.** *Journal of Personality Assessment*, 1975(Dec), Vol 39(6), 563-572. —Examines current dissatisfaction with projective techniques. A credo for use of projective techniques is presented emphasizing accountability, phenomenological equality, and an eventual "giving-away" of assessment procedures through education. The primary legitimate usage is nonpsychometric; an interview focused on growth in various contexts. Secondary usages include examples of procedural or methodological effects to provide specific information. Training practices germane to the credo and legitimate usages are discussed. (89 ref)—*Journal abstract.*

7813. del Gaudio, Andrew C.; Stein, Leonard S.; Ansley, Martha Y. & Carpenter, Paul J. (U Rochester, School of Medicine & Dentistry) **Community mental health ideology as a function of professional affiliation and social class background.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 341-345. —Measured the adherence of a mental health center staff to community mental health ideology, using the Community Mental Health Ideology Scale, developed by F. Baker and D. C. Schulberg (see PA, Vol 42:1399). Ss were 65 therapists—psychologists, psychiatrists, social workers, and nurses. Results were essentially the same as those of previously published studies, indicating that the Scale stably measures differences between professional groups and is useful for research purposes. Scores were found to be significantly related to the socioeconomic backgrounds of the families of origin of therapists as well as to their professional affiliation.—*Journal abstract.*

7814. Deneen, Lawrence J. (U Georgia) **The effects of systematic human relations training on the interpersonal functioning of dental students and the characteristics of high and low functioning students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4734-4735.

7815. Dickinson, Gary & Clark, Kathleen M. (East Kootenay Community Coll, Cranbrook, Canada) **Learning orientations and participation in self education and continuing education.** *Adult Education*, 1974(Feb), Vol 26(1), 3-15. —Explored the relationship between learning orientations and participation by adults in learning activities. The typology suggested by C. O. Houle (1961) and others provided the framework for investigation of learning orientations. The categories of self education and continuing education suggested by C. Verner (1958, 1964) and others were used to analyze learning activities. 6 research hypotheses were tested with 220 female registered nurses. Instruments were S. Sheffield's (1964)

continuing learning orientation index and 2 11-item measures of participation in self-education and continuing education. Factors identified from Sheffield's instrument were similar to those found in other applications of the same instrument and consistent with Houle's typology. The factor named "learning orientation" was clearly related to participation both in self-education and continuing education, but there was a mixed pattern of relationships with respect to the other learning orientations. (18 ref)—*Journal abstract*.

7816. Dungan, David S. (North Texas State U) **The effect of didactic-intellectual training versus relationship-oriented training upon counseling behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4736.

7817. Engs, Ruth L. (U Tennessee) **The personality traits and health knowledge of crisis intervention volunteers in the State of Tennessee.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4736-4737.

7818. Farber, I. E. (U Illinois, Chicago Circle) **Sane and insane: Constructions and misconstructions.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 589-620.—Reviews the literature and concludes that concern about the existence of abnormality or the reality of the distinction between sanity and insanity is in large part philosophical puzzlement. The question whether insanity and its causes reside in people or in their environments relates to psychologists' preferences among psychological theories differing in terminology and in assumptions about the usefulness of phenomenological and behavioral concepts. Psychodiagnostic concepts concern behavior in a given context. The reliability of psychodiagnostic classification is limited by knowledge of the laws of behavior and the training of clinicians. The unreliability of uselessness of any diagnostic method cannot be established by showing that pathological symptoms can be faked, and the effectiveness of psychiatric treatment ought not be judged solely by the impressions of those who know they are normal. (37 ref)—*Journal abstract*.

7819. Fenster, C. Abraham; Litwack, Thomas R. & Symonds, Martin. (John Jay Coll of Criminal Justice, City U New York) **The making of a forensic psychologist: Needs and goals for doctoral training.** *Professional Psychology*, 1975(Nov), Vol 6(4), 457-467.—Discusses the relationship between law and psychology, and describes the purpose, rationale, and need for doctoral training in forensic psychology. Forensic psychology reflects the application of psychological principles and services to the legal system, especially its criminal justice components. Opportunities for psychological and social action research are explored, and the benefits of forensic psychology training to both professions are explicated. The philosophy of curriculum development is discussed and illustrated by detailed presentations of 4 courses in legal aspects of forensic psychology. Involvement with the civil justice system, as well as the criminal justice system, is stressed, with special reference to such urgent problems and concerns as civil commitment, the family court, and the development of new treatment modalities. 7823. Golden, Joshua S. & Rosen, Alexander C. (U California, Neuropsychiatric Inst, Los Angeles) **A group dynamics course for medical students.** *International Journal of Group Psychotherapy*, 1975(Jul), Vol 25(3), 305-314.—Describes a program in group experience for medical students. During the 1st 2 yrs of the program, participation was voluntary; later, it was made a part of the curriculum, with credit as a course in group dynamics. 136 students participated in 10 groups. Although resistance was expressed by nonbehaviorally oriented faculty and the mandatory character was objected to by students, the 1st 4 yrs of the program have been a qualified success. The stress of entry into the learning of the art and science of medicine has been made more tolerable for the student, and it appears that the students' humanitarian needs have been reinforced. Increased contact and intimacy between student and faculty, as well as between medical faculty and behavioral science and psychiatric faculty, has been noted. —*Journal Abstract*.

7824. Green, Stephen A. (National Naval Medical Ctr, Bethesda, MD) **The chief resident as reluctant staff therapist.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1078-1081.—Discusses the interactional process between the chief resident and ward staff, with reference to W. Bion's theory of group functioning. It is concluded that the primary task of the chief resident is to serve as psychotherapist to the staff and that this is not a chosen role but derives from the staff's wish.

7825. Harmatz, Morton G. (U Massachusetts, Amherst) **Two-channel recording in the supervision of psychotherapy.** *Professional Psychology*, 1975(Nov), Vol 6(4), 478-480.—Discusses the procedures and usefulness of 2-channel audiotape recording of therapist-client sessions which are used in psychotherapy training. Advantages for both the supervisor and the student are noted.

7826. Hilliard, Ted R. (U Florida) **Rehabilitation counselor personal characteristic type relationship to counselor performance ratings.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2933.

7827. Holmstrom, Engin I. (American Council on Education, Policy Analysis Service, Washington, DC) **Promising prospects: Students choosing therapy as a career.** *American Journal of Occupational Therapy*, 1975(Nov-Dec), Vol 29(10), 608-614.—To identify the characteristics of potential occupational, speech, and physical therapists, 13,784 Ss who had entered college as full-time freshmen in 1966 and who indicated in 1970

that they planned on a career in therapy were compared with aspirants to other health careers with respect to demographic characteristics, sources of college financing, academic achievement, and education-employment status as of 1970. Their attitudes and values, as revealed by self-ratings, life goals, and reasons for choosing the career of therapy, were also examined. Prospective therapists were found to have outstanding academic records, high rates of baccalaureate completion, and specific skills that seemed to qualify them for success in the career. They were strongly oriented toward working with people, had altruistic goals and values, and were highly confident of their interpersonal skills.—*Journal abstract.*

7828. Isele, William P. **Malpractice liability of the mental health professional.** *Professional Psychology*, 1975(Nov), Vol 6(4), 399-412.—Examines, from a legal standpoint, the extent of liability and the duties to society arising out of the treatment of psychiatric patients. An historical approach traces the attitudes of courts from the heavy emphasis on the custodial role of the professional to a recognition of the need for therapeutic discretion. Issues related to the professional's duty to the patient and his duty to the public at large are examined, and the balancing of these duties is pointed out as the factor most prominent in the rendering of a legal decision of liability. The reasoning behind the legal rules established by courts is discussed to explain the legal "tests" the professional will face if he finds himself in court to answer for the violent actions of a patient. Respect for sound professional judgment is shown as the trend developing in modern courts.—*Author abstract.*

7829. Kahn, Michael D. & Schloss, John J. (U Hartford) **Enhancement of self-concept in beginning clinicians.** *Professional Psychology*, 1975(Nov), Vol 6(4), 425-434.—Discusses how clinical psychology students become indoctrinated in a passive orientation with respect to delivering health care services because of their identification with college students, who often passively await educational input, and mental health professionals, who wait for clients to come to them. A 2-yr master's degree program in clinical practices is described, which attempts to counteract this through a university community clinic which is staffed by the trainees under the supervision of faculty clinicians. The clinic provides outreach and consultative services to schools, clinics, and agencies of the students' choosing. Students have found that the more unstructured orientation of the clinic, as compared to the more traditional concurrent field placements, provides opportunities for self-growth and a movement toward a more activist orientation as clinicians. (16 ref)—*Author abstract.*

7830. Klonoff, Harry & Clark, Campbell. (U British Columbia, Vancouver, Canada) **Measuring staff attitudes toward computerization.** *Hospital & Community Psychiatry*, 1975(Dec), Vol 26(12), 823-825.—Developed and tested an 88-item questionnaire designed to measure staff attitudes toward and knowledge about computers. The questionnaire was completed by 42 staff members at a psychiatric unit of a hospital where a health information system was being implemented; 28 of the staff members had attended a 2½-day course on computer systems. Results show that Ss who had completed the

course had more favorable attitudes toward computerization than the 14 who did not. The implications of these findings are discussed.—*Journal abstract.*

7831. Koran, Lorrin M. (State U New York, Stony Brook) **Controversy in medicine and psychiatry.** *American Journal of Psychiatry*, 1975(Oct), Vol 132(10), 1064-1066.—Notes that factual and ethical controversies confront physicians in medicine as well as in psychiatry. If psychiatrists can impart a perspective on these controversies to medical students, increasing their tolerance for uncertainty, they may aid them in becoming better physicians and remove one reason for their disinterest in psychiatry. (29 ref)

7832. Krell, Robert; Fine, Stuart & Stephenson, P. Susan. (U British Columbia, Vancouver, Canada) **The psychiatrist as the vulnerable mental health consultant.** *Canadian Psychiatric Association Journal*, 1975(Aug), Vol 20(5), 379-384.—Argues that the psychiatrist who works as a consultant is made to feel vulnerable because he is not on his own ground (in his office), he is accountable to others (those who run the agency to which he consults), he lacks knowledge of the agency, and he provides services indirectly rather than directly to patients. Also solutions elude him and results are slow. Sound training in basic psychiatry and good supervision are prescribed as preparation for the consultative role. (French summary) (17 ref)—*F. Auld.*

7833. Lane, Ross G. (Arizona State U) **The influence of supervision on trainee's development of facilitative skills in counseling.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4748-4749.

7834. Ledbetter, James E.; Parmley, Robert J. & Chastain, Randall M. (William S. Hall Psychiatric Inst, Columbia, SC) **Rehabilitation services through contractual agreement: Legal and psychological considerations.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 144-153.—Discusses the Individualized Written Rehabilitation Program which specifically identifies the responsibilities of counselor and client in working toward rehabilitation objectives. The elements of a legal contract are discussed in relation to the rehabilitation counselor's role in implementing the Individualized Written Rehabilitation Program as a therapeutic contract. It is concluded that a rehabilitation counselor would probably not be held liable under contract law; however, this would not free him from tort liability in a malpractice suit. (22 ref)—*Journal abstract.*

7835. Lesiak, Walter J.; Petty, Sharon & Bracelet, John. (Central Michigan U) **The multiplier effect: A strategy for the continuing education of school psychologists.** *Psychology in the Schools*, 1978(Oct), Vol 12(4), 393-401.—22 school psychologists participated in a 1-yr program to test the use of a multiplier effect in the continuing professional development of school psychologists in Michigan. Participants representing 12 geographic regions attended 6 days of inservice meetings on behavior modification strategies, models of continuing education, affective education, life-space interviewing, and consultation strategies. Participants were responsible for conducting 2 1-day workshops in their regions on topics discussed in the institute. The impact of the intervention model was evaluated using personnel interviews, questionnaires, and tape recordings. Results

indicate that 550 school psychologists attended 2 inservice meetings with generally favorable reactions. Specific evaluative data, conclusions, and suggestions for modification of future models are presented.—*Journal abstract*.

7836. Levy, Martin R. & Fox, Hayward M. (Arizona Medical Ctr, Tucson) **Psychological testing is alive and well.** *Professional Psychology*, 1975(Nov), Vol 6(4), 420-424.—Investigated whether skills in psychological testing are important prerequisites for employment. All employers who advertised clinical job opportunities in the *American Psychological Association Employment Bulletin* during 1971-1972 were surveyed. A total of 334 replies were received representing an 87% return rate. Data were analyzed according to job description, job setting, and geographic region. Results indicate that 90.5% of the clinical job openings required psychological testing skills, and 84% of the job openings required that these skills include projective testing. The discrepancy between job demands and graduate training programs which seek to minimize or exclude testing from their curriculum is discussed. (15 ref)—*Author abstract*.

7841. Meyers, Mary J. (U Missouri, Kansas City) **Effects of micro-interviewing skills training on counselor trainees' feelings toward interview situation and on potential client preference.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3881.

7842. Mitchell, David C. & Frederickson, William A. (Central State U, Education School, OK) **Preferences for physically disabled counselors in hypothetical**

counseling situations. *Journal of Counseling Psychology*, 1975(Nov), Vol 22(6), 477-482.—Obtained the preferences of 320 undergraduates for 1 of 3 disabled counselors or for a nondisabled counselor on each of R. E. and R. W. Thoreson's (see PA, Vol 50:1423) 20 hypothetical counseling situations. Chi-square analyses for the entire sample and the sample categorized by sex yielded significant findings. For the entire sample, significant counselor preferences existed for 18 of the 20 situations, and when categorized by sex, significant counselor preferences existed for 4 of the 20 situations. The general pattern for significant preference trends was in support of "an enhanced ability to understand and empathize" hypothesis. (16 ref)—*Journal abstract*.

7843. Morrow, Robert S. (John Jay Coll of Criminal Justice, City U New York) **Symposium: Ethnic differences in therapeutic relationships.** *Professional Psychology*, 1975(Nov), Vol 6(4), 468-469.—Presents an introduction to a 1972 American Psychological Association symposium on the interracial aspects of psychotherapy by giving a brief history of the problem and discussing the roles of the minority psychotherapist and the minority patient. Transference and countertransference relationships are stressed.

7844. Neil, Thomas C. (U Georgia, Work-Study Program in Probation, Corrections, & Parole) **Turning muddy problems into clear solutions.** *Personnel & Guidance Journal*, 1975(Nov), Vol 54(3), 139-142.—Offers a number of suggestions to help counselors develop the ability to express the counselee's problems in specific and concrete terms.—G. S. Speer.

7845. Nelson-Jones, Richard & Patterson, C. H. (U Aston, England) **Measuring client-centred attitudes.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 228-236.—Reports on the development of a counselor attitude scale, and reviews the reliability and validity of other efforts to measure client-centered attitudes. The scale is a modification of one developed by C. C. Stewart (1958) and emphasizes a "central attitudinal" hypothesis (vs a "central implementation" hypothesis) which suggests that an individual has the capacity to deal constructively with all aspects of life that come into conscious awareness. Reliability and validity data obtained from counseling students and trainees are presented. It is concluded that the scale may prove valuable in counselor selection and research, and since its items are based on theoretical and practical issues in client-centered counseling, may also be useful for counselor training. Sample items from the scale are provided. (17 ref)—*Journal abstract*.

7846. Paulson, Helen B. (U California, San Francisco) **The role of the community mental health nurse as consultant to police officers in three California suburban police departments.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2739-2740.

7847. Pearson, Peter T. (U Southern Mississippi) **The comparative effects of a cognitive and affective counselor training program on the client-counselor relationship and counselor self-actualization.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3886-3887.

7848. Rees, Mina. **The scientist in society: Inspiration and obligation.** *American Scientist*, 1975(Mar-Apr), Vol 63(2), 144-149. Notes that scientists are confronted

with increasing concern for the uses to which scientific findings are put. Since the late 1960s science has been subject to what appears to be unreasoning attack; suspicion and contempt for conventional rationality have put science on the defensive. It is noted that most scientists do their work without considering the use which will be made of their results, but that science does have obligations to society. Some of the basic questions relevant to these issues are considered, and possible countermeasures by science are discussed. It is felt that scientific and professional organizations should do more to clarify the rights and duties of scientists. Universities should explore more fully the interrelationship of science and society. Young scientists should be encouraged to evaluate possible technological exploitation of research results, and scientists generally should help to promote public understanding of science.—*G. S. Speer.*

7849. **Ronaldson, J. B. & Evison, Rose.** (U Newcastle-upon-Tyne, School of Education, England) **Integrating theory and practice in counsellor training.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 219-227.—Conducted a training program for 9 counselors, based on the principle that counseling is a behavioral skill. Pre- and postcourse measures of skill were based on (a) a 45-min recorded interview with a client, and (b) recorded responses to simulated clients. During the program the skills were practiced, with feedback on progress, using a behavior category language. This enabled trainees to become more sensitively aware of others, become aware of discrepancies between their intentions and their actions, and to monitor their own progress. Results show that the behavior category instrument and its application to client-centered skills were effective and could be applied to any form of counselor skills training.—*Journal abstract.*

7850. **Ronquist, Karen J.** (Wayne State U) **An investigation of self-exploration in counselor preparation.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3387-3388.

7851. **Sanders, Charles H.** (North Texas State U) **Description and analysis of change in selected personality characteristics of guidance associate trainees.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4761.

7852. **Saper, Bernard.** (Florida International U) **Confessions of a former state hospital superintendent.** *Professional Psychology*, 1975(Nov), Vol 6(4), 367-380.—Discusses 12 significant problems encountered in the operation of a state mental hospital. The analysis is based on personal experience, buttressed by empirical, theoretical and historical perspectives. The institution is assessed in terms of adversities in administration and management, trouble in treatment, effectiveness of behavior modification approaches, the rights of mental patients, and the hospital's utility as a component of the community mental health network. It is concluded that long-term residential treatment must be judged primarily by standards of clinical accountability. The need for overhauling the state hospital system, especially by ridding it of political and bureaucratic meddling is discussed.—*Author abstract.*

7853. **Sarup, Gian.** (Northern Illinois U) **Levels of analysis in social psychology and related social sci-**

ences. *Human Relations*, 1975(Oct), Vol 28(8), 755-769.—Discusses the concept of levels of analysis in social psychology by examining the concept's origin, need, and place in the discipline. Following T. C. Schneirla's (1951) distinction between levels of organization and levels of analysis, the problem of varied relationships between the 2 kinds of levels is outlined. Distinctly reductive, antireductive, and interdisciplinary attitudes toward the idea of levels are discovered among social psychologists. A paradigm of levels which generates not only the ideal typical approaches, but also clarifies the actual patterns of interdisciplinary relations, in social sciences is presented. 7854. **Schwartz, Allan J.** (U Rochester) **Human sexuality and community mental health on campus: Evaluating procedures used to screen and selected undergraduate leaders for human sexuality discussion groups.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2317-2318.

7855. **Schwartz, Joseph M. & Abramowitz, Stephen I.** (Vanderbilt U) **Value-related effects on psychiatric judgment.** *Archives of General Psychiatry*, 1975(Dec), Vol 32(12), 1525-1529.—Conducted a study to clarify the role of political bias in forming psychiatric impressions. 102 psychiatrists, randomly selected from the national register, responded with 6 clinical decisions on the basis of a prepared case history in which the patient's sex and race were systematically varied and also completed a moral traditionalism scale. Findings highlight the problem of covert psychiatrist bias but fail to substantiate the contention that such bias inevitably disfavors the relatively disenfranchised. The major finding was the inability to detect consistent psychiatric bias against patients identified as Black or female. Limitations in the integrity of the evidence are discussed. 7856. **Scorzelli, James F.** (Northeastern U) **Reactions to program content of a rehabilitation counseling program.** *Journal of Applied Rehabilitation Counseling*, 1975(Fal), Vol 6(3), 172-177. Conducted a job task analysis to assist the newly formed rehabilitation counseling program at Northeastern University in curriculum and instructional planning. The sample consisted of 55 employed rehabilitation counselors in the New England region for both state agencies and rehabilitation facilities. Results indicate an emphasis on vocational counseling skills, community resources, and methods of client evaluation. The areas of job placement and follow-up received relatively moderate to low ratings, suggesting that the practitioners may feel that it might be more efficient and practical to relinquish these duties to support personnel and para professionals. It is suggested that this type of analysis could be useful in curriculum and instructional planning in other rehabilitation counseling programs.—*Journal abstract.*

7857. **Sechrest, Lee.** (Florida State U) **Research contributions of practicing clinical psychologists.** *Professional Psychology*, 1975(Nov), Vol 6(4), 413-419.—Argues that in order to advance knowledge and practices in clinical psychology, it is imperative that good quality research be accomplished, and such research requires cooperation between practicing clinicians and researchers. The actual research contribution of practicing

clinicians has probably been underestimated, but there are many ways in which contributions have been made and which should continue. Obstacles to cooperation between clinicians and researchers are outlined, but it is thought that they are more a matter of attitude and outlook than of structural impediments and should be resolvable with mutual determination and respect.
